Sanitary Engineer

Plumber and Steamfitter of Canada

Vol. XVII.

PUBLICATION OFFICE, TORONTO, JANUARY 1, 1923

No. 1

To Our Patrons:--

In extending our greeting to the trade for the coming year, we wish to refer briefly to the Empire organization.

The "Emco" line of plumbing and sanitary fixtures represents the result of many years of practical and specialized experience in this class of work. As designers and originators of making fittings for the plumbing trade, our engineering department is kept in touch with the most progressive ideas of the time. The successful development of many such ideas keeps the "Emco" line strictly up to date.

Coupled with this long experience we have a modern, well-equipped shop and foundry with a staff of trained mechanics for turning out the work economically and to a high standard of quality. All of our castings are made under expert mechanical analysis insuring uniformity and quality.

With your past favors in mind we look forward to further opportunities of serving your requirements during the coming year. Our aim is to serve, and by serving, to secure and hold the confidence of our patrons and friends.

Empire Brass Mfg. Co. Limited

London and Toronto, Canada

PUSSYFOOT

Stands out prominently as superior to all other

Closet Tanks

The New Patent Ballcock

with the name cast on the large Chamber finds favor everywhere because of its Silence, Rapid Action, Simple Mechanism

The attractive design and beauty of the tank itself, combined with its durability, is another feature and it is shipped to you securely packed in case as here shown, which ensures it reaching you in good condition without any of those annoying mishaps which frequently cause delay —

TANK, LID, and FITTINGS

each packed separately, thus eliminating possibility of breakage.

Every Pussyfoot Tank contains our Full Guarantee Label on the cover.

OUR GUARANTEE

This Pussyfoot Tank is guaranteed to the extent that no matter how many years it has been in use, if a fault of material or workmanship shows, we will replace with a new tank. The defective tank must be sent to us for inspection.

THE CANADA METAL CO., LIMITED

Toronto, Hamilton, Montreal, Winnipeg, Vancouver.

SPECIFY Pussyfoot to your Jobber, and make sure you get it.

THE CANADA METAL COMPANY

LIMITED

Montreal Hamilton TORONTO Winnipeg Vancouver

Include Refinement in your Service by Selling the **QUIETUS**

OUR NO. 20 "Quietus" Syphon Jet closet as its name implies is of the so-called "silent" type. It operates so quietly that its action when flushed cannot be heard outside of its immediate environment; yet it possesses the same unhesitating strong action for which all Canadian Vitreous closets are noted.

IT IS modelled on simple dignified lines; it is vitreous through and through and its lustrous shimmering white-glazed surface coupled with its special attribute of real quietness of operation commends it to the discriminating buyer who would include the utmost of refinement in his choice of toilet-room equipment.

CANADIAN POTTERIES
LIMITED
SAINT JOHNS
QUEBEC

Sales handled exclusively through recognized jobbers in plumbing supplies.

Farmers Thousands

The Anthes Syphon

The Anthes syphon is the heart of the disposal system.

Regularly, unfailingly, year after year, it will carry on its appointed work. There are no trick parts to get out of order, nothing to wear out nor rust out; once installed it is a permanent fixture.

Will Buy of Disposal Systems in 1923

A bumper crop and fair prices have put the farmer again on his feet. To-day, with his debts paid and money in the bank he is "sitting pretty."

Early next spring, thousands of these farmers, disgusted and sore because of the annoyances of an outdoor toilet in winter, will be ready to sign on the dotted line for the first sanitary engineer who talks Disposal Systems to them. Many will sign right now if you go after them properly.

—And when you get this business, insist that Anthes soilpipe and the Anthes Syphon be used; you will thus be able to give your customer a permanent, satisfactory job, which will be right and stay right from the beginning.

Markets

Sanitary Engineer Marketing Reports are eagerly looked for by progressive plumbing and heating Engineers of Canada.

A thorough knowledge of prevailing prices and tendencies in the trade is an absolute necessity for the conduct of any business in these days of frequent price fluctuations.

Sanitary Engineer Marketing Reports are compiled at considerable expense. We are determined to keep them reliable, complete, and up-to-date.

Sanitary Engineer
Plumber and Steamfitter of Canada

Happy New Year

Were we to allow the holiday season to pass without extending to the sanitary engineers of Canada heartiest greetings, good wishes and warmest thanks for favors received, we would enter 1923 with our greatest debt undischarged.

In the coming year we are going to turn in as never before to make more Ruud Heaters—and to tell the public more about them. We are going to work harder than ever to make it easy for you to sell Ruud Heaters to your customers.

Selling gas water heaters will not, alone, make 1923 a big business year for you; but as we see it now, with the efforts we shall make to put over Ruud Heaters to the public, you will be able to devote most of your time to other matters; just show a Ruud in your window and it will sell itself; better stock up now in anticipation of spring requirements.

May 1923 bring you good health, good luck and good business.

Ruud Manufacturing Co.

Toronto

Clean Land

ness was a fetish in the of the Pharaohs

The Egyptians of old were scrupulously clean in their person; any thing that savoured of untidiness was repugnant to them.

They carried this passion for personal cleanliness so far that they even removed all superfluous hair from their bodies and considering they had no razors and so had to pull the hairs out with pinchers, it must be admitted that they were sincere little members of the Sanitary Club.

But they didn't wash very often. They had no bath tubs. Water was scarce, and was not so satisfactory a cleanser as the oils and unguents they used. These oils were absolutely necessary to protect their lightly clothed bodies from the hot suns and burning winds of that torrid land.

To-day, in Canada, running around in abbreviated skirts with one's body smeared with oil is not being done by our best people.

To-day Canadians need no retinue of slaves to keep them clean. To-day a **"Standard"** Sanitary bathroom affords every convenience, beauty and luxury that man can desire.

To-day in every district in Canada **"Standard"** Plumbing Fixtures are regarded as the highest expression of modern decorative plumbing art.

"Standard" Advertising is spreading this gospel broadcast.

The sanitary engineer who stocks, displays and recommends **"Standard"** Fixtures will find his sales path smooth.

"MADE IN CANADA"

A few of the 400.

Plumbing and Heating contractors in Montreal, Toronto, Guelph, Ottawa, Windsor, Niagara Falls, Halifax, etc., are using the Henderson Business Service for pricing their jobs and find it a great time and money saver.

Why they use it.

They are receiving better prices with a great deal less complaints from their customers. They do not worry about price changes as we guarantee to keep them informed. Many of these men have been using our service for 5 years and would feel lost without it.

How it works

We furnish you with a big leather covered loose leaf book containing suggested retail prices on over 3,000 items in the plumbing and heating business. As cost prices change we change the sheets in your book. The cost of this service is about 10 cents per day or the price of a cigar.

You owe it to your business to try it out for a year. It must have some merits or your fellow members of the trade would not use it.

PLUMBING AND HEATING RESALE SERVICE

HENDERSON BUSINESS SERVICE, LIMITED.
Box 123, Brantford, Ont.

Date.....

Dear Sirs:—

You may enter our order for your Plumbing and Heating Resale Price Service on the following terms and conditions:—

You are to furnish us with a loose-leaf Resale Price Book on Plumbing and Heating Material as supplied to the Plumbing and Heating Trade throughout Canada for which we agree to pay you the sum of \$36.00. Payment to be made as follows:—\$9.00 with this order and three payments of \$9.00 each at the end of each 3 months' period following. We agree to remit to above payments by Money Order and failing to do this, will accept your sight drafts with exchange.

You are to keep this book revised for the next 12 months by sending us whatever Change Sheets are issued from your office.

At the expiration of this 12 months' period, you may continue supplying us with the Change Sheets whenever issued, until we notify you 30 days in advance of our wish to discontinue. We Agree to pay you the sum of \$3.00 a month for this Service by remitting Money Order each month and failing to do this, will accept your sight draft for \$9.00 (with exchange) at the end of every 3 months.

It is distinctly understood that these are suggested Resale Prices and we are under no obligation or Agreement to maintain the prices compiled by you.

“Here We Suffer Grief and Pain”

We find, however, in business that most of our cares and troubles are due to our own incompetence or carelessness.

The sanitary engineer who is consistently losing money on contracts has only himself to blame; the use of an ALLPRISER would automatically put him right in making out his estimates.

Allpriser takes more grief out of plumbers' lives than any other business help on the market. You can't go wrong on a price when you use Allpriser.

A New Sales Record

Many plumbers and steam-fitters are out to establish a new sales-record on “Daisy” boilers during 1923. They have been inspired by encouraging results in past years through satisfied customers and good profits. They realize that the “Daisy” boiler is backed by a reputation.

Our customers are going to again benefit by our service during the coming year. Are you going to be one of them?

We invite you.

Tax Counter Checks Marked "Paid"

Customs and Excise Official Points out Some Technicalities in
Receipt Tax Regulations—Cash Register Manufacturer Advises
Striking Words "This is a Receipt" off Printing Machinery—
Would Not Use Post Cards for Receipts

MANY QUESTIONS are likely to be raised by the trade in connection with the application of the receipt tax, effective from January 1, 1923. While some of the regulations are sufficiently clear, there are others which may be misconstrued. Discussing the subject with an official of the Toronto Department of Customs and Excise and some manufacturers, Sanitary Engineer secured some information which may assist in dealing with this subject, though no detailed rulings have been issued as yet and it is stated that none are likely to be issued from Ottawa until after the receipt tax has been made effective and specific complaints are brought to the attention of the authorities.

The chief division of opinion seems to be in connection with the provision which states "Counter sales slips and cash register tickets are not taxable, provided no words implying or stating acknowledgment of the receipt or the payment of money appear thereon." Some retailers have enquired if a cash register slip or counter check showing the amount involved is to be classed as a receipt for taxation purposes. A. E. McLean, sales manager of the National Cash Register Co., Toronto branch, stated to Sanitary Engineer that on a great many cash register slips the words are printed, "This is a receipt." With these words the cash register check constitutes a receipt and is, therefore, subject to tax on amounts of \$10 and over. In this connection, Mr. McLean stated: "We will have these words eliminated on new machines. Merchants are well advised to have this change made in their machines at once, as it is an easy operation and will save them much trouble. Some of the large department stores have already done so, anticipating that the check handed out from the cash register with these words on it would be subject to tax."

The official of the Department of Customs and Excise confirmed the foregoing concerning cash register slips. He gave it as his opinion that where a counter check is issued and the merchant marks the word "paid" on it that it constitutes a receipt and is subject to tax. It was pointed out that frequently merchants used the word "paid" on such checks and sometimes followed it with their initials. It was not thought that this would be a serious tax insofar as counter sales were concerned because very few customers asked for a signed receipt on a cash sale. Where it would be felt more would be on C. O. D. orders. Discussing this angle of the subject, it was pointed out that while the customer purchasing goods and paying cash over the counter would not necessarily require a signed receipt, that the customer ordering goods over the telephone on a C. O. D. basis would rather hesitate to pay any

considerable sum of money to a delivery boy without receiving a receipt which would be an adequate acknowledgment of the money paid. The possession of the parcel might be taken as sufficient evidence of the money paid in some cases but it would constitute a practice which would be open to abuse. Of course, the customer could be accorded the alternative of running an account for such orders, but this is undesirable to retailers. Generally speaking, it was thought the tendency would be for retailers to encourage more cash business so as to keep down the number of accounts over \$10 and to eliminate as many C. O. D. orders as possible so as to keep down the number of tax stamps they would be compelled to use.

It was the opinion of this official that the ordinary counter check showing goods purchased and amount, but not marked "paid" or bearing any other words implying a receipt, would not require to bear a tax stamp.

It was pointed out by this official that a cheque may not be shown to be in settlement of an account and, therefore, a signed receipt may be required by the debtor even though a cheque is used. The fact that a cheque may not be classed technically as a "receipt" also raises the possibility of certain debtors who pay by cheque requiring a signed receipt which is taxable.

Another practice which comes under the new regulations is the use of transfer cards in large stores. Certain department stores make use of such a card on which a number of small purchases are entered in various departments and payment made by the customer in a lump sum at the end of the shopping tour. This card is now stamped "paid" when the cash or a cheque is tendered and would ordinarily come under the regulations requiring it to be taxed when of \$10 or over.

Each signature of an employee on a pay roll being a receipt is taxable for each signature covering an amount of \$10 and over. Some of the large firms put salaries on deposit for employees in a bank and the employees put a tax stamp on withdrawal orders. In certain other cases two or three officials of the firm are on hand when the staff is being paid and no receipt is asked for from the employees.

Individual freight bills and periodical statements of same, acknowledging receipt of payment are taxable. An enquiry has been made if this includes "way-bills" which the railway freight handler signs in acknowledgment of the freight and which may bear record of freight classification and rate applying. It was pointed out that, while details of classification and rate chargeable may appear on the bill, the receipt conveyed by the signature of the freight handler is merely cover-

ing the merchandise, and is not taxable. The periodic statements of account issued to collect freight charges and receipted in the ordinary way are the ones which are taxable.

There is some division of opinion concerning the provision covering receipts in the form of letters forwarded by mail being taxable. Letters in an envelope must carry stamps which include revenue under the War Revenue Act so that tax is paid in that form. Asked as to whether or not postcards would come into use for the purpose, bearing only one cent postage, this official

thought it unlikely that any firms would care to show receipts so publicly.

Favors Mail Order

The provisions exempt remitter's counterfoil, being part of a taxable express money order. This counterfoil is the acknowledgment received for money paid for money order. It is suggested that in connection with mail order business where cash is paid in advance for merchandise and where such cash is generally forwarded by money order, that the customer has a receipt for

money paid without requiring the mail order firm to give it. To secure a receipt for money paid to the local merchant either by cash or cheque, a second tax applies.

E. M. Trowern, Dominion Secretary R. M. A., states that the intention of the government is evidently to exempt cash register checks and counter slips in cash transactions. He states that the provisions might mean that all cash register slips and counter checks are not exempt, but he is of the definite opinion that the retailer may not feel any concern in regard to such taxes.

Would Revise Business Income Tax

Proposals of Joint Conference on Taxation Understood to Include Recommendation that Business Income Tax be Put on Same Basis as Personal Income Tax—Exclude Gifts to Charities, Etc.—Recommend Flat Tax on Cheques of Two Cents

DISCUSSING the proposals of the joint conference on taxation which since being outlined in a previous issue of Sanitary Engineer have been put before various manufacturing, wholesale and retail associations, some better idea of probable final meaning of the recommendations has been gleaned. A group of resolutions was passed unanimously at that conference with the understanding that these were to be referred back to the national organizations concerned and that a second conference of representatives of these organizations would be held in Ottawa in January to put the resolutions in final form before the government.

It is understood that it is designed to make up any loss of revenue brought about by following out the recommendations, by reducing government expenditures and by slightly increasing the sales tax if necessary; that purchasers are to be furnished with invoices on which the amount of such sales tax to at least the extent of 2½ per cent. must be shown; that the regular rates of Sales Tax should apply to all purchases by or on behalf of the government. This policy is followed in connection with import duties and it is planned to make no exception under the Sales Tax.

Will Determine Status of Trade

Some discussion has also taken place concerning difficulties arising in connection with the value on which Sales Tax is assessed and as to the status of various branches of trade such as tin-smiths, harnessmakers, etc. Under the suggested regulations, it is understood that the Minister would be given power to determine the status of the individual or firm, subject to appeal to higher authorities. The recommendations of trade organizations on the subject are to be

considered in connection with such appeals. It is also understood that importers who sell in this country under exclusive selling rights should be classed for Sales Tax purposes as wholesalers in respect to importations and sales in Canada, under the proposal.

The proposal in connection with the status of certain branches of the trade such as tin-smiths, provides that those who produce goods which they wholly retail from stock over the counter in the premises where they are produced, to consumers, shall be compelled to collect sales tax on such manufactured goods if their turnover in such goods exceeds in value a set amount to be agreed upon by the organization which represents their interests. The proposals also include a clause, it is said, which provides that sales tax shall not apply on sales by retailers who manufacture or produce articles made to the order of individual customers and sold over the counter or in the premises where they were made direct to such individual customers.

Two-Cent Stamp on All Cheques

The proposal re the Stamp Tax on cheques was originally two cents on all cheques, drafts, bills of exchange or promissory notes, up to and including one hundred dollars and a flat rate of four cents for higher amounts. It is understood the manufacturers favor the further amendment of this proposal so that there will be but a flat rate of two cents on each cheque irrespective of amount.

It is understood the income tax on corporations also came in for some consideration, and that the suggestion was made that the normal tax of 10½ per cent. on the income of corporations exceeding \$2,000 per annum be reduced to

the present rate applying to individuals of 4 per cent. on incomes up to \$6,000 and 8 per cent. on all incomes over that amount without any surtaxes. It was also understood to be a recommendation that net loss from business for any taxable year be deducted from the net income of the succeeding year and that any unabsorbed balance be a deduction from the net income of the next succeeding year. Income Taxes payable to other authorities such as provincial or municipal governments should be counted as an expense of doing business and deducted from the taxable amount as well, according to the recommendations. The deduction of gifts to charities totalling not more than 15 per cent. of the taxpayers' net income should also be deducted from taxable income according to the proposals. The same provision would be applied to personal income tax and also including deductions of life insurance premiums not exceeding 5 per cent. of net income. Suggestions for simplifying the method of computing the tax are also made. Repeal is also suggested of the tax of 5 per cent. on premiums paid to unlicensed insurance companies.

The proposed amendment of the paint manufacturers, as outlined in a recent issue of Sanitary Engineer, would be inserted in place of the provision that the purchaser be furnished with written invoice which shall state separately the amount of tax to at least the extent of 2½ per cent. The suggested amendment of certain manufacturers provides that no absorption of any part of the tax be allowed, that the sale from manufacturer to wholesaler be exempted from taxation and that the sale from either manufacturer or wholesaler to retailer be subject to the full Sales Tax of 4½ per cent.

Predict Big Building Year In 1923

Much Residential Building Required to Keep Pace With Natural Increase in Population—Prices Appear to be Fairly Stable for Early Part of Next Year—Pipe Deliveries May be Slow

MANUFACTURERS discussing the business outlook for 1923 in plumbing and heating supplies give some information of value to the trade in planning for next year.

L. H. Ivey, Empire Brass Mfg. Co., Ltd., London, Ont., states that the past year has been a fairly good one for residential building.

"There has not been industrial building to any great extent, and we are looking forward to about the same conditions during the year 1923 as industrial building will not reach any large extent until there is a bigger increase in immigration into the country," says Mr. Ivey.

"Figures, however, show that the natural increase in residential building during the war years and after, was never maintained, so that we still think there is a great deal of residential building to be done in the country to take care of the natural increase.

"We feel that there is an exceptionally good field for business in the rural districts where the farmer is wakening up to the fact that he can have at a fairly moderate cost the conveniences of the city resident, and with a little concentrated work on the part of the manufacturer, the jobber and the sanitary engineer, this business could be made more extensive.

"In regard to prices. Indications are that the price of labor for the time being is at least stationary. The advance in the rate of wages made of their own free will by the steel companies in the United States, indicates that no further reductions are to take place so that, if anything, an advance in prices can be looked for during 1923 instead of a further reduction. We personally feel that generally business in 1923 will exceed that of 1922."

Much Building to be Done

C. A. Lusby, Amherst Foundry Co. Ltd., states:—

"We have found some improvement in business during the past few months and we think that the prospects for the coming year are better than they have been for some time during the past. There must certainly be a considerable volume of building business during 1923 which has a direct bearing on the line of business in which we are interested.

"In regard to the stability of prices, it is rather difficult to make predictions as a great many articles, especially in the line of metals, are showing a tendency to increase in price at the same time. We think, however, that there will not

be any very great fluctuation in prices during 1923."

J. O. Thorn, General Manager, The Metallic Roofing Co., of Canada Ltd., manufacturers of sheet metal building materials, states:—

"Prices of raw material and manufactured goods in our line are as low as it is possible to make them, under existing conditions. Owing to a variety of reasons raw material has been difficult to obtain, and in our opinion customers will be well advised to book now for their requirements during at least the first quarter of the new year."

Price Trend Stable

J. M. Gunn, Ass't. General Manager McClary Mfg. Co., London, states:—

"The basic raw materials of our industry consist of sheet iron, both black and galvanized, pig iron, copper, spelter, tin, and tin plates. It was expected that there would be a general decline in values during 1922, towards pre-war prices, but on the other hand there has been a general advance, though not a large one; and we have not advanced our manufactured goods to correspond with these increased values. It is quite possible that this will have to be done in the near future. The reason for this secondary inflation is the increased cost, occasioned by the scarcity of coal, and railway troubles, owing to the refusal of the miners and operators to take their share of the liquidation which is going on.

"During the year our trade was increased in volume considerably, but the value was not very much greater than the year before, owing to the lower

prices, and it was done at a narrowing margin of profit. It is hard to say how long the present conditions will prevail but there is not likely to be much change during the first quarter of the year. An advance is predicted in some lines of raw materials which will certainly affect our costs, but if an amicable settlement is made with the labor elements above referred to, this anticipated advance may be avoided."

Pipe Deliveries Slow

H. Rooke, Page-Hersey Tubes Ltd., Toronto, manufacturers of steel and wrought iron pipe, states:—

"In the tubular trade, the year just closing was marked by a very heavy demand for small sizes of black and galvanized pipe, due to what might be termed, "the building boom in Eastern Canada," principally in Ontario and Quebec. The opposite has been the situation in respect to larger sizes of pipe, 3 in. and up, due to the few buildings of large size, under construction, and because there was no development to any extent in the industries. Manufacturers of tubular products have been hampered very seriously, in fact, plants have been closed down, due to lack of raw material, caused by the coal strike and the railroad situation in the United States in addition to which they have also had a heavy demand for steel products, both home and abroad.

"Notwithstanding this, the price of tubular products has not changed materially, from the low point of 1921, the advance only being \$6.00 per ton, hence in this line, the experience of rapidly rising costs, has not affected work, as was the case two years ago.

"It is, of course, likely that the volume of business in Canada, will be reduced during the mid-winter and inventory periods, but, due to short supplies, it is not expected that mills will be able to accumulate stocks, to any extent, and the probability is that deliveries will be slow during the early part of 1923 and prices continue firm."

Stimulate Buying Market

W. R. Gibson, General Manager, Gurney Foundry Co. Ltd., Toronto, manufacturers of heating appliances, states:—

"If manufacturing costs are regarded as a basis of price for 1923, there should be a decided stiffening of price, although some softness may result in the early part of the year because many manufacturers lack the nerve to get the prices that their costs demand.

(Continued on page 20)

WHY A TINSMITH IS A MANUFACTURER FOR TAXATION PURPOSES

Tinsmiths have long wondered why they were classed as manufacturers, for taxation purposes, while blacksmiths, merchant tailors and others producing certain articles were classed as retailers.

The reason, as outlined in the resolutions being considered now, is that tinsmiths and confectioners produce something which can be sold in the ordinary retail way to practically anyone, whereas the product of a blacksmith or tailor is to special order and could not be sold in ordinary retail trade.

"Coming to Loggerheds Over Bizness Expanshun"

(With apologies to Ring W. Lardner)

By

MAJOR L. L. ANTHERS.

MANAGING DIRECTOR-ANTHERS FOUNDRY LTD.

Terraboone, Dec. 29

Dear Friend Al--

I HOPE you recd. that nektie I sent you for Xmas. I showed it to sum of the boys in the shop and they sed it was a reglar knockout. I sez to them nothins too good for my Old Side Kick Al and I aint goin to tell you how much I pade for it for I dont bleeve in lookin gift horses in the mouths—you know me Al.

Wen I showed it to Vilet she said it maid her dizzy to look at it the colors was so strikin. She said you could either ware it on the Seventeenth of March or the Twelfth of July and keep em all guessin without given afence. Thats a hole lot of praze comin from Vilet.

Ime goin to tell you how me and Bill the foreman my partner neerly came to loggerheds over a question of what he called "bizness expanshun." You know how it is in the big leagues Al. Wen the season is over you bust up till the next spring. Theres a lot of that "Old lang sine" stuff and the usual fairwell greetings such as "sorry to meat, happy to part," and etc. But when you get into reel bizness you got to keep movin the hole year round or your not libel to finnish the season. Haven played baseball so long I wasnt wize to these conditions. An when things begin to slack off I was enclined to hit the eezy chare. But not Bill. He had somethin up his sleeve and when he sprang it that was when we had the argument.

"Ever here of skeptic tanx?" he sez to me one day as I set in the offis goin over the battin averages of them fellers what calls themselves major league hitters when they never half bean up before a reel live pitcher like what we usta half when baseball was in its zeneith.

"Skeptic Tanx," sez I, thinkin he was referrin to some brand of booze-fighter. "No whats they?"

"Well there used for ruriel sewage dispozle," he explnd. "Where a town aint got a trunk sewer

and sewage dispozle system you put in individual skeptic tanx and a dispozle field and nature does the rest."

"What kinda squerl whiskey you been drinkin?" I asts him. "Were jew get this ruriel dispozle skeptic, field tanx bizness? Come down to earth and tell us what its all about."

"Well," sez he, "its like this. Theirs a tank concisting of 2 chambers. The discharge from the house drain enters the first chamber and undergoes a process of dissalushun threw the action of Annie Robic Bakteeria, then it—"

"Back up—back up—wot the h—" (Then I seen Vilet lookin my way and changed my questn.). "Annie who?" sez I.

"Annie Robic," sez he.

"Well wot doz Annie do?" I asks thinkin he was goin nuts.

"If you lissen Ile tell you," he sez irratated like. "The solids is broken down by Annie Robic Bakteria—"

"I thought you said her name was Annie Robic—now you say its Bakteria—was she married twice."

"You dont get me" he sez.

"That's the best little guess you ever maid" I came back at him.

"Well lissen till Ime threw," he sez, "and then you can ask questns."

So I set back in my chair and lissened wundring what it was all about.

"After the solids is broken up they overflow into the doseing chaimber—"

"Is a doseing chaimber a sick-room?" I asks in-nicent like.

"See hear," he sez, beginning to get soar, "Jew wanta lissen to what I gotta say or jew think you no enuff?"

"All rite fire away," I sez. When Bill begins to get sourcastic its time to close up. "Sorry I interrupted—I'll lissen to the bitter end."

"You maid me lose the thread," he growled.

"Will a peace of string do" I asts, but he looks so mad that I closed my trap and kep it closed.

"Where was I," he asts.

"In the first chamber with Annie Robic," I informs him.

"Oh, yes," he sez. "Well after the solids is broken up by Annie Robic Bakteria, they overflow into the doseing chamber. When the affluvia gets to a certain hite—"

"The what?" I sez, fergettin myself.

"The affluvia" he skowles, "the liquid what overflows from the first chaimber. When it gets to a sertain hite it is discharged into the dispozle field which is a lot of tile of about 18" under the ground."

"Who discharges it," I ast him.

"Why A. Sifen discharges it when it gets to a certain hite."

"How does A. Sifen no when its high enuff?"

Bill looked so discusted like he wood of et me.

"A. Sifen discharges the affluvia automatickly."

"Oh I see" I sez, not seen at all. "A. Sifen has a automatick and discharges affluvia insted of bullets."

Bill looked like he wanted to kill me. "Your hopeless," he sez.

"Oh Ime not so cuckoo as you think," I retallyates with fervor. "Wot makes A. Sifen discharge automatik affluvia, thats what I want to know," I sez, tryin to look wize.

"Atmusfeerik Preshar," he says.

"But wot regelates Atmusfeerick Preshar?" I came back at him.

"Nothin does," he balled. "Atmusfeerik Preshar is constant."

"Whoz Atmosfeerik Preshar constant to— Annie Robic?"

I thot Bill ud choak, he looked so mad.

"When your threw astin damphool questns," he sez, "Ile perseed. I want to show you how we kin get knew bizness but you wont take it seryous."

"Now look hear Bill" I sez tryin to molufy him.

"Ime just as kean as you to boost bizness, but when you interdooce me to Annie Robic in the 1st chaimber an then Atmosfeerik Preshar shoots out automatick affluvia out of the 2nd chaimber I really thinks you ought to half youre hed red."

"Oh thats youre apinion is it," he sez with a snear. "Well youve gotta lot to lern."

"Shoot away old Bean," I sez, "Ime injoin it if you are. What happens after the affluvia shoots out into the automatik dispozle field."

"It filters threw the open joints of the tile in the dispozle field."

"Then what happens?"

"It is purified by the son and heir and A. Robic Bakteria."

"You mean Annie Robick Bakteria," I sez thinkin I was puttin one over him.

"No I dont" he

"Skeptik Tanx," says I, thinking he was referring to some brand of booze fighter.

shouts.

"Didnt you say A. Robic Bakteria," I asts.

"Yes I did," he returns.

"Well dozent A. stand for Annie," I asts tryin to look hurt.

"Oh h—I," he sez, "I dont sea how I stand for you," and with that he gets up and busts outa the shop slamming the door after him.

"Well some peepols got me beet," I coments, as he hikes it akross the streat as if he was in a hurry to go somewhear.

"Oh is that so," I hears a ladys voice behind me, "When did you begin to tumble to yerself?"

It was Vilet and I begins right off to feal uneezy.

(Continued on page 36)

Sewage Disposal for a Rural School

First of a Series of Plans and Specifications of Sewage Disposal Systems That Have Been Prepared, Laid Out and Adopted by Authorities—Sewage Disposal in Rural School With 400 Pupils

Written for Sanitary Engineer by EDWIN NEWSOME, Consulting Sanitary and Heating Engineer

IT IS estimated by some of the greatest statisticians that rural, as well as city school problems are becoming more important to the sanitary engineer, because such institutions as schools require to be fitted up with modern sanitary conveniences.

Various countries have put laws into effect that require all children to be given a public school education until they reach the age of 16 years. This law it is said, is responsible for a lot of schools having to either be enlarged or new ones erected, and while no doubt such a conditions adds in more ways than one to the financial burden of the

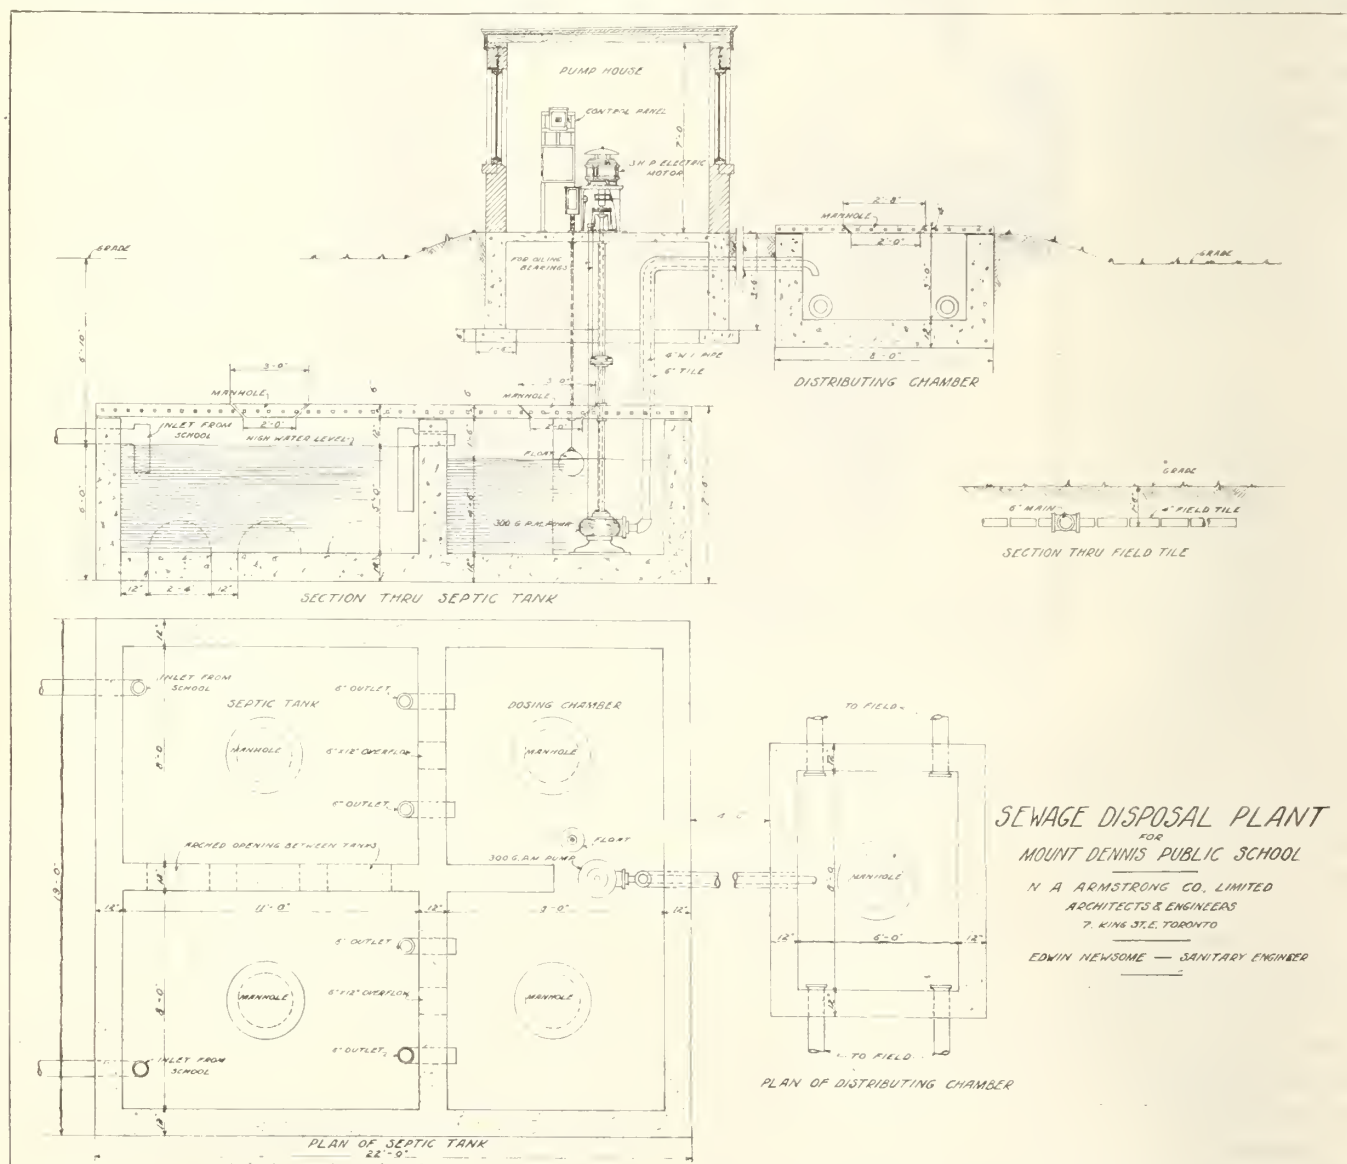

public school boards in incorporated towns and cities where sewerage systems and public sewers are available, the problems of the rural school boards and trustees are still more serious, because special sewage disposal systems have to be laid out and designed, and almost every school requires a system best suited for prevailing conditions, as well as to meet the financial situation of each locality.

Architects and sanitary engineers are being called upon to cope with these problems, and, realizing the position of many, who not having had very much experience along these lines, because of

the fact that few such undertakings were required in years gone by, the Sanitary Engineer is going to publish plans and specifications of sewage disposal systems that have been prepared, laid out and adopted by men who have given this line of work a great deal of study and who also have laid out and designed many successful systems.

The first sewage disposal system to be described in this series of articles is that designed for the school now under construction at Mount Dennis, Ontario, a suburb of Toronto.

When the school is completed it will provide for the attendance of 400 pupils

at least. Modern plumbing and sanitary fixtures will be installed and the basement will be drained. There will be separate boys' and girls' lavatories and small ones for teachers.

The septic tank proper, which is a double one, will partially treat 4,000 gallons of sewage per day, and nearly 8,000 lineal feet of four-inch field tile pipe will be laid underground for the absorption bed. N. A. Armstrong Co., Ltd., King St. East, Toronto, are the architects and engineers. The whole system is fairly well described in the accompanying illustrations, which are actual reproductions of the working drawings.

Tanks are Built Down

The tanks are built down in the ground so that wash basins, urinals and w. c.'s situated in the basement can be all connected in such a way as to discharge the soil and waste into the tanks. Ample ventilation is also provided, as the drawings and details show.

The sewage flows direct into the cultivating compartments and, when the anaerobic bacteria has broken down the solids, the effluent overflows into the dosing chamber.

These latter chambers are emptied by a vertical electric driven sewage lift

pump. 3 h. p. discharging and lifting the sewage at the rate of 300 gallons per minute into a concrete distributing tank, from which the effluent flows into the thousands of lineal feet of field tile.

This rate of discharge has been provided so as to insure an equal distribution of sewage into the whole of the system of laterals as shown.

Operation of Sewage Pump

The sewage pump is operated by an automatic switch, connected to a vertical rod at the lower end of which is fitted a large copper float; when the effluent in the dosing chamber has reached a certain height, the float rises and throws in the electric switch, starting the motor. The motor is also a vertical type A. C. directly connected to a vertical shaft operating the centrifugal pump.

The size of the septic tank is determined by the number of pupils and teachers attending the school and the amount of water used in the operating of the whole school, viz.: Water used in the w. c.'s. (the amount per flush predetermined). The urinals are fitted with automatic flushing tanks set to discharge a given amount at pre-arranged intervals. A certain amount of water is provided for cleaning the school, for

drinking purposes as well as for the wash basins.

Not one item has been overlooked and every care has been exercised that will insure as perfect a disposal system as possible.

T. B. Smythe, sanitary and heating contractor, Toronto, has the job of installing this system as well as fitting the school up with all the sanitary fixtures, and, if previous work done by Mr. Smythe and his staff is to be taken as a basis upon which to judge, this job when completed, the writer believes that the school board will be given excellent work throughout.

How Sizes are Figured

When a sewage disposal system is being designed for any kind of building, there must be certain conditions given very careful attention. For example, the kind of ground, the area available, the number of pupils (if a school), the water supply in all cases, the kind of fixtures to be used, how the fixtures are to be flushed, or whether some of these are flushed periodically or continuously.

Suppose that the urinals are to be furnished with running water, then the quantity passing through the valves or nozzles will have to be predetermined or if these fixtures are to be flushed at

intervals, the number of intervals per day and the quantity per flush.

The w. c.'s will have to be flushed either by low down tank valves and ball-cocks or by automatic flushing valves and the quantity of water to be used must be predetermined before the size of septic tank can be decided upon. Then after all these details have been determined, the work of arriving at sizes can be gone on with, as well as an allowance made for cleaning the school, and the probable quantity used at the wash basins.

Type or Source of Water Supply Available

When water is procured from a private source, such as well, lake, river or stream, and the water is pumped into pneumatic pressure tanks, water is used more sparingly than is the case where a public water supply is available. In the case of this school, water is procured from the city of Toronto water works and ample water allowance is therefore provided. Each w. c. is to be furnished with flush valves set to discharge (3½) three and one half gallons per operation. The urinals will be fitted with automatic flushing tanks; two gallons of water per pupil is furnished for the purpose of school cleaning. The balance of ten gallons per pupil per day is used for urinals and wash basins.

Location of Septic Tank

When plumbing fixtures are installed on the ground floor and basements do not require to be washed and drained into the septic tanks such tanks can be built close to the surface of the ground. But in this case, plumbing fixtures are placed in the basement and the soil and waste must therefore flow by gravity into the septic tanks, which are built at some depth down as shown in the illustrations herewith. The effluent flowing from the cultivating, or septic tanks into the dosing chamber must therefore be raised by the vertical pump because it is necessary to discharge such effluent into open field tile pipe laid about (18) eighteen inches below the surface of the ground, a position where most of the friendly germs are always to be found.

The pump, discharging the sewage at the rate of 300 gallons per hour, will only operate once in twenty-four hours, giving ample time to allow the effective breaking down of the solids in the cultivating chamber, and the further settling of the effluent. The dosing chamber will be emptied in about thirteen or fourteen minutes from the time the motor starts. This high rate is necessary so as to make sure that all the field tile pipes will be filled with sewage and ample time given to allow the sewage to be absorbed by the ground.

"Consult your Plumber more and you'll consult your doctor less."

Foregoing has been suggested as a good slogan for plumbers to adopt in their advertising and showroom displays.

ELECTRICITY KEEPS SWIMMING POOL WATER SANITARY

F. E. Hartman, a chemist, has written a booklet on "The Purification of Water for Swimming Pools," in which he says that the methods commonly employed in the art of water purification are filtration, chlorination, actinic rays and ozonation. The use of actinic rays, or as it is more generally known, ultra-violet light has been practiced since 1906 when De Mare employed it to purify the water at Marseilles. It was found that ultra-violet rays could be used for the destruction of micro-organisms in water.

For the Madison Square pool, New York, water is taken from the street mains, passed through a filter bed of broken stone, sand and gravel in huge steel cylinders; from the cylinders the water goes through the ultra-violet ray sterilizer; from the sterilizer into the pool through 30 inlets around the edge of the tank. The used water flows through outlets at the bottom of the diving pit to a point where it joins fresh water flowing in from the city mains, then all of it goes to the filters and on through the sterilizers. This continual circulation of the water is carried on by two motor-driven pumps.

PREDICTS BIG BUILDING YEAR

(Continued from page 15)

"Iron, coal, coke, steel, copper, and the many other necessary supplies will be affected by the increasing volume of business and their cost will influence upward the price of manufactured goods.

"Labor is not likely to be any lower in cost as even now the fact appears that demands are already being formulated for higher wages, and if efficiency drops, as it usually does when unemployment diminishes, then this item of cost will also increase.

"My experience would indicate that the retail business man's policy should be to use every endeavor to stimulate the buying market in his local district and then should buy conservatively and steadily to fit his requirements. Then if the policy of collecting promptly and closely, and paying his own accounts punctually is followed, he is almost certain to have a very satisfactory result for the year 1923."

Sanitary Conditions in Artisans' Homes

A comprehensive report has been prepared upon artisans' homes in the City of Hamilton, as the result of months of work by the inspectors of the local health department. Instructions for the making of the survey of homes were issued by Dr. James Roberts, M. H. A., some time ago.

The results of the thousands of inspections made are revealed in the exhaustive tables as to each district which are included in the report. A summary is also included, which is as follows:

Number of homes occupied by one family	4,148
Number of homes occupied by two families	326
Number of dwellings over stores, tenements	192

Total of dwellings inspected	4,536
Defective sanitary fittings	1,504
Defective eavestroughs, plaster, roofs	1,060
Defective flooring	80
Dampness and structural defects	117
Dirty homes and cellars	504
Dark rooms	133
Dry earth closets or privy vaults	843

"It will be noted," the report states, "that out of the 4,666 premises inspected 1,840 or 40 per cent. were owned by the occupants of the same. The 4,666 includes tenement houses, and rooms over stores. If these be excluded, it will be found that at least 50 per cent. of the artisans in this city are the owners of their homes."

Of the homes inspected, 3,005 were reported in good sanitary condition, 1,237 as fair, and 424 as bad. The lack of sanitary convenience indicated in the tables with a large number of homes, was owing to the fact that many houses in Homeside district were visited, and the city services have not yet been completely installed.

In homes where conditions were bad, notices have been served that improvements must be made. After the completion of these improvements, the homes will be eligible for promotion to the "fair" or "good" class.

The report deals with occupied dwellings only. Nevertheless, it is stated that the number of vacant houses suitable as artisans' dwellings is remarkably small. In the extreme east of the city, several houses had been erected consisting of a single room.

"I have no hesitation in stating that there is a distinct evidence of the necessity of a large number of small habitations to be erected in the city," Mr. Thornley states toward the close of the report.

The document is signed by W. M. Thornley, chief sanitary inspector.

Some Patterns for Hanging Ducts

Written for Sanitary Engineer by O. W. Kothe, Principal, St. Louis Technical Institute, St. Louis, Missouri.

(Continued from last issue)

Patterns For Hanging Ducts.

IN FIGURE 1 we show how small ducts may be hung to a concrete beam by clamping a band around the duct and attaching to the beam by means of expansion bolts. This is done at intervals of every 4 feet or so, at least there are 2 hangers to an 8-foot length. Then at figure 2 we show how hangers are embedded in the concrete before setting. Then by means of additional straps, bent or twisted to suit conditions, several holes can be punched along which enables raising or lowering the duct to suit. Other times they can be arranged as in figure 3, where they are expansion-bolted direct to the beam. Still at other times long rods are threaded and run directly through the floors to support wide ducts or several runs of ducts. These angles are anchored to the floor with extra long threads on the bottom, are attached to angle irons laid underneath the ducts. Then these rods can be screwed up, thereby raising or lowering the work as required to make it perfectly level and straight.

In modern buildings where tile construction is used in the floors, these tiles are generally wedged, shaped and concreted in place. For such floors, and on small ducts as in figure 4, toggle bolts as at A are used. These are very serviceable for such work as they can be inserted in drilled holes, after which the wings will expand and enable tightening up. But for heavy ducts it is better to run a long bolt through the floor and anchor with a plate at the top, since that will make it safer and there is no liability of the tile pulling through as would be the case with a toggle bolt.

Sometimes with extra wide ducts, a construction feature as in figure 5 is used. An angle is bolted to the top of duct at intervals, and hung over the flange of the I-beam, where considerable vibration would be met with, a bolt would be set. To prevent the bottom of duct from sagging or buckling, an angle is also stretched across and either angle iron sides or rods are provided for supports. Vertical ducts on stacks are often

joined together as at B and hooks for I-beams may be made as at figure 7. Many of these details must of course be adjusted to what a workman has to work with. At times it is convenient to make joints as in figure 8 at certain places but even at that, certain slip joints are often designed to overcome this cumbersome joint.

A BUSINESS EVOLUTION

Forty publishers of morning newspapers met in Chicago a couple of weeks ago and formed an association to promote the morning newspapers' interests in competition with the evening newspaper as an advertising medium. The chief method by which they say they intend to accomplish this is through announcements in the business newspapers of the United States—that is papers of the type of Sanitary Engineer.

This is an interesting evolution—the recognition of the place and power of the specialized newspaper.

Asks That Sanitary Engineer Advocate Compulsory Passing on of Sales Tax

IN a recent communication received by Sanitary Engineer, J. E. Casson, plumber, of Victoria, B. C., states, "I have subscribed for and read Sanitary Engineer for about twelve years and always found it useful. The yearly subscription is well spent money."

He goes on to state re the Sales Tax: "Why should the retailer have to pay for it all? A lot of attention is given to manufacturers' and wholesalers' difficulties but little about the retailer who has to pay it and who can least afford to do so. He is the one who has to face unrestricted competition to sell his goods and simply has to absorb this tax out of his anticipated (?) profits. Why

should not he charge the Sales Tax direct to his customer as a separate item on this bill? Why should you not advocate that the law be changed so as to make it compulsory for him to do so."

In explanation to Mr. Casson, Sanitary Engineer has worked diligently in the interests of the retailer in respect to Sales Tax. The recommendation has been made that the Sales Tax be passed along to the consumer as the government has intended it to be, and the average retailer finds his cost of doing business sufficiently high to-day without absorbing any part of this tax. This is the practice which should be followed. It is infinitely better to pass this tax

along as part of the price quoted than to show it separately on the invoice to the customer. The latter plan would bring back the old objection to the Luxury Tax. If through competition in certain districts the retailer is unable to collect this tax the situation is similar to that of local price cutting and is beyond the assistance of any outside organization. The price cutting situation generally rights itself in short order.

INCORPORATIONS

Hickey & Aubut Ltd., head office Montreal, capital \$50,000 to manufacture furnaces, stoves, ranges, piping, sanitary apparatus, etc.

Perfection Radiators Ltd., head office Montreal, capital \$750,000 to manufacture and deal in radiators.

The collage consists of several overlapping advertisements:

- Erskine, Smith & Co.**: "Our Hobby is Good Work Only." 21 Nicholas Street, Bideford 4771.
- McKelvey & Birch, Limited**: Gas Water Heaters and Gas Stoves. 1111 St. John St., Kingston, Ont.
- W. H. Thorne Co., Ltd.**: Bathroom Fixtures. Beautiful and Sanitary. 1111 St. John St., Kingston, Ont.
- Brousseau & Frere**: Modern Plumbing. 387 St. Paul St., P.O. Box 100.
- Taylor Bros.**: A Shower For Health. 381 Colborne St., Brantford, Ont.
- Hamilton & Stott**: When Planning Your Home. 400 Talbot Street, Toronto.
- R. Chestnut & Sons, Ltd.**: TIGHT JOINTS. 1111 St. John St., Kingston, Ont.
- E. Lawrenson**: PLUMBING! 387 Prince St., Kingston, Ont.

Some advertising which may offer some helpful suggestions to others in the trade is shown above. Erskine, Smith & Co., Ottawa, advertise "Our Hobby is Good Work Only," which points out that the firm concentrates on plumbing and heating work, using best materials and honest workmanship. It states "this is time to discard that zinc bath tub and let us install sanitary enameled ware." McKelvey & Birch, Ltd., Kingston, Ont., advertise gas water heaters and stoves. The ad. by W. H. Thorne Co., Ltd., St. John, N.B., is devoted to bathroom fixtures and reads "On the fixtures depends the attractiveness, convenience and completeness in the sanitary arrangement of the modern bathroom. Our complete line of fixtures is fully abreast of every requirement." Brousseau & Frere, Quebec City, advertise "For the plumbing, heating and radiation of your home or improvements to existing systems it will pay you to place your work with an experienced and resourceful firm." Under the heading, "A Shower for Health," Taylor Bros., Brantford, Ont., say, "Doctors say that the morning shower bath contributes in no small measure to one's health and immunity from colds and disease. Why not one of our showers in your bathroom?" The ad. by Hamilton & Stott, St. Thomas, Ont., points out the necessity of considering health first in planning sanitary installations. The ad. by R. Chestnut & Sons, Ltd., Fredericton, N.B., emphasizes the necessity of tight joints, showing that careful threading and fitting are features of the firm's pipe work which are distinct specialties. E. Lawrenson, Kingston, Ont., advertises the greater enjoyment which comes from home life where the best fixtures are in use.

This view of a Toronto plumber's showroom indicates the attractive appearance which can be secured by devoting a little attention to the arrangement and furnishing of the display. Enameled ware in an extensive array is shown, with medicine cabinets, toilets, mirrors, etc., down one side and laundry tubs and fixtures along the other. The office is at the rear with special facilities for discussing business with prospects and making estimates.

TELEPHONE AT BATHTUB, A NEW IDEA IN HOTELS

For years hotels have been competing with one another to provide the ultimate in a guest's comfort. But it is only recently that anyone had enough imagination to think of anything so sensible as a telephone extension in the bathroom. What is more annoying than to have to get out of the bathtub all dripping and stand by a wall telephone? One hotel has two telephones in each room, one by the bathtub and the other on a stand by the head of the bed. Excellent places for phones, but think how long it took for hotel men, even hotel men with the best of intentions, to quit putting them on the wall where a guest can't even sit down. For that matter, it is not many years since phones in private homes were placed where one could talk and be comfortable all at once.

SANDWICH COUNCIL PLANS BIG SEWER TO SERVE SOUTHEASTERN SECTION

Windsor, Ont.—The tender for the laying of a sewer in the southeastern portion of the town of Sandwich was awarded to the firm of Merlo, Merlo & Ray, at a special meeting of the Sandwich council. The by-law authorizing the work was also passed, and the sewer will be started at once. The successful bid was \$143 871, and the new sewer will

supply Askin Boulevard, Partington Avenue, Craigh, Randolph streets and Rankin Avenue, and several other streets in the southeastern district.

The plans of the new sewer provide

for drainage for the section of the town bordered by the town limits on the east and on the south, and as far west as the Huron Line. This work will only be completed as required.

By-law Which Allows Installment Payment of Sanitary Conveniences in Peterboro

SANITARY ENGINEER has secured a copy of By-law No. 2,425 of the City of Peterborough, concerning the authorization of the Local Board of Health to install sanitary conveniences. This by-law reads as follows:

PASSED THE 2nd DAY OF NOVEMBER, 1922.

The Municipal Council of the Corporation of the City of Peterborough enacts as follows:

1. Where the Local Board of Health of the City of Peterborough recommends to the Council that sanitary conveniences should be installed in any building, and is of the opinion that the owner of the premises is unable to pay the expense of the same at once, and where the said Board directs that the cost, including interest at six per centum on the deferred payments, be paid by the owner in equal successive annual payments extending over a period not exceeding five years and that such annual payment be added by the Clerk of the City of Peterborough to the collector's roll and collected in like manner as municipal taxes, the Council may, by resolution, install suitable sanitary conveniences at the expense of the owner as herein set forth and according to the Public Health Act, Chapter 218, R.S.O., 1914, and all amendments thereto and authorize the Treasurer of the City of Peterborough to pay the cost thereof on the order of the said Board.

(Sgd.) W. H. TAYLOR, Mayor.

(Sgd.) S. R. ARMSTRONG, Clerk.

I certify that the foregoing is a true copy of By-law No. 2,425 of the Corporation of the City of Peterborough passed by the Council thereof at a meeting held November 2nd, 1922.

(Sgd.) S. R. ARMSTRONG, City Clerk.

Pure Water Lowers Death Rate

A STATISTICAL record of water purification issued by Norman J. Howard, bacteriologist in charge of the Toronto filtration plant laboratory, is remarkable in three respects: 1. Its revelation of the increasing vileness of the raw water supply. 2. Its testimony as to the efficiency of filtration plus chlorination. 3. Its proof of the consistently excellent tap water which Toronto enjoys despite the yearly greater contamination of Lake Ontario.

In raw water for the slow sand filters, only 18 per cent. of the cubic centimeter samples showed the presence of B. Coli, the danger signal, in 1912. This percentage grew steadily until it reached 40 per cent. in 1918, 53 in 1919, 60 in 1920 and over 72 in 1921. The average number of bacteria per cubic centimeter developing in tests of the raw water in 1914 was 103.53. In 1918 it was 356.30; in 1919, 715.11; 1920, 724.51; 1921, 1,036.49.

But despite the growing impurity of the Lake Ontario supply, the tap water has been uniformly good. The filters have reduced the bacteria count by the following percentages:

	Slow Sand Filters	Drifting Filters
1914	96.9	—
1915	99.5	—
1916	98.9	—
1917	98.7	—
1918	99.1	85.4
1919	99.7	95.3
1920	99.6	93.9
1921	99.5	95.2

These figures are a great tribute to the slow sand filters installed many years ago by Mr. Allen Hazen, of New York, and violently criticised in certain circles as inefficient before they had been given a chance to prove themselves. It was even said that they were falling to pieces as soon as built. But they are still on the job and removing over 99 per cent. of the bacteria.

Chlorine removes the remainder. Mr. Howard says: "Treated water examined in 100 c. c. shows almost complete sterilization in the winter months, while in the summer occasional 48-hour fermenters occur, which persistently fail to confirm out."

The result of pure water (plus pasteurization of milk which has been enforced since 1915) is seen in the reduction of the

typhoid death rate. It averaged 18 per 100,000 in the years 1910-1914 inclusive. It has averaged only a little more than 3 per 100,000 from that time onward. And this despite an abnormal annual increase in the pollution of the raw water, a pollution which Mr. Howard thinks "will go on increasing as long as Lake Ontario is regarded as the normal receptacle for the discharge of putrescible matter."

* * * *

Justice to Plumbers

IT IS comforting to sanitary engineers to note that some of the more thoughtful individuals in business and social life are coming to a higher appreciation of the importance of this industry. In a recent issue of Commerce and Finance, the following laudatory remarks are given:

"A Boston journal speaks eloquently and, it must be said, persuasively in defence of the plumber. It points out that in plumbing, as in many lines of endeavor to-day really skilled craftsmen are hard to obtain, and that it is too much to expect that for every small household job the master plumber should always be available.

"Were he to undertake personally every piece of work ordered the business could not be carried on. Plumbers as a rule are reasonably prompt; the call for a household job is usually a hurry call and it is of importance that it be done quickly. One should not expect the head plumber for every leaky faucet or frozen pipe.

"As for the profits in plumbing, it is pointed out that there is many a small plumbing contractor who clears but \$50, including pay for his own time, on the work that goes into a six or eight-room house. The business suffers from periods of acute depression, or idleness, and of course its volume falls off when such protracted times of let-up in domestic building occur as that we have witnessed in recent years.

"Especially in regard to the inherent and justly famous proclivity of the plumber to go back for something does the editor urge fairness in criticism. One has but to glance at a plumbing supplies catalogue to get an idea of the bewildering extent and variety of the things needed to make a house really and completely modernly plumbed. No workman can be expected to carry a hardware store on his back every time he comes to fix one's sink or restore the normal current of affairs to one's bathroom. It is asking too much to look for a 1,000 page catalogue incarnate in a pair of overalls and a kit.

"Therefore we again extend to Mr. Gawthrop and the great plumbing industry our acknowledgment of the high utility, public spirit and ethical standards of their craft. To our earnest readers we pass along this plea for fair treatment. Boston has presumably more busted water pipes and plumbing troubles than we, for the atmosphere and the people are both colder there.

"We look forward to retiring some day to our farm. There are many things indispensable to preserve the essential note of simplicity, but of all these there is one vital, essential and pre-eminent. A farm to retire to may be without ducks, horses, cows, ice-house, shady lane, corn-crib, silo, tester, Department of Agriculture bulletins or an orchard, but there is one thing it must have and that is Modern Plumbing.

"This is true not only of a farm, but of a house, apartment, cottage, flat, bungalow, pyramid, community centre and any and every kind of place, dwelling, residence, abode or habitation where one would lead a life happy and civilized."

Our ancestors only bathed when they thought it unavoidable, but advertising has sold us a daily habit. Is it now to sell us on substitutes therefor?

Profitable Field for Plumbers' Efforts In Connection With Industrial Hygiene

Toronto Plumbing Inspectors Find Unsanitary Conditions Affecting Efficiency of Workers in Many Industrial Plants—Unused Closets With Traps Dried Up Are Emitting Sewer Air—Plumber Should Discourage Use of Handymen Meddling With Plumbing Work

By J. W. TROTTER, Inspector of Division of Housing and Industrial Hygiene, Toronto

I HAVE been honored with the request to give some information on what has been done in connection with the Division of Industrial Hygiene in Toronto.

In 1914 this division was organized in connection with the Division of Housing and in 1918 I was transferred from the Division of Plumbing and Drainage to the Division of Housing and Industrial Hygiene. At the present time there are two plumbing inspectors, Mr. Norris and myself, investigating conditions in the different industries, of which there are over 2,000 in the City of Toronto.

An inspector, in addition to plumbing and drainage work, has to take into consideration all conditions in the several industries which are likely to affect the health of the workers, such as gases, chemicals, trade dusts, lighting, ventilation, temperature, air space, overcrowding, expectoration, etc., and unless an inspector knows something of these different conditions, he is at a disadvantage. It requires considerable study to make one's self efficient in questions such as these.

I wish, however, to confine my remarks to general plumbing work in connection with the work of our division.

Plumbing Has Become Faulty

In dealing with the question of defective plumbing and drainage, I wish it to be understood that in our division we deal principally with plumbing which has been installed at one time in proper manner, but through the work of some handy man, probably an engineer or caretaker, the work has been made faulty, and in many cases positively dangerous to health, as you will readily perceive. As to work in factories that are closed up between the hours of starting and the hours of stopping work, breathing the foul odors from the unclean bodies of workers, the escape of gases in soil and vent pipe and other trade smells to say the least, it cannot be healthy.

The vitality of the worker is lowered by these conditions to the point where he or she is liable to contract any or all of the diseases which attack a weakened or run down constitution. This is why Toronto is endeavoring to try and have the plumbing work, with its waste and

vent pipes, kept in proper repair as well as to see that proper light, fresh air and fresh water is given to those whose lot it is to work in such places. While I am particularizing some of the bad cases found I don't want it to be understood that all our factories are unsatisfactory, for let me tell you we have in Toronto some very fine employers who try and do succeed in having every comfort and convenience, and are constantly trying to make the lot of the workers as pleasant as possible consistent with their work. We have some factories with specially fitted wash rooms, with lots of hot and cold water, and lunch rooms, everything in their surroundings clean, and they not only do that but they supply hot tea and coffee with milk and sugar at cost, and sometimes less than cost to the employees, rooms warm and comfortable so that the employees may enjoy their lunch away from bench and machines. Those are the ideal ones; the ones I

speak of are the ones we have trouble in getting the work made right.

Plumbing Done by Inexperienced Men

Every employer should be discouraged in allowing handy men to do plumbing work. These men instal sinks, basins, etc., using all manner of material as waste pipes. They undoubtedly get rid of the waste water but they take no precaution against the syphoning of traps, thus admitting sewer air into the building.

In one instance a factory was found where one of these men had installed several sinks. He had constructed traps of urinals with black iron and fittings, and run the waste pipes to soil pipe stacks or rain water leaders, whichever happened to be the most convenient. However, this fellow showed a little intelligence in this way, he had extended a half inch pipe from the crown of his

(Continued on page 36)

It is in connection with such conditions as that illustrated here that the chief advantage of work along the lines of industrial hygiene can be demonstrated. The plumber has a broad field opened to him by conducting educational activities among the industries located near him, along the lines suggested in this article.

News Notes From Coast to Coast

Doings in the Plumbing and Heating Industry

NEW FIRM

Port Arthur, Ont.—Hugh McCrae has commenced a plumbing business here.

OBITUARY

Winnipeg.—John Murray, contractor, who constructed Winnipeg's first system of waterworks in 1881, died last night, aged 82.

Charles A. Sargent, Western manager for Darling Bros., Ltd., Montreal, died in Chicago while on a business trip. At the age of 14 Mr. Sargent commenced with the above firm, and remained with them until time of death. He was 44 years of age, and for the past twenty years resided in Winnipeg. Apart from being well known in business circles he was also prominently identified in sports.

TORONTO PLUMBERS ELECT OFFICERS

At the annual election meeting of the Toronto Brotherhood of Steamfitters and Plumbers held in the Labor Temple, the officers of the present year were re-elected, as follows: President, George Holtby, Financial Secretary, Storey Gordon; Business agent, Stewart Richardson; Recording Secretary, Alexander McBain.

SEAFORTH PLUMBER CELEBRATES GOLDEN WEDDING

Seaforth, Ont.—Mr. and Mrs. Sidney N. Jacobs celebrated their golden wedding anniversary here, and were the recipients of numerous gifts. Their home was filled all day long by friends. They were married in Seaforth on Christmas Day, 1872, by the late Rev. C. E. Lavell, and have lived here ever since. Both are in splendid health and quite active. Mr. Jacobs is a tinsmith and plumber, and although 78 still works at his trade.

CANADA PIPE AND STEEL CO. SOLD TO CRANE LTD.

Canada Pipe & Steel Co. Ltd., (Cluff Bros.) Toronto, have decided to discontinue their plumbing supply business, which they have operated for the last fifteen years at 85 Church Street, Toronto, and have sold the same to Crane Limited, to take effect January 1st, 1923. All orders on the books for delivery after January 1st will be filled by Crane Limited. Messrs. R. J. and W. J. Cluff, will in the future confine their efforts to manufacturing only, through Galt Brass Company, Limited.

CHANGE STRATFORD SEWAGE DISPOSAL PLANT

Stratford, Ont.—Certain changes are about to be made in the local sewage disposal, the plans for the proposed alterations having been approved and submitted to the Provincial Board of Health. These it is expected will be satisfactory and beneficial to all concerned.

MONTREAL MASTER PLUMBERS ELECT OFFICERS

Montreal.—Officers of the Master Plumbers' Association of Montreal for the coming year were elected at the annual general meeting of that body as follows: President, George E. Delaney; 1st vice-president, J. A. Francoeur; 2nd vice-president, J. Griffin; chairmen, sanitary committee, W. W. Hughes; arbitration committee, O. Caron; legislation committee, J. St. Amand; apprentices committee, J. Buchan; convenors, audit committee, W. G. Borland; trustees, J. A. Gordon; hon. secretary, J. A. Belisle; secretary, David K. Trotter. The report from the principal of the Technical School regarding plumbing and steamfitting classes recently inaugurated there showed 34 French and 20 English-speaking students, good attendance and satisfactory progress.

WAR AGAINST PLUMBING PRICES, FORT WILLIAM

Fort William, Ont.—Fort William has opened battle on plumbing prices and whatever forces lie behind their alleged maintenance on an abnormally high level, whether for equipment or work. Following the appointment of a special committee of the city council, a meeting was held, with plumbers and builders in attendance, at which the committee practically decided upon a course of action which will leave the door wide open for any person to engage in the plumbing business.

So long as the ordinary health of the city is guarded, no handicap will be placed in the way of plumbing installations of any kind. City regulations will be amended and licenses hitherto granted to master builders abolished, if the council approves the committee's proposals. Carrying the fight further afield, the committee intends finding out why fixture prices are held so high by factories and jobbers.

CRANE LIMITED TO OCCUPY NEW PREMISES

Crane Limited, Toronto, expect to occupy, by January 1, 1923, their new three-storey office and warehouse, Front St., West, which is to cost \$125,000.

GO AHEAD WITH SEWERS

Bridgeburg, Ont.—Fort Erie ratepayers at the January election will vote on a by-law authorizing the council to sell debentures for \$45,000 for a sewer disposal works, sewer pumping plant, force mains and the acquirement of necessary lands for the disposal works.

Actual sewers will be installed on the frontage-tax plan as the abutting property owners petition for them.

Plans for building a sewer system for the entire village, including the Garrison road and the Old Fort district, are complete.

SEWER WORK PROGRESSES

St. Thomas, Ont.—The construction of the storm sewer outlets in different parts of the city, in accordance with the plan for relieving the overloaded sanitary sewers recommended two years ago, is well under way, a gang of about 25 men being engaged in installing the East Wellington section off Fifth avenue. The work is providing employment for about 20 extra men in addition to the regular employees of the Board of Works Department. With favorable weather prevailing, it is expected that the work will be continued well into 1923.

PREFER DAMAGED TANKS TO INTERFERENCE WITH WATER

Fort William, Ont.—No city of its size, larger or smaller, anywhere has a water supply which in its relations to requirements renders more effective and efficient service than does the system owned and operated by the city of Fort William. The annual consumption approximates 1,093,000,000 Imperial gallons.

This water system was one of the first things that Fort William set out to do in a big way and it was one municipal venture which turned out to be 100 per cent. perfect.

The water is absolutely pure, so pure in fact that in order to slow up corrosion of galvanized water tanks a suggestion has been made that foreign matter be deposited in the forebay in order that sedimentary lining be provided for the tanks. The suggestion has not been received with any great outburst of popular applause as the public generally seem to prefer absolutely pure water to long-living water tanks.

Letters to the Editor

Dear Sirs:—

Would you please send me a copy of April 1st, 1922, issue of Sanitary Engineer. I understand that there is an article in this particular issue by Mr. Murray, of Saskatchewan, on some tests made for determining the temperature in septic tanks. I would be greatly obliged if you could send me a copy of this particular issue.

(Prof.) R. R. GRAHAM,
Ontario Agricultural College, Guelph, Ont.

Dear Sir:—

As a consistent advertiser in, and reader of, and contributor to your magazine, I wish to enter a protest against an article entitled "Big Opportunities Being Overlooked," which appears upon the first page of your December 1st issue. Whoever your correspondent is he either shows absolute ignorance of rural sanitation and water supply or has been so absurdly misquoted that his "Message to Garcia" has been made a burlesque. As those who live outside of the big cities know, there are many municipalities of no mean size which have a water supply but no municipal sewage system, and many more which have neither. This makes the question of sewage disposal an individual problem rather than a municipal one. If your correspondent is really in the plumbing supply business as you assert, how does he expect to sell his product in those localities "where water facilities are now available," and which he describes as "the cream of all business for the plumber," when he knocks the only system which makes plumbing installations possible in these centres? Furthermore there are thousands of rural schools being built and equipped, besides magnificent suburban homes. How would he handle these?

It is depressing as well as surprising that a man who poses as an authority comes out with the statement that while the present tank systems for sewage disposal adequately meet to-day's requirements, they are not as desirable in the interests of public health as a modern waterworks system. Of course a septic tank is not conducive to public health if it is used as a source of domestic water supply! We cannot recommend the effluent as a beverage—we positively cannot. A prominent Detroit engineer claims that the composition of toilet paper lends itself readily as a base for home-brew—but we beg to pass. Yours truly,

L. L. ANTHERS.

PROFITABLE FIELD FOR PLUMBER

(Continued from page 13)

neatly constructed traps around the rim of the sinks and left the end open. In doing this he was trying to prevent his traps from syphoning, but he was also leaving a half inch pipe wide open which was connected to the sewer side of the trap. In several fixtures steam traps were found discharging from soil pipes. This is bad practice as expansion and contraction caused the lead-in joints in a very short time to get out of place.

Unscrupulous Plumbers

It is most essential that plumbers should co-operate with the health department in every respect in order to get the best results. Unfortunately a

few instances have been found where plumbers have shown carelessness in their work, or were trying to save a few dollars in material. One rather glaring case was found recently where a Y had been cut into a rain water leader and sink installed but no precaution had been taken against syphoning of trap, by placing a vent pipe in the same.

Loose Closet Bowls

Many closet bowls were found loose at the floor, caused by the screws at the front corroding. These screws should certainly be of brass or rust-proof metal. If the bowl works loose on the floor it not only admits sewer air but the movement of the bowl causes the flush connection to leak and keep the lavatory floor wet and unsanitary.

Open Waste and Vent Pipes

It is remarkable the number of open waste and vent pipes found. An inspector has to trace the plumbing very carefully, especially in some of the old buildings that have been reconstructed several times to suit different tenants, or he will miss a lot of the defective work.

Unused Plumbing Fixtures

Too much lavatory accommodation is often a fault. In some buildings we found lavatories containing several closets were being used as storage rooms, closet bowls were covered up with stock, traps absolutely dry from evaporation, and admitting sewer air into the building, later to the lungs of the worker. This proves that any plumbing fixture which is not in constant use should be removed and the openings sealed.

Urinals

All urinals should have automatic flush, self-closing valves. Any device that must be operated by hand is unsanitary. Most people hesitate to take hold of a valve over a urinal because they realize a previous person infected with disease would probably leave infection there. The result is that the urinal is very seldom flushed.

Breathers and Breather Caps

A great many air inlet caps are found missing. In the majority of inlets where caps are missing they are choked with rubbish, most likely put there by children. The air inlet in use to-day can certainly be improved.

Drinking Bubbles

Unless the water pressure is good and strong, bubblers are not sanitary. One place was found where the water was just rising about an inch over the opening. A boy came along and placed the nozzle in his mouth, and was able to drink the water as fast as it came. Now if the pressure had been stronger, he would not have been able to keep his face down to the water.

Tourist (in village notion store)—Whaddya got in the shape of motor car tires?

Saleslady—Funeral wreaths, life preservers, invalid cushions and doughnuts.

* * *

"No, sah, Ah don't never ride on dem things," said an old colored woman looking in on the merry-go-round. "Why, de other day I seen dat Rastus Johnson git on an' ride a dollah's worth an' den git off at the same place he started at. I says to him, 'Rastus,' I says, 'yo spent yo' money, but whar yo' been?'"

* * *

"Then, when you have finished your lecture," said the professor of elocution and deportment to young Dulle, "bow gracefully, and leave the platform on tiptoe."

"Why on tiptoe?" queried Dulle.

"So as not to wake the audience," replied the professor.—Judge.

* * *

A red-headed boy applied for a job in a butcher shop. "How much will you give me?"

"Three dollars a week; but what can you do to make yourself useful around a butcher shop?"

"Anything."

"Well, be specific. Can you dress a chicken?"

"Not on three dollars a week," said the boy.—Life.

* * *

Dibbs: "Where are you going in such a hurry?"

Gibbs: "To the police station to get a warrant for my wife's arrest."

"On what charge?"

"Rocking me to sleep."

"You can't have your wife arrested for that."

"Can't eh? You should have seen the rock!"—Exchange.

* * *

"You look like an idiot," thundered the disgusted man to his swell son, just returned from college. "You grow more and more like a conceited, hare-brained, helpless idiot." Just then an acquaintance of the old gentleman entered the office and saw the youth.

"Hello, Charlie, back eh!" exclaimed the visitor. "You're looking more like your father every year."

"Yes," said Charlie, "that's just what the governor's been telling me."

APPRECIATES HELP OF "SANITARY ENGINEER"

J. P. Ibbotson writes to Sanitary Engineer stating that the outlook for sanitary work in the rural districts in the next few months is fairly good. Farmers are said to be more disposed to invest in sanitary equipment. He finds that personal work in encouraging the replacement of worn equipment brings good results. He states that his biggest problem to-day is in connection with collections.

Concerning Sanitary Engineer Mr. Ibbotson states, "I like the paper and appreciate the help it gives. The articles now being published on Rural Sewage Disposal are excellent, so are those on pattern cutting."

TAP THREE SOURCES FOR WATER SUPPLY

Montreal.—Such is the quantity of water required to carry on the business of the Mount Royal Hotel, that three sources of supply have to be drawn on to meet the demand. Water is taken from the high pressure and also the low pressure mains of the city of Montreal, besides which the hotel is equipped with an artesian well, 950 feet deep, from which 8,000 gallons per hour can be drawn.

The diameter of this well is ten inches. A 10-inch steel casing with a drive shoe was inserted from the surface of the ground 12 feet into the bed rock for the purpose of casing off the 34 feet of clay and 11 feet of hardpan and surface waters encountered. The 10 inch well was drilled through 850 feet of chazy, trenton, and calciferous limestone rock.

From two water veins encountered at 362 and 855 feet a supply of 7,200 gallons of pure water per hour at a temperature of 52 degrees Fahrenheit was pumped, maintaining a level of 133 feet from the well top. The water is delivered by means of No. 7 type V. A. Imperial air lift supplied from two 12 x 10 air compressors, the one for service operation being electrically driven and the one for reserve having steam drive.

From all these sources, cold water is pumped or forced by the operation of the law of gravity, to two 10,000 gallon storage tanks on the roof, with a horizontal overhead distribution main delivering water to all fixtures throughout the building. All water for general house purposes is filtered by a battery of filters, and water for laundry purposes is treated by a water-softening plant.

Drainage water from the basement and boiler room is pumped to the sewer by three ejector pumps. The combined capacity of these three ejectors is 850 gallons a minute. Five hot-water heaters supply hot water, with a combined capacity of 19,000 gallons per hour. Exhaust steam is being largely used in supplying the heat for these heaters.

Use of Trade Acceptances is Extending

To Avoid Losses and the Husbanding of Funds, Trade Acceptances Replacing Open Accounts in Many Instances—Book Debts Have Caused Much Trouble in Assignments

TO AVOID losses in most cases, and a desire to husband funds in others, are the material factors in spreading the movement in the Dominion in favor of trade acceptances with a consequent abandoning of open accounts. It is rather surprising to find the number of firms using this method of doing business to-day and also the percentage that have been employing it for years. Out of a large file of letters giving views on the efficiency of trade acceptances over open accounts, not one argued against the proposal, while many offered reasons and arguments in favor.

Recently the Canadian Credit Men's Trust Association of Winnipeg, focused attention on the matter by sending a plea to many business organizations for assistance and co-operation in increasing the use of trade acceptances, drafts and bills of exchange, in commercial transactions and to decrease as far as possible the system of open accounts.

One of the main arguments in favor of such a move is that the Bankruptcy Act of 1921 made null and void general assignment of book debts as against the trustee in bankruptcy, except in provinces where there is provision for registration. The draft or bill of exchange is, therefore, advanced as a legal admission of liability when accepted by the customer, whereas book debts have in the past proven the subject of never-ending disputes.

The Canadian Manufacturers' Associa-

tion took the matter up with its membership and received quite a general response in the way of letters. To these might be added the views of some bankers. One of the latter stated that the time was coming when drafts and bills of exchange will be almost exclusively used. Many industrial heads of the Dominion stated that they were reluctant now to carry an open account for any firm and did not do so if they could possibly avoid it.

"As a young concern we found it very inconvenient to have large sums tied up in open accounts," wrote one maritime firm. He said it was found to be the only proper method of settlement and enabled them to get along much better on their limited capital.

An old banker, now the head of a large industrial organization, declares that he long realized the great benefit of trade acceptances. He never encouraged open accounts. His main reason for this was that they caused a great portion of the business losses of the day.

One Montreal miller declares that he has not kept an open account for some time and declares that to-day all milling sales are subject to either draft or note.

The one stumbling block discovered relates to the stamps on bills of exchange. Some of the business men fear that they would lose considerably on unaccepted paper. However, there is a movement in this regard in co-operation with the larger one. It is to have the stamps payable only once. The details of how it is proposed to work this out have not yet been advanced.

MAKES A REPORT ON SANITATION

Ottawa.—During the year just closing greatly improved conditions existed in Ottawa along sanitation lines, according to the 22nd annual report of Chief Sanitary Inspector G. O. S. Laflamme. Only 19,464 calls were dealt with, as compared with 23,420 the previous year.

"It is unfortunate," he states, "that the progress which had been made during the last couple of years in reducing the number of privy vaults should have been interfered with this year, through the granting of permits in the west end of the city. In the majority of cases these privies are isolated from the sewerage system. I would respectfully submit that in future no such permits be granted without the authority of the medical health officer, and that it be understood that, where at all possible, the privies must be connected with the sewage system."

GEORGE E. DELANEY
Elected President Montreal Master
Plumbers' Association for 1923.

Market Conditions and Tendencies

Price Trend on Sanitary and Heating Supplies

ALTHOUGH several price developments in the sanitary and heating markets are apparently anticipated during the opening weeks of the New Year, the number of revised quotations at the present time is somewhat limited. This is commonly attributed to the influence of the holiday atmosphere in the markets. A much firmer undertone is apparent, however, especially in certain

basic elements which contribute towards maintaining current levels on many manufactured plumbing lines. The degree of improvement recently outlined in the asbestos market continues, and quotations have firmed up to more uniform levels on comparative centres. The ad-

vance of one dollar per ton in pig iron indicates a reversal of the former price trend. Radiator valves are now generally quoted at the discount level of 58 per cent., as briefly outlined in the last issue. Cotton wastes continue at the revised levels, but decided firmness is recorded. That some price developments may materialize on closet outfits is the opinion prevalent in the trade, while similar rumors are noted with regard to cast iron fittings.

Montreal Markets

MONTREAL, December 30.—Although actual price changes are fewer on the current markets for plumbing and steam-fitting supplies, developments on primary markets attract attention. Following a continued slump in pig iron prices for some weeks past, quotations are now advanced one dollar per ton. This upward tendency is looked on by some as the turning point, and a firmer tone from now on will be displayed. There is still a strong undertone in cotton waste prices, and higher prices are looked for in some quarters early next month. Wrought iron and steel pipe is in a firm market position, and other lines of iron and steel products, such as sheets and bar products, show a strengthening tendency. Valves and bibbs are unchanged in price, and although this market is described by most manufacturers as steady to firm, there is still a feeling in some quarters that slight revisions will be announced early in the new year. Ingot metals are quiet, but firm in tone. Trade in most lines is quieter, although described as quite seasonal.

IMPROVED TONE IN BRASS AND COPPER PRODUCTS

Montreal.

With copper on primary metal markets displaying a firmer tone there is a strengthening attitude in such finished products as sheets, rods and tubing. Demand for these lines is also said to be fair for this time of year, and if anything a little better than in previous weeks. Quotations are unchanged and are described as steady at the following levels:

BRASS—	Base.
Rebate of 20 cents for empty bags.	
Sheets, base	0 24
Rods, base ½ to 1 in., round...	0 22
Tubing, seamless, base	0 30
F.o.b.	

COPPER—	
Rods, ½ to 2 in.	0 29
Soft sheets, plain, 16 oz. and heavier	0 30
Plain tinned, 16 oz. and heavier...	0 36
Polished, and tinned, 16 oz. and heavier, lb.	0 41
Tubing, lb.	0 41
Tubing, lb.	0 32
Above prices are full sheets and bars. Cut sheets and bars are 5c. per lb. higher.	

QUIET MARKET FOR MALLEABLE AND CAST FITTINGS

Montreal.

With the annual inventory period now practically at hand, there has been a noticeable slackening in demand for pipe fittings during the past week, and a quieter market is now anticipated for

the opening weeks of the new year. Although there is no definite indication of a change in prices, it is stated in some quarters that slightly easier quotations may appear on some lines next month. Present discounts are as follows:

PIPE FITTINGS—

Cast iron fittings	27%
Plugs, cast iron	27%
Do., solid	27%
Do., countersunk	27%
Bushings, cast	30%
Do., malleable	30%
Unions	45%
Flanged unions	27%
Flanged fittings	27%
Dart unions, black, ... 33	1-3%
Dart unions, galv.	13%
Nipples, ½ to 4", close and short	55%
Do., long	60%
Do., 4½ to 8", close and short	45%
Do., long	50%
Couplings, 4" and under	25%
Do., 4½" and larger	5%
Malleable Fittings—	
Piece list effective June 1st, 1922. Discount 70 per cent.	

HOLIDAY SEASON REFLECTED IN SCRAP MARKETS

Montreal.

Winter dullness, reflecting the holiday season, is evident in the local markets for waste materials, trade being generally described as very quiet. Accompanying this is a little weaker tone in some lines, especially yellow and red metals. Brass and copper showed a slight improvement when there was a better buying movement noted in recent weeks,

but interest has now subsided to quite an extent. Cast iron is also in a listless state, while steel scrap is reported as the steady material on the list. No changes in prices have been made, and following are dealers' average buying quotations:

SCRAP MATERIALS—

Automobile Tires ..	0 40
Rubber shoes ..	0 02½
Yellow brass	0 05 to 0 06
Red brass	0 08½
Light brass	0 04
Scrap zinc	0 04½
Lead, heavy	0 04½
Lead, tea	0 03
Light copper	0 08½ to 0 09
Heavy copper	0 11½
Wrought iron, R. Rd., No. 1 per gr. ton	11 00
Malleable scrap (ton) ..	9 00 to 10 00
Pipe scrap (ton) ..	7 50
Heavy melting steel	9 00 9 50
No. 2 busheling	3 00
Boiler plate	3 00 to 9 00
No. 1 machinery cast	20 00 to 22 00

MORE SATISFACTORY CONDITION IN IRON AND STEEL

Montreal.

A steady to firm attitude is again presented in the market for bar iron and steel products. Current business is only fair, and orders are for the most part small and of a sorting character, reflecting the usual condition at the present holiday and inventory period. As outlined in former reports, however, there is more interest showing for future, and forward deliveries are being made at to-day's prices. As in other iron and steel commodities, it is expected that bar products will show an improved market tone, with a steady to firm situation assisting in this direction. Local average quotations are as follows:

BAR IRON—

Common bar iron, 100 lbs.	3 15
Refined iron	4 65
Irish finish machinery steel	3 20
Mild steel	3 15
Single reeled machinery steel	5 25
Band steel	3 50
Spring steel	4 75 8 50
Sleighshoe steel	3 15
Tire steel	3 35
Harrow tooth steel ..	3 30
Toe caulk steel	4 05
Mining tool steel, per lb.	0 20½
Black Diamond tool and cast steel, per lb.	0 21½
NOTE—Refined iron is approximately \$1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.	

Band steel in scroll bundles, 50c per 100 lbs. extra.

FIRM UNDERTONE REMAINS IN COTTON WASTES

Montreal.

With current trade in cotton wastes continuing in seasonal proportions, a firm undertone remains in the market due to the improved tone in raw cotton circles. As outlined in a previous report a further revision upwards in prices would not be surprising after the first of the year. Prevailing quotations are:

COTTON WASTES—	Per lb.
Cream polishing	0 19
White, XXX extra	0 17
White, XX grand	0 16
White XLCR	0 15

Colored cotton	0 14

WROUGHT PIPE IS NOW QUIETER BUT FIRM

Montreal.

Although the movement of wrought iron and steel piping has recently slackened somewhat, this is only considered seasonal, and satisfaction with business during the past season is expressed. Producers again state that present prices are firm with a strong tendency in raw materials, deliveries on some of which are still slow. Quotations remain at list No. 57.

STEADY OUTLOOK IN SHEET MARKETS

Montreal.

Interest in the local sheet markets is still attached to prospects for the opening months of next year, and it is said that the New Year should open with quite satisfactory conditions in sheet circles. Manufacturers are in many instances behind in deliveries, which, in spite of the present quieter season, should greatly assist towards maintaining a steady market position. Another factor is the apparently steady basis on which sheets are placed for the first quarter, which has resulted in considerable business being placed for later delivery. Taken altogether importers and distributors anticipate a satisfactory market for the first half of next year at least. Average local quotations are unchanged as follows:

BLACK SHEETS—		
10 gauge, base	4 25	
12 gauge	4 35	
14 gauge	4 45	
16 gauge	4 55	
18—20 gauge	4 80	
22—24 gauge	4 85	
26 gauge	4 90

NO CHANGE IN VALVE AND BIBB QUOTATIONS

Montreal.

Current quotations on valves and bibbs are unchanged, and while the market is described as steady in most quarters, there is still a feeling among some that minor revisions on certain lines will be made early in the new year. Recent minor fluctuations in raw materials have apparently not materially affected the market for finished products. Prevailing discounts are:

VALVES—

Compression work, standard	45%
Fuller work, standard	30%
Quick opening compression bibbs	43%
Bath cocks, quick opening	41%
Bath cocks, compression	41%

FIRM TENDENCY REMAINS IN RANGE BOILERS

Montreal.

Manufacturers and distributors of range boilers describe business as quieter, although fair for the time of year. Stocks in dealers' hands have been low, and remain so, thus demand while for small quantities has continued well up to the holiday season. There is a firm tone in the market owing to the strong tendency in raw material and other replacement costs, and following are list prices and discounts:

RANGE BOILERS—

5 Gallon	\$13.50
12 "	14.00
18 "	15.00
25 "	16.50
30 "	17.50
35 "	20.50

120 "	117.00
144 "	164.00
168 "	187.00
192 "	210.00

Std., less 40 per cent.; Ex. Heavy, 30 per cent.

SEASONABLE TRADE IN LEAD AND ZINC PRODUCTS

Montreal.

Quotations on lead and zinc products remain unchanged, with primary metals, which enter into their production, reported as steady to firm at higher levels recently reached. The movement of the finished products is seasonal, only a moderate amount of activity usually being in evidence at this time of year. Following are unchanged price levels:

LEAD AND ZINC PRODUCTS—

Lead pipe, per 100 lbs., up to 2"	14 00
Do., 2" to 8"	15 00
Do., 8" and over	16 00
Lead waste, per 100 lbs.	15 00
Note—Lead pipe is subject to a discount of 10%.

Do., wiping, lb.	0 22½
Do., wire, lb.	0 36
Zinc, sheets, casks	0 11
Do., broken lots	0 11½

KNIFE HANDLED WRENCHES AT HIGHER LEVELS

Montreal.

Through a revision in discounts quotations on W. & B. knife handled wrenches are advanced, and these are now less 37½ per cent. Coes' are quoted at 30 per cent. off.

BOILER TUBES MOVE IN SMALL QUANTITIES

Montreal.

Boiler tubes are only selling in limited quantities, and the market is described as quiet. Deliveries from the mills are a little slow but because of the quiet demand no shortage is felt. Quotations are unchanged at the following average prices:

BOILER TUBES—

	Seamless	Lapweld
1 inch	20 00
1¼ inch	22 00
1½ inch	21 00
1¾ inch	24 50	24 00
2 inch	21 00	19 75
2¼ inch	24 00	22 25
2½ inch	27 00	23 25
3 inch	33 00	29 50
3½ inch	38 00	34 25
4 inch	49 00	43 50

MODERATE TRADE IN SOIL PIPE AND FITTINGS

Montreal.

Current trade in soil pipe and fittings is now said to be of moderate proportions, although fair for this season of the year. Regarding the undertone of the market for these products a local manufacturer stated that they were watching more recent developments in the pig iron market with interest, and

while the advance in prices last week was of a minor nature, it may mean the turn to a stiffer market which would directly reflect on products such as these. With pig iron continuing to show recessions their products were placed on an easier market although supplies on hand were sufficient to carry them over the present quieter period. It was now very problematic what existing values would be when they were again in the market for raw material. Unchanged quotations are:

SOIL PIPE—

2 and 3 inch	35%
4 inch	35%
5 and 6 inch	35%
8 inch	net

FITTINGS—

2 to 6 inch	45%
8 inch	net

QUIETER PERIOD NOW EVIDENT
IN CORRUGATED

Montreal.

Following a quite satisfactory movement in corrugated sheets up to the present time, there is now a slackening in sales with the appearance of the holiday season. Quotations on these products are unchanged and the market is again described as steady. Following are list prices and discounts:

CORRUGATED SHEETS— Per 100 Sq. Ft.

No. 28 gauge	6 50
No. 26 gauge	7 00
No. 26, U. S. gauge	8 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50
Less 10 per cent.	
Lighter than 24 gauge and wider than 27 inches, 75c. per square extra.	

STEADY TONE NOTED IN ASBESTOS PRODUCTS

Montreal.

Notwithstanding a little quieter demand in asbestos products, and higher price levels recently announced, a steady to firm undertone is still noted in the market. Trade in pipe and boiler coverings has slackened during recent weeks, but there is a fair amount of activity reported in magnesia coverings, and slower deliveries also add to the firmer tendency on this product. Following are unchanged quotations:

ASBESTOS PRODUCTS—

	Off list prices
2 ply pipe covering	57 1/4%
3 ply pipe covering	55%
4 ply pipe covering	50%
85% magnesia	40%
	Per bag
Boiler covering	1 50
	Per 100 lbs
Asbestos sheathing	7 75 8 25

ADVANCED PRICES ANNOUNCED
ON PIG IRON

Montreal.

After a receding market for some weeks past, domestic pig iron prices are now advanced \$1.00 per ton. Although this marks a sudden reverse trend, this development does not come as any great surprise to some well informed, as the former level was recognized as well

down to bottom and with conditions in the steel industry promising well for the New Year it was thought improbable that prices would remain at levels recently announced. Reports from United States markets show that many consumers took advantage of the reduced prices and this was a strong factor in producing higher quotations. An advance of \$1.00 per ton is also announced this week in some quarters on these markets. Although local producers of steel products are sufficiently supplied with pig iron for the opening months of the new year at the present ratio of operation, stocks are by no means heavy and a trade revival would place them in the market for pig before many weeks pass. Present local quotation is \$34.15 per ton.

SEASONAL DEMAND NOTED IN
ENAMELED WARE

Montreal.

Enameled ware continues to move in fair seasonal volume, although the holiday period has produced a quieter market during the past week or so. No change is made in quotations, and following are list prices with discount of 33-1/3 per cent.:

ENAMELED WARE—

Sinks, roll rim—	
18 x 30	\$23 00
Sinks, flat rim—	1 only 2 only 3 only
16 x 24	\$ 7 50 \$ 7 40 \$ 7 30
18 x 30	8 70 8 60 8 50
20 x 30	9 90 9 80 9 70
Bath tubs, roll rim, 4, 4 1/2, 5 feet, 24 to 30 in. wide	51 40
Bath tubs, 5 1/2 feet.	57 10
Lavatories—	
17x19 in. Apron F139 or P4045	15 30
18x24 in. Apron F154 or P3847 or P3847	23 60
18x21 in. Apron F169 or P4205	17 60
17x19 in. Roll rim. F241 or P4345	12 60
Less 33 1-3 per cent.	

QUIETER TRADE IN CLOSET COMBINATIONS

Montreal.

Current trade in closet outfits, as in other enameled ware, continues on the quieter side. There is little or nothing new in the market, and quotations are nominally unchanged at following price levels:

CLOSET COMBINATIONS—

Low down outfits, each	25 00
Closet, standard outfit, oak	25 00
Do., post hinge seat	26 00
Do., oak vitro or Pussyfoot	26 00

White vitro or Pussyfoot with fittings, flush elbow and supply	15 65
Vitreous china tank with fittings, flush elbow and supply	19 00
Enamelled iron with fittings, flush elbow and supply	16 50

INGOT METALS ARE QUIETER BUT
CONTINUE FIRM

Montreal.

Ingot metal markets remain quite firm although there are certain evidences that the holiday spirit is prevailing. Copper is the feature of the market, this metal being particularly strong in tone, although there is no sign of weakness in any other lines.

TIN.—After showing a sharp advance in London the early part of the week tin re-acted slightly, but the tone is still firm and it is thought probable that higher prices will rule after the holiday period. The advance in sterling means higher prices on this side. Local price is slightly higher at 43 cents.

COPPER.—The situation on this metal has altogether changed during the past few weeks, and the tone of the market is very firm. Electro is quoted at about 14 1/4 cts., refinery, i.e., an advance of almost one cent in two weeks. London also reflects the improved tone on this side and export has picked up as well as local consumption. Market is firm here at 18 cts. for electro and 17 1/2 cts. for casting.

LEAD.—Another advance in trust price was recorded in the U. S. A. this week, while London also went to a higher level. Demand remains remarkably good and production is only about equal thereto. Local quotation 8 cents.

SPELTER.—East St. Louis has again re-acted on cessation of English buying, but it is thought that a seven-cent level will bring about a resumption of this, and further advances may follow. The statistical position of this metal remains good as supplies are still short and it will be difficult to increase production during the winter months. Local prices are firm from 9 1/4 to 10 cents.

ANTIMONY.—There is no particular feature to this market, but offerings from China are said to be fairly heavy and reasonable in price. This metal is undoubtedly cheap and it is thought only a question of time until an advance is made. Chinese is quoted at 7 1/4 cts., high grade English at 7 3/4 cts.

ALUMINUM.—Aluminum is firm in the U. S. A., but the market is quiet here with quotation unchanged at 22 cents.

Toronto Markets

TORONTO, December 30.—Only a minor number of price developments are recorded in the current plumbing and steam-fitting supply markets. A few revisions are evident, however, such as the higher quotations on certain asbestos products—which development was foreshadowed in earlier reports—and the fact that radiator valves are now generally being quoted at the discount level of 58 per cent. The recent increase in pig iron prices attracts attention in primary sources, this being a reversal of form as regards the prevailing price tendency in this direction. That there may be some revision in pipe fitting prices is the current impression in certain quarters of the trade, while the rumor is also prevalent concerning possible future revisions in closet outfits.

PRICES ADVANCED ON ASBESTOS PRODUCTS

Toronto.

As foreshadowed in a former issue of Sanitary Engineer, a revision has now been made in quotations on asbestos products. Discounts on air cell pipe covering have been reduced ten points, thus bringing higher price levels into effect on these products. Asbestos sheathing is likewise advanced, the new price being around eight cents per pound. Magnesia pipe covering also undergoes a similar revision, while boiler covering appears with an upward tendency. This revision is attributed to the firmer trend in primary markets, a condition previously pointed out. There is a shortage of asbestos fibre at production centres, and manufacturers state that under the present trend of the market, another advance might be expected should the upward movement continue in basic elements. Following are revised quotations:

ASBESTOS PRODUCTS—

Pipe Covering—	
Air cell, 4 ply	50 per cent. off list.
Air cell, 3 ply	55 per cent. off list.
Air cell, 2 ply	57½ per cent. off list.
Boiler Covering	\$1.50 — \$2.00 per bag.
Asbestos Sheathing	\$8.00 per 100 lbs.
Magnesia pipe covering	less 35 per cent.

PIG IRON PRICE IN SEE-SAW MOVEMENT

Toronto.

Following the recent reduction in pig iron prices of \$2.00 per ton, an advance has been recorded this week, which indicates the improved activity of the market as outlined in a former issue. The extent of the increase is \$1.00 per ton, this change bringing the prevailing quotation up to \$31.80. Brisk activity in placing contracts at the former level is described as leading to the current revision.

COTTON WASTES CONTINUE AT REVISED LEVELS

Toronto.

Quotations on cotton wastes are still holding at the recently revised levels, and while the opinion has been expressed in certain quarters that further upward movement might develop early in the New Year, up to the present no change of this kind has materialized. It is generally recognized, however, that prices are on a firm basis, and should raw cot-

ton continue to climb and this factor be reflected in cotton wastes, the opinion is expressed that additional slight increases would not be surprising. The following levels govern the local markets at present:

COTTON WASTES—

MAY BE REVISION IN CAST FITTING PRICES

Toronto.

Business in pipe fittings is stated to be just on a fair basis at present. While reports from certain distributors describe trade as "ordinary for this time of the year," others state that it is "not good." It is evident that there is no activity worth mentioning and not much is expected during the stock-taking period. That some revision may develop early in the New Year on cast iron fittings is rumored on the local market, slightly easier levels being said to be pending on account of anxiety in certain quarters to open up the market. Discounts in general remain unchanged at the following levels:

PIPE FITTINGS—

	Per Cent.
Cast iron fittings	27
Plugs, cast iron	27
Do., solid	27
Do., countersunk	27
Bushings, malleable	30
Do., cast	30
Unions, ¼ in. to 2 in.	45
Do., ¼ in., 2½ to 4 in.	45
Flanged unions, std.	27

RADIATOR VALVES NOW AT 58 PER CENT. OFF

Toronto.

Manufacturers and distributors record a fair volume of activity keeping up in brass compression goods. Trade for this time of the year is described as brisk, a condition caused generally by

recent building operations, and repair work. In conjunction with the current annual inventory period, the hum of activity in warehouses is therefore evidently reflecting these causes. Quotations remain unchanged, with the tone of the market steady. Raw materials have fluctuated within narrow limits, but no marked developments have been recorded. Radiator valves are generally quoted at 58 per cent. off, as a result of the unsettlement referred to in recent market reports.

MALLEABLE FITTINGS—

New piece list, effective June 1, 1922.
Discounts, Classes, A.B. and C, less 70 per cent.

SATISFACTORY TRADE IN SOIL PIPE AND FITTINGS

Toronto.

Business in soil pipe and fittings is described as keeping up remarkably well for this time of the year. A brief review of trade during 1922 indicates that the volume of business has been of a more satisfactory nature, with good prospects ahead for the coming year. Prices remain on a firm basis, with little likelihood of change at present. While the current pig iron market is at easier levels than formerly, it is pointed out that existing quotations are no lower than was the case early in the fall when a revision in soil pipe discounts was put into effect. With raw materials generally showing a firm trend and with labor costs on an equal basis, it is stated that production costs hardly permit of downward revisions at this time. Current quotations follow:

SOIL PIPE—

2 inch	Less 33 1-3%
3 inch	Less 33 1-3%
4 inch	Less 33 1-3%
5 and 6 inch	Less 33 1-3%
8 inch	net

FITTINGS—

2 to 6 inch	Less 45 per cent.
8 inch fittings	net.

SPASMODIC TRADE NOTED IN BOILER TUBES

Toronto.

Current trade in boiler tubes is now stated to be of a spasmodic nature. The improvement in volume which was formerly recorded has now subsided somewhat, although fluctuations in the amount of business are more or less evident. Prices are continuing on a moderately steady basis, with the upward tendency still being recorded in certain primary centres owing to the somewhat uncertain future position of raw materials. Domestic quotations remain unchanged at the following nominal levels:

BOILER TUBES—

Size	Seamless.	Lap-weld
3/4 inch	\$19 00	\$.....
1 inch	20 00
1 1/4 inch	22 00
1 1/2 inch	24 00
1 3/4 inch	24 00	23 00
2 inch	22 00	19 00
2 1/4 inch	24 00	21 50
2 1/2 inch	27 00	23 50
3 inch	34 00	28 50
3 1/4 inch	36 00	33 00
3 1/2 inch	38 00	33 00
4 inch	50 00	42 00

SLIGHT BETTERMENT IN BRASS AND COPPER

Toronto.

With a slightly firmer attitude recorded in primary metal centres, the conditions of brass and copper products is again stated to be on the road to improvement. Current trade in sheets, rods and tubing is described as fairly good for this time of the year, and slightly better in volume than was evident a few weeks ago. This is attributed to the general improvement in business conditions, coupled with a more active interest in raw materials. Prices on these products remain unchanged at the following levels:

BRASS—

Sheets base, per lb.	0 23
Rods, base, per lb.	0 22
Tubing, base, per lb.	0 30

COPPER—

Rods, base, per lb.	0 30
Soft sheets, plain, 1 oz. and heavier, lb.	0 29
Do., plain tinned, 16 oz. and heavier, per lb.	0 36
Do., polished, and tinned, 16 oz. and heavier, lb.	0 41
Tubing.	0 33

REVISION MAY DEVELOP IN CEMENT PRICES

Toronto.

That some minor revision may develop on cement quotations early in the New Year is the current opinion found in production centres. Prices on cement have remained on a steady basis for some time. There is very little moving at present, but business is described as normal and satisfactory for this season. Another brisk period of building activity is anticipated for 1923, with some indication that large construction work will be on a heavier scale than was the case in the past season. Prevailing quotations follow:

CEMENT—

Car load lots.	Toronto.
Per barrel, delivered	3 63
Less car lots.	
Per barrel, f.o.b. yard.	4 35
Per barrel, delivered	4 55

Single bags, \$1.15 each; 4 bags to barrel.
Extra charge of \$1.50 per load on less than 24 bag lots.
Rebate of 20 cents for empty sacks.

NO ACCUMULATION ON WROUGHT PIPE STOCKS

Toronto.

While the volume of business in wrought piping during the winter months is somewhat restricted on domestic markets, and is considerably reduced during the holiday and inventory periods from the brisk activity recorded a couple of months ago, yet owing to a continued shortage in the supply of certain raw material it is pointed out that mills are not able to accumulate any degree of stocks. This factor has also contributed towards the maintenance of firm price levels on pipe, while it is stated that for these reasons the probabilities are that deliveries will be slow during the early part of 1923. As pointed out in previous reports, more activity has been recorded in smaller sizes of black and galvanized pipe due to the building boom of the dwelling house variety experienced in the past season. On the other hand, the movement of larger sizes, three inches and up, has been retarded because of the lack of industrial building under construction. While quotations on wrought piping were advanced several times during the past year, each increase was of minor extent and the aggregate advance did not represent the proportion of higher costs in production fields.

List No. 57 continues to govern the local market.

WROUGHT PIPE

Price List No. 57. November, 1922.
Standard Butt-weld Pipe S/C

SEASONAL QUIETNESS IN LEAD AND ZINC GOODS

Toronto.

In lead and zinc goods the primary metals entering into production are described as just holding their own, and quotations on the finished products listed below have remained unchanged. Cur-

rent trade is moderate, a condition usually evident at this time of the year, when activity is light on account of inventory and holiday factors. Some variation is still noted in lead sheet prices, the range being between 9 1/2 and 10 cent per pound. Other quotations remain at the following levels:

LEAD AND ZINC GOODS—

Lead pipe, list, per lb.	0 14
Lead waste pipe, list, per lb.	0 15
Do., over 8 in., list, per lb.	0 16
Lead pipe is subject to a discount of ten per cent.	
Lead traps and bends, less 15 per cent.	
Lead sheets, 4 to 6 lbs., sq. ft. in rolls, lb.	\$0.09 1/2—0.10.
Cut sheets, 1/4 to 3/4 lb. extra and cut sheets to size, 1c lb. extra.	
Solder wire, per lb.	0 21
Do., commercial, lb.	0 25
Do., strictly, lb.	0 23 1/2
Do., guaranteed, lb.	0 26 1/2
Do., wiping, lb.	0 23 1/2
Zinc sheets, per lb.	0 11 0 12

SATISFACTORY VOLUME OF TRADE IN RADIATORS

Toronto.

The recent recovery in pig iron prices serves to strengthen the market, for radiators and boilers, while maintaining the steady to firm undertone formerly recorded. Although current activity is moderate in extent, the prevailing price levels are unchanged, it being pointed out that no developments have occurred in basic elements. Referring to the volume of business recorded this season, one manufacturer stated that heating systems had generally experienced a brisk demand over a period of several months and satisfaction was expressed with the movement up to this time. How records compared with former seasons was something not yet available, although the general opinion was that the movement was considerably heavier because of the impetus afforded through the enlarged building activities. No changes are made in the following quotations:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.
38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.

Discount on 2, 3, 4 and 5 column standard sizes, 55 per cent. for water and 56 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 47 per cent for water and 48 per cent for steam.

Discounts on 1-column hospital size, water 33 per cent.; steam, 34 per cent.

Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 52 per cent.

BOILERS—

Water:

Round 60 per cent. off list. Square 20 per cent. off list.

Steam:

Round, 25 per cent. off list; Square, 15 per cent. off list.

POSSIBLE CHANGE FORESHADOWED IN CLOSETS

Toronto.

That some price revisions may develop early in the New Year on closets is the general opinion prevalent in the trade this week. In this connection, however, it is stated that any movement towards easier levels would primarily depend upon manufacturers, as wholesalers

state that there is little profit in existing figures. However, another distributor expressed the opinion that it was quite possible quotations on closets would remain at existing levels, because it was felt that a steady market would be more conducive to active trade and restore confidence in future operations, rather than price fluctuations at this period.

CLOSET COMBINATIONS—		Each.
Closet, standard outfit, oak	26 00	
Do., with post hinge seat	26 20	
Do., mahogany Vitro or Pussyfoot with mahogany post hinge seat and cover	28 45	
Do., vitreous china, with oak post hinge seat and cover	28 45

CLOSET SEATS—		
Oak post hinge seat and cover	3 85	
Oak wood strip seat and cover	3 50	
Mahogany finish post hinge seat and cover	4 05	
Oak Richelieu seat and cover	3 50	

QUIET PERIOD IN ENAMELED WARE TRADE

Toronto.

There is now the customary quiet period in enameled ware trade, which is described as seasonal for the winter session. There is, however, a moderate amount of activity recorded, as some finishing work appears from time to time. No changes appear in quotations on these products, and the following are local list and discounts:

ENAMELED WARE—

ENAMELED Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.		51 40
Do., 5 $\frac{1}{2}$ ft.		57 10

All steel enamel baths, 4 and 4 $\frac{1}{2}$ ft.		\$14.00
Do., 5 ft.		15 00
Do., 5 $\frac{1}{2}$ ft.		16 75
Steel bath quotations are net		

RAW MATERIAL TREND AFFECTS CORRUGATED

Toronto.

Chief interest in the corrugated sheet market at this time of the year centres around the trend of raw materials. In

this respect it is pointed out that for a variety of reasons the supply of basic elements from a production viewpoint, has continued somewhat difficult to obtain. This condition is reflected to an extent in the undertone of the market as affecting the finished product, and although little activity is evident at this season, yet existing price levels remain steady. Manufacturers point out that on the basis of raw material costs, existing price levels are well down to replacement values and firmness in quotations is expected to prevail during the initial quarter of the New Year.

CORRUGATED SHEETS—		Per 100 Sq. Ft.
No. 28 gauge	6 50	
No. 26 gauge	7 00	
No. 26, U. S. gauge	8 00	
No. 24 gauge	9 00	
No. 22 gauge	11 00	
No. 20 gauge	12 50	
No. 18 gauge	16 50	
Less 10 per cent.		
Lighter than 24 gauge and wider than 27 inches, \$0.75 per square extra.		

NO CHANGES ANTICIPATED IN TROUGH AND PIPE

Toronto.

While trade in eavestrough and conductor piping and kindred lines is naturally of a very light nature at this time of the year, yet conditions are described as fairly good. More interest is evident in the development of raw materials which may have a bearing on the future trend of price levels on these finished goods. At the present time, however, it is stated that no changes are anticipated, and the following quotations remain unchanged:

TROUGH (EAVE)—		
O. G. Square Beam—		
Per 100 ft.		
8 inch	\$15 90	15 inch \$28 80
10 inch	17 70	18 inch 36 80
12 inch	21 20	
O. G. Round and Half Round		
8 inch	16 90	15 inch 29 80
10 inch	18 70	18 inch 37 80
12 inch	22 20	
Less 70 per cent.		
PIPE (CONDUCTOR)—		
Plain, round or corrugated.		
Per 100 ft. in 10 ft. lengths.		
2 in., in 10 ft. lengths, list	18 40	
3 in., in 10 ft. lengths, list	22 30	
4 in., in 10 ft. lengths, list	29 60	
5 in., in 10 ft. lengths, list	40 00	
6 in., in 10 ft. lengths, list	49 00	
Less 70 per cent.		

ELBOWS (CONDUCTOR)—		
2 inch, list	5 25	
3 inch, list	6 00	
4 inch, list	10 50	
5 inch, list	24 00	
6 inch, list	29 00	
Less 60 per cent.		

HOLIDAY SEASON IN IRON AND STEEL MARKET

Toronto.

Greater activity in the pig iron markets, both domestic and outside, coupled with the local advance in price of \$1.00 per ton, is taken to indicate that finished steel quotations are hardly likely to go any lower at present. It is pointed out that some lines of finished steel where price softness was formerly marked, now appear on a firmer basis due to improved booking operations in certain quarters. Another favorable aspect of the current market situation is the greater confidence which is being displayed

in obligations for material for forward delivery at prevailing price levels. Local business is described as good for this time of the year, in spite of the holiday season, inventory period and winter dullness. Prices are unchanged, as follows:

IRON AND STEEL—		
Mild steel bars, base	3 25	3 40
Mild steel bands, 3-16 base	3 75	3 90
Bar iron, base	3 25	3 40
Angle, iron base	3 35	3 50
Horseshoe iron		3 90
Tire steel		3 50
Spring steel	7 00	8 00
Sleigh shoe steel		3 40
Toe caulk iron		4 10
Hoop Steel		4 75
Norway iron		12 50
Crucible cast steel		28 00
Mining Drill steel		18 50
Cast-tool steel, high grade		30 00

BOOKING WELL AHEAD ON SHEETS AND PLATES

Toronto.

While current trade in sheets is described as moderately quiet at this period of the year, it is also pointed out that mills are still considerably behind on deliveries, and bookings are now being placed in some cases for March business. Quotations remain unchanged, both on domestic and primary markets, with prevailing market tendencies being closely watched. Prices on plates now show a narrower range, and the opinion has been expressed that the recent recovery in pig iron, although of slight extent, contains some indication of the developments in semi-finished steel products.

GALVANIZED SHEETS—

	Premier and Apollo	
10 $\frac{1}{4}$ oz.	6 65	
U. S. 28 base	6 25	
U. S. 26 base	5 95	
22 and 24	5 80	
18 and 20	5 65	
16	5 50	
12 and 14	5 35	
		Queen's Head

TORONTO MARKETS

(Continued from page 34)

FIRM UNDERTONE TO RANGE BOILERS

Toronto.

While trade in range boilers is seasonably quiet at this period, yet the undertone of the market continues quite firm. Current discounts remain unchanged, and it is stated by manufacturers and distributors that little change is anticipated for the opening weeks of the New Year at least. Prices remain unchanged at the following levels:

RANGE BOILERS—

Size.	List Price.
5-gallon	\$13 50
12 to 15 gallon	14 00
18-gallon	15 00
25-gallon	16 50
30-gallon	17 50
35-gallon	20 50
40-gallon	22 75
52-gallon	38 00
66-gallon	60 75
82-gallon	74 00
100-gallon	103 00
120-gallon	117 00
14-gallon	164 00
168-gallon	187 00
190-gallon	210 00
Discounts, Standard weight, 40 per cent.	
Extra heavy, 30 per cent.	

BETTER FEELING REMAINS IN INGOT METALS

Toronto.

There is a better feeling generally evident throughout the ingot metal group, but no great changes are recorded. There is little trading at this period, due to holidays and inventory needs. Prices have remained on a fairly steady basis, both in domestic and primary markets.

COPPER.—The undertone of copper is decidedly stronger, with the pendulum now commencing another upward swing. While domestic price levels are unchanged, as yet, it is noted that United States quotations are slightly higher, while any corresponding advance in London is tempered by exchange conditions.

TIN.—This metal continues on a strong basis. Tin prices are again showing an inclination to rise, both in London and the U. S. markets. Sentiment is described as much more cheerful. Domestic quotations remain fairly steady, local levels being given below.

LEAD.—The general tone of the market for lead is steady to firm, with no great developments expected at this time of the year, due to the holiday and inventory interest. While the aspect of this market has lately shown temporary periods of listlessness, with a slight wavering in primary quotations, the large and steady consumption that is going on is pointed out as maintaining a sound underlying position.

SPELTER.—This metal continues quiet with very little change in either prices or market conditions. The present tone is quiet, a condition not unusual at this season. London prices are reported as slightly firmer, but this trend is not reflected in domestic circles.

ANTIMONY.—The market undertone in antimony has remained dull. In the

absence of any trading to speak of, prices have remained unchanged, both on primary and domestic markets.

ALUMINUM.—Inquiries are stated to have been more numerous for aluminum, but it is noted that actual transactions are relatively light. Prices are firm and unchanged from previous levels:

INGOT METALS—

Copper	17 25
Tin	41 00
Lead	7 50
Spelter	9 50
Antimony	8 50
Aluminum	22 00

"KUMING TO LOGERHEDS OVER BIZNESS EXPANSION"

(Continued from page 17)

"Sum peeple think their all fired smart" she sez snappy like, "and don't half to half there heds red" lookin plum at my aubern lox.

"Its a little two thick for me," I sez in self defence, referrin to the lion of affluvia doap Bill had been handin me.

"What iz," she sez "youre hed?"

"Aw Vilet lay off, that's not fare," I remonstrats.

"Well its lite anyway," she comes back.

Vilet always gets me goin, I didn't know wheather she ment my hare or my hed. So I sed nothin.

"If you could only reed," she continjuse with a sort of pityin voice, "you might lern, for nobody can tell you nothin."

The swet begin to bust out on my foarhed for if theyres 1 thing I don't like its to have Vilet roast me.

You know I can reed Al only some of the words is strange thow the dictionery she give me helps a lot.

"If youd leeve the sportin page aloan and forget some of the things you done on the Polo Field and read some of this literatcoor about what your goin to do on the dispozle field, youd get some-where."

What Imc goin to do on the dispozle field! Thats just like Vilet she jest lays down the law as to what Imc goin to do, and befoar I no Imc doin it.

Thats the way it was with the dispozle feeld. I was skeered stiff Bill was goin to bite off more than he could chew and that he wood get all balled up with all those cheimbers and Annie Robic. But I begin to study and befoar long I becam a ferm bleever.

One day I come into the shop with a good one to spring.

"Ive found out who Annie Robic is," I sez to Vilet.

"Oh have you?" she sez, "who is she?"

"The Cheimber Made," and I laffed fit to split.

"Fresh," sez Vilet and tossed her hed.

Well Al we hev been bizzzy as beevers all threw the dull seenen workin on rurail work. Bill phoned he had the goods and all the folks is what Teddy Roosevelt used to say "Deelighted.

Yours till the next. Jerry.

PROFITABLE FIELD FOR PLUMBER

(Continued from page 16)

Flush-ometers

One place was found where the flush-ometers were not operating well on account of low pressure. This factory uses reclaim water and only the top floor of the building was affected. However, they are raising a storage tank on the roof to overcome this difficulty.

General Sanitation

Dark lavatories are usually dirty lavatories. Too much cannot be said about lots of light. If stairways and halls are painted white around the corners people will hesitate to spit there. Some factories have their stair landings in this way and also have cuspidors at convenient intervals. It is remarkable what a change it is from a tobacco juice corner sometimes found.

Many Plumbing Defects

To give you some idea of what has been accomplished by our division of the department of public health in Toronto in connection with improving the condition of our factories, public buildings, apartment houses, etc., from a sanitary and hygienic standpoint, I may tell you that last year we dealt with 165 buildings with defective drainage, and 653 buildings which had defective plumbing work, all of which have been made sanitary, either by repairs or reconstruction. In addition to these, we have the ventilation improved in 80 factories; urinals, sinks, basins and shower baths to the number of 175 installed, drinking bubblers installed in 72 cases; gases and chemicals controlled in 98, and trade dusts wholly or partly controlled in 159. Now this will give a general idea of our part of the work.

I may say that it is my opinion that all sanitary engineers should co-operate with the city health authorities in an endeavor to have all plumbing work, and drainage not only installed in first class manner but they should do all they can to see that it is kept in the best possible state, as the public places a lot of confidence in them, and depend largely upon them to see that their health is not affected from bad odors arising from leaky work and filthy fixtures. They should also remember that the inspector is not there to hinder them, but only to see that their work has been done right.

Remembering what our object should be, prevention rather than cure, I may say right here that any person undertaking to do plumbing and drainage work without the necessary training and qualifications is like a person performing a serious operation without the proper training in surgical work.

The Everlasting Veneer Toilet Seat

**Strong, Clean
Hygienic**

This reliable, dependable toilet seat is made of 7 and 9-ply, air-seasoned wood veneer, held together by our special wood cement. This cement is proof against heat, cold or dampness. The veneering is distributed according to the strain and wear required of the different parts. The Everlasting Seat will never crack, warp or split.

It is a splendid seat for use in cold, damp basements where closets must be installed. The Everlasting Toilet Seat will meet, and successfully resist, these severe conditions of moisture, changing temperature, etc.

The GREAT POINT about BURNHAM GRATES

The great point is that they operate in two sections—front half and back half. This takes the back "breaks" out of shaking, but puts savings into coal bills. Grates operating half at a time mean that you can have only half a fire when you don't need a whole one.

Send for our booklet about this.

Few people realize the tremendous selling power of classified advertising or the exceptional opportunity which it offers.

Hundreds of Sanitary Engineers to-day are carrying equipment for which they have no further need, yet many others could use this same equipment to good advantage and would be glad to buy at a fair price, if they but knew of it.

How to get buyer and seller together—that's the question. The answer is—SANITARY ENGINEER classified advertising service. Thousands of Sanitary Engineers throughout the country read the classified advertisements every issue. That's why they produce results surely and quickly.

If you want to buy, sell or exchange equipment.

If you want to sell or exchange your store.

If you want to buy a store.

If you are looking for a location.

If you need a competent journeyman.

If you are seeking a position.

In fact if you wish to buy, sell or exchange anything used in a plumbing and steamfitting shop or for any reason desire to quickly get in touch with other Sanitary Engineers, use SANITARY ENGINEER'S classified advertising service. The charge is ridiculously low—\$1.50 for twenty-five words, 5 cents for each additional word.

Who Paid for It?

In an authoritative magazine we read:

"A certain house eight years ago did an annual business of \$3,000,000 and the cost of selling the goods amounted to 8 per cent. Good advertising has since then increased their annual business to \$15,000,000 and the cost of selling, including advertising expenditures, has fallen to 5 per cent. The salesmen are earning much more money, and the advertising has enabled them to do it, because while their commissions are smaller their sales are made easier and are more than trebled in volume."

Who paid for the advertising?

Not the consumer, for the price of the goods was less than it had been without advertising.

Not the manufacturer, because his total selling cost was 3 per cent. less.

Not the salesmen, because they made more money.

Who did pay, then? The same inexhaustible source upon which we draw for the cost of all progress—Old Man Waste.

The most expensive institution we have to-day is the unsuccessful

competitor — the business that drags along for years, eating up rent and salaries, and traveling expenses, trying to get orders that someone else can get and execute better and cheaper.

It is cruel, perhaps, but true that the sooner such concerns disappear, the better it is for the public. The advertising of their more aggressive and better-organized competitors brings the end quicker. And it is the money saved by putting a stop to hordes of these petty, wasteful non-successes, which pays for the advertising and cuts down the cost of the goods you buy.

TRY IT! The E-Z Radiator Hanger

You'll only have to try it once because it always works satisfactorily and there is a demand for more all the time.

It hangs radiators securely and is a real device to give a neat and complete finish to the interior of every home.

The E. Z. Radiator Hanger has one Bolt, Invisible Washer, Horizontal Adjustment, Vertical Adjustment, Baseboard Adjustment. Made for Wall and Column Radiators.

They Always Call Again

The merchant may be sure when he sells an article bearing this mark:

that his customers will call again. In every Gendron product there is:

Conscientious Manufacture and Fair Price, and for the dealer a splendid margin of profit.

The Gendron Mfg. Co. Ltd.
Duchess Street - Toronto

A Real Leader

The Marvel, extra heavy and electric welded, is as efficient in operation as it is simple to install.

It is a combined range boiler and gas water heater doing away entirely with the old side-arm combination.

It holds and consumes every unit of heat, thereby needing less gas; the special Marvel burner produces a green-blue flame that heats the entire capacity of the tank in a very short time. It is silent, odorless and safe.

It is sold only through plumbers and yields a generous profit.

Good Plumbing Calls For JENKINS VALVES

Fig. 106
Jenkins Brass Globe Valve

What makes Jenkins Valves so much better than ordinary valves is—

The high-grade Brass, Iron or Cast Steel from which they are made.

The scientific way in which they are constructed.

The scrupulous care with which every valve is tested for service before leaving the factory.

Jenkins Valves are **DEPENDABLE** even under unusually severe conditions.

Plumbing and Heating Contractors should write for interesting literature describing the complete Jenkins line. It will be mailed on request.

DUNHAM VACUUM HEATING

One of the outstanding advantages of the vacuum system of steam heating is the wide range of control of pressure to meet changes in weather conditions, made possible by the use of the Dunham Traps.

The Dunham Traps function—to pass air and water, and prevent passage of steam—whether under vacuum or pressure. They do this automatically, without change or adjustment.

Like all Dunham heating specialties, these traps embody only the finest materials and workmanship, insuring permanent and dependable service.

Complete data on request.

The Realization of An Ideal

It has been our ambition ever since we have engaged in business to produce a beautifully designed tank that would hold its transparent whiteness without stain, indefinitely, and that could be sold at a low price.

To-day we have come to a realization of that ambition—and the New Design Vitro, because of its sheer beauty of design and its granite-like endurance has led in sales every tank in Canada.

An Attractive Combination

THE new "Emco" Oak Tank has met with a flattering reception since its recent introduction to the trade. The demand has far exceeded our expectations.

The special composition tank illustrated is rust-proof and its glossy finish will last for years. When used with the heavy type wash down bowl the effect is pleasing to the eye. Interior fittings are of best red metal. This attractive combination operates smoothly and quietly.

Include Refinement in your Service by Selling the **QUIETUS**

OUR NO. 20 "Quietus" Syphon Jet closet as its name implies is of the so-called "silent" type. It operates so quietly that its action when flushed cannot be heard outside of its immediate environment; yet it possesses the same unhesitating strong action for which all Canadian Vitreous closets are noted.

IT IS modelled on simple dignified lines; it is vitreous through and through and its lustrous shimmering white-glazed surface coupled with its special attribute of real quietness of operation commends it to the discriminating buyer who would include the utmost of refinement in his choice of toilet-room equipment.

The Heart of the System

The Anthes Syphon is the heart of the disposal system. Unfailingly, year after year it performs its important function. It can't get out of order because there are no parts to GET out of order.

Ever Hear of Anaerobic Bacteria?

It is a rather appalling name to give those friendly little fellows who break up solids in the first chamber of a septic tank—but that is exactly what scientists call them. The name means:—"bacteria which live on organic matter and thrive without air or light."

They not only break up vegetable and animal matter, but consume also deadly germs and paper, and but for them, the septic tank as we know it would not be possible.

By the way—right now is the time to line up your rural prospects for spring installations of sanitary systems. Very soon spring will be here; in the interval, you can do a lot of real constructive selling and be ready to get to work at the first sign of warm weather.

Be sure to specify Anthes Soil Pipe. This splendid, sturdy, long-lived pipe, so superior to ordinary piping.

BATHING IN

CHERRY BLOSSOM LAND

The true Japanese is as cleanly as he is polite; and he — and his family — revel in the delights of a hot bath.

Particularly in the rural districts he is in his element bathing in the many hot springs of his land, but when these are not available the family bath tub, a type here illustrated, is used.

Note the built-in stove. This illustration is drawn from a photograph of recent date.

The bath proper is not taken in the tub. On the slatted floor he stands and soaps and scrubs thoroughly, rinses clean and then—and only then—enters the tub and blissfully soaks himself in water warmer than the average person of this country could stand.

In their proper order his sons, his wife, his daughters and his servants from highest to lowest, enter, scrub and take turns in soaking up heat in the same bath tub; no one is exempt.

Today in Canada thousands of homes are little better, if as well, equipped than those of the rural Japanese in the matter of bathrooms. Thousands more have obsolete bath equipment that should be replaced.

How Plumbers Handle the Receipt Tax

Some Questions Raised by Plumbers Concerning New Tax Imposition Are Answered by Taxation Official—Cash Register Slips and Counter Checks Not Affected if They Do Not Bear Words Implying a Receipt

SOME enquiries have come to Sanitary Engineer from plumbers in various parts of the country concerning the working of the Receipt Tax, in effect since January 1, and some enquiries have elicited information of assistance, from tax officials and from other plumbers.

A study of the regulations would make it appear that there is really little justification for any difficulty, because this tax has little effect upon the average plumber insofar as cash sales are concerned and it occasions little annoyance in connection with the accounting.

One plumber stated to Sanitary Engineer that only a small proportion of the cash sales are for amounts over \$10 and that seldom then is a receipt insisted upon by the customer. Where it is asked for, a cash register slip is given as sufficient evidence of the sale. Care is being taken that the cash register slip is not so worded as to constitute a receipt. In connection with accounts, the customer requires a receipted statement, and the plumber is of opinion that it is good business methods to give such a statement irrespective of the petty annoyance of placing a two cent stamp on the statement. It makes necessary the carrying of a supply of stamps, but this is already necessary due to the cheque and draft tax.

Another stated that little difficulty was being experienced, and that the law eliminating the ordinary cash register slip or counter check providing it was not in the form of a receipt, made it much less onerous. This was according to the English law where the Receipt Tax was said to work with little friction. He stated that he was just in the act of forwarding a protest concerning stamping of cash register slips and counter checks, when word came to him that these were being exempted from stamp tax. He stated that a good many voucher checks were used in payment of accounts and these apparently did not require any additional stamping.

In discussing the new Receipt Tax with an out of town plumber it was pointed out that the tax had not had any effect on charge accounts as yet, but the firm had arrived at two decisions with regard to counter sales and c.o.d. purchases. In respect to sales over the counter, steps are now being taken to revise the wording on the sales receipt. The former words to the effect that, a sum of one dollar will be paid to any person not receiving a receipt for their purchase, is being changed to "The sum of one dollar will be given to any person not receiving a printed slip such as this showing the amount of their purchase."

In this way, he pointed out that the words "paid" and "receipt" were eliminated. The former plate in the cash register has been removed and a new one is being made. Referring to

the sales slips, it was stated that these were just being initialed by the salesmen, and the word "paid" was no longer being placed thereon. With respect to c.o.d. purchases, he stated that he anticipated no difficulty in this direction, as the parcel was merely handed over by the delivery man upon payment of the sum called for, and the possession of the parcel and sales slip by the customer was usually accepted as prima facie evidence that the goods had been paid for.

A wholesale firm where a retail department is maintained, referred to the receipt tax as bearing upon their sales over the counter in the following manner:

"We have the regular sales slip, which is made out by the salesman showing the goods purchased and the amount of same. Formerly this was initialed by the salesman and the word 'paid' stamped thereon, as well as the date. We have now adopted the plan of merely initialing all sales slips, and omitting the word 'paid.' This affects all slips whether for amounts over ten dollars, or not. Should a customer ask specially to have the word 'paid' stamped or written on the sales slip, as formerly, then we point out that under the receipt tax regulation this will entail affixing a two-cent stamp—if the amount is over ten dollars."

Another plumber pointed out that there appears to be some misunderstanding as to whether the customer or the plumber had to pay the tax. This firm also had adopted the method of merely initialing sales slips, the word "receipt," or "paid," having been eliminated. However, when a customer desired a "paid" slip and the amount purchased was over ten dollars and therefore taxable according to the meaning of the act, they have requested the payment of the tax on the part of the customer. In this case it was pointed out by Sanitary Engineer that this was not in accordance with the regulations, as the party issuing the receipt was expected to pay the tax.

It would appear, from a consensus of those plumbers interviewed by Sanitary Engineer, that the general practice adopted has been to merely sign the sales slips, and to eliminate the word "paid," which was formerly placed thereon. In respect to cash register receipts, in most cases arrangements are being made to strike off the word "paid" or "receipt" and substitute the words "amount purchased," together with the date.

Some rulings have been received on certain points put before the Department of Customs by Sanitary Engineer. These are as follows:

1. "Where a customer makes purchases and counter sales slips are prepared separately for each purchase and each slip marked "paid" individually, the total payment being made at

(Continued on page 34)

Favor Proposal to Amend Sales Tax

Manufacturers Who Have Studied the Difficulties of Present Sales Tax and the Application of Proposed Amendment, Strongly Favor the Change—Manufacturer With Fixed Resale Prices and Discounts Points Out Some Difficulties

EDITOR'S NOTE:—As taxation will again be taken up very shortly by Parliament in connection with the Budget for the next year, it is interesting to note that there is considerable support among manufacturers and wholesalers for the proposed amendment to the Sales Tax as outlined in former issues of Sanitary Engineer. This proposed amendment provided that sales from manufacturers to wholesalers, holding wholesale tax licenses for resale, be exempt from Sales tax. Secondly that wholesalers holding tax licenses collect the full $4\frac{1}{2}$ per cent. tax from retailers or consumers. Thirdly that manufacturers continue to collect $4\frac{1}{2}$ per cent. sales tax from retailers and consumers. Fourthly that the collection of $4\frac{1}{2}$ per cent. tax by wholesalers and manufacturers be compulsory with no option of absorbing a part or all of it. The stand taken by a number of manufacturers is outlined in the following:

F. S. LAYTHE, assistant-treasurer Butterfield & Co., Rock Island, Que., refers to the proposed amendment as follows:—"We are of the opinion, based on our own experience and study, also following closely the arguments which have been presented regarding the present Sales Tax, that the amendment proposed in your letter should be adopted. We are inclined to believe that the acceptance of this amendment by the Department and the change made in the Act will simplify the collection of the tax and prove more workable all around."

E. G. Bennett, assistant treasurer Crane Ltd., Montreal, is of the opinion that the proposed amendment is very much to be recommended. This firm are manufacturers and also jobbers selling to both wholesalers and retailers and consumers. This firm in company with others has had difficulty meeting the present requirements of the Act as regards the segregating and charging of the two different rates of tax as between goods of its own manufacture and those that the firm sells wholesale, the situation being the more complicated on goods sold through various branches throughout the country. Mr. Bennett was of the opinion that the amendment would not only relieve firms such as his of much difficulty, but would give a more equitable measure of taxation to business in general. It was thought to be highly desirable to distract the public mind with taxation as little as possible.

"We do recommend the suggested amendment," said Mr. Bennett, "and sincerely hope it will go through. Apart from this we favor a small tax on all sales as being the least felt and most economical to all concerned, but this apparently does not meet with general approval. We would like to emphasise the fourth clause in the suggested amendment, as we feel this to be vital to the equitable application of the tax."

D. R. Fowler, sales manager, Canada

Foundries & Forgings, Ltd., Brockville, Ont., states: "We strongly favor the proposed amendment for the reasons you have outlined. The effect of the amendment no doubt will be to have the tax passed on as the government intended and there will certainly be a better feeling among manufacturers, wholesalers and retailers as a result."

A. P. Beaupre, president, Canadian Veneering Co., Acton Vale, Que., favors the amendment in the belief that it will greatly help manufacturers who are exporting. "In our case we export about 90% of our products all over the world," said Mr. Beaupre. "When exporting to the U. S. we have to pay a duty of 45% and as the declaration of fair market value for goods sold in Canada for home consumption includes the $2\frac{1}{4}$ % tax we pay duty on the said $2\frac{1}{4}$ %, thereby increasing cost of exportation, whereas under the amended regulations there would be a saving for exporters."

G. B. Greene, gen. manager, General Supply Co. of Canada, Ottawa, is strongly in favor of the proposed amendment. "We believe this to be the only possible means of entirely eliminating the injustice now being done the Canadian wholesaler, and trust your efforts to have the Act amended in this manner will be fully successful. Otherwise we are convinced that the wholesalers of Canada will be forced out of business by an unbearable tax contrary to the fundamental principle of the Sales Tax Act."

Geo. W. Reed & Co. Ltd., Montreal, spoken for by R. W. McIntosh, secretary-treasurer, heartily approves of the proposed amendment.

F. B. Combier, general manager, The Wm. Rogers Mfg. Co. Ltd., Niagara Falls, Ont., favors the proposed amendment and outlines his views on the subject as follows:—

1. "We find the present tax very confusing as to administration. It leads to duplication of tax which results in unwarranted hardships on some consumers

and purchasers. 2. We favor the proposed amendment because we believe it is a generally accepted fundamental that it is cheaper to collect, clearer to administer and altogether preferable that any tax be collected at one source only or on one type of transaction only, instead of the same tax being sub-classified and collected from various sources to presumably the same total on the one article of merchandise. Naturally and rightly the consumer pays for all costs including taxes on merchandise he consumes. It is therefore advisable that taxes be collected as close to the ultimate consumer's purchase as possible because the further back in the channels of distribution a tax is placed, the more overhead, interest on investment and profits on the transaction will accrue on the tax money."

F. Moore, vice-president and general manager, Benjamin, Moore & Co., Toronto, states, "We have given a good deal of thought to the present method of collecting tax and the proposed amendment. You have pointed out the real difficulties of the situation under the Act as it is at present. We think the amendment is the best way out of the present difficulty and the government will lose nothing financially by the change."

A. J. Oliver, secretary, R. McDougall Co. Ltd., Galt, Ont., states: "It looks to us as if this proposed amendment would simplify matters very much and in our opinion this should be laid before the government in as strong a manner as possible. The only other thing which could be much better than this would be a general Turnover Tax."

Some interesting points concerning the application of the tax where there is a suggested re-sale price on the article are brought out by A. T. Channel, president Channel Ltd., Toronto, in the following:

"In studying your suggested amendments and the manner in which you present your argument, we do not feel that it is applicable to a product sold on the basis that our products are sold; that is, with a set price to the consumer, a set discount to the retailer and an additional set discount to the wholesale trade. We do not view these set discounts too large and extravagant, nor do we hear opinions expressed to that effect. On the contrary we have heard them expressed as fair and reasonable and the proper discounts for articles of this nature."

Fifteen New Customers in a Week

Maritime Plumber Seeking Ways to Stimulate Trade, Sent Out Two Hundred Letters—Received Two Jobbing Orders in Two Days and in Week Had Fifteen New Customers—How Plumbers Can Sell Filtration Systems

IS THERE a place for the small fry in the plumbing sphere?" was a query put to L. M. Brown, of St. John, N. B., manufacturers' agent in plumbing supplies, who has just returned from a swing through the maritime provinces.

"Yes," said Mr. Brown, "there is certainly a place for the small plumber. For instance, he has a place in jobbing and in small contracts. The chief trouble with the small plumber is that he does not get out after the business. He waits until it comes to him. And he waits and waits.

"In my latest trip through the maritime provinces I met a number of master plumbers, some of them big and some of them medium and others just little fellows in this game. Some of the little fellows were complaining about business. I asked one of them what he was doing to stimulate trade. He said he wasn't doing anything in that line at all. There he was with an abundance of competition and things in a natural depression and he was just sitting still and hoping for the best.

"I told him to get busy—show some life, and he would get results. I told him to send some personal letters around to builders and to owners of houses soliciting trade in both jobbing and contracting. He sent out two hundred in a few days. He did not even have letterheads and had to get a thousand printed. Also the same number of envelopes. He hired a girl to typewrite the letters.

"Two days after he sent out the first letter, this plumber received two jobbing orders from people he had never done business with. And in a week he had fifteen new customers on his list. He had made enough to offset the cost of the letters in a week, and indications are he is in for some good jobbing business henceforth if he keeps sending out the personal letters. If he drops by the wayside again no doubt he will lose what he won," said Mr. Brown.

An ingenious plan for acquiring business in the selling of filtration systems in the maritime provinces was discovered by Sanitary Engineer.

Circular letters were being mailed in follow-up order to firms manufacturing soft beverages, associations and colleges owning swimming pools, large hotels, and cities and towns with water systems. The first letter deals briefly on the excellent points of a filtration system, making but minor reference to the particular systems. In the second letter, the good qualities of this particular sys-

tem are impressed on the prospective buyer. The third letter is a personal letter written by the type-writer and not the mimeograph. This letter makes an attractive offer to the prospective buyer, and mentions the fact that installation of the system and operation will be cheaper in the maritime provinces than in other parts owing to the excellence of the maritime gravel. This gravel is absolutely necessary for the system, and the gravel found in the maritime provinces has been found to be superior to the gravel found elsewhere as far as

the installation and operation of these filtration systems is concerned. In addition to pointing out that the use of the gravel will cause cheaper installation and operations, as well as efficient operation, it states that owing to impure water in many parts of the maritime provinces owing to defective water systems, of cities and towns, filtration systems are a boon to health.

Letters have also been addressed to health boards in the various cities and towns where there are swimming pools
(Continued on page 19)

"If I Were a Journeyman Plumber"

* * *
(Suggested by K. B. A.)

I would work whole-heartedly for the boss and be unflinchingly loyal to him or else, if I must holler and grouch, I'd holler my fool head off, but I'd quit my job first.

* * *

I would be on time, or ahead of it, and ready to start the day at starting time.

* * *

I would keep my kit supplied with the little things I would likely need during the day.

* * *

I would see that my appearance was tidy and that my movements were active, especially whilst I was in contact with the public.

* * *

I would realize, that whilst the boss employed and paid me, yet that I, as he, was a servant of the public, and I would serve the public on that basis.

* * *

I would not be a clock watcher, because sometimes an extra hard problem might take extra time that would not warrant being charged.

* * *

I would read and study trade subjects so as to familiarize myself with the various trade practices.

* * *

I would realize that whilst the pay per hour was the same for the thinking journeyman as the indifferent one, yet the prospects of steady employment would be greater for the former as would the chances of advancement be better.

* * *

I would be ambitious enough to qualify as a foreman and later on to become the proprietor of a business, realizing that my training would the better fit me to become a business man and an employer when the opportunity came my way.

* * *

And I would keep in practice on the golden rule about doing unto others by putting myself in the boss's place and the customer's place as well as taking just my side of things.

“Having What Bill Calls Seazonal Windy Displaze”

(With apologies to Ring W. Lardner)
By

MAJOR L.L. ANTHERS.

MANAGING DIRECTOR-ANTHERS FOUNDRY LTD.

Tarraboome, Jan. 15, 1923.

Dear Al. :—

THE Festuv Seezon has came and went. I do enjy Xmas. Theirs somethin about it that sturs the deps of a mans sole. You get so soft-harted that you want to give away everythin you got and don nead—You know me Al. It makes you feel poeticle two. Leastwize it gets me that way. Hears a little thing that Ive thunk out miself. Ime goin to spring it on Vilet for little doz she suspkt. that theirs a genyus in our middst. Lissen in Al, its good.

In Tarraboom at Xmas time
And snow drops fill the air,
I love to sing and dance and play,
And raize Old Ned fer fair.

The Xmas. treez are all lit up,
Even as you and me,
And weer all hapy, even the pup,
As far as eye can sea.

The big fat turkies disappear
The gravy gurgles down,
And when I no that you are neer,
Ime the hapiest guy in town.

Oh happy time when bells do ring,
And skates are on the ice,
And you and I together sing
O gee but aint it nice.

And so I go from yere to yere,
Till Crismus comes agen,
And wish you all the festuv cheer,
To which I say Amen.

The buty of it is that theirs no alushion to shop. Wen I rite poitry Ime aible to keep miself abuv wurdly things. Thats the trew spirut of poitry.

Well as I sed abuv, Xmas has came and went. We are having what Bill calls seezonal windy displaize.

We had a slay party out to the bush and Bill cut down a big Nevergreen tree under my direc-tns. It was a bute! We brawt it in and put it in the middel of the shop windy. Then we went to the drigoods stoar & bawt a no. of roles of cotting batting.

We spred it all over the flore of the windy just like sure enuff snow. Vilet bawt a big starr and some little Sandy Claws witch she hung on the top of the tree and on the end of the branchus. Then their was a lot of this here sillver festune stuff witch we skalloped all over the tree like Spanich moss. Bleeve you me Al it was the regler cats whiskrs.

After the nital trimmins we put up a lot of small nickle & annamal tilet fxtrs. hung like presence and if we didnt have the klassiest Xmas tree in town you got annuther guess comin.

The peeples crowded round that windy like it was a free S. S. entertanement.

Wile we didnt maik a fortun outta wat we solde offn the tree, still tho favorable comnts. what was passt maid you feal that it wernt loves laibor lost as Bobby Burns or sum other poett sez.

Wen Bill 1st sprang this seezonal windy dressin stuf I werent none 2 kean.

“Wot you goin to dress the windy like when the fishin seazon comes in?” I asts him. Plumbin and fishin is a long way apart. You mite put a bathtub fulla water in the windy and have a lottuv empty hooch btls. floteing round in it to remind the fishin craft that fishin aint wot it usta bee. As fur the huntin seazon the only thing I can think on conec-tered with plumbin is you cld. hev a shower bath

all clozed in with a curtain and a dummy on the outside with a gun peekin in, with a sine which sez "Its a bare."

"Aw you dont get me atall" sez Bill, registerin discust. I dont meen to pull off no bum jokes like your talkin ov but to dress the windy appropriate to the seezon.

"Oh I sea," I sez, "Snowballs in the winter, goluf balls in the Spring, moth balls in the summer and puffballs in the Fall."

"Yessn a high ball fer leep yr.", snortered Bill. "Jest lend me yr. eer for a minnit and ile enliten yr. dence ignerance."

"You kin hev my noze 2 if you like" I shot back at him with vimm.

"My cars got a tale-lite," retortured Bill with the heir of a witt. Bill can get reel snappy at timse.

"What I meen by seezonal displaize," sez Bill, "is makin youre show-windy attractov at sikilological times."

"Come again," I sez, "Wots this Siki stuff—the big smoke from Bene-gal what licked Karpenteer, or Cupids side-kick wot sez to the well 'How well I look?'"

"Neethur," snortered Bill with distain. "Wot Ime tryin to tell you is, theirs a time and a plaice fer everythin—thats wot 'Sikilological meens."

"Oh I get youse now," I sez. "The time & the plaice & the gurl," & I looks over twords Vilet for approval. But I didnt get none. She was lookin at me in a board sort of way, witch maid me feal oncomfortabel.

"You kin leeve the gurl out uv it," snips Bill, so I sets back to lissen.

"Its nachural that befoar winter comes," per-seeds Bill, "peepuls begins to think how theys goin to keep theirselves warm, so thens the time to displai youre heetin goods. When theirs no new jobs

in site, fix up youre windy to maik the peepuls with Noze Ark fxtrs. think theys gettin behind the times and neads an overhall & sofoarth & etc."

"I sees," I retorz, but as the huntin seezon was jest a few dais off & I was booked up fer a shootin party, my mind was on the shootin & not on windy dressin. So to maik a short story long I sez "Go to it—put it over!"

Bill looked hurt at my lack of enthusiasm, but I knew heed go threw with it if heed maid up his mind 2.

Bill went out back to the shop wile I pertended I seen some 1 acrost the road ide fergot to tell somethin an so lit out. I new Vilet was layin fer me an discided digression was the better part of valler.

Wen I got bak from the shootin trip I seen a bunch of hicks standin in front of the store. My 1st thawt was fire! & my hart beet fast lest Vilet was saif and sound. But wen I gits near the windy I was flabby-gasted. Their was Joe Hicks our slickest jurneyman puttin the finish on 1 of the ancientest bunch of bathroom fixtrs. you ever set ize on. We got a long front to our

"When I got back from the shootin' trip I seen a bunch of hicks standin' in front of the store. My 1st thawt was fire! and my hart beet fast lest Vilet was saif and sound."

shop & the biggest windy in town. Some 1 hed put up a wooden pertition dividin the windy in 2, and 1 side had nothin in it wile the other as afore-sed was bean fixed up by Joe Hicks. I coulda sworne that the fixtrs. had come outa 1 of them Egiptian Faro graves you reed so much about in the paipers. I shure thot some 1 had gone dippy, an wen I bust inter the dore I sez "Hoonells gone bug around hear?"

"It must be yerself," came a laidys clear cut icy voice, "judgin by yr. languidge & yr. manners."

Of coarse it was Vilet. An the frosty look she give me! Oh gee!

Cost to Plumbers of Labor Turnover

What Makes Up Labor Turnover Costs—What Wages Are Paid for—Breaking In New Men Is An Expense—Spoiled Materials, Repairs, Etc., Run Up the Cost of Labor Turnover

Written for Sanitary Engineer by G. W. Hafner

ACCORDING to reports made to the Industrial Bureau of the Merchants Association by 42 concerns representing 15 different industries and employing a total average force of 42,375 workers, the average yearly rate of labor shift or "turnover" in 1921, for skilled and semi-skilled workers in one city was 125 per cent., and for unskilled workers 265 per cent.

Out of a total of 7,362 full year workers, in 5 mercantile establishments investigated by the Bureau of Labor Statistics for the years 1917-1918 837 were discharged, 3,972 were laid off and 10,432 left voluntarily—a total of 15,241 or a labor turnover of 207 per cent. Of this 207 per cent. 141.7 per cent. consisted of voluntary leaving.

What Wages are Paid for

There are a multitude of reasons why men leave one place of employment to go to another, some of which are legitimate, some imaginary and some foolish. The most prominent reasons, especially during rush of business, are wages and hours.

Workmen have nothing to sell except their services. Custom has welded us to the thought that wages are compensation for time spent; but this is a peculiarly mischievous idea. When we come to analyze the subject, we find that most wages are paid for work done. There are few, if any, jobs in which wages are paid for bodily presence only. The real unit is the unit of production; of things accomplished; of tasks finished. And these, it will be found, are not convertible into units of time, even though we pretend to do it.

The daily unit is necessary, of course, because men recuperate by sleep once a day. If it were possible to do otherwise, we would have men who would want to work 24 hours and then rest 48. It is also cut into weekly units because of the sensible and scriptural injunction which affects the majority of workers.

What Makes up Labor Turnover Costs

Now the heart of this problem of labor turnover is its cost to the business man, and many proprietors and managers are extremely anxious to know what such costs consist of and in what ways they may reduce such losses.

The costs of labor turnover to the merchant or manufacturer are of many kinds. These may be summarized as follows:

1. Breaking in new men.
2. Spoiled materials.

3. Repairs.

4. Accidents.

In attempting to get some clear conception of this subject, it is highly important that due consideration be given to each of these four kinds of labor turnover costs.

Breaking in New Men

Every time a new worker is taken on, there is an expense of hiring. Time must be given by someone to the task of interviewing the applicant, deciding upon his rate of pay, securing his name and address for pay roll purposes, writing his name on the payroll, introducing him to the working force.

But the expense does not stop there. To a greater or less extent the new workman must be trained. The foreman and the workers already on the job must get him started, and show him how the work is to be done. They must continue to teach or train him for a more or less long period of time, depending on the nature of the work he is set to do, until he has attained to the normal or average. This consumes time, and time in this sense is actual money. The time lost by foremen and the old employees in giving the new man instructions, as well as the reduced output of the new worker, is a large item of expense.

Spoiled Materials

Everyone knows that the human animal must be given time to adjust himself to his surroundings. A new place to work, strange faces and unfamiliar environments all have a tendency to create a "sensitiveness" on the part of the worker, which in the majority of cases tends to prevent the man from appearing at his best, and thus detracts from his ability to do good work. He is more or less awkward and distracted until the newness and strangeness wear off.

This means that in the handling of the various kinds of merchandise or materials carried by the individual business man, there will be for some time a greater degree of spoilage than usual. Any merchant or manufacturer can apply this for himself. If he will watch the next new man he sets to work in his place of business, he will have his eyes opened to the loss involved in spoiled goods.

Trucks, wagons and equipment of all kinds stand idle, while waiting for new hands to replace those who have left. In like manner, all this equipment is more than ordinarily idle while the

new workers are becoming familiar with their tasks.

But more serious than this is the fact that, during the time these green hands are learning, there is wear and tear on equipment. This means extra depreciation and the necessity for larger repairs and renewals.

Also, there is a larger use of gas, oil and the like in operating trucks; greater use of power, lubrication, etc., in the handling of machinery and equipment, due to the fact that this equipment must be run longer in order to produce a normal output.

Accidents

As has been said, it takes time for new employees to co-ordinate or adjust themselves to new work and surroundings. On this account they are more likely to get hurt. The frequency of accidents is always greater among new men than among old workers.

This means, to say the least, that the business man is subjected to a great many inconveniences. It requires him to take a greater care in supervising accident prevention. It compels him to pay higher rates for accident insurance. The time lost in giving first aid to the injured amounts to considerable in the course of a year. Hence, in breaking in new men, the manufacturer or merchant is put to a large expense in terms of increased accidents.

Figuring the Cost

Having determined upon the main items which make up the cost of labor turnover, how are such costs to be figured in terms of dollars and cents?

The rule for calculating the cost of turnover is difficult to apply, yet it will serve as a practical guide for those who are interested in working out such costs. The rule is: First find out the total amount spent for breaking in all men on a given job, both those who stay only a little while, and those who remain until they become normally efficient, taking into account as far as possible all the items of cost already enumerated; second, deduct from this total the difference between the standard wage and the lower wage paid to workers during the learning period, since the lower wage paid partly makes up the cost of breaking them in; third, divide the amount thus obtained by the number of workers involved, and the result will be the average cost of turnover for that particular job.

If you wish to find the annual cost of turnover for that particular job, multi-

ply the average cost of turnover just found by the total number of persons hired for the job during the year.

The book on "Labor Turnover, Loyalty and Output" by Colvin, says that "the actual cost of hiring and firing a man may run from \$20.00 to \$2,000.00, depending on the kind of a man and the importance of the job." From this any business man may gain some sort of clear idea of the staggering drain on his own business caused by labor turnover.

What Men Work For

But the time necessary to work out labor turnover costs of this kind may be worse than wasted, unless the business man is thereby led to realize that he should take some steps to discover methods of holding men. Any plan to be successful must have an unpretentious democratic basis. Feudal systems that dispense largess and expect corresponding loyalty usually get disappointment and a cynical view of human nature for their reward.

Others who do things—usually kind things—for their employees, have gratitude and appreciation of the acts more in accordance with the manner in which the things are done than for the spirit which prompts them.

The real problem is how to adapt our methods to human nature as it is, and always will be, yesterday, to-day and forever. All that we can be sure of is that there must be genuine sympathy and understanding on our part of the other fellow's point of view, if we are to create that spirit of loyalty in him that is the foundation stone of efficient service.

Loyalty—that's the word to think about, both in your attitude toward the worker and in the worker's attitude toward you. No man really works for wages. What he puts in his time for is money. He must have money, because the world is organized that way. He cannot raise sheep for clothing on the roof of his flat. He must get money somewhere for the things which he cannot make for himself. Necessity compels men to get money, honestly or otherwise.

But when we find a man really working, it is because of a deep sense of loyalty. Why did men go to the war, volunteer or drafted, without a regret? Because there was something, intangibly spiritual, in their enthusiasm for and loyalty to the flag.

It is the job of every business man to build up this same sort of loyalty in his own organization.

PROGRESS ON NEW WATER WORKS SYSTEM

Trenton, Ont.—Messrs. McNabb & Traverna have finished laying water mains from Queen street to Lorne Ave. on King street and from Dundas to the new water tank on the hill. Also from Division street to new pump house and from the new collecting gallery.

The contract given to Weddell & Saunders for pump house is all but completed and the collecting gallery along the foot of the mountain some four hundred feet is expected to be completed in three weeks' time, providing weather permits. This gallery is capable of holding an immense surplus supply of water and the contractors de-

cided to finish the work rather than wait till spring.

The big tank on the hill is also completed.

The pumps for the pump house have been ordered and will arrive about February first.

WATERWORKS ASSN. TO HOLD MEETING

A mid-winter meeting of the Canadian Branch of the American Water Works Association will be held in February 22nd and 23rd, at the Carls-Rite Hotel, Toronto. The meeting was arranged by the executive committee which met in Toronto recently. Arrangements are also being made for a display of water works appliances and machinery in connection with the meeting. The official program for the meeting has not been received as yet.

WATER WORKS COMPLETED

Woodbridge, Ont. — The town of Woodbridge has completed and has now in operation a modern up-to-date water-works system, surpassed by none other in the province of Ontario, according to local authorities and the firm of architects in charge of the undertaking.

Around August 1st work was begun on the system, and since that time two miles of water mains have been laid, a stand pipe with a capacity of 100,000 gallons constructed and a well, with a capacity of one-third of a million gallons a day excavated and completed. The estimated cost of the undertaking was \$37,000, and a remarkable feature in connection with a public work was that this amount has not been exceeded.

Greatest Need in Farm Homes

THERE is not a convenience enjoyed by householders paying taxes for city water service that cannot be had with a compression tank and pump in a farm home—a bath with running water both hot and cold, running water in kitchen, running water to wash the automobile or extinguish the fire. This last consideration has saved the price of a water system many times over on many Canadian farms.

Let us show you why city people live longer than those in the rural districts.

Rural Sewage Disposal Systems

Physical and Bacterial Action in Septic Tanks—How Sludge Accumulates and is Dissolved or Broken Down—Action of Bacteria in Cultivating Chamber—How to Assist Germ Life in System

Written for Sanitary Engineer by EDWIN NEWSOME, Consulting Sanitary and Heating Engineer

(Continued from last issue)

THE chapter published in the Dec. 15th issue of the Sanitary Engineer dealt with the history of germ life and its application to sewage disposal systems and the why and wherefore as to why the effluent discharged into the disposal system of field tile pipe does not freeze. A little explanation from a physical as well as bacterial action is worthy of careful consideration.

First of all let it be noted that septic action must take place in a septic tank and that no harmful chemical compound such as carbolic, formaldehyde, formalin, permanganate of potass, lysol, cresol, creolin or any such antiseptic fluid are used to any great extent.

If the state of health of the occupants of a house require that any antiseptic fluids must be used, the discharge should not be permitted to enter into a septic tank.

To name any or all of the above as injurious to the bacteria in a septic tank, does not by any means infer that those compounds are injurious or harmful to humanity when used for specific purposes, but it does mean that fluids of that nature are injurious to the friendly

bacteria so very necessary in a septic tank.

In the septic process of purification, sewage from a plumbing system enters into the septic tanks, and, for a period, a fairly large quantity of solids will remain in the form of sludge and unbroken up solids, human excreta, fats, paper, and so on, the fluid which enters the tank is to some extent charged with oxygen, which is dispelled by the presence of aerobic bacteria. The latter soon disappear when the sewage has been freed from oxygen while at the same time the scum which by this time has formed on the top of the sewage.

Then this aerobic bacteria, having done its work, leaves the sewage in a suitable condition for anaerobic action, which is the most effective in liquefying solids, and in this way the first chamber or septic tank becomes the seat of two distinct actions.

For example, the interior, and on the bottom of the tank, anaerobic bacteria attacks the solid matter, both sludge and floating solids, and while the anaerobic bacteria is thus working the aerobic bacteria, re-attacks the sludge,

and in that process keeps the sludge down to a minimum.

Let it be further explained. The sludge on the bottom is subjected to both biological and physical action. Gases produced by the liquefying bacteria in the sludge, rising to the surface of the fluid by the aid of small globules of gas, which gas becomes liberated at the top of the fluid under the scum, these gases then penetrate the scum and are carried off up through the soil pipe stack. The sludge freed of the gas globules again settles to the bottom of the tank.

The physical action is taking place night and day all the time, in the septic tank (first chamber) and if it were possible to place a glass in the side of this tank, the physical action could be clearly seen, and it is only when the effluent ceases to be active that it rises and overflows into the dosing chamber. The solids, as before stated, do not overflow into the dosing chamber.

It will therefore be seen by the above detailed explanation, that the effluent when it enters the dosing chamber, is entirely free of oxygen, but is in such a condition as to be ready for fresh air.

*Plan With Size Of Septic Tank Suitable For House Occupied
By Twelve (12) Persons.*

this is procured as soon as it is discharged into the field tile area, and because of the fact that such bacteria as are found in the upper surfaces of the ground, namely aerobic bacteria, makes it necessary to provide an intermittent application of effluent from the dosing chamber.

There are few authorities on this subject that would state just how much sludge will or will not accumulate in the septic tank compartment. For example, if a tank is constructed in the fall of the year, and the process necessary to break down the solids has not reached its most active stage, a greater depth of sludge will be formed in the bottom of the tank. This condition is not likely to be alarming, because as soon as the spring comes around, or provided that an extra quantity of hot water is used, with a relative quantity of solids, the sludge will gradually disappear.

The writer has known where the sludge has collected in a septic tank to the depth of twelve inches during the first 6 or 8 months after tank has been put into operation, and 4 months later, the sludge has disappeared until only two inches remained.

It is well to have the septic tank inspected at least once a year, during the warm part of the fall season, because if, upon inspection a great amount of sludge is found, it should be removed, as it is not likely that the supply of sewage during the colder seasons, would be warm enough to entirely, or even partially, destroy the sludge as well as break up newly discharged solids.

If, however, the septic tank was inspected in the spring, and a fairly deep sludge contents were found, there need be no sludge removed, as the warmer weather would assist the breaking

down process; very likely before the fall season all the sludge would be gone.

The writer made inquiries from the owner of a septic tank installed by the former over 15 years ago, and though for several months foul odors were found to come from the breather, later on no such disagreeable condition prevailed. Another case was found not far from Toronto where a septic tank has been in use for over four years, and no odors are to be found, and with the exception of the first month or so, no odors have been noticed.

If it were possible to procure a good quantity of scum from an already active septic tank, the scum then placed in a newly constructed tank the trouble with odors would be largely overcome. But the re-planted scum would have to be little disturbed, and placed into the cultivating chamber when same was nearly full, and at no lower a temperature than 65 degrees, or not lower than the temperature of the fluid from which the scum had been taken.

The average summer working temperature of sewage is about 60 to 65 degrees Faht., whereas in winter the temperature will fall to 44 or 46 degrees Faht., which is quite normal and not likely to freeze. One of the greatest "help," towards keeping a field tile area in good condition is to dig it, plow it, harrow or otherwise break it up. This will re-aerate, or charge the earth with more aerobic germs or nitrates so that it will be clearly seen that a vegetable garden, truck or domestic, would be a most favorable area for a subsurface disposal field tile system of piping.

The accompanying illustrations show plan and elevation of a septic tank suitable for taking care of sewage from a house occupied by 12 persons. The syphon will discharge 324 gallons of effluent per operation every 24 hours,

it will be necessary to lay 648 linear feet of field tile pipe. The size of this tank is arrived at by making an allowance of twenty-seven gallons per person.

Some authorities claim that an allowance of not less than 50 gallons per person per day should be made, but from inquiries made, the writer finds that in towns where houses are metered as low as 6 gallons per person is consumed daily. We will deal with this matter in our next issue and show where out of over 2000 families the greatest quantity used per family of five persons averaged only 18½ gallons per person. Yet we have town and city water works authorities claiming that as high as 300 gallons per person per day is used. We will give some startling information regarding this too later, because it has a great bearing upon sewage disposal systems.

(Continued in next issue.)

FIFTEEN NEW CUSTOMERS IN A WEEK

(Continued from page 13)

and to the departments of health of the provinces calling the attention of the members to the menace lying in unfiltered water in such pools. It is pointed out that contagious diseases of all sorts are to be contracted in the swimming pools where unfiltered water is used, and the names of some of the more malignant diseases are specified.

That filtration systems can be installed by any efficient plumber has been proven conclusively in the maritime provinces, where installations have been made by plumbers who have not seen a swimming pool or filtration system until engaged to make the installation. An ability to clearly follow defined instructions is the chief asset demanded.

THE QUESTION BOX

Warm Air Heating in Rural School

Knowing that for years you have been an authority on heating, and having read your articles in various trade journals, we desire some information regarding a heating system which we have installed in rural school near Orillia.

The situation is as follows: We furnished a pipeless furnace and installed it as shown on the enclosed plan. The trustees now ask us to move it to the rear of the basement; the present location of the furnace is shown on plan. Could you suggest a better location and one that would enable the furnace to heat the building satisfactorily? Please rush your reply.

The trustees desire us to place the furnace as shows in the rear; see plans 1 and 2. Plan one gives desired location of registers. Plan two the desired location of the furnace. Awaiting your early reply.

T. P. and Co., Orillia.

P. S. Kindly return sketches with your reply.

In the first place, we sent our reply by return mail, but for the benefit of

our readers, have decided to publish a more detailed answer to the above inquiry. The writer also happened to be in Orillia at the time this matter was under discussion, and found that there were one or two other points to be considered than actually appear in the correspondence.

Here is the situation:—Certain ratepayers decide to erect a school. They elect a number of trustees, who in turn appoint a building committee.

The committee prepare, or have prepared for them, the plan of a school. Size about 60 feet long by about 25 feet wide. The accompanying sketches show the two floor plans, basement and school room. The committee have erected the school. No specifications were drawn up as to size of furnace, type, or method of heating, except that the school had to be heated by warm air.

The building committee did not make out any specifications for the heating system, but did request that a large enough furnace be installed to heat the school without unduly forcing same.

The heating contractor used his own

personal judgment in the matter, based upon years of previous experience, coupled with the knowledge he had as to the purse strings of the ratepayers and, therefore, installed a pipeless furnace in the manner and location shown in plan number two. And we find that the furnace heats the building well and to the entire satisfaction of the building committee as well as several others of the trustees. But—it now transpires that the basement is required for purposes that require a clear space from rear to front and the contractor is asked to take back the present furnace, furnish a pipe furnace and install it at the rear in a separate compartment where the fuel is stored.

We are asked for advice, not as to whether the contractor is or is not entitled to some remuneration for the changing of the furnace, but rather as to whether or not the present kind of furnace is the best, and if it could be better located, as well as whether we think that a pipe furnace with registers placed as suggested would be best.

In the first place, we do not think for one moment that a pipe furnace would heat the building at all if placed as suggested.

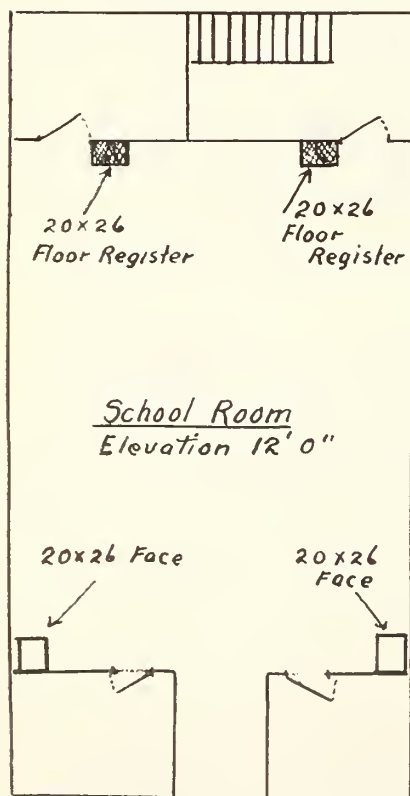

It will be seen that two warm air registers are shown in the floor near baseboard, 20 inches x 26 inches. Also a round face register in wall at the rear of the basement, 20 inches in diameter. Holes have to be cut at the base of the furnace to admit cold air, but no cold air pipes have to be connected. Two cold air registers are to be placed as shown, and to these registers two cold air boxes are to be carried to within 20 inches of the basement floor.

The suggested change is one of the most impractical plans we have ever seen, as well as very insanitary. In the first place the proper location of a pipe furnace would be in the exact centre of the basement, with registers near the two side walls, at equal distances from the rear and front, with two cold air registers, one near the front entrance and one at the rear. The furnace then would heat the floors above as well as the whole of the basement. But to expect a furnace, placed at the rear in a separate compartment as shown, is asking too much of any kind of furnace. Then again, to allow cold air to be drawn from the firing room or even from the basement would set up unhealthy conditions. No sanitary engineer would endorse such an idea. The dust and dirt from the floor of the school room, as well as the basement would be drawn with the furnace and forced up to the school room, and inhaled by the pupils. It is just such conditions that are responsible for 75 per cent. of our victims to tuberculosis. And, understanding this, we feel sure that no school board, ratepayers or committee of ratepayers would wish to have a heating system so installed.

If the ratepayers wish to use the basement to a greater degree than is possible (Continued on page 23)

"Force Manufacturer to Sell to Consumer at Same Price as Wholesaler or Other Trader"

Such is Effect of Decision of Federal Trade Commission of U.S.
Which Certain Wholesalers Are Opposing—Would Play Into
Hands of Co-operative Retail and Chain Store Organizations

A SITUATION of much interest to the retail and wholesale trades has developed in the United States, recently, in connection with an appeal by The Mennen Company against the Federal Trade Commission due to a decision of the latter body which is said to limit the freedom of sellers in formulating and carrying their selling policies into execution.

In this connection a brief has been filed in the United States Circuit Court of Appeals, at New York, in behalf of several of the most prominent national merchandising associations and other bodies. These are wholesale firms and it was felt that as The Mennen Company were manufacturers, that these representations would present a more complete aspect of the questions involved.

This brief contends that the commission has misconceived, in the order appealed from, the purpose and effect of Section 2 of the Clayton Law making unlawful any discrimination in price between different purchasers of commodities, where the effect of such discrimination may be to substantially lessen competition or tend to create a monopoly in any line of commerce. Cases where this decision did not conform with other decisions of the United States courts in similar matters were given. It is further pointed out that the arguments presented by counsel for the government are fallacious. Among others the following statement was made at the hearing: "If all manufacturers in the drug and sundry lines adopted the marketing system of the respondent, it would force the closing of the doors of every concern discriminated against in price. The evidence in this case shows that the marketing system of the respondent was adopted to:

Forces Resale at Suggested Price

"1. Force resale of its products at its suggested prices. 2. Penalize efficiency and economy. 3. Satisfy complaints and demands of individual members of the National Wholesale Drug Association, competitors of co-operative wholesale houses."

The brief goes on to point out that there is nothing to show that The Mennen Company endeavored to force resale of its products at its suggested resale prices, and the other charges are said to be without foundation.

The brief points out that if the order appealed from be affirmed and the method of business be forbidden, the result will be to lessen competition to a vastly greater extent than if such order be reversed and such method be declared lawful. The argument is summarized to the effect that if the contention urged by the Federal Trade Commission should be declared law, it would follow:

"Firstly: That wholesalers would be seriously hampered, their business materially impaired and their future existence imperilled, if not terminated.

"Secondly: Retailers not within the class of chain stores, department stores, mail order houses or members of co-operative corporations, buying clubs or syndicates (and the retailers who are not within such class are immeasurably the larger number of retailers in the country) would be unable to compete with the retailers in the classes named, their business would be impaired and their future existence imperilled, if not made impossible.

Favor Individual Consumer

"Thirdly: If the system contended for by the Federal Trade Commission be established and manufacturers forbidden to discriminate in price as between wholesalers and co-operative corporations and the like, the same principle would forbid

such discrimination as between the two classes named and the individual consumer when the latter buys the same quantity of a given commodity as the former. Such a situation is not only conceivable, but it is a matter of common occurrence that an individual consumer does buy certain commodities in the same quantity as a wholesaler, e.g., a box of soap, a stove, a range, an automobile. If the new system of business here contended for be declared to be the law of the land, a manufacturer would be compelled, in the instances named, to make direct sale to the individual consumer at the same price as to the wholesaler. The obvious result of this would be the impairment of the business of the wholesaler and of the retailer and a serious derangement and disorganization of the business of the manufacturer. It is not too much to say that the result would be little short of chaos. Nor is the illustration chimerical or fanciful. It but depicts the natural consequence to be expected from apaternalistic and meddlesome interference by government with the conduct of private business. Even if these results should not occur in the precise detail and to the precise extent indicated, such interference and control on the part of government would necessarily tend to check the initiative of the merchant and manufacturer, by imposing upon the free exercise of his judgment as to the most efficient method of conducting his business, the judgment of a governmental tribunal and of the courts. It cannot be doubted that such a procedure would impair efficiency, check and hamper individual enterprise and energy, and to tend to deprive the trade and commerce of the country of the benefits which normally flow from business skill and acumen when not exercised by methods inherently wicked or constituting offenses mala in se—methods not claimed to be present in the case at bar.

"The value of the 'old line wholesaler' in the scheme of distribution of manufacturers is an economic fact long established. They constitute, in substance, the salesmen of the manufacturer. They gather together under one roof the products of many manufacturers and hold in readiness in their warehouses these countless products for prompt and ready distribution in small quantities to the retailer. By closer acquaintanceship derived from propinquity to their retail customers, they are better able to judge of the financial credit of the latter than the more distant manufacturer. If these wholesalers be driven out of existence, the manufacturer in most lines of industry would be confronted with the need of making direct deliveries to countless customers, at great distances, in relatively small quantities, and without adequate opportunity of determining the credit standing of such customers. It seems fair to say that such an undertaking would be impossible. The wholesaler now fills this function to the satisfaction of the manufacturer and of by far the greater number of retailers in the country. Shall this time-honored institution be disrupted by the inauguration of the new and unheard-of system here urged by the Federal Trade Commission—and so urged upon the basis of a statute never designed to that end; and, in the debates which accompanied its passage through Congress, no word in support of such a system was ever uttered?

"The order appealed from seems to have been based upon a superficial reading of Section 2 of the Clayton Act, without regard to its history and to its declared purpose; without regard to the decisions of the courts adjudicating it and the other anti-trust laws; and without regard to the vastly greater injury to trade and commerce which would follow from the procedure which that order would inaugurate, than from the long-established procedure which that order seeks to prohibit."

Sanitary Engineer

Plumber and Steamfitter of Canada

No. 2

An Unfortunate Situation

THE alleged high cost of plumbers and plumbing, were subjects discussed at a recent open meeting of the New York Association of Master Plumbers, the idea being to bring to the attention of the public the abuses said to be fostered by the workers. It was charged that fifty million dollars' worth of plumbing contracts for this year were tied up because of an artificially created famine in plumbers; that employers were forced to pay plumbers \$10 and \$15 a day and guarantee overtime despite the fact that the union scale calls only for \$9 a day. It is stated that twenty representatives of the Plumbers' Union were among those attending the meeting but declined an invitation to comment on the charges made.

It is unfortunate that those men engaged in the industry itself have no more concern for its welfare in the eyes of the public than to be a party to such a situation. Steps must be taken to renew confidence among the public in their regard for the plumbing industry both from the standpoint of their functions and their integrity.

* * * *

A Profitable Field

PERHAPS it's just as well that carrying pocket microscopes isn't fashionable. If we were to examine the air in many of the public places we attend all unconscious of the danger, we would be horrified at the result.

None of us would consent to being confined, for even a few brief moments, in a room which we knew to contain thousand of germs each carrying a deadly disease. Common sense would prompt anyone to avoid such a room, for it would be almost impossible to avert being inoculated with some disease which might ultimately cause death.

Yet, despite the good sense that causes humanity to fight shy of contact with contagious maladies, thousands of otherwise prudent persons flock daily to poorly ventilated public places without a thought of the many health perils which may be harbored there in the fetid, poisonous breath exhaled by hundreds of individuals, and intermingled in the dead, foul atmosphere.

This scientific fact is borne out by the frequency of persons fainting wherever a crowd congregates indoors. Seldom does a large number of persons collect in one enclosed place without one or several individuals growing weak and sick. This is due to the lungs becoming impoverished from lack of oxygen because sufficient fresh, clean air is not available.

It has been observed that such occurrences are most frequent in theatres, and an investigation of public gathering places revealed an almost total neglect of correct ventilation.

In many states, statutes and city ordinances have been enacted to enforce the laws of fresh air, and compel owners of theatres, and other places where crowds gather, to install ventilating equipment of a character which will ensure abundant fresh air.

The field of ventilation equipment offers the plumber splendid opportunity for business. The need for such equipment is not as apparent as is the case with plumbing or heating appliances and for this reason more educational work is necessary. The foregoing may give some ideas for developing this kind of trade.

* * * *

A Much Undersold Field

THERE are a great many opportunities for the merchandising of plumbing equipment which are not being fully taken advantage of by sanitary and heating engineers. The case cited elsewhere in this issue of a small Maritime plumber who, acting on a suggestion to get some letterheads and envelopes printed, and send out a number of letters to prospects, secured a number of new customers in short order. Such opportunities exist in every municipality in Canada. The field for equipment in rural districts is one which offers wonderful opportunities, likewise the industrial field where business men are gradually being educated to the advantage of sanitary conditions for their employees.

In the field of water heaters there is also a big opportunity where gas is available. There is said to be an advantage in heat saving in the use of a gas heater as compared with certain other forms of water heating. There are many towns of 20,000 population where there are 800 to 900 automatic water heaters in use. In one larger city there are 18,000 small heaters and 3,000 automatic heaters in use, the latter chiefly in houses of a value of \$10,000 and over. In the Pittsburgh district there are said to be in the neighborhood of ninety thousand automatic gas water heaters in use. There is claimed to be a field for the sale of nine million automatic heaters in the United States. The number would be considerably less in Canada, but it is in greater ratio than the proportion of population because of climatic conditions.

Moisture and other weather conditions affect heaters, and in certain sections their life of usefulness is much shorter than in others. This offers opportunity for renewal as well as new business. This is undoubtedly one of the most undersold fields in Canada and one which lends itself to development of profitable business for the plumber who gives service equal to those who are now taking the cream of such business.

* * * *

CANADA'S improving financial condition is shown by reports just issued indicating an increase of \$6,000,000 in the revenue for the nine months of the fiscal year ending December 31. The biggest increase is shown in Inland Revenue, from Sales and Stamp Taxes. In the nine months these taxes brought \$75,000,000 into the treasury, an increase of \$20,000,000. Income tax revenue declined twenty million dollars, being a reflection of business profits, while Customs revenues increased ten million dollars in value. These figures indicate higher values and increased imports, an increase in volume of business done in the country, though profits were not up to usual levels during last year. This is a true representation of the business experience of that year and the thing to do this year is to increase the profit margin where possible and to stimulate turnover.

Patterns Show Use of Hip Angles

Written for Sanitary Engineer by O. W. Kothe, Principal St. Louis Technical Institute, St. Louis, Missouri.

Patterns for Hip Angles.

THE finding of true angles through hip lines of various designs as covers, hoppers, pipes, etc., is very important, and is also a part of descriptive geometry, extended to a more practical application. In figure 1, we take on the development of the angles in the hip of a pitch cover made to an octagon. The plan shows the half octagon, while the elevation shows the rise with X-Z as center height. Now one manner of developing true angles is shown in connection with this plan.

The first step is to lay out 2 patterns directly from the outline of plan. So we pick the side line of cover X-Y, and we set them as a-b and d-e in pattern I and II. Then we draw the slant lines c-b, also c-e and f-e. This will give the separate patterns for each octagonal segment. The next step is to set dividers to any radius, and using c as center, describe an arc as j-k. Then from these points square out lines to right angles to their base lines, or 90 degrees, to intersect the extended plan lines in points g and h. Now use h or g as center, and k as j as radius, and describe an arc to the hip line of plan as in m. Then draw line h-m-g, which is the true angle for the hip. This hip would have to be bent to this shaded bevel.

The same result is produced by a different treatment as in figure 2, which M-N-O is the angle of outline of plan, or the octagonal angle in this case.

Then M-P equals the central miter line and also is the length of one of the miter lines in plan. From P square out equal to the rise X-Z as P-Q; then Q-M-P will be the true diagonal section through hip. At any place at R draw a line square to miter line M-P until it intersects the outlines in point N and O. After this, draw a line as U-T through R so that it is parallel with the hip line Q-M. After this, square a line at right angles from R to N-M as R-S. Now use R as a center and N and O as a radius, describe arcs to the line P-U. Then the angle T-S-U will be the true bevel through the hips of our cover. This method may be a little harder to see through than the above method, but it permits a wider range of application.

Then at figure 3 we show another treatment for hip lines of a pan, where it is the desire to have the true bevel of the angles in the hips, A-C-C'-A". Here this treatment is repeated as shown in figure 2, and hence needs no further comment.

WARM AIR HEATING IN RURAL SCHOOL

(Continued from page 20)

sible with the furnace in present position, there is only one location we would suggest and that is to move it a little to the rear about half way between chimney and the partition, and still use the same furnace.

The next best suggestion, if not the very best, would have been to install a steam furnace with a number of steam radiators fitted on the walls of the basement, and a number of direct-indirect steam radiators in the school room. Then the steam furnace would take up very little space, and there would be no pipes to obstruct any useful space in the basement.

The direct-indirect radiators, being of such a kind would not only heat the room, but would also admit fresh clean air from the outside. In conclusion, we are sure that taking every condition into consideration, the heating contractors used good judgment in placing furnace where they did.

PREFER TO JOIN CITY OF ST. JOHN

St. John, N. B.—It has been shown that the ratepayers of East St. John have a desire to secure extension of the St. John water and sewerage systems to East St. John rather than to install a special set of these systems in East St. John. Although the light voting precludes a definite indication of what the voters really want, yet the preference seems to be for the extension of the St. John systems and the ultimate annexation of the district to the city of St. John, instead of continuing as a separate municipality.

News Notes From Coast to Coast

Doings in the Plumbing and Heating Industry

BUSINESS CHANGES

Moose Jaw, Sask.—Frost Bros., plumbers, have discontinued their branch at Regina, Sask.

INCORPORATIONS

Hickey & Aubut Ltd., head office Montreal, capital \$50,000 to manufacture furnaces, stoves, ranges, piping, sanitary apparatus, etc.

Perfection Radiators Ltd., head office Montreal, capital \$750,000 to manufacture and deal in radiators.

PERSONAL

St. John, N. B.—Two master plumbers are acting as chairmen for wards in the Liberal city committee of St. John, there being indications of a coming election in New Brunswick politics. They are Joseph Doody and R. J. Harrington, both for many years identified with politics as Liberal workers, in St. John.

Dave Donaldson, formerly with Wolverine, Ltd., traveling from Fort William, Ont., west to the coast, has returned to the employ of the plumbing firm of Robert Paterson, Keele St., Toronto. Mr. Donaldson was for seven years with this firm and the break between his former employment and his return now has been of two years' duration.

PLUMBERS EXPECT BIG JOB

St. John, N. B.—Following the visit of Sir Henry Thornton, the new general manager of the Canadian National Railways, plumbing and heating contractors of New Brunswick seem confident a new station will be built at St. John. The plumbing and heating contracts for this big building will be luscious plums. Reports are that the work will be started in the spring.

KITCHENER BD. OF HEALTH MAKES REPORT

Kitchener, Ont.—The health of the city has been favorable in the past year according to the reports submitted by Sanitary Inspector W. H. Rau and Chairman Geo. Bucher at the last meeting of the year of the board of health.

The report by the sanitary inspector on the work and conditions in the past year follows:

For the month of December I report as follows:—Six cases of diphtheria and one of measles. As this is the last meeting of the year I will conclude my yearly report which is as follows:

We had sixty-three cases of scarlet fever, thirty-one cases of diphtheria,

seventeen cases of small pox, twenty-one cases of measles, three cases of infantile paralysis, one typhoid fever, in all 136 cases. Last year's report was 254 cases.

The sewage from several industrial plants on Spring street caused considerable trouble but this will be taken care of by the city engineer. The garbage system has been exceedingly heavy this year, averaging twenty tons daily.

CLOSE UP UNSANITARY HOUSES

St. John, N. B.—The St. John Board of Health has closed up several houses in St. John as unfit for habitation and a card so stating has been placed on the outside of each. This action has followed negligence of the owners in installing modern sanitary plumbing. There are said to be a number of houses now occupied by tenants in St. John that should be closed until the owners install sanitary plumbing.

WILL HAVE DRAINAGE CONVENTION IN CITY

Chatham, Ont.—Announcement has just been received that the annual convention of the Ontario Farm Drainage Association will be held in this city the last three days of this month.

The sessions of the convention will be held in the Chamber of Commerce. An

attractive program has been arranged and prominent speakers have been engaged for the various sessions.

EMPIRE BRASS CO. HOLD ANNUAL SALES CONVENTION

A four-day annual sales convention was held this month by the Empire Brass Manufacturing Co. Representatives were welcomed at the head office in London by C. S. Stevens, vice-president, who gave an outline of the improvement made in the Empire plant during the past year in the way of modern machinery and other factory equipment, designed to care for the increasing opportunities for trade in brass goods. The entire sales organization attended. A keynote of optimism was evident when prospects for business during the coming year were under discussion. The convention program was taken care of by W. H. Darling, sales manager, London, and O. L. Robb, manager of the Toronto branch.

SAYS WATER NOT RESPONSIBLE

St. John, N. B.—To the report that the St. John water has been responsible for some cases of typhoid in St. John and suburbs, T. M. Burns, secretary of the St. John Board of Health, has stated that Dr. H. L. Abramson, pathologist, for the provincial department of Health, has taken samples of the water and has pronounced the water good.

TENANT GETS DAMAGES FOR LACK OF HEAT

Montreal.—Tenants living in badly heated apartments will find some consolation in the judgment rendered by Mr. Justice Mercier in Superior Court, in which he condemned a landlord to pay \$250 damages to a tenant because a flat had not been kept at a "comfortable living temperature" as stipulated in the lease.

A condition in the lease was that the dwelling should be heated by the owner, and maintained at a proper heat at all times. In this the landlord failed conspicuously, he stated, and the average temperature of the place during the cold months of January to April 1922 was a bare 47 degrees above zero, Fahrenheit. The mercury fluctuated between 43 and 52 most of the time, with the consequence that the tenant caught a severe cold which required protracted and expensive treatment.

In addition, the cold and dampness injured the furniture and silverware to such an extent that these articles were damaged in an irreparable manner. In all, the tenant claimed \$760.

F. R. MAXWELL

Sanitary Engineer of Toronto, former President of Canadian Society, D.S. & H.E., who was re-elected Alderman in Ward 8, Toronto, for 1923 and elected Chairman of the Board of Works for the city.

NORWOOD, ONTARIO, TO VOTE ON WATER WORKS AND FIRE PROTECTION

The fact that the Ontario Government is conducting short courses to farmers' sons and daughters as well as rural residents should make it possible for sanitary and heating engineers to put forth greater efforts towards increasing business in rural districts.

One town, Norwood, is already voting on a by-law which will, if passed, tend to increase the use of sanitary conveniences in that district. Mr. Newsome, the technical editor of Sanitary Engineer, is doing much good work along this line, and even if this bylaw does not pass, there is already good ground broken by the lectures already given.

Apart from the work done in this course Mr. Newsome is giving a lecture, open to the public at each town he calls, and Norwood citizens turned out to the number of nearly 200, a proof that people in Norwood want to know all about sanitary bathrooms and city conveniences. It is rumored too that a sanitary bylaw will go into effect regarding the installation and designs of sewage disposal systems, septic tanks, etc.

With the present interest in water works, and fire protection in Norwood, it would appear to be an opportune time for some one to establish a plumbing and heating business in that town, there being no local industry of that kind there.

MONTREAL BUILDING SHOWED INCREASE IN 1922

Montreal.—Building operations in Montreal for 1922, amounted to \$21,132,586, which is practically the same amount as recorded for 1921, amounting to \$21,726,332. If the \$5,000,000 building permit issued to the Mount Royal Hotel at the close of 1921 is regarded as being in a class by itself on account of its extraordinary investment, it will be seen that the building record for the year just ended shows a substantial increase over the ordinary building activities for the year 1921. The building record by months for the year was as follows, according to figures supplied by the Building Inspection Department: January, \$216,460; February \$561,100; March \$935,713; April \$2,038,834; May \$2,831,690; June \$2,558,077; July \$2,291,190; August \$2,080,270; September \$2,210,167; October \$1,720,875; November \$1,675,370, and December \$2,011,940.

WILL START COURSE AT COLLEGIATE FOR STEAM ENGINEERS

Regina, Sask.—A course for steam engineers will be started in connection with the evening classes at the Regina Collegiate Institute, it was announced by G. R. Dolan, principal.

The course will be for firemen who have had experience with high pressure

boilers and who desire to obtain second and third class certificates. Candidates entering the class will be prepared for the government examinations which will be held in March.

USED SANITARY ENGINEER'S SUGGESTED WINDOW DISPLAY

When calling on the plumbing firm of Band & Cole Ltd., Ottawa, a representative of Sanitary Engineer heard favorable comment from Mr. Cole's son, on the articles which have been appearing from the pen of Major L. L. Anthes. At the same time this firm had a window display showing a Christmas tree hung with bathroom fittings, taken from a suggestion appearing in a December issue of Sanitary Engineer. The firm find the paper useful for giving such ideas.

WESTERN ONTARIO NEWS

Alex. Milne, London, Ont., has been awarded plumbing contract for new \$10,000 citadel being erected for the Salvation Army.

E. R. Seabrook 119 King St., London, Ont., is preparing plans for two new dwellings to cost \$8,000 and wants prices on hot air heating, plumbing and electrical equipment.

Dr. F. N. Sangster, Sarnia, Ont., has plans and will call for tenders shortly for new residence costing \$15,000. Prices wanted on hot water heating, plumbing and electrical work.

Plans are to be prepared by Watt & Blackwell, Bank of Toronto, London, Ont., for a \$100,000 addition to St. Joseph's Hospital. Prices will be wanted on steam heating, plumbing and electrical work.

Ed. Bratt, Harrow, Ont., is preparing plans for new \$4,000 dwelling and wants prices on heating and plumbing.

Ratepayers of Campbellville, Ont., have voted on the question of installing an electric lighting system.

Architect W. G. Murray, Dominion Savings Building, London, Ont., is preparing plans for a new residence to cost \$15,000 for R. H. Dowler. Prices will be wanted on steam heating, plumbing and electrical work.

John A. Nash, 182 Dundas St., London, Ont., is having plans prepared for an addition to his jewellery store to be used as an art gallery. The building will cost \$20,000 and prices will be asked shortly for heating and electrical equipment.

PITTSBURG WATER HEATERS

A new general catalog covering their line of copper coil water heaters has been issued by the Pittsburgh Water Heater Co., of Pittsburgh, Pa. This book is profusely illustrated with the various types and styles of heaters, showing methods of installation, dimensions and details of construction, as well as general views. Much useful information is also given regarding the uses and adaptability of these particular products. The principle of operation, together with the different sizes, are also contained in this illuminating catalog.

DO YOU KNOW THAT—

Many a man has made a false step by standing still.

A wheelbarrow will stand on its two legs and never move a foot unless you lift it up and push it along. So would business. You've got to pick it up and push it along.

You don't have to know anything about grammar to tell the truth.

A hen is the only creature on earth that can sit still and produce a dividend.

Talking comes by nature; silence by wisdom.

When a man starts out to make a fool of himself he can be depended upon to surmount all obstacles.

No currency is elastic enough to stretch from earning capacity to desire.

He profits most who serves best.

Good ideas are only seeds. They must be planted and tilled before they can produce.

There are two kinds of men who never amount to anything—one kind cannot do as they are told, and the other cannot do anything else.

The best time to loaf is after you're dead.

So many things seem impossible—until they are attempted.

"Madam," said the conductor, politely, to the colored lady, "you must remove that suitcase from the aisle."

"Fo' de Lawd sake, conducto', dat aint no suitcase, dat's mah foot."

Catchers Keepers

"I wouldn't marry you," she said scornfully. "If you were the only man in the world."

"No, you wouldn't," he answered. "You'd get trampled to death in the rush."

The Lot of Them

A teacher in a village school asked the other day: "How many kinds of flowers are there?"

Three pupils held up their hands. She chose one to reply.

"Well, Beatrice, how many kinds of flowers are there?"

"Three, teacher."

"Indeed? And what are they?"

"Wild, tame, an' collie!"

Table Etiquette

The Teacher—And what do we do with the whale?

Bobby—Eat it.

The Teacher (sarcastically)—Oh, do we! And what do we do with the bones?

Bobby—Put 'em on the edge of the plate.

Finish Houses and Plumbing Before Applying for a Permit

Plumbing Inspector of York Township Gives Evidence in Inquiry—Plumbing Inspector's Fee Not Forthcoming for Long Period After House is Built

SOME points of interest to plumbers were brought out in connection with the inquiry held in York Township into certain alleged deficits in the Treasury. The hearing was before Judge Denton in Toronto.

H. Hughes, plumbing inspector, for the past two and one-half years, was a witness. He said he had two assistants, Beeston and McGowan. He had no systemized inspection whereby he knew that everybody who was building a house had had plumbing plans inspected by the Township, the staff wasn't big enough.

Often builders or owners finished their houses and the plumbing before they applied for a permit.

"All the plumbing would be covered up then," observed R. S. Robertson, K.C.

Witness: "If it was, and we found out we should prosecute, but we have to grant a permit."

There were hundreds of houses in the Township with no plumbing fixtures because there were no sewers. In this way the Township didn't receive the plumber's inspection fee until the plumbing was installed, sometimes years after the houses were built. He himself, examined and passed on all plans of proposed plumbing. He used "discretion" sometimes, if he thought the owner or builder did not purposely break the by-laws in their planning.

He Has the Say

Counsel: "Is there no appeal from your decision?"

"No."

"So that if you want to beat a man out of the plumbing business you can?" There was no answer to this.

Three houses had been completed last August, and had plumbing installed without the plans being first inspected by him. One of the houses was plastered, so that he couldn't inspect all the plumbing. The houses had been "O.K.d" by some unknown person. The plumber hadn't been penalized for not submitting plans.

Counsel elicited the information that witness had granted a permit to a plumber whose plumbing was all wrong when he inspected. This was "because his plans were all right" witness said.

Owner Complained

A letter was read from an owner, George Brown, complaining that the plumbing had been "O.K.d" by an unknown person before it had been completed.

"What did you do about that?"—A. —"We couldn't find the person."

Judge—"It might have been someone trying to get into the cellar. Some men will do that kind of a thing to get in a man's cellar and get his liquor."

Counsel: "Did you try and find out who was doing this O.K.-ing?"—"We made many inquiries, but couldn't get anything definite." He thought there was some animosity against Inspector McGowan, who inspected plumbing, and somebody might be trying to "get him in Dutch."

No Check on Other Depts.

Counsel: "Did you keep a check on the Waterworks Department as to when they turned on water, so that you would know that no owner would get away without having his plumbing inspected and paying his fee?"—"No."

Judge: "Perhaps it didn't occur to you."—"No."

Counsel: "Do you keep a check on what permits the building department are issuing?"—"There's no co-operation between our department, the Building and the Waterworks Department."

Witness wished more co-operation, and said he would like to be relieved of the handling of the cash he received for permits issue.

SPEND \$50,000 ON NEW SEWER SYSTEM

Nelson, B. C.—To install the Fairview sewer system will entail an outlay of \$52,026.81, according to figures given by W. M. Myers of Green Bros., Burden & Co., the city's engineers, in an estimate presented to the city council. This is the estimate for the entire project, covering all of Fairview but the hill section. The system will require more than four miles of pipe.

In the above figure is included \$18,535.50 for excavation, \$15,383.39 for pipe, \$8,575 for pipe laying. An item of \$2,875 is included for engineering work and inspection.

In the area covered by proposed system there are approximately 200 houses to be served and approximately 800 lots front on or will be accessible to the sewer. In addition to this number of lots there are approximately 300 additional lots which will be benefitted by the installation, as in no case will more than 600 lineal feet be required to give a connection.

"The total length of pipe on this proposed system is approximately 22,000 feet. The plans call for the construction of 50 manholes, 31 light holes and 32 catch basins. Three outlets are pro-

vided, the main one being at the foot of Kootenay street, with an outlet pipe 800 feet in length. The second outlet, at the end of First street, provides for a small septic tank and an overflow to the lake. This outlet will carry the sewerage from block 21 only, and will not be added to as the general system is expanded. The third outlet is at the foot of Poplar street.

"So far as possible the proposed system provides basement drainage for all houses, and to a large extent will collect through the various catch-basins the surface water which is now periodically a menace to a part of Fairview."

SEASONAL WINDY DISPLAZE

(Continued from page 15)

"Wots the big idear," I sez, tryin to look dignified.

"It certainly aint yourn," she bit off at me. "Theirs an old sayin," she continyvers hostically, "that childern an foolze shooldnt look at 1/2 finished werk. An you aint no child!"

I new I was goin to get the wurst of it so I begin to talk about myself an my trip to put myself at eeze—you know me Al.

But I was curyious as to wot the stunt in the windy ment, thow I never ast no more questus.

However wen Joe Hicks started to werk on the other side of the windy I begin to get wize. He fitted it up into 1 one of the swellst little bathrooms you ever seen. He put immytation white tileing on the flore and wails and used a big sheat for the sealing. He put in alectrick lites witch was turned on at nites.

The side with the Noze Ark fixtrs, he fixed up with common dark wall-paiper, and it was lit up at nite with a old coal oil lamp. I suggested that we awt to call the old 1 "befoar," and the new 1 "after," like a patient medycine add. But Vilet had beet me 2 it & had 2 nise-ly printed cards, 1 beeing, "Ancient," & the other, "modern," witch wear put in the 2 sidzs ov the windy respectab'y.

Youd athawt we was exhibityn man-eatin goofers the way peepls crowded around that windy.

Bill afterwadze explnd to me that the old junk had been taken out of the house ov 1 ov hour leadin cityzens just the weak befoar & their wear still a bunch of the same kind of fixts in menny of hour best hoams.

That exhbt must hev got on the con-sence of the popelace for overhawl jobs begin to come in regler wich was a good thing as the builden seazen was abt over & we was gettin slack.

So Ive came to the concln that windys are like men and wimmen. If their well dressed, peeoples will take notis—if their not the world passes them up.

With witch remks I draw to a cloze.

Yourze Jerry.

Market Conditions and Tendencies

Price Trend on Sanitary and Heating Supplies

Markets at a Glance

AN IMPORTANT list of price revisions appear on the current sanitary and heating markets. The changes include both advances and declines. It was outlined in some quarters that the turn of the year would most probably produce new quotations on various lines, principally of an upward direction, however, owing to the strengthening tendency evident in the undertone of certain basic commodities. A summary of the current market changes indicates that increases are more numerous than reductions. Higher price levels are noted on hot air furnaces, both pipe and pipeless; also stoves and ranges; lead products, including sheets, wool and solders, terne plates, pig iron, brass and copper rods, tubing and sheets. There has also been a change in the list prices on larger sizes of eavestrough and conductor piping. New price lists are issued on radiator valves and union elbows, with varying discounts at present being

quoted. The reductions include such products as, the Penberthy line of brass injectors, ejectors, air and pet cocks, water gauges, nickel-plated basin supplies, cement in carload lots, stop and waste cocks, and closet combinations. There has been no change in cast iron fittings, as yet. The upward tendency remains in cotton wastes, while delivery of wrought piping from the mills is now described as on a slightly better plane. Radiators remain on a firm price basis, with an upward tendency also noted in bar iron and steel. An unusual feature in the sheet markets is the upward trend in primary centres, and the fact that some shading has occurred in an attempt to attract business during the quiet period in certain domestic markets. The outlook for trade during the coming months for such lines as enameled ware, soil pipe and fittings, corrugated sheets, and asbestos products is stated to be good.

Montreal Markets

MONTREAL, Jan. 13.—A lengthy budget of price revisions is announced in the markets for plumbing and steam-fitting supplies. Advances are more numerous than declines, and the following are now quoted at higher levels: hot air furnaces, both pipe and pipeless, also stoves and ranges, lead products, including sheets, wool and solders, terne plate, and pig iron. Reduced quotations are announced on such lines as the Penberthy line of brass injectors, ejectors, air and pet cocks, water gauges, etc., nickel plated deep seal traps, stop and waste cocks and cement. Higher waste prices are still expected in some quarters early in February. The wrought pipe market remains in a strong position, also other lines of iron and steel products due to the firm tone in raw materials. No change is made in enameled ware quotations, these lines being quiet at the present time.

STOVES AND FURNACES SHOW PRICE INCREASE

Montreal.

Revised price levels are now effective on stoves and ranges, also hot air furnaces, both pipe and pipeless. Local manufacturers announce that new quotations are effective immediately, and show an increase of from five to seven per cent. on the various lines. The undertone of this market has been firm for some time because of increasing productive costs, and the present revision allows for the advanced costs of raw materials and labor.

REDUCED PRICES ON THE PEN-BERTHY LINE

Montreal.

Through a revision in discounts reduced prices are quoted on the Penberthy line of injectors, ejectors, air cocks, water gauges, etc., the reduction

amounting to approximately ten per cent. Following are revised discounts on some of the well-known lines:

Injectors	55 10/5%
Ejectors	70 10%
Air or pet cocks.....	50%
Water gauges, safe guard	plus 5%
Water gauges, standard	33 1 3%

COTTER PINS NOW FIVE AND TEN PER CENT. OFF

Montreal.

A revision in an upward direction is announced in quotations on cotter pins, these now being quoted less 5 and 10 per cent. Former discounts was 10 and 10 per cent.

FURTHER SLIGHT ADVANCE IN PIG IRON QUOTATIONS

Montreal.

That pig iron is on a firm market trend is evidenced by a further slight increase in quotations. Domestic iron

is advanced seventy-five cents per ton, bringing the present local price to \$34.90 per ton. While the low price reached prior to the advance of a few weeks ago was considered well down to bottom, and the trend would probably be upward in future for this reason, improved demand has also played an important part in this market.

SLIGHT REDUCTION IN CEMENT QUOTATIONS

Montreal.

After remaining on a steady basis for some months past, quotations on Portland cement now show a reduction of minor proportions, approximately six cents per bag. The buying movement of this product is slow at present, although business is described as seasonal, with prospects of brisk activity during earlier spring and summer months. Current quotations at the revision are;

CEMENT—

Car load lots, per bag, f.o.b.	
Per bag, f.o.b. steam cars	0 86
Per bag, delivered	0 94
Less car lots, per bag, f.o.b., yard.....	0 94
Per bag, delivered	1 04
Less 5 per cent.	
Rebate of 20 cents for empty bags.	

VARIOUS LEAD PRODUCTS MOVE UPWARDS IN PRICE

Montreal.

A quite extensive revision is recorded in the market for lead products when lead wool, sheets and solders are advanced in price. Wool is up one cent. per lb., sheets one-half cent in the various weights. Solders, with the exception of wire solder, are advanced one-half cent. Wire solder in two cents per pound higher. Metals on primary markets continue to display a very firm un-

dertone, tin spelter and lead being the strongest. Although lead has remained in a very strong market position for some time past there is no indication at present of any easing. This movement comes as more or less of a surprise to some well informed who were of the opinion that the advance had spent itself before the close of last year.

LEAD AND ZINC PRODUCTS—

Lead pipe, per 100 lbs., up to 2"	14 00
Do., 2" to 8"	15 00
Do., 8" and over	16 00
Lead waste, per 100 lbs.	15 00
Note—Lead pipe is subject to a discount of 10%.

Lead sheets, 3 to 3½ lbs., sq. ft. lb.	0 11½
Do., 4 to 8 lbs., sq. ft. lb.	0 10½
Cut sheets, ¼ c. lb. extra and cut sheets to size, ¾ c. lb. extra.	
Solder, guaranteed, lb.	0 27
Do., strictly, lb.	0 24
Do., commercial, lb.	0 23
Do., wiping, lb.	0 23
Do., wire, lb.	0 38
Zinc, sheets, casks	0 11
Do., broken lots	0 11½

GENERAL ADVANCE IN HAMMER QUOTATIONS

Montreal.

Local jobbing houses have now received new price lists on hammers showing advanced quotations on nail, riveting, and sundry lines. The increase is from five to ten per cent. on the various grades, such lines as machinists' blacksmiths' and tinners' hammers, mauls and wedges showing changes of a minor nature.

HIGHER COTTON WASTE PRICES STILL LOKKED FOR

Montreal.

Although new advanced quotations on cotton wastes were anticipated around the first of the year these have not yet made their appearance. The market, however, remains in a very firm position and one local dealer stated that a revision was still looked for and would probably be announced around the middle of the month or early next month. Other lines of cotton goods are now higher in price which denotes the strong tendency in raw cotton circles. Prevailing net prices are the following:

COTTON WASTES—	Per lb.
Cream polishing	0 19
White, XXX extra	0 17
White, XX grand	0 16
White XLCR	0 15
X Empire	0 13½
X Press	0 12
Colored—

Wool Packing—	
Arrow	0 24
Axle	0 20
Anvil	0 16
Dominion Wipers—	
White cotton	0 20
Colored cotton	0 14

WIRE NAILS ADVANCED TO \$4.00 BASE

Montreal.

Following the firm trend of wire and wire goods in primary markets, due to a brisk demand and higher production costs through higher raw material values, wire nails are advanced on the lo-

cal market twenty-five cents per keg. This brings the quotation to \$4.00 base. In announcing this revision local mills state that a very firm undertone exists in wire products generally and a further announcement covering other lines may be made at an early date.

WROUGHT PIPE MARKETS STILL DISPLAY FIRM TONE

Montreal.

Much the same conditions prevail in wrought pipe markets as have been outlined in previous reports, a firm tone being still behind in deliveries. Local mills are also experiencing the difficulty of securing supplies of raw materials. List No. 57 still governs domestic quotations.

COPPER RIVETS AND BURRS HAVE REVISED DISCOUNTS

Montreal.

Through a revision in discounts, advanced prices are recorded on both copper rivets and burrs. Copper rivets with the usual proportion of burrs are now quoted at less 25 per cent., while copper burrs separately are plus 20 per cent.

REDUCTION IN N. P. DEEP-SEAL TRAPS

Montreal.

A reduction has been made in quotations on 1½ inch deep-seal nickel plated traps and these are now quoted at \$5.50. 1¼ inch are selling at \$3.40.

REVISED DISCOUNTS ON STOP AND WASTE COCKS

Montreal.

As stated in previous reports changes in quotations on certain lines of compression goods were expected by local distributors. Manufacturers announce that discounts on both flatway and roundway stop and waste cocks are revised, and lower prices are now quoted on both lines. The discount in both instances is 56 per cent. It is also understood that radiator valves are now priced on a new list and discount, but up to the present time local jobbing houses are still quoting for former list prices. Following are prevailing discounts;

VALVES—

Compression work, standard	45%
Fuller work, standard	30%
Quick opening compression bibbs.	43%
Bath cocks, quick opening	41%
Bath cocks, compression	41%
Basin cocks, quick opening	46%

Roundway stop and waste cocks, standard ..	56%
Brass steam cocks, standard, ¼ in.	60%
Radiator valves, standard	58%
Do., removable discs	58%
Quick Opening radiator valves	60½%
Globe, angle and check valves, standard ..	25%
Gate or straightway	25%
Emco globe valves	33%
Emco check valves	33%
Jenkins globe, angle, check and swing ..	
check	10%
Jenkins gate or straightway	16%
Montreal.	
Jenkins iron body, globe and angle	15%
Jenkins iron body, gate	25%
N. P. "O" and "S" traps	40%

INCREASED QUOTATIONS APPEAR ON TERNE PLATE

Montreal.

In the local sheet markets higher prices on terne plate, announced by jobbing houses, attracts attention. Quotation on the 112 sheet boxes are advanced seventy-five cents per box. It is stated that this revision is made in face of a firm market tone in production centres, and former prices were at a level which offered a very narrow margin of profit for distributors. Advanced quotations on tin plate in the near future are predicted in some quarters. Galvanized sheets remain on a steady to firm basis, and although there is no definite indication of a change in prices the tendency is undoubtedly upwards. The quieter winter months are passing and distributors are apparently quite willing to carry stocks over the remainder of the winter because of the firming tendency in the market, rather than sell at any lower levels in the hope of clearing the decks for spring business. Black sheets are very quiet with no particular change in the market.

BLACK SHEETS—

10 gauge, base	4 2½
12 gauge	4 35
14 gauge	4 45

STEEL MARKETS IN SATISFACTORY POSITION

Montreal.

In spite of only a seasonal amount of business from local warehouses distributors of bar products pronounce the market a being in a satisfactory position. There is a firm undertone in production circles, the market described as stronger at the present time than for some time past, and this condition is not usually in evidence during the quieter winter period. Quotations locally are unchanged with the exception of domes-

tic spring steel which is twenty-five cents per 100 lbs. higher.

BAR IRON—

Common bar iron, 100 lbs.	3 15
Refined iron	4 65
Irish finish machinery steel	3 20
Mild steel	3 15
Single reeled machinery steel	5 25

Mining tool steel, per lb.	0 20½
Black Diamond tool and cast steel, per lb. 0 20½	
NOTE—Refined iron is approximately \$1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.	

Band steel in scroll bundles, 50c per 100 lbs. extra.

STRONGER TONE SHOWN IN RADIATORS AND BOILERS

Montreal.

In outlining the market tendency in radiation and boilers one local manufacturer stated that recent developments in raw material and production costs had somewhat strengthened the situation on these products. Pig iron was now firmer in tone, and fuel costs were higher and still hard to obtain. Domestic labour had not yet increased but it was noted that moulders in the United States were to be granted higher wages and this would possibly follow here. There was, however, no indication of any revision in prices on either line at the present time, but certainly the tendency in the market was upward. Another manufacturer was of the opinion that nothing would be done in the matter of advancing price levels for some little time at least. Unfortunately there was a certain amount of unsettlement in the market and this had a tendency to weaken the position. Following are prevailing quotations;

RADIATORS AND BOILERS—

Radiator list prices are for 1, 2, 3, 4 and 5 column radiators, per sq. ft.
45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount 55 per cent for hot water, and 56 per cent for steam.

Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05; Discount 52 per cent.

Boilers—Round hot water boilers, sizes from 0 to 10, 60 per cent. off list. Square or sectional hot water or steam boilers, 15 in., 15 per cent. Square or sectional water boilers, 19 in. to 36 in., 20 per cent. Square or sectional steam boilers, 19 in. to 36 in., 17 per cent. Ontario Government trimmings, 15 per cent.

Round steam boilers, standard trimmings, 28 per cent. Ontario Government trimmings, 25 per cent.

F.o.b. Montreal, Toronto, Guelph.

STEADY MARKET TONE REMAINS IN CORRUGATED

Montreal.

When discussing the firm tone in galvanized sheets and the possibility of its reflection on corrugated sheets, a local manufacturer stated that he did not think the upward tendency was of sufficient extent to affect these products. Importers of English sheets had announced a minor revision in flat sheets owing to the strong market overseas, and the increased exchange rate, but the fact that they were now in the midst of a dull period would offset this tendency, for the present at least. Stocks

are in good shape, in fact more than ample to take care of present requirements. Following are list prices and discounts;

CORRUGATED SHEETS—

	Per 100 Sq. Ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 26, U. S. gauge	8 00
No. 24 gauge	9 00

No. 20 gauge	12 50
No. 18 gauge	16 50
Less 10 per cent.	
Lighter than 24 gauge and wider than 27 inches, 75c. per square extra.	

NO CHANGE IN QUOTATIONS ON CLOSET OUTFITS

Montreal.

No new prices have made their appearance on closet combinations, although it was thought by some that some development along these lines might be recorded around the beginning of the year. Distributors state that there is little enough profit on these products without any announcement of lower quotations. It is also felt that a change downward would only prove detrimental to the supply houses as there has for some time been a more or less unsettled condition in the market, and easier prices would not tend to establish a more stable market tone.

CLOSET COMBINATIONS—

Low down outfits,	each
Closet, standard outfit, oak	25 00

Enamelled iron with fittings, flush elbow and supply	16 50

VERY LITTLE DOING IN ENAMELED WARE

Montreal.

Seasonal dullness is evident in enamelled ware, sales being spasmodic and for small quantities. Jobbers anticipate a quiet market for the following weeks, although prospects for a resumption of activity in spring months are bright as a good building year seems assured.

There is no change in quotations, and following are list prices and discounts:

ENAMELED WARE—

Sinks, roll rim—	
18 x 30	\$23 00
Sinks, flat rim—	
16 x 24	1 only 2 only 3 only
18 x 30	\$ 7 50 \$ 7 40 \$ 7 30

17x19 in. Roll rim. F241 or P4345	12 60
Less 33 1-3 per cent.	

MODERATE TRADE RECORDED IN BOILER TUBES

Montreal.

There is only a moderate amount of business being done in boiler tubes. Quotations on the various sizes are unchanged but these levels are firm owing to the upward tendency in primary markets, where a fair amount of activity is noted, and deliveries somewhat delayed. Local distributors state that an improvement in the movement of tubes would in all probability mean higher prices as they are working from stock, and not forced into replacement costs. Unchanged average quotations are as follows;

BOILER TUBES—

	Seamless Lapweld
1 inch	20 00
1¼ inch	22 00
1½ inch	21 00
1¾ inch	24 50 24 00
2 inch	21 00 19 75
2¼ inch	24 00 22 25
2½ inch	27 00 23 25
3 inch	33 00 29 50
3½ inch	38 00 34 25
4 inch	49 00 43 50

CONTINUED STRENGTH OF LEAD FEATURE OF METALS

Montreal.

Quotations on ingot metal markets are holding firm and in some cases have again advanced slightly, the new high point reached on lead being a feature on U. S. markets. Demand locally is still on the light side, but there should soon be an improvement and if the European situation takes on a more settled appearance a better tone is thought likely in all lines.

TIN.—This metal has marked time recently both buyers and sellers being somewhat cautious, but the general feeling is bullish and the strength of Sterling exchange would seem to point to higher prices. Locally the market is quiet but firm at 43½ cents.

COPPER.—The American market is dull put prices are unchanged and although export business is light at present domestic demand continues good. Copper is still the cheapest metal on the list and there are said to be indications of higher quotations in the near future. Prices remain at 18 and 17½ cents for electro and casting respectively.

LEAD.—Lead continues very firm in the U. S. with prices advancing daily, and \$7.40 East St. Louis has been paid. London is a little lower but is fairly

strong in tone and advances are expected there. The local market is strong at 8 to 8½ cents.

SPELTER.—The market in the United States has sagged slightly especially for forward deliveries, but this is probably temporary as stocks are still on the low side. London receded a little last week but has recovered some of this since. Indications are said to point to a firm market especially when Europe

again starts buying on this side. Quotation is from 9½ to 10 cents.

ANTIMONY.—Antimony is temporarily at least very firm and offerings from China are light. The local market is almost bare of supplies and prices are firmer at 8 cts. for English, 7½ cts. for Chinese.

ALUMINUM.—There is no new feature in the aluminum markets and quotation remains at 22 cents.

Toronto Markets

TORONTO, Jan. 13.—A fairly heavy budget of price revisions features the plumbing markets during the early weeks of the year. Developments include both increases and reductions. Higher prices are recorded on furnaces, both pipe and pipeless, also stoves and ranges. There has been an upward change in the list prices on the larger sizes of eavestrough and conductor pipe, while a similar revision is made in quotations on copper and brass products. A further increase in pig iron attracts attention to the trend of certain basic elements. On the other hand some easier levels appear on closet combinations, this change being foreshadowed in the last issue of Sanitary Engineer. There is also a decline in prices on stop and waste cocks, while cement costs are reduced in carload lots only. New lists are issued on radiator valves and union elbows, with varying discounts applying to same at present. A slight reduction is also evident on nickel-plated basin supplies.

EASIER PRICES ON CLOSET COMBINATIONS

Toronto.

A reduction of approximately two dollars each is made on closet combinations. This downward revision was foreshadowed in the report contained in the last issue of Sanitary Engineer. The revision applies to all outfits, as listed below. Closet bowls, tanks and seats, however, remain unchanged in price. Following are the revised quotations on these products:

CLOSET COMBINATIONS—	Each
Oak Wood Tank, Oak W. S. Seat and Cover	24 00
Oak Vitro Tank, Oak W.S., Seat and Cover	24 00
Oak Pussyfoot Tank, Oak W. S. Seat and Cover	24 00
Oak Wood Tank Oak P.H., Seat and Cover	24 50

Oak Richelieu seat and cover	2 50

PRICE DECLINE ON STOP AND WASTE COCKS

Toronto.

Through a revision in discounts, quotations on standard roundway and flatway stop and waste cocks are slightly lower this week. The current level is now 56 per cent. off, as compared with the former quotation of 54 per cent. This change affects the T lever and lever handle, while slightly revised discounts also appear on special lines, such as the patent guard or socket head stop, and stop and waste cocks.

No uniform discounts have yet been announced on the new radiator valve price lists. In some cases, the former discount of 58 per cent. is being applied on the new list—which is reproduced elsewhere in this issue—while in other quarters a quotation of 60/10/10 per cent. has appeared. The reason for this is pointed out that the revised list is higher on some sizes.

VALVES—	Per cent
Compression work, standard	45
Fuller work, standard	30
Bath cocks, compression	47
Do., Fuller	25
Flatway stop and wastecoeks, stand'd.	56
Brass steam cocks, standard ½" to 2"	50
Do., 2½" to 3"	43
Globe, angle and check valves, std.	25

Quick opening No. 3633	50
No. 3623, plain or index handle	34

NEW PRICE LIST ON RADIATOR VALVES AND UNIONS

Toronto.

New lists and discounts are being adopted on radiator valves and union elbows. At the time of going to press, the new lists were available and these are re-produced below, but the discounts applying to same had not yet been definitely decided upon. However, it is expected that a decision will be reached within the next couple of days and the revised quotations will automatically become effective from January 1. In placing these revisions into effect, manufacturers point out that under the former list and discounts some sizes were considered too low in price and others too high. Thus the present change is more in the nature of a readjustment. Following are the new list prices:

STEAM RADIATOR VALVES—	
Composition disc, Without valves.	
No. 32—Size ½ inch, \$3.40; ¾ in., \$3.85; 1 in., \$4.50; 1¼ in., \$5.65; 1½ in., \$7.40; 2 in., \$12.10.	
Composition disc with union—

SLIGHT PRICE REDUCTION ON BASIN SUPPLIES

Toronto.

A slight reduction is now made on nickel-plated basin supplies, size ¾ in. These are now quoted at \$1.90 per pair, compared with the former level of \$2.

INCREASED PRICES ON COPPER AND BRASS

Toronto.

The stronger tone which recently developed in the copper markets, both on ingot and semi-finished products, has now resulted in an increase of approximately one cent per lb. on both brass and copper rods, tubing and sheets. This upward tendency was referred to in the last issue of Sanitary Engineer, and was considered as more or less foreshadowed by the recent trend of events in primary

centres. While current business in these goods is described as moderately fair for this season, conditions in some quarters are outlined as better than anticipated and the domestic market tone has remained fairly strong. Following are revised quotations:

BRASS—

Sheets, base, per lb.	0 26
Rods, base, per lb.	0 23
Tubing, base, per lb.	0 31

COPPER—

Rods, base, per lb.	0 29
Soft sheets, plain, 16 oz. and heavier, lb.	0 30
Do., plain tinned, 16 oz. and heavier, per lb.	0 43
Do., polishing, 16 oz. and heavier, lb.	0 36
Tubing ...	0 34
Copper, bus bars, base ...	0 29

CHANGES IN LIST PRICES ON TROUGH

Toronto.

Higher list prices are now generally in effect on the fifteen-inch and eighteen-inch sizes of eavestrough, both ridge roll and valley. The discounts remain unchanged, but an advance of over 25 per cent. is made in the list. The actual extent of the increase, however, is of moderate extent. A similar revision takes place on conductor pipe in the five and six-inch sizes. These list prices are also advanced, but discounts remain the same. Other sizes of both trough and piping are unchanged at the former levels. Elbows also remain unchanged in price. These larger sizes in such products receive only few calls, which is pointed out as one of the reasons for the revision. The new quotations follow:

TROUGH (EAVE)—**O. G. Square Bead—**

	Per 100 ft.	Per 100 ft.
8 inch ...	\$15 90	15 inch..... 34 50
10 inch ...	17 70	18 inch..... 44 00
12 inch ...	21 20	
D. G. Round and Half Round		
8 inch ...	16 90	15 inch..... 35 50
10 inch ...	18 70	18 inch..... 45 00
12 inch ...	22 20	
Less 70 per cent.		

PIPE (CONDUCTOR)—

	Plain, round or corrugated.
	Per 100 ft. in 10 ft. lengths.

3 in., in 10 ft. lengths, list	22 30
4 in., in 10 ft. lengths, list	29 60
5 in., in 10 ft. lengths, list	48 00
6 in., in 10 ft. lengths	58 80
Less 70 per cent.	

ELBOWS (CONDUCTOR)—

2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 60 per cent.	

INCREASE OF FIVE PER CENT. ON STOVE PRICES

Toronto.

A general readjustment of prices on stoves and ranges is being made involving an approximate increase of five per cent. Manufacturers state that this upward movement has been decided upon in order to take care of higher labor and raw material costs. These latter factors have been pointed out in former issues of Sanitary Engineer. It is also stated that the maximum advance is not more than around seven per cent. Furnaces, both pipe and pipeless, are also affected by the change, as similar conditions prevail in regard to basic elements affecting these products. New prices are at pre-

sent being figured, and will be available within the next few days.

REDUCED PRICES ON CEMENT IN CARLOAD LOTS

Toronto.

As was outlined in a former issue of Sanitary Engineer, cement quotations are now reduced. This decline, however, is only effective on carload lots, at present, the extent of the reduction being around twenty cents per barrel. The change brings the barrel basis in quantity purchases to \$3.45. The revised quotations follow:

CEMENT—

Carload lots, per barrel	3 45
Less carload lots, per barrel, f.o.b. yard ..	4 35
Per barrel, delivered	4 55
Single bags, \$1.15 each; 4 bags to barrel.	
Extra charge of \$1.50 per load on less than 24 bag lots.	
Rebate of 20 cents each for empty bags.	

STEADY TO FIRM TONE IN LEAD AND ZINC GOODS

Toronto.

Business in lead and zinc goods is described as keeping up in fair volume for this season, with prices on a steady to firm basis. Primary metals continue to hold the recent improvement, and this strength is reflected in the finished products to a certain extent, as previously referred to. The termination of the inventory period now leaves the field clearer regarding prospects for the new year's business and an optimistic tone is generally evident. No change has developed from the following local price levels, although some slightly higher levels are now evident in other centres:

LEAD AND ZINC GOODS—

Lead pipe, list, per lb.	0 14
Lead waste pipe, list, per lb.	0 15
Do., over 8 in., list, per lb.	0 16
Lead pipe is subject to a discount of ten per cent.	
Lead traps and bends, less 15 per cent.	
Lead sheets, 4 to 6 lbs., sq. ft. in rolls, lb. \$0.09½—0.10.	
Cut sheets, ½ c to ¾ c lb. extra and cut sheets to size, 1 c lb. extra.	
Solder wire, per lb.	0 31
Do., commercial, lb.	0 25
Do., strictly, lb.	0 23½
Do., guaranteed, lb.	0 26½
Do., wiping, lb.	0 23½
Zinc sheets, per lb.	0 11

FURTHER INCREASE IN PIG IRON QUOTATIONS

Toronto.

Pig iron also registers another increase, the extent of this further rise in price being seventy-five cents per ton. This revision, although of a comparatively minor nature, indicates the trend of the market, and places current quotations at the level of \$32.55. This is the second increase during the last few weeks, and prices have risen from the mark of \$30.80 to \$31.80, and now have attained the above figure, \$32.55. It is pointed out that quotations in primary centres have been on the upward grade and this condition is reflected in domestic circles, together with more interest and a seasonal degree of activity. Coke prices also remain high. Just how far this development will affect the trend of finished products will be watched with interest.

NO CHANGE IN DISCOUNT ON CAST IRON FITTINGS

Toronto.

Conditions with regard to cast iron fittings have been recently adjusted and the contemplated revision in prices on these products is now in abeyance. While the opinion was formerly expressed by several distributors that some easier levels would most likely appear in the early part of the new year, it is pointed out that any such changes would have been in the nature of price shading, as current market conditions, as well as the raw material situation, hardly warrant any declines at this period. The former discount of 27 per cent. off remains unchanged. Other quotations are as follows:

PIPE FITTINGS—

Per Cent.

Cast iron fittings	27
Plugs, cast iron	27
Do., solid	27
Do., countersunk	27
Bushings, malleable	30
Do., cast	30

SEASONAL QUIETNESS EVIDENT IN CORRUGATED

Toronto.

Only moderate trade is recorded in corrugated sheets, the seasonal quietness being generally evident. These products remain on a steady to firm basis, no change having been made in either list prices of discount. Another brisk season, however, is expected, with indications of increased building activity as soon as the weather permits. Following are current quotations:

CORRUGATED SHEETS—

Per 100 Sq. Ft.

No. 28 gauge	6 50
No. 26 gauge	7 00
No. 26, U. S. gauge	8 00

No. 20 gauge	12 50
No. 18 gauge	16 50
Less 10 per cent.	
Lighter than 24 gauge and wider than 27 inches, \$0.75 per square extra.	

UPWARD TENDENCY REMAINS IN COTTON WASTES

Toronto.

While no changes have yet developed with regard to cotton waste prices, the opinion still prevails that some further increases are pending and will most likely become effective during the ensuing weeks. One manufacturer stated to Sanitary Engineer that, while the contemplated revised levels would not be known this week, it was quite possible that slightly higher quotations will ap-

pear, especially if the upward trend of raw cotton continues to be reflected in this market. The present levels are as follows:

COTTON WASTES—

Cream, polishing	0 19
White, XXX	0 19

Above lines subject to trade discount for quantity.

GOOD PROSPECTS FOR ENAMELED WARE TRADE

Toronto.

No developments have been recorded in enameled ware products, the former quotations still being in effect on these lines. Lists and discounts are unchanged, although a moderate reduction is being made on closet outfits. It is noted that in some quarters of the city a start has already been made on the 1923 building program, while in other cases some interior finishing is being done on buildings which were only partially completed last year. All these factors are pointed out as assisting towards current activity and good prospects for the ensuing months.

ENAMELED WARE—

Enameled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40

Do., 5½ ft.	16 75
Steel bath quotations only are net.	

RADIATORS REMAIN ON FIRM PRICE TREND

Toronto.

While some rumors have been in evidence regarding the possibility of slightly advanced quotations on radiators in the near future, no development in this direction has been recorded. Manufacturers state that the prospects for the year are good and brisk business is anticipated. No change is being made in prices or discounts, it being pointed out that although pig iron is again firming up in price, this condition is not affecting the market tone unduly, as no revision was made in quotations while pig iron was recently fluctuating. Raw materials are admittedly, however, on a firm trend, which is reflected to some extent on the finished products. Current quo-

tations are unchanged at the following levels:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.
38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.

Discount on 2, 3, 4 and 5 column standard sizes, 55 per cent. for water and 56 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 47 per cent for water and 48 per cent for steam.

Discounts on 1-column hospital size, water 33 per cent.; steam, 34 per cent.

Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 52 per cent.

BOILERS—

Water:

Round 60 per cent. off list. Square 20 per cent. off list.

Steam:

Round, 25 per cent. off list; Square, 15 per cent. off list.

DELIVERY OF PIPING NOW ON BETTER PLANE

Toronto.

"Very good for this time of the year," is the general expression regarding current business in wrought pipe. The delivery situation, referred to in former reports, is now described as being a little better, but it is certainly not considered as easy. The market remains on a very firm basis, with the call for piping in primary centres being such as to indicate that heavier requirements are being anticipated for the coming months. List No. 57 continues to govern the local market.

WROUGHT PIPE

Price List No. 57. November, 1922.

RANGE BOILER TRADE BETTER THAN EXPECTED

Toronto.

In range boilers seasonal quietness prevails. The present volume of trade, however, is stated to continue somewhat better than usually expected for this time of the year. The undertone of the market remains firm, and little change in this direction is anticipated. No revisions have been made in either lists or discounts, it being pointed out that raw materials and production costs are approximately on the same basis as when

the last revision was made, which brought the following quotations into effect:

RANGE BOILERS—

Size.	List Price.
6-gallon	\$13 50
12 to 15 gallon	14 00
18-gallon	15 00
25-gallon	16 50

168-gallon	187 00
192-gallon	210 00
Discounts, Standard weight, 40 per cent.	
Extra heavy, 30 per cent.	

FIRMNESS IS KEYNOTE IN SOIL PIPE MARKET

Toronto.

Firmness is described as the prevailing note in the trend of soil pipe fittings. This market remains on a steady tone, with current business keeping up fairly well for this season. While trade is moderate in volume for this time of the year, the prospects for increased activity in building operations during the coming spring and summer is being anticipated by manufacturers and distributors. Discounts remain unchanged as follows:

SOIL PIPE—

2 inch	Less 33 1-3%
3 inch	Less 33 1-3%
4 inch	Less 33 1-3%
5 and 6 inch	Less 33 1-3%
8 inch	net

FITTINGS—

2 to 6 inch	Less 45 per cent.
8 inch fittings	net.

TIN PLATE PRICES REMAIN FIRM AND UNCHANGED

Toronto.

In the tin plate market, prices generally remain firm and unchanged. Domestic levels are steady, while it is noted that Welsh tin plate prices have registered slight increases. In the U. S. market the quotations for the first quarter of 1923 are being strictly adhered to, and there is apparently nothing to offer earlier than second quarter.

BOILER TUBE BUSINESS IN NORMAL STATE

Toronto.

There is a reasonable amount of business in boiler tubes at the present time, according to the opinion expressed this week by distributors. Trade is more or less in a moderate condition at this period, but one factor of some importance is that competition is not so keen as was formerly the case, and this is described as an indication that distributors have new supplies of higher-priced

Mueller Drum Traps

If you could buy a better Drum Trap from a concern you know is reliable, for the same price as the ones you now use, you would be likely to consider the matter favorably at least.

Mueller for many years has been making Quality Goods only. When a new product is added to the line, certain tests have to be passed before the name "**MUELLER**" is allowed on it. In the case of Mueller Drum Traps, each one is tested under pressure before leaving factory.

4"x 8" is fitted with brass cover with sunken square as shown above, or with raised square on cover if desired.

2"x 6" size is furnished with extension cover as illustrated.

Your orders will be given preferred attention.

H. MUELLER MFG. CO., LIMITED, SARNIA, ONT.

Water, Plumbing and Gas Brass Goods and Tools.

American Factory at Decatur, Illinois, U. S. A. Branches, New York and San Francisco

Mueller Metals Co., Port Huron, Mich., Makers of "Red Tip" Brass Rod; Brass and Copper Tubing; Forgings and Castings in Brass, Bronze and Aluminum; also Screw Machined Products.

stocks on hand. No changes have developed from the following levels, which are representative of current transactions:

SCRAP MARKETS NOW SHOW FIRMER TENDENCY

Toronto.

Domestic waste material markets are looking much better than is usual at this time of the year. Local dealers report that there is more than the usual amount of business around, and prices have been showing strength.

Dealers are showing quite an active interest in scrap metals, particularly copper, despite the fact that consumers have generally held off from the market. White metals are firm, but quiet.

Scrap iron has not shown any weakness. The trend of things seems to be toward active buying, and higher prices.

Scrap rubber has maintained its recently advanced levels, although demand has fallen off.

The following are the usual averages of dealers' buying prices for large quantities:

SCRAP MATERIALS—

Scrap Iron		
Heavy melting steel	11 00	
Scrap pipe	6 00	
Steel turnings	10 00	
Malleable scrap	10 00	
Rails scrap	11 00	
Net tons—		
No. 1 cast	18 00

No. 1 composition	9 00	
Red brass turnings	7 00	
Light brass	4 00	
Heavy yellow brass	5 25	
Heavy lead	4 50	
Tea lead	3 00	
Scrap zinc	4 00	
Scrap Rubber		
Boots and shoes	2 25	2 75
High rubber boots	1 50	1 75
Auto tires	0 25	0 50
Solid tires	0 60	1 00

UNUSUAL FEATURES IN SHEET MARKET

Toronto.

Current trade in galvanized sheets is now of a quiet nature. The market in general is considered to be upon a firm basis, although developments indicate a somewhat complicated condition in some quarters at the present time. The appearance of an extra charge for deliveries smaller than a given quantity, indicates the strength of primary sheet markets. On the other hand, slightly lower levels have appeared in some quarters, this being described as purely a local effort to get business during the quiet period. It is pointed out that deliveries are still very much delayed and by the spring it is anticipated that deliveries

may be even further delayed owing to the anticipated increased volume of business. That such price levels will also be revised upward again in the near future is the general opinion. The following quotations represent the average current values:

GALVANIZED SHEETS—

	Premier and Apollo
10½ oz.	6 65
U. S. 28 base	6 25
U. S. 26 base	5 95
22 and 24	5 80
18 and 20	5 65
16	5 50
12 and 14	5 35
Queen's Head	
28 gauge base	7 15
26	6 75
24	6 45
22	6 30
Fleur de Lis	
28 gauge, base	6 90
26	6 50
24	6 20
22	6 05

An extra 40c. per 100 lbs. is charged for Keystone and Premier bands copper-bearing sheets. An extra is now charged on galvanized sheets. 10½ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown in 20c. per 100 pounds.

BLUE ANNEALED SHEETS—

10 gauge, base	4 20
12 gauge	4 25
14 gauge	4 30
16 gauge	4 35

BLACK SHEETS—

18-20 gauge	4 90
22-24 gauge	4 95
26 gauge	5 00
28 gauge	5 10

A charge of 25c. per 100 lbs. is made for less than case lots. An extra 10c. per 100 lbs. is also charged on sheets 26 in. wide.

GOOD OUTLOOK IN ASBESTOS PRODUCTS

Toronto.

Current trade in asbestos products is described as not very brilliant, but the outlook is good and the improvement recently recorded is being maintained. A firmer tone is evident on both domestic and primary centres, with local quotations remaining at the recent higher levels. Present discounts follow:

ASBESTOS PRODUCTS—

Pipe Covering—	
Air cell, 4 ply	50 per cent. off list.
Air cell, 3 ply	55 per cent. off list.
Air cell, 2 ply	57½ per cent. off list.
Boiler Covering	\$1.50 — \$2.00 per bag.
Asbestos Sheathing	\$3.00 per 100 lbs.
Magnesia pipe covering	less 35 per cent.

UPWARD TREND IN BAR IRON AND STEEL

Toronto.

An improved condition is generally evident in the steel markets. That some higher prices on bar iron may develop in the near future is the current anticipation in primary centres, and this upward trend may result in local quotations on bar iron and steel firming up to the \$3.40 level, according to local distributors who are naturally watching closely the current developments at production centres. Present levels hover between \$3.25 and \$3.40, the former figure being most general, but the latter price being quoted in some cases according to specifications, delivery and the size of the order. Any firming up to this higher level, therefore, would practically constitute an advance of fifteen cents per cwt. Producers in the United States claim that existing prices represent a hard-

ship, as the present margin is considered insufficient to cover costs and afford a reasonable profit. Accordingly, there has appeared a tendency to advance quotations \$2 or \$3 per ton, and the opinion prevails in some quarters that should there develop any increase in current activity, such an advance will probably become effective. Local levels remain unchanged as follows:

IRON AND STEEL—

Mild steel bars, base	3 25	3 40
Mild steel bands, 3-16 base	3 75	3 90
Bar iron, base	3 25	3 40

HOW PLUMBERS HANDLE THE RECEIPT TAX

(Continued from page 11)

one time which is over \$10.00, the receipt tax would apply as the payment is over \$10.00 as provided by the Act."

2. "In the case where a sale is made in excess of \$10, the original counter sales slip being handed to the purchaser, the stamp cannot be attached to the carbon copy, or the carbon copy merely marked 'paid' and retained in the merchant's possession without having stamp affixed. This would not conform to the Act which requires that the receipt given the customer must bear the stamp."

3. "Where a customer makes purchases on behalf of others, the total amount of purchase being over \$10 the tax applies as the payment is in excess of \$10."

4. "Where a customer makes a purchase of say \$7 and pays the bill and later makes a purchase of \$5.00 and the merchant is asked for a receipt covering the total, amounting to \$12, tax applies even though each individual sale was less than \$10."

FAVOR PROPOSAL

(Continued from page 12)

ture. Thus, any government tax that they were compelled to deduct from these discounts by either of these classes of trade, would seem to us to reduce their return on their efforts to a margin that was far below a fair amount for them to receive. So, to collect this sales tax from the consumer, it would be necessary for us to change our system of selling to the extent possibly of saying that our products were sold at \$2.00 plus sales tax. At the present time all prices on our products are advertised at a certain set figure to the consuming public, and they do not anticipate paying any additional expenses for taxes when they receive their product.

The Everlasting Veneer Toilet Seat

Strong, Clean Hygienic

This reliable, dependable toilet seat is made of 7 and 9-ply, air-seasoned wood veneer, held together by our special wood cement. This cement is proof against heat, cold or dampness. The veneering is distributed according to the strain and wear required of the different parts. The Everlasting Seat will never crack, warp or split.

It is a splendid seat for use in cold, damp basements where closets must be installed. The Everlasting Toilet Seat will meet, and successfully resist, these severe conditions of moisture, changing temperature, etc.

Are You Chasing Prospects?

Most good merchant plumbers are hotfoot after Gas Water Heater business just now.

But it's hardly worth while selling some heaters; your profit is all eaten up by return trips and adjustments.

The Marvel—built in one piece—is simple and inexpensive to install and once installed it stays put. You keep all the profit. With its low cost, high efficiency, economy of gas consumption and neat appearances, the Marvel is easily sold—and, moreover, it stays sold.

Sold Only Through Plumbers.

Bastian Morley Limited

125 Hanson St., Toronto, Ont.

WHAT IS YOUR ADVERTISING DOLLAR BUYING?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

Gurney No. 26 Water Heater

Gurney Water Heaters have in the past year entrenched themselves strongly in the public favor. But—

There are still innumerable potential owners of Gurney Water Heaters. Builders and prospective builders of homes are sure prospects for this proven, economical household necessity.

Thousands of settled homes would buy the efficient Gurney Heater if they knew of its easy installation and its year-round utility.

You are on the brink of a big year in Gurney Water Heaters. Develop this profitable line to the utmost and make 1923 a "Gurney" year.

Few people realize the tremendous selling power of classified advertising or the exceptional opportunity which it offers.

Hundreds of Sanitary Engineers to-day are carrying equipment for which they have no further need, yet many others could use this same equipment to good advantage and would be glad to buy at a fair price, if they but knew of it.

How to get buyer and seller together—that's the question. The answer is—SANITARY ENGINEER classified advertising service. Thousands of Sanitary Engineers throughout the country read the classified advertisements every issue. That's why they produce results surely and quickly.

If you want to buy, sell or exchange equipment.

If you want to sell or exchange your store.

If you want to buy a store.

If you are looking for a location.

If you need a competent journeyman.

If you are seeking a position.

In fact if you wish to buy, sell or exchange anything used in a plumbing and steamfitting shop or for any reason desire to quickly get in touch with other Sanitary Engineers, use SANITARY ENGINEER'S classified advertising service. The charge is ridiculously low—\$1.50 for twenty-five words, 5 cents for each additional word.

Long Fire Travel and Short Coal Bills.

The less up chimney heat there is, the more boiler heat there is going to be.

"Up chimney" heat means coal waste.

In the illustration you will see that the Burnham Boiler fire travel is three times back and forth on both sides of the boiler.

This means that the bulk of the heat is out of the gases before they enter the flue.

Choose The Right Tool

You can't expect a cheap, inefficient wrench to hold and turn rusted pipe or fittings. It's bound to slip or break.

WILLIAMS' STILLSON WRENCH is dependable; it is made for heavy duty. Drop-forged from special steel, carefully hardened and tempered, its sturdy strength is proof against the knocks and strains of hard service. The tough teeth retain their sharpness; they "bite" instantly, yet release readily.

For grip, power and endurance, choose Williams' Stillson. Wood and Steel Handle patterns — eight sizes, 6 to 48 inches. Made in Canada.

DART Union Pipe Coupling

Will not leak, loosen, rust, nor corrode

Bronze to bronze is the secret.

The heavy malleable iron pipe ends and nut help some but it is the snug-fitting non-corroding bronze to bronze that gives Dart Unions the necessary qualities to meet the sternest service conditions.

The Dart—so easily connected—remains a permanent, unbreakable union until taken apart with a wrench.

Your Jobber Sells Them.

Manufactured by Dart Union Co., Limited, Toronto

KERR VALVES

No. 43—Screwed

The illustration here is of our genuine WEBER PATENT Bronze Gate Valve.

All old timers remember it as the best made and best appearing gate made in Canada.

It earned its reputation years ago, and still maintains it. It has stood the test of time.

What better recommendation could one ask for a valve, than to meet all comers for 40 years.

It has had its imitators, but the genuine Kerr Weber Gate leads the procession.

Get out in front and use Kerr's Weber Gates. You will see the difference.

Achievement

"Art," someone has said, "is the expression of man's joy in his work."

And it is equally true that the same smooth, sheer beauty of the New Design Vitro Tank is something that would come only from a plant where lies the pride of creative workmanship—that is imbued with the joy of doing.

This beauty of design is, however, but a part of the whole; before the purely decorative comes utility. Strength, permanence, efficiency—these three unite with beauty in the Vitro, the best selling tank on the market.

SMP HUMIDIFIERS

*A Fast Selling New Line Which
Every Merchant Should Handle.
Place Your Order Promptly*

This new Humidifier (air moistener) is badly needed in Canadian homes. In homes where there is not enough moisture the furniture, floors and woodwork, wallpaper, bookbinding and pictures suffer. Pianos especially show the ravages of too-dry air in homes. Much disease, such as catarrh and eczema can be traced directly to the absence of moisture in the air.

This new Humidifier certainly fills the job. Note the illustration. The water is poured into the tubular part and also fills the narrow pan end. This thin pan end is inserted between the coils, where it fits securely. It comes in direct contact with both sides of the radiator, thus giving the highest possible evaporation of water. In cold weather one of these humidifiers will evaporate almost one quart of water a day. They should be in every room of every home for health's and economy's sake.

The **SMP** Humidifier is made of Galvanized Iron and is finished in either Pearl Grey or White Japan. Sizes: No. 5, pan 18" x 5", supply

Design Reg'd., Patent Pending.

The SMP Humidifier fits securely into the radiator; cannot spill or leak; well finished; inconspicuous.

can 3" x 5". Total capacity 1 1/4 quarts. Fits smaller size radiators. Size No. 10, pan 18" x 9 1/2", supply can 3" x 9 1/2". Total capacity 2 1/2 quarts. Fits almost any standard radiator.

There is profit for you in this new line, and splendid turnover, as each customer should purchase enough to outfit his entire home. We warmly endorse and recommend the new **SMP** Humidifier. Try them out in your own home first. Then you will see their selling possibilities.

Splendor Reigned

Louis XIV, the Grand Monarch, who brought the world to his palace at Versailles, set a standard of luxurious living that has had no subsequent parallel.

All the world knows of the forty personal servants who ministered to his every want; of his gallantries with the fair duchesses of France; of the great victories of his generals; of the Hall of Mirrors;—the gardens and fountains of Le Grand Trianon and of Fontainebleau; of the charm and majesty of his manner—

—**BUT**—We wonder if he would not have fired a dozen or two valets and become a little more human could he have stepped into a nice, modern bath tub each morning, turned the tap and mixed the hot and cold as he desired.

Servants carried water in pails to the ornate bath tubs of Versailles, and, when the master's toilet was completed, baled the tub out with a sponge—it did not have even a drain plug.

To-day the man of average means has a "Standard" bathroom; at his command are refinements of living of which Louis never dreamed.

"Standard" *Equipment in his window is the plumber's surest recommendation to the home builder of to-day.*

The DUNHAM HEATING SERVICE

(Made in Canada)

The diaphragm damper regulator on the boiler must be of a size suitable to respond to the low pressure of four to eight ounces. The Dunham Damper Regulator insures absolute control.

Boiler Pressure Control

Eight ounces of pressure should be the maximum amount required on any Dunham Home Heating System; more often it is two or four ounces. Desirability of effective damper control to guard against wastefulness of higher pressure is apparent.

In the past the trouble in many cases of unsuccessful damper control rested on improper installation. The hand damper should be installed in the smoke pipe to regulate the intensity of the draft to suit varying weather conditions. A balanced check damper, full size of the smoke pipe, must be installed in the smoke pipe, as this is the most effective device for checking the fire and thereby obtaining fuel economy. This should be controlled by the Dunham Damper Regulator.

Full data on request.

TRADE

MARK

You can profitably use the "A-1" On 90% of your installations

FULLY 90% of all Sanitary installations call for the ordinary wash-down combination—simply because it is about the most inexpensive type of closet outfit available.

But if your client exercises economy in choosing a closet combination of relatively low price, surely you can only serve his best interests by furnishing only the best his money can buy—the "A-1" Closet and "Bellemeade Junior" Tank.

CANADIAN Solid Vitreous Ware stands pre-eminently superior as a truly sanitary material in the construction of both closet bowls and tanks. Its fine-grained, all-clay hard-burned vitreous body ensures a lifetime of unchanging service while its lustrous white surface adds beauty to any toilet room and is as easily kept clean as a china plate.

On the basis of present prices this combination affords a realization of value which cannot be challenged.

How Sanitary Science Lessens Disease

**Marked Decrease in Typhoid Fever in Exact Ratio as Dry Closets
Reduced and Sewers Installed—Freezing of Sewers Was Aggra-
vated by Permission to Do Away With House Traps on Plumbing
Systems—Wooden Sewer in Use for 47 Years**

(Address to Manitoba Branch Sanitary Inspectors Ass'n. of Canada by James Smith,
Chief Plumbing and Sewer Inspector).

THE development of sanitary engineering is a most interesting study and before discussing the sewerage system of Winnipeg and particularly the maintenance of it, I would like to touch lightly on a historical review of sewers and drainage work and in doing so I would point out that sewers are not the outcome of modern civilization. Investigations in the realms of archeology have disclosed that sanitary science was not unknown in the older worlds and the water borne method of removal of sewage was practised in some of the palaces unearthed in recent years on the island of Crete. Latrines hewn out of stone with water flushing arrangements were found in these ancient buildings which date back to an earlier civilization than Rome or Athens, and are reliably computed to have existed about 2500 years B. C. The Assyrians also constructed large masonry sewers in their palaces built in the 8th and 9th centuries, B. C., but the most famous of ancient sewers is the "great sewer" of Rome, constructed in the 7th century, B. C., and still in use after a lapse of over 2,500 years. A large tract of Rome could not have been inhabited without this sewer and one authority states: "To this gigantic work, admired even in the time of the magnificent Roman Empire, is undoubtedly owing the preservation of the Eternal City, which it has secured from the swamping that has befallen its neighboring plains."

Neglected in Dark Ages

It is interesting to reflect, judging from the intelligently planned drainage systems that have been disclosed, that those ancient engineers had a very clear conception of the necessity for paying great attention to this matter so vitally affecting public health. The art reached its highest ancient development in the time of the Roman Empire. The Romans in fact were the greatest engineers of antiquity and especially excelled in sanitary engineering. With the fall of the Roman Empire, sanitary engineering suffered the same retrogression which befell learning and science, and for a thousand years—through the middle of dark ages—it was entirely neglected with the result that terrible pestilences desolated Europe periodically.

In Great Britain modern sanitary engineering may almost be said to have originated, yet as recently as 1815, laws were enforced forbidding the discharge of faecal matter into the sewers. This law was repealed however, in 1847, and an exactly contrary act passed, making it compulsory to discharge faecal matter into the sewers.

Wooden Sewer

Modern sanitary engineering, particularly with regard to sewage and drainage, has had its entire development since 1850, and it is a short step, as we have been measuring time to-day, from 1850 to 1875, when the first sewer was laid in

Winnipeg and extended from south of Broadway to the C. P. R. tracks north of Higgins Ave., a distance of approximately $1\frac{1}{2}$ miles. It reflects great credit on the pioneers of this city that they had the courage to launch into such a large scheme with a population of about 2,000 persons. This is a wooden barrel sewer and has a diameter of from 2 ft. 6 in. to 3 ft. 6 in., and after being in use over 47 years I have no hesitation in saying that it is in better shape to-day and has cost less for maintenance than any trunk sewer since constructed.

Brick Sewers

In 1883-4 the trunk sewers on Bannatyne Ave., Logan Ave., Assiniboine Ave. and Syndicate St. were constructed of brick, all of them have given good service and cost very little for maintenance. From that time steady progress was made in keeping with popular demand and financial ability, till in 1893 General Ruttan reported that 35 miles of sewers had been constructed.

Concrete Sewers

In 1903 concrete began to be used for the construction of trunk and sub-trunk sewers and has since been used exclusively till a few years ago. There are now approximately 262 miles of sewers in the city, $44\frac{1}{2}$ miles of which are of concrete construction and range from 2 ft. 0 in. to 9 ft. 0 in. in diameter. A very large proportion of repairs are on concrete sewers and it is only a question of time in my opinion till most of these concrete sewers will require to be rebuilt. In most of our concrete sewers disintegration of the concrete is to be found and in a number of cases the sewers have collapsed entirely for a distance of 10 to 20 feet. This condition is due to the presence of alkali salts in the soil being leached out by the ground water and coming in contact with the concrete sewers. Our city chemist, after a great deal of experimentation, states that a concentration of 500 to 10,000 parts per million will affect good concrete, but poor concrete may be affected by a lesser concentration. This condition is not peculiar to Winnipeg, but is found in all the prairie provinces and in the Middle States of America and attacks concrete foundations or any other concrete underground. A research laboratory was established in Saskatoon last year to thoroughly investigate the matter and devise, if possible, some means of avoiding or counterbalancing the trouble. Meantime we are patching up our concrete sewers as well as possible to keep them in service till more definite information is available, and there has been at least one sub-trunk sewer constructed of segmental tile. No concrete sewers will be built meantime.

There are 684 underground flush tanks with an average capacity of 260 gallons. These are placed at the end of laterals and are operated 2 or 3 times a week. In addition a hose gang is constantly flushing the sewers which are uncompleted or have no flush tanks. From 18 to 20 million gallons of water are used annually in this work. The sewer system of Winnipeg is well designed and very little trouble is experienced from deposit in the sewers. In this respect the greatest trouble we have is due to the raising of the river level in the summer by the closing of the St. Andrews Locks which causes our sewer outlets to be submerged, consequently when the locks are opened in the late fall and the river level is lowered, considerable deposit is left in the trunk sewers close to the river, and this has to be flushed out.

Climatic Troubles

In a climate such as we have in Winnipeg a great deal of care has to be exercised in winter time to prevent freezing of the sewers and sewer connections, and it is a matter of wonderment to me that there is not a great deal more trouble from this source. At one time it was quite a common occurrence for sewers to freeze up, even at a depth of 20 feet, due to indrafts at manholes and this was aggravated when permission was granted to permit of doing away with house traps on plumbing systems. However, by carefully noting year after year where the trouble was worst and covering the manholes in winter time our frost troubles have been almost entirely eliminated. The fact is, we can only permit a very limited amount of ventilation in our sewers during winter, a complete reversal of policy as practised by cities in more temperate climates.

Latest Problem

Our most recent problem has been the return of the ground water to its former courses in the form of springs since the Shoal Lake Water System was inaugurated and the Well System abolished about 2 years ago. There is considerable evidence that the ground water level has risen and recently at one point 30 feet of an 18 in. tile pipe sewer collapsed. On excavating we found that springs had washed the clay from under the pipe, causing it to collapse. This pipe was replaced with a cast iron pipe resting on gravel and 6 lines of 4 in. weeping tile were laid alongside the iron pipe connected to a manhole. When the pipes were in place 4 of the 6 weeping tile lines were running full.

I would draw your attention to the marked decrease in typhoid fever in Winnipeg since 1905, almost in an exact ratio as dry closets were reduced and sewers and sanitary plumbing installed. In 1905 there were 6,339 dry closets in Winnipeg, and in the same year 1606 cases of typhoid fever. Year after year as the dry closets were abolished the

number of cases of typhoid fever was reduced till in 1920 and 1921 there were only 400 dry closets within our boundaries and in each of these years there were only 17 cases of typhoid fever and not one death occurred from this cause. The incidence of typhoid fever is accepted by authorities as an index of the sanitary condition of a community, and judged on this basis, Winnipeg holds an enviable position. This condition, I have

no hesitation in saying, is very largely due to the policy and unremitting efforts of the Health Department and it must be a very great source of pleasure and encouragement to you to know that your work has been so successful. The saving of life, the saving of sickness with all its inconvenience and mental anguish cannot be measured in terms of money. It is of incalculable value to the community and citizens of Winnipeg.

Accidents From Defective Appliances

Great Danger From Insufficient Venting of Gas Appliances in the Form of Carbon Monoxide—Should Have Gas Feed Pipe Not Smaller Than $\frac{3}{4}$ " for Four-Burner Range

Written for Sanitary Engineer by G. J. H.

Editor's Note:—After reading the article which appeared in a December issue of *Sanitary Engineer* with reference to the asphyxiation of a young girl from carbon-monoxide, a Toronto subscriber who is cognizant of the details involved has written the following review of the situation, giving tangible suggestions for meeting the danger involved:—

By G. H.

CARBON monoxide is a very poisonous gas and is produced in combustion processes, where there is a deficiency of oxygen for completely burning the carbon in the gas to carbon dioxides. A condition favorable for the production of carbon monoxide results with gas range burners when the flame is insufficiently aerated by placing the burner too close to the utensil. It is therefore very important to know exactly proper distance between burner and utensil without producing dangerous quantities of carbon monoxide. The air shutter adjustment of the burner which determines the characteristics of the flame has also much to do with securing perfect combustion. Carbon monoxide is a colorless, tasteless and odorless gas slightly lighter than air and burns with a pale blue flame; it is one of the combustible constituents of water gas, coal gas and producers' gas. The gas is very poisonous and it is due to this that so many deaths are caused annually by the accidental inhaling of artificial gases owing to the fact that carbon monoxide is colorless, odorless and tasteless and not easily detected by the ordinary senses. It can be present in very dangerous proportion before being detected, which shows the importance of large gas feed pipe not less than $\frac{3}{4}$ in. for 4 burner range to allow proper adjustment of each burner individually when a range is at full capacity. Carbon monoxide is present in greater quantities in gas water heaters, caused by hot flame striking cold coils, etc., and owing to this seriousness of carbon

monoxide poisoning it is important that every gas appliance have vent pipe from appliance to chimney which will carry away poisonous gases.

Other causes of gas accidents are:—Defective and worn appliances and stop cocks and particularly the deadly rubber tube connection. This connection is a flexible tube which allows the average person to connect a gas appliance without the aid of an experienced mechanic and owing to the tubing being of poor quality in 90 per cent. of cases, an accident results. In the city of Toronto each year a great many deaths occur from gas poisoning; during the year 1922 a toll of 25 lives was the result of such accidents (not suicides) and with this in view it is important to prevent reoccurrences from these conditions in the future, which should be done at once by the city of Toronto. In the city of Newark, N. J., under the supervision of "Mr. Ellsworth Francisco" a system of inspection is in force which regulates the gas appliances in rooming and lodging houses, also the sale of only approved rubber tubing which has been tested by inspection department. In this way a great many lives are saved, which certainly repays for maintenance of inspection dept. of this kind. It is to be hoped that the example set by Newark will be followed by others in the interests of human life.

Sandy, not feeling well, had consulted a doctor.

Doctor—"Do you drink, Sandy?"

Sandy—"Yes, sir."

Doctor—"Well, you must give that up. D'you smoke?"

Sandy—"Yes, sir."

Doctor—"You must give that up too."

As Sandy went quickly through the office door, the doctor exclaimed:

"You have not paid me for my advice, Sandy."

"I'm not taking it," replied Sandy.

Shows Comfort of "Heat by Radiators"

How a Plumber Gets the Interest of Prospects for Hot Water Heating Systems Through the Medium of Window Displays Which Carry a Distinct Appeal—Details of Construction of Window Which Should Pull Many Prospects

YOU HAVE a show window which is costing you money in rental and upkeep and as long as you have that window why not make it earn its way by at least presenting cleanliness and orderliness to the eye of the passer-by?

Who knows but that an expenditure of \$12.00 on this window may not cause just one prospect to pause long enough and then stop and think?

Who knows but that that one, just one, prospect may come in to you for information on the installation of a hot water heating job in his residence? In coming into enquire he is already largely sold on the idea; in coming to you he is also a large percentage sold to you as the installer of that job.

Why knows but that one, only one, prospect may become a client and you secure business without price cutting competition, the kind of competition that to-day makes you take business at 10 per cent. and less when your overhead is 20 per cent. and more?

Show Comfort from Radiators

This "Heat by Radiators" window can be made without regard for having, or making, any window background. The intention, in making this window, is to show the comfort, etc., from a radiator heat with a framework like a picture frame to cap it off.

This picture frame should be set up, twenty inches if possible, from the floor of the window itself to the top side of lower frame member. For this purpose construct a platform of 1 in. lumber which shall be two feet wide, six feet ten inches long at front, and angled on each side so as to be four feet long at the back. Make sure that this platform is securely braced so that it will not topple over, although it is not necessary to nail to the floor of the window.

The front frame itself is made out of $\frac{3}{4}$ in. by 4 in. dressed lumber and is five feet three inches high by seven feet long, mitred at each corner. In connection with this frame four angle plates may be secured at a hardware store for five cents each which will strengthen the nailing of your mitred corners. Stain this frame with two coats of mahogany combination stain and varnish. Two angle brackets screwed to the lower member of frame, one inch from top side of same, will allow this frame work to rest on the platform.

For the back wall make a framework of $\frac{3}{4}$ in. by 3 in. dressed lumber to measure outside four feet wide by five feet high and on to this framework fasten the same size of beaverboard, tacking same along the edge of frame.

The side walls are two feet six inches wide by five feet high of beaverboard and these do not need any framework as they can be nailed direct to the front and back members.

Cut two pieces of beaverboard, the one for the floor being the same size as the platform and the one for the ceiling being left one inch wider until finally fitted.

The beaverboard on back wall, two side walls, and ceiling can be painted with some wall finish. I mention water paints because they are easily mixed and easily applied.

If the two tones are used with say the darker tone four feet high on the walls and the lighter tone on the upper wall

and also ceiling, then a $\frac{5}{8}$ -in. half round strip can be stained mahogany and tacked around the walls, as shown in the picture, with good effect.

You may find certain adjustments to make in this layout. For instance, this display was made where the plate glass window was nine feet long and five feet six inches high. The window proper was over five feet deep and the front frame of this picture was set some two feet in from the plate glass. The picture frame can be set to come a little above the top of the window, such distance being judged by the distance picture sets from window.

Side walls are mentioned as being two feet six inches wide but in fitting these it may be necessary to cut an inch or so off the width.

While it is necessary to make the display secure yet this can be done without

(Continued on page 30)

The window which is described fully in this article is illustrated herewith, as used by F. A. Wiles, plumber, Toronto. Such a display drives home several important points in connection with hot water heating.

"Personal Contax With the Consumering Publik"

(With apologies to Ring W. Lardner)
By

MAJOR L.L. ANTHES.

MANAGING DIRECTOR-ANTHES FOUNDRY LTD.

Tarraboome, Feb. 1, 1923

Dear Friend Al:-

THE weigh of trancessors is hard. You reemember that pome I scent you at Xmas time. Well I infurred to you I was goin to spring it on Vilet. I sprang it all rite but it was like one of these here boomerin sticks what the natuvs of Ostralia uses with the "come back." Instead of uttring some aprobriate commence on my poeticle instink Vilet handed me the midd-winter rasberry.

"Theirs only 1 brite spot in it," she sez, "and thats were you say,

The Xmas trees are all lit up,
Even as you and me."

I tumbled at onct as to wot was comin. You see me and Bill had an invite out to inspect the premices of a mutuel friend Noo Yeers Eve. Somebody had scent in a cupple of crox witch also had 2 bee inspectd. I guess the inspectn. was prety thoro for wen me and Bill started for hoam it seamed just like walkin on a mary-go-round. Howsoever we was both feelin good and wen I feel good I cant keep from signin. An wen I sign I let lose like what I ust to do on the diamond—you know me Al.

As Bill sez his feat was asleap we linqued arms and I ascorted Bill to his hoam. When we found the dore-bell I wrung it severaal timse thinkin praps the fokes was asleap. But they wasnt. Vilet opened the dore herself an wen she see us she give me a look like a meet-ax. She grabbed Bill by the arm an pulled him in. I tride to carry it off with what Frenchies calls savwar fare. I razed my hat an maid a verry low bow saying at the same time "Happy Nooyere!" Vilet slamed the dore with a bang just as I was doin my bow. I was pretty neer fallin forward as I was doin the

graceful and when the dore closed it caught me squair on the bean. Wen I come 2 I was sittin on the verandy flore wonderin wen the firewerks was goin to stop. So you can sea diplimatik relatns. between me an Vilet has bean somewhat straigned.

Well the abov is wot we mite call hoam-stuff, but the reel objek of this lettr. is to aprize you of hour efferts to get noo bizness. I bean readin sum of theze sassy articles on "How to Sell the World," an so I determined to sea if I cldn't pull off some-thin reel snappie.

1 of the artikls. was strong for what is called "Persional Contax With Consumeing Publik." It tolde how to start a maling list and lettin all the peepke in the town and serrounding distrix no that your in bizness and just bustin to do em a good tern. I didnt say nothin to nobody abt. it, but werked it all out miself untill I was reddy to spring the trap. I wanted to let Bill an Vilet no that I didnt go to sleap like the bares an suck my toze all winter. Hears the letter i fraimed up:—

Deer Sir & Maddam—Praps you dont no that weave got the swelest plumbing showroom in this part of Ontario. We invite you to come round and give us a look over. If you never had no plumbing in youre hoam you dont no wat hoam comferts is. Whare youre convenyiances such as water supplie and waste and etc. are on the outside you never no wat it is until you have it on the inside. Wots the cents of havin to dress up fer the outside wen it can all be done on the inside? I ask you this question to put to youreself. Young ladies is in the habit of wareing pumps these days. If she wants water or etc. in the winter time she has to go out to the pump or the etc. in her pumps.

Wots the result? Wet feat! Wot does wet feat leed to? To inflewenzy—to pheumonia and verry verry often to dethe!

Think ov it! Pumps—wet feat—pheumonia—dethe!

Doze it not make 1 stop to shuder? I asks you.
And all can bee pervented by inside plumbing.

If praps you have got in plumbing but the taps leek from old aige, and the bath is all outa shaip by being sat in so much on a/c of being only tinned coppar, and the seet is cracked and pinches you wen you sit down on a/c of being warped and splitt dont you think it is time for a chainge just the same as a plitical party wat has bin in offis 2 long?

If you live in the country let us show you our desine of skeptic tanks and watter presher sistems. We no we can intrist you & maik a visit to our shop a plesher and profit to awl.

Come on in and give us the onct over.

Yours truly

Emporium Plumbing & Heating Co.

Now I leeve it to you Al if that letter aint full ov meet as they say abt. the kokonut.

I feltt purty good over it and I put in xtry panes to get my spellin rite. I no it aint perfeck by no meens but I think it has a kik into it.

Well I sprang it on Bill & Vilet 1 nite & I will say for bothe of them they lissend attentif and said they was possyibilities into it. But they dident show no fitts of rapchur so you eld. notis.

"Who doo you purppos sendin the letter out to?" ast Vilet cawsully.

"Everybody in the distrik," I sez rite out.

"A lotta peeple hearaboutz has plumbing in al-reddy has they not?" she sez.

"Shure they has," I retortured.

"Then why tell them abt. outside disscomforts?"

"You dont on-derstand," I sez, "that letter is a

genral apeel to evveryboddy."

"I cann sea that," sez Vilet without turnin a hare, "but why not make it spesifick?"

"Make it wot," I sez, thinkin of horse medycine.

"Specifick," she reepeated. "That is subdyvide yer prospecks."

"You must think weer sellin reel ostate," I sez.

"O know Ime not," she came back with sang fraud, (witch is French you no for nonchallous). "You can subdyvide jer perspectif customers jest the saim as you subdyvide reel ostate."

"You meen cutt em up befoar you sell em?" I enquired sort ov purplexed. "I aint neether a buttcher or a cutt-up," I sez, thinkin their was a call for a smart retorte.

"I aint so shure you aint a cutt-up," sez Vilet soopersiliously. "If you lissen Ile explane."

"Ime all earze," I sez sittin back.

"I kin sea that," snipped back Vilet lookin at the sidze of my hed, so I shutt up and give her the flore.

"Wat I meen by subdividen yer prospex," she continyered, "is formeing them into groops. Weeve

got reckerdz of evry 1 round hear hooze got in plumbing, and wee no thoz wat has in noo jobs and them wat has old ones wat shld. be overhalled. The rest aint got enny plumming & etc. atall. Now my ideer is to maik groops of them that has & that hasnt, also them that nead a chainge and rite a speshul letter 2 each group. Ree-member I aint nockin yer skeem, I think its a good 1, but I bleeve the reesultz wd. bee better if you adop-tid the groop sis-tem.

"I dont no but wat your rite," I cummented, seein

(Cont. on page 20)

"When I come 2 I was sittin' on the verandy flore wonderin' wen the fireworks was goin' to stop."

Three Sets of Prospect Letters Brought Good Returns to Maritime Contractor

During Fall L. A. Haley Outlines Prospects in the District and Follows Them Up Vigorously During Winter Months—Only Way to Keep Up Activity in Cold Weather, He Says

IF A PLUMBING contractor wants to keep busy all through the winter he must get out and get," says L. A. Haley, one of the well-known plumbing contractors of the New Brunswick and Maine border section.

"During the late fall," continued Mr. Haley, "I list out all the prospects in my vicinity. I get the names of people who intend to build houses in the spring as well as those who might decide to install sanitary plumbing in their homes during the winter, thinking the cost would be less than at any other time. I divide the names into three classes—likely, unlikely and doubtful. To the likely class I start to send direct mail advertising such as booklets and letters. The letters are all written individually as, although the circular letters may be all right for another business, they are not the right idea for the plumbing business.

"With the unlikely list I also send out individual letters as the first assault. Afterward I follow up with a personal canvass. If the person lets me look over the ground I give him an estimate of what the job will cost. A week or so after I give the estimate, I visit the per-

son and keep him or her interested in the subject. If the person is a difficult one to convince I let time take its course but just the same I keep active and in touch with conditions.

"With the doubtful class I send the individual letter. Then I visit the quarry and give him or her (I hope it's a him) a heart to heart talk. Perhaps he does not like me personally. You know there are people with whom I was brought up who do not seem to like me and would like to give their business to strangers. However, I keep after these people and show them where I can do the work at less cost than any other contractor, and in addition I offer to give these people each written guarantees that the work will be satisfactory or if not I will make it so, without further expense to the customers.

"I have found that in order to get business it is necessary to get out after it. I would be a long while sitting in my office before enough business would come drifting in to keep me busy through the winter or summer either. I tried the waiting stuff and then I got busy, and I got results."

How a Plumber is Selling Humidifiers

Ottawa Plumbing Firm Include Humidifiers in Window Displays and Encourage Customers to Look to Them for Advice on Ventilating Questions

TAKING advantage of opportunities for the sale of humidifiers and thus increasing the relative amount of trade at this season of the year, has been one of the methods adopted by various sanitary engineers. In discussing this matter with Sanitary Engineer, Messrs. Band & Cole, of Ottawa, Ont., pointed out that they have included humidifiers in their recent window displays, and by giving publicity of the right kind to these products public interest is not only aroused therein, but gratifying trade results have been achieved.

"The average person today is not acquainted with what humidity means," said one plumber to Sanitary Engineer. The reason why he was featuring these products, he said, was that "the public look to the plumbers for information on sanitary and heating equipment and not only as to what kind of equipment is needed, but the reasons why they should install it. That is what we have been

trying to do through our window displays, retail advertising and show-card suggestions. It is our opinion," he continued, "that failure on the part of the sanitary and heating engineers to provide the public with the information desired along these lines will naturally place him in a minority position in their estimation. They will then turn elsewhere to have their curiosity satisfied or to seek this knowledge of matters pertaining to their personal welfare."

Some samples of their window cards were then pointed out. One of them read as follows:

"Warm air heating furnaces have their water pans. What about the humidity of your steam or hot water boilers? We have the ——— humidifier, which is applicable to either steam or hot water radiators."

Another one reads, "Consider the benefit derived by the whole family through the installation of the right kind of humidifiers on your radiators. These can

be installed throughout the home at a very moderate cost. They will keep the air moist, and thus protect furniture from warping and splitting. This required moisture in the air will also keep the wall-paper from peeling. Certain medical authorities advocate the use of humidifiers as a guard against sore throats."

Other advertising matter sent out by this plumber reads as follows: "From a health viewpoint alone you should not hesitate to install humidifiers in your home. They keep you healthy, they protect your furniture through keeping the air moist. They also aid distinctly in preserving good health."

"PERSONAL CONTAX WITH THE CONSUMERING PUBLIK"

(Continued from page 19)

the life of her argymnt.

"Then wat abt. heatin," she sez, "I dont sea nothin hear abt it."

I confest I hed kleen fergot about mechinon heatin.

"Furthramoar, why not run a few adds in the lokel paiper at the saim time usin some of thoze klassic kutz the annamel ferms sez theyle lend. Also put in the letters some of thoze their foulders with kutz of moddern bathrooms?"

I seen that Vilet hed bean thinkin along the saim lions as I had onlie she had thunk deaper.

"1st rait," I sez in admuration, and Bill nodded ascent.

So we went to it, goin into kawkus so to speek like the cab-nut minnisters do. it tuk a litle time to get our lissts ail in shaip and our hole campane doaped out but we finely arrivd.

We drest the windy up shown the things we was writin to the peeple abt, got our advertizen out, and then shott out the letters & foulders, follered up by more advertizin. It jarred the bank balance a bit but the publiik also bit & they bit harder that the bank balance was bit and Vilet said the xpenditure was a prophetable invesment.

I no that wee never was so bizzzy befoar. The peepul come like as if it was a Revivle Meating & I begin to undderstand wat bizness revivle ment.

Weer still sufferin from the affects of that campane but its the kind of sufferin that maiks you feal good. We had to put on severial noo jernymen and evry-boddy is doggtirde at nite. But weer happie!

Vilet has been reel kind 2 me reesently & Ime feelin bettr in consekence.

Its bedtimme & Ime awl inn so Ile tye the cann on this apissal rite hear.

Yourse as ever,
Jerry

Price Cutting Easier than Selling

But Morale of Plumbing Business Has Been Affected by Continuous Price Cutting—An Epidemic of Spinelessness—Bids on a Job Range From \$245 to \$322.50

(Written for Sanitary Engineer by Kenneth B. Allison)

MISERY loves company. By public acclaim are we, in the plumbing business, finding out what a lot of us felt, namely, that we have company in the glorious all-the-year round pastime of "beheading the prophet"—pardon me, "profit."

Some time before an article entitled "Wholesalers Seeking to End Tobacco War" appeared in a Toronto paper. I had noticed that there was a price-war on in the cigar business of Toronto. I found that a package of twenty of a well-known cigarette costs the dealer, when sales tax is added, thirty-one and a half cents and his selling price was thirty-five cents.

Yet, price cutting has reduced the selling price today to as low a figure as twenty-seven cents.

part of, or as in relation to, the total percentage of one hundred.

Therefore the wholesaler, on an average, pays 81.4% for his goods (100% minus 18.6%) and if an article costs the wholesaler \$100 then that figure is 81.4% of his selling price if said selling price is to conform with the preferential discount he enjoys. By dividing this percentage into the cost price we find this selling price to be \$122.85. If you are in doubt as to the correctness of this answer, then take 18.6% of \$122.85 and you obtain an answer of \$22.85 which deducted from the \$122.85, leaves us with our original cost of \$100.

Now the overhead expenses of some dozen wholesale houses show those expenses to run as high as 26¼% of the selling price and averaged up show 17%.

Business is, we will say, dull, and we as wholesalers, want more volume or, carrying the thought to the other extreme, business is now good and we want to get ours while the getting is good. In any case we find that price cutting, in place of salesmanship, seems to be the easier road to the increased volume so we will see how much we can cut the prices from the preferential so that we may pass all the profit along while at the same time making our way—overhead expenses.

By the method of figuring as was given above we find that on every article having a net cost of \$100 we should receive \$121.21 so that we may just clear expenses.

Some of the readers of this paper who are trade operators will probably think just about now that these figures are so close that Allison is either kidding the reader or himself.

I will defy anyone to make any radical changes in my figures, because they are plain facts.

Loss of 93 Cents On \$100 Worth

Do you in the trade realize that the giving of as small a premium as 2% by the wholesaler to you for your business causes a loss of ninety-three cents on the cost to the wholesaler of each one hundred dollars' worth of goods; that you are actually paying ninety-three cents less for the goods than their cost to the wholesaler who has just the average overhead of 17¼%?

Do you in the trade realize that an extra 5% to you means an extra 5% to a whole lot of other operators and perhaps an extra 7½% to them so that you are the difference—say 2½%—worse off by price cutting?

Do you in the trade realize that in passing that little extra on-the-side discount along, as you invariably do, you do a lesser volume of business, have a larger percentage of overhead, and have a lesser percentage of profit?

If you only, as an operator, obtain that little extra to yourself why you could shade the other fellow's bid a little, make a little extra out of the extra yourself, gather in a lot of business and go ahead like a house on fire, but unfortunately the little extra is not a secret or a special privilege because you find your competitor is beating you to it with a better price and you are seized with a fear—no, just a very, very

Passing that little extra discount along gives less volume of business, a larger percentage of overhead and this eats up the profit.

At the beginning of a new year, when folks have been extending the Season's Greetings with an at-peace-with-the-world disposition, it is perhaps bad taste to start stirring up trouble and suggesting all sorts of calamities as sure to happen if some of our most flagrant sins, either of commission or omission, are not rectified.

May, therefore, the abuse I give here be taken in the spirit in which it is given, as being for the common good and as not having been the result of personal jealousy. Fact is, jealousy could not have prompted this article because I trust I will never have to be reduced in the ranks sufficiently that I will find it necessary to steal, especially from myself.

The best information which I have gives me the average preferential, or margin, enjoyed by the wholesale distributor of plumbing material as 18.6%.

Writers of various articles have shown that all percentages are reckoned as a

Price cutting keeps the plumber everlastingly on the treadmill

faint suspicion that inadvertently your competitor has found a place to buy just a little cheaper than you.

If the finding of that place, or that way, would put you all back on a common buying level there might still be a chance, but no, it becomes a now-you-see-it now-you-don't game like the shell game. You—reading this article right now and being an operator in this business, YOU know you are not making the progress you should.

Nice to Stop it at the Door of Wholesaler

We have started this argument right at the door of the wholesaler. Wouldn't it be real nice if we could stop it right there? Wouldn't it be nice if we could think of this trouble as having been successfully localized, that if anything the patient, our good old friend the plumbing industry, was resting much easier now, and that there was no danger of the disease spreading and our having an epidemic—spinelessness?

But let us on and have the rest of it over with, and see how far the price-cutting bug has gone into the system of the operating plumber.

(Continued in next issue)

Questions and Answers Regarding Plumbing and Heating Practice

Further Information Re Sewage Disposal System

Editor Sanitary Engineer:

I have been a reader of your "Sanitary Engineer" for some years.

I feel I must congratulate you on the excellent answer to "New Subscriber's" problem of sewage disposal, appearing in the Dec. 1st issue. This answer was in itself worth the whole yearly subscription price.

To make the answer complete to myself, I would like to ask one question.

How would you make installation according to Fig. 2 sketch in heavy clay soil where there is not any natural grade within the area in which the installation must be made?

—H. W. R. Toronto.

of six inches. Next place the pipe on to the cinders and fill over the top and sides with more cinders until the pipes are covered over about 2 inches and not more than 3 inches.

Dig the trenches as shown in sketch, Fig. 1 herewith, and then cover the cinders with a mixture of sandy soil and clay. This is, to our knowledge, the only way to make a success of a field tile area when the ground is clayey. The money spent will be worth while because, as a matter of fact, sand mixed with the clay will make good growing land, otherwise the clay is almost useless for gardening or even for a lawn.

The sodding of this area will also

feet of radiation. Radiators are usually located at each end of the house. Our method requires the running of four lines of piping to each end of the boiler which, on this type of building, is usually located about 12 feet from the front in the basement.

It has often occurred to me that the running of four lines of piping with the large labor, pipe and fitting costs for this type of building was out of proportion, making the installation appear too costly to the average builder of this type of residence.

The fact that so many in the trade are attempting to solve this question by installing many of the "57 varieties" of two-pipe jobs we see every day, I believe it would prove interesting to the majority of your readers if you could answer this question through the pages of the

NOTE.—This subscriber also asks several questions re hot water heating systems, requiring some special drawings. These latter questions will be answered in their regular order. (See below). —Editor.

Referring to the query in connection with disposal bed in clay ground, etc., the following is our solution to the problem:

In the first place, when the amount of lineal field tile has been decided upon, the area of ground must be measured and the tile pipe laid out in such a way as to have the open jointed laterals as far apart as the ground available will permit. This may mean that a greater number of glazed sewer pipes will have to be furnished but, nevertheless, they are absolutely necessary.

Next, the trenches must be dug at least six inches deeper than usual, or not less than 24 inches deep. Then fill into trench good railway cinders to a depth

make a big improvement in the sewage disposal system. One thing more before concluding. When a disposal system of piping has to be laid in such ground as is referred to by H. W. R., it is always well to provide 10 to 15 per cent. more 4-inch field tile pipe, if the area of the ground available will permit.

—Technical Editor.

H. W. R. also writes as follows regarding

Hot Water Systems

In my daily work I find some very queer attempts to install what I understand as the circuit system of hot water heating. We are still installing the regular system of piping for hot water heating, that is, with a separate system of piping for the ground floor and for the upper floors.

Our work is chiefly on medium-sized residences having from 350 to 550 square

"Sanitary Engineer," for which I could supply a plan.

The following remarks will, to some extent, serve as an introduction to what could develop into a number of valuable discussions:

For example, the intricate system of piping that goes to make up a gravity hot water heating system is largely due to the fact that piping in residences must be placed out of sight. This requires separate risers and mains for each floor and oftentimes even for an individual radiator.

Another reason, and there are many, is that very few heating contractors give vent to their imagination—too many rely upon the manufacturer of boilers and radiators to lay out a job. And often, too, the architect also gets his heating plans drawn by the above-mentioned manufacturers. This state of affairs should be viewed as pathetic by every man engaged in the business and

until we have men who begin to study for themselves the underlying principles in heating, little true progress can be made.

And if the cost of installing hot water heating systems or steam systems must come down, it will only be by the rank and file of heating contractors becoming masters of the situation and by fitting themselves to plan and lay out all their jobs in their own offices.

Then there is another reason. How long, oh how long are we going to hold to open tank hot water gravity jobs? How long are we going to refrain from acknowledging the efficiency of pressure, or closed hot water heating systems?

The answer:—Just so long as we are dependent upon others to think for us. That is about the only answer.

Hot water heating is where it was in the days of Sir Isaac Newton. No progress in the rank and file of jobs. Why not adopt closed systems with smaller pipes and smaller amount of radiation?

Why not adopt a small circulator, a mechanical means to assist circulation? Why use those light-gauge expansion tanks that are no doubt cheap but require replacing? Why not sell a heating system on its value in service instead of upon the basis of first cost?

Why not adopt a Vento system in a house and install warm air and cold air ducts in the walls? This would at least furnish some variety. And then last but not by any means least, why not adopt low-pressure steam for residences? Almost any departure from the present sameness in hot water heating systems would be welcome. And now, in conclusion, we would call our readers' attention to a new series of articles which will appear in an early issue. This series will begin with the methods adopted by men in the prehistoric age to the present, not only methods adopted in this country but in others as well.

—Technical Editor.

used the work of pumping is not harder than before the piping was installed. The whole system is laid out in the ordinary way, the pump connected to the pipe that would be fitted to the pressure supply.

A regulation range boiler and water front is connected up as shown, and it will be noted that when the pump is operated, and either the hot or cold water tap is opened, water will flow. Simply because if the cold water tap is opened and the pump is operated, cold water will not flow into the range boiler, but will simply pass up through the pipe and down to the cold water tap. On the other hand, if the hot water tap is opened, and the pump is operated, the cold water will be forced into the range boiler, through the tube to the bottom of boiler, thus forcing the hot water out at the top of the boiler and through the hot water tap, exactly in the same manner as if the range boiler were connected to a city water service, or pneumatic water supply system, with the slight addition of a safety valve as shown.

To carry water up to a bathroom at a later date, two tees could be fitted to the piping at the ceiling near to the top of the range boiler. These tees could be plugged, and then no piping need be disconnected to make the necessary additions.

This is a very simple way to overcome the use of the ordinary open tank at the back or end of a range, used as a rule on kitchen ranges in rural homes, and not only so, but by using a water front and range boiler, at least 30 gallons of hot water would be available at all times.

Furthermore, if the owner of the house wishes to procure hot water in summer time, and not put a fire in the kitchen range, a gasoline water heater could be fitted to the range boiler in the (Continued on page 30)

Farm Kitchen Water Supply

ONE of our readers wishes to know how hot and cold water can be procured at the tap in a farm home, using one pump as already used at a sink.

An ordinary cast iron sink is in use, and the waste at present is being discharged into a cesspool some distance from the house. A large soft water system is situated in the basement and a good quantity of soft water is available.

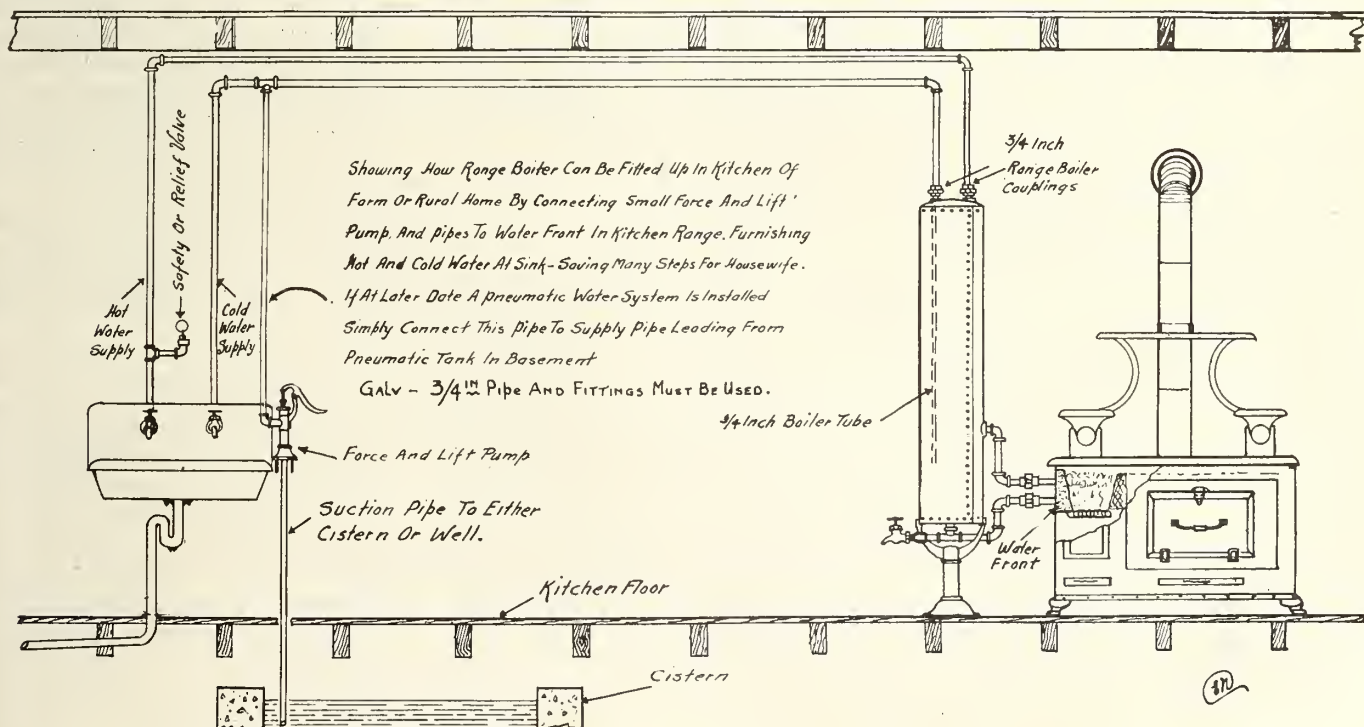

The rural resident hopes to install a pneumatic water system soon as well as a complete plumbing system. One reason for delay is that he is likely to be able to procure hydro-electric service at no far

distant date, but if some way can be found to fit up a modern kitchen now, a new kitchen will be built, and a modern sink installed now, with a new kitchen range.

The Problem Solved

The writer was asked this same question some months ago by the wife of a farmer and answered by making a drawing similar to the accompanying illustration. The pump is a force and lift type. It has a union nozzle, and so, can be connected to a system of pipes.

No piping used in a rural home should be less than $\frac{3}{4}$ inch and if this size is

The Use of Various Types of Valves

Practical Data on Globe, Angle, Cross, Check and Gate Valves
—Check Valves Looked Upon With Suspicion by Average Engineer and it is Frequently Badly Bruised—Still Some Globe Valves Connected at Wrong End

(By Herbert Smith, Ass't. Superintendent Empire Brass Mfg. Co., Ltd., London, Ont.)

PRACTICAL service requirements have developed three general classes of types of valves—First:—globe, angle and cross valves.—Second, check valves—and third, gate valves. In addition there are numerous types for special service, much as blow-off, back pressure, safety, hose, whistle, etc., but in the three classes mentioned may be grouped by far the larger majority of valves. Furthermore, the general designs of these three classes are now well standardized.

Valves must be not only strong enough and heavy enough to withstand maximum pressure to which they may be subjected, but in addition they must be capable of withstanding varying pressures and temperatures, strains of expansion and contraction, weight of piping, stresses incidental to settling, and the corrosive and cutting action of steam, gas or fluids. They must be standard—that is, all valves for similar service must as identical as is practically possible and each component part should be interchangeable.

The function of a valve is to control, regulate or change the natural course and action of the medium carried by the piping, container, connection of fixture to or in which the valve is attached.

A Grave Responsibility

The establishment engaging in the manufacture of valves assumes in these days of high steam pressures, a grave responsibility. Valuable lives and property must be safeguarded by his product, and yet the selection of valves is too often governed by their initial cost.

Suitable materials in combination with correct design, and this combination only can successfully give the service demanded by the user.

In all valves—and Globe valves in particular—on account of the stiffening of the valve seat bridge when the valve is subjected to changes of temperature, a certain warping of the valve seat is almost sure to occur. This, the seat, being the vital spot of a valve and the point of the valve which makes a success or failure of it, has led all makers of valves to try by various means to overcome the almost impossible conditions to be contended with. Where it is permissible to use it, nothing has met these conditions, so far, more successfully than a resilient disc—that is, one that would conform to any uneven sur-

faces on the seat face caused by warping of the seat, scored faces, etc. The most suitable materials used for this purpose are rubber compounded with graphite, or oxide of iron and asbestos, and then vulcanized. But up to now no resilient discs, to my knowledge, have been developed that will stand up against the action of super-heated steam, and for gasoline this disc is not to be recommended, as the gasoline disintegrates the rubber from the compound and entirely destroys the disc.

Admitting the fact that the rubber disc is to be most highly recommended as the most suitable means of overcoming most of the difficulties of successfully keeping a valve tight, we are affected by limitations of the use of same, and are left with the problem of making successful metal to metal seats.

This has been largely overcome by a careful and scientific distribution of the metal, and also by using proper proportions of the metals used in making valve brass—namely, copper, tin, lead and zinc.

In the old designs of valves, the bridge or diaphragm of the regular globe valve was simply a straight partition put across the body of the valve. We have now got a partition of circular form of carefully and evenly distributed metal which has largely eliminated the warping and twisting of the valve seat face. In Gate and Angle valves this partition is so formed that it is simply a ring attached to the walls of the body. It is not affected by distortion to the same extent as a Globe valve is.

Radiator Valves

In radiator valves used on steam the pressures rarely are higher than 20 pounds to the square inch, consequently there is no need to use a valve so heavy as a standard valve. A much lighter valve stands up to the usage and with a standard composition disc gives perfectly satisfactory service. Angle valves are used most exclusively in this service, and one point to be noted is that the seat face of the body should never be above the bottom inside level of the tail pipe, so that the radiator or pipe to which it is attached can be thoroughly drained, if necessary.

In hot water valves the service doesn't call for a valve that needs to shut off absolutely tight, and in fact some users

insist on a small hole being drilled in the cylinder to be sure that there is a slight circulation going on in the radiator at all times while the service is in commission. The reason for this is that in most cases the radiators are placed near the windows and in very low temperatures if the circulation was entirely cut off, there is a possibility of freezing and bursting the radiator.

Gate Valves

The gate valves are preferred and used by engineers wherever possible, largely because of their straight through unopposed passage ways, and for standard water service, they can be highly recommended. For steam service the principal objection to their use is that in closing the valve the disc has a tendency to cut and score the face of the valve. Some makers use the split wedge principle of the disc.

Gate valves are known as S. S. valves—that is, stationary spindle valves or non-rising spindle valves, and as rising spindle valves. Some engineers prefer a rising spindle valve, so they can see at a glance when the valve is open or shut and when they have not got height enough to allow the spindle to rise, insist on having open and shut indicators placed on the non-rising spindle valves.

When gate valves are to be used on fire service work, they should always be rising spindle or indicator valves, and if to meet underwriter requirements should be what is known as an O. S. & Y. valve, meaning an outside visible screw, free from contact with the water.

It is always advisable when taking orders for hose end valves to find out if they are for fire service and also if they are to meet underwriter requirements.

The check valve is a valve that has more uncertainty about it than any other valve that is in use, mainly because there is nothing visible from the outside to indicate whether it is functioning or not, and as it is an automatic valve depending on back pressure to close it, it always seems to be looked on with suspicion by the average engineer. This is quite evident by the fact that wherever you see a check valve in use, it is almost invariably badly bruised all over by hammer marks. It seems second nature to almost all engineers that whenever he has trouble, that the first

thing he must do is to go to the check valves and give them a severe hammering. The principal causes of trouble that a check valve gives is when they are working on pipe lines where there is trouble with water hammer, and on rapid working pump lines; and in these cases there is so much pounding on the seats that the seats and disc become pounded out of shape. This, in most cases can be remedied by reducing the lift of the valve, or by putting a spring behind the disc, or by casting a piston on top of the disc, and boring the top of the body to suit it, this creating a dash-pot to act as a shock absorber. Wherever possible it is always the most reliable to use a rubber disc in check valves as they give the most satisfactory service.

I would now like to make a few remarks about valve use and otherwise.

There are still pipe fitters who connect globe valves so that the steam, or water comes in the wrong end of the valve. The pressure or inlet end of a valve should always be under the disc. The reason for this is that if it is connected so the pressure is on top of the disc, all the working parts are exposed to erosion and wear, which is all avoided by connecting at the proper end. Some makers cast an arrow on the body to show the inlet end of valve.

It is bad practice, especially in a gate or metal disc valve, to close the spindle down the very utmost when a valve is cold, as when the steam is turned on the valve becomes heated and the spindle increased in length due to expansion.

I will now come to a subject which as a factory man has always unfavourably impressed me, and that is the way some pipe fitters use a valve when they are

installing it. It must always be kept in mind that a valve, to meet all requirements and expansion in particular, must be made of a ductile metal and this being the case a certain amount of care must be used in installing it. If a pipe fitter places a pipe in his vice and then grips the opposite end of a brass valve with the largest pipe tongs he has, and screws it up home with all his force, the chances are that he will spring the valve out of shape and is usually astonished to find the valve leaking. He will resent any suggestion that he might be the cause of it, but from my own observation and the mutilated condition of returned valves that have passed through my hands, I feel justified in saying that there are still some pipe fitters who have yet to learn that a valve should be put on by gripping the end nearest to the pipe.

Helps for February Advertising

Some Suggested Paragraphs Which Sanitary and Heating Engineers May Use to Advantage in Planning Advertising During This Month

"KITCHEN PLUMBING"

Just as essential as the bathroom plumbing, and your heating system, is the plumbing in the kitchen. No matter what the job may be if you secure our services it will be done right.—L. H. Eckhardt, Vancouver, B. C.

* * * *

"PUT THE BATH TUB IN NOW"

Now is the time in this season to put in that bath tub you have been thinking about. See us about it for we can give you interesting prices and guaranteed workmanship. See us in regard to any information concerning plumbing, hot water or steam heating. It will be to our mutual benefit.—T. J. Minnes, Brantford, Ont.

* * * *

"MAKE YOUR BATHROOM DISTINCTIVE"

Bathrooms that are ordinary can, with the aid of a few small fittings, be made distinctive and expressive of the good taste of the housewife. Your bathroom equipped with our towel bars, sponge holders, tooth brush holders, tumbler holders, plate glass mirrors, white enamel cabinets, nickel-plated electric brackets, etc., will add wonderfully to the appearance as well as to your comfort. A goodly display of these fixtures may be seen in our showroom.—Cowans, Brantford, Ont.

* * * *

"SAFEGUARD THE CHILDREN"

While in the home you mothers and fathers take every care to safeguard the health of your children. But do you know if proper care is taken to protect your children while at school or in other public places?

It is your right and duty to demand that adequate protection be given your children in such public places in respect to toilet and washroom accommodation, ventilation, drinking water, etc.

Let us know what your investigation proves and we will help you bring about better sanitary conditions in such places.

(Suggested ad. Name of firm here)

"END YOUR PLUMBING TROUBLES"

Don't wait for a small leak to grow bigger. Have it fixed now. It costs less in the end. Call us at the first sign of faulty pipes or faucets and your plumbing troubles will be ended almost before they have begun.—W. L. Armour, Brantford, Ont.

* * * *

"EXTRA HEAT OR HEAT YOU ARE NOT GETTING"

Possibly there are one or two radiators that do not heat. Have our plumbing department examine them and see where the fault is. You may desire more hot water from your range boiler. Let us connect it to your furnace with a large Domestic Heater. (By McKelvey & Birch Ltd., Kingston, Ont.)

* * * *

"LAUNDRY COMFORT"

During the winter it is often found that the basement is not suited for laundry purposes. We have what is called a laundry sink, which is a white enamel laundry tub, and a deep kitchen sink combined. It can be installed in your kitchen. Space required is only four feet. When the laundry tub is not in use there is a cover which closes and acts as a drain board to the sink.—McKelvey & Birch Ltd., Kingston, Ont.

* * * *

WHAT ABOUT UNSEEN PLUMBING?

It's unseen; but it's there—between walls, under floors, buried in the ground. One-third of the cost for any good plumbing job is for that "unseen" work. We believe that no part of a plumbing job is more important than the "unseen" plumbing. We know that unless "unseen" work is done right the first time, using the proper materials and workmanship, there is sure to be costly trouble later! Trouble in the "unseen" plumbing means expensive tearing out and replacement of walls and floors, with the added cost of repairing the faulty work. Our "unseen" plumbing stands the test of time and constant use. Our customers will tell you so. It will be to your advantage to consult us about any new installation or remodelling job.—Paddon Company, Limited, Windsor, Ont.

Gurney

Service

Helping Our Dealers Make Hot Water Heating Sales.

WE ARE distributing to many of your prospective customers copies of the "Warmth" booklet illustrated here. In "Warmth" we tell of the advantages of Hot Water Heating in general and, of course, Gurney Heating in particular. We are rather proud of the way we have depicted our products, showing them both in relief and as they appear in use. Each illustration in three and four colors, brings the subject of heating before your prospects in a very attractive manner, gets them interested in Gurney heating, and makes it an easy matter to close the contract.

If you have any prospects in view (if you haven't, dig some up), send us their names and let us send them a copy for you. Or, perhaps you would like to mail them yourself? If so, we will supply the books.

Warmth—A Necessity

The Living Room

HERE you spend your evenings, and it is here that you are justified in expecting comfort during the long winter evenings. Space is seldom such a consideration as in the hall and for that reason, a three column radiator, which has more heating surface for its length, is usually used. The Gurney Beaver pattern three column radiator is modelled in the same chaste beauty as the two column. This design lends itself admirably to any style of decoration and is quite at home in any surroundings.

Warmth—A Necessity

3-Column Gurney Radiator.
"Beaver Pattern."

Warmth—A Necessity

In The Hall

YOUR guests receive their first impression of you and your hospitality as they enter your door. Consequently the hall should be well heated.

In the average hall very little space is available, for that reason a two column radiator is quite often suitable. The Gurney Beaver pattern two column radiator is of a simple, yet artistic design, which breathes an air of refinement. The manner in which it hugs the wall adapts it particularly to the places where space is a consideration.

Warmth—A Necessity

2-Column Gurney Radiator.
"Beaver Pattern."

Plumber Has Advantage

A COMMITTEE has been appointed by the American Gas Association to deal with "co-operation with the plumber and heating dealer." This bears out the theme of the discussion at the last convention of the association when the advantages of closer relationship between the gas companies and the plumbers were dealt with. There is no doubt that more co-operation between these two factors will do much to further the interests of both in the sale of gas appliances and the consumption of gas.

The plumber is very much in the home, especially in the new home being finished. He is in close touch with the builder and can act in a more or less advisory capacity where he can do much good work in having sufficient gas facilities provided. This is where the plumber has a big advantage over the gas company and he should be able to turn it to good advantage.

Prospects Good for Year

IN THE whole field of Canadian industry it is doubtful whether the year 1922 can show any achievement so thoroughly gratifying as in building. It has been an almost epochal period. Not only has it witnessed a remarkable expansion in the volume and value of work accomplished, but it has seen, after two most trying and uncertain years, the restoration of conditions as nearly normal as possible. That is, labor has bent its efforts toward the attainment of greater productivity; capital has loosened slightly; the market for materials has reached comparative stability; demand has been sustained in healthy and increasing activity; all of which factors have contributed to a marked quickening of the pulse of the construction trades, and to a promise of even larger expansion to follow.

Ninety million dollars more contracts awarded in Canada during 1922 than the previous year. Statistics show total construction undertaken to a value of \$331,843,800, compared with \$240,133,300 in 1921. Even in 1920—a year of feverish expansion and inflated costs—the monetary value of new building was \$75,000,000 less than last year. In actual volume of work performed the 1922 total may be placed 70 per cent. above that of 1920, due allowance being made for the present lower scale of costs. Going farther back, the figures of 1917, 1918 and 1919 at \$87,298,062, \$99,842,300 and \$189,821,300, respectively, look insignificant in comparison. Indeed, not since the pre-war period, when for three years (1911-13) the whole country enjoyed a phase of unwonted prosperity and develop-

ment, has any aggregate been recorded to equal that of last year. The month of December gave rise to \$52,472,400 of fresh projects, this being the largest monthly aggregate since April, 1913, and one which has been exceeded only three times in the annals of Canadian building. A glance at the details, showing classification of work undertaken, draws attention to the importance latterly assumed by residential and engineering construction.

Plumbers' Wages and Building Cost

WHETHER the aggressive assault made during the year on the housing problem has taken much of the edge off demand is difficult to say. A year ago it was estimated upon reliable authority that the actual shortage of homes in Canada, if people were living according to pre-war standards of accommodation, was 165,000. During the year some 21,000 new houses were built. The potential demand would, therefore, appear to be little abated. Yet the estimate of 165,000 houses represents rather what the country would require if it could finance its full needs. It is not the "effective demand." The latter, however, has been sharpened by a psychological factor, namely the growing popular belief that building costs have now fallen to a point where prospective builders have little to gain by further delay. So important is this factor that it will probably result in the production of even more houses in the coming year than in the past.

Wage scales declined slightly in the year. The Federal Department of Labor, in reporting the index number of wages paid to six main groups of building trades in 13 cities, quotes 162.5 for 1922, as against 170.5 a year ago. The abrupt advance in wages during 1919 and 1920, and subsequent slow decline, are illustrated in the following table, which shows average hourly rates for five years back:

Year	Bricklayers	Carpenters	Electricians	Painters	Plumbers	Blkrs. & Laborers
1918	\$.70	.57	.57	.52	.60	.40
191979	.67	.68	.61	.69	.49
1920	1.02	.79	.81	.73	.83	.56
1921	1.00	.78	.80	.73	.80	.52
192296	.70	.75	.67	.80	.46

Inspiration for Young Men

TWO OF Chicago's biggest business men recently stepped out of commercial life and were succeeded by young men trained in their own organizations. John G. Shedd, whom Marshall Field called "the world's greatest merchant," retired from the presidency of Marshall Field and Co. where he had started as a \$10 a week clerk. He was succeeded by James Simpson, who began his career as an office boy. The man who took Simpson's place as vice-president also started as an office boy.

J. Ogden Armour also resigned a presidency last week. The new president of the gigantic Armour packing interests is F. Edison White. White began his career at the age of seventeen in the blood and slime of the packing house. He worked on the killing floor for a year. Within ten years of that time he was assistant to one of the company's vice-presidents.

In the careers of Shedd, Simpson and White there is inspiration for any young man. Every one of them started at the bottom. Every one has reached the top. No one of them has any particular advantages as to education—merely determination and common sense and a recognition of the duty of big companies in serving the public well.

The Mirrors of Selling Street

Don't Let Them Reflect Upon You!

Plumbers will appreciate the "reflections" contained in the following—article. This appeared in the January 6 issue of Forbes Magazine, from the pen of John E. Rosser. Sensing its interest for the sanitary engineer, as well as the lesson it contains for salesmen and distributors, Sanitary Engineer reproduces the story for the benefit of its readers.

RUB R. STAMP has one virtue: he can repeat whatever is told him. In that regard he ranks along with the Poll parrot and the phonograph. He has the sprightly imagination of a cod-fish on ice. In school he was the little boy who always began a recitation by saying, "The book says—"

He has put in many an hour memorizing a lot of stuff about "go-getters" and "red-blooded he-men" but he never

Rub R. Stamp

The chap who knows his sales-talk but gets lockjaw when he's asked a question

has got to the part of the book that presents problems involving unknown quantities. He knows several good swimming strokes, and yet, if he accidentally fell into the creek, he would surely drown unless somebody threw him a chart and compass.

Stamp is the chap (unless Joe Miller deliberately lied about it!) who staked his week's salary on the champeen fightin' dog. This dog had just one manner of attack—always diving under the belly of his opponent and getting a death-grip on the left hind leg. One day along came a fellow who entered a dog that didn't carry with him a single solitary left hind leg. And, of course, the flabbergasted champeen was chewed to a deckle-edged frazzle because he didn't have resourcefulness enough to play a new system.

Rub R. Stamp gets along well enough with his canned spiel until his prospect shoots a query at him; then it's amateur night for him, and he finds himself ignominiously yanked off the stage of

action, with a question-mark gagging him tightly about the gooze.

He will always be in demand for a job where somebody is needed to say "cuckoo" on the hour, or where a moist tongue is required for postage stamps, or a quickly portable hatrack is desired for the outer hall.

L. Urid Glare is a gifted liar. Since he plays only one-night stands it is merely a question of time until he has used up all the towns there are and is then compelled to get off the earth. Anybody who is good at riddles can easily figure out where Glare will go when he does leave this sphere, but the quotations don't indicate any jump in the prices of real estate in his destined abode because of his expected coming.

He is like a twenty-dollar bill run off with a hand-press in the far corner of the cellar, for he is fair enough to look at, but it is a felony to have him in one's possession. To his selling talk he adds whatever neat little touch is necessary to make it sound well. His gaze is extremely brazen, but at heart he is so cowardly he fears his own shadow, which at least has the solid virtue of sticking with its boss—a quality which Glare does not possess.

L. Urid Glare ignores the fact that Truth is the best ally anybody can have and that the dreamer-liar makes for himself an impossibly hard job. He forgets that we live in a world of realities—a very practical, matter-of-fact world—which, with all its imperfections, is

L. Urid Glare

The promising Salesman-- who always lets it go at that

yet sound enough to build skyscrapers upon—provided we set the walls up straight.

He can't bring himself to place trust in the world as it is. That is because he is himself a weakling. One day he may find that weakness exists primarily within himself, and that outside him—like the magnetic lines of force that play from pole to pole—are truth and strength in abundance. Then he may become the chap it is possible for him to become.

Certainly he will stop lying.

Rely Upon "Steam"

Hap Hazard is a lineal descendant of the Hopheads on the maternal side and

Hap Hazard

The Salesman who is always yawping about the future --but he's a man-eating shark at Kelly pool

of the widely distributed family of Hooch-Hounds on the paternal. His favorite character in fiction is Mr. Micawber, and he has a fine business acumen of Colonel Mulberry Sellers.

On a tour through the Latin countries the only word of their lingo that he acquired was "Manana," and this will be the legend on his coat-of-arms when he gets time to rig one up. Just now he is snoozing sweetly and must not be disturbed.

In the vacuum which he is pleased to call his mind he has two sure-fire projects for achieving great prosperity some time in the future: the first, to unearth the treasures known to be contained in a crock buried at the rainbow's end; and, the second, to form an association of blowhards, like himself, who shall dry up the ocean above sunken vessels, thus producing perfectly dry holes from which it will be a simple trick to remove the precious cargoes.

Facts just make Hap Hazard desper-

ately sick; the law of cause and effect easily prostrates him.

Around the merry pool table he finds real cronies. Of course, the salary of a journeyman pool-player is not a vast sum, but the members of the gang are agreed that if one of them discovers perpetual motion of Captain Kidd's treasure they will all share in the proceeds; so anybody can see how unnecessary work is.

Hap Hazard's brain tests up at a fraction less than one cockroach power, but his crop of hair, firmly set in ivory, makes a fine floor mop, and prevents his being a total loss.

He won't become any more valuable to himself or to anybody else until he substitutes will-power for his present highly developed wish-power, and begins to rely upon steam instead of a dream.

Have Ammunition Ready

There are many things the matter with Luke Warm, but his most obvious

Luke Warm

**The Salesman
whose gunning
outfit includes
everything but
the shells**

defect is that he is a damphool. He has a way of neglecting to take along with him the selling equipment which his firm provides. He carries nothing with which to support his argument in case he finds himself in the lair of a prospect who, being originally a resident of old Show-Me County, Missouri, demands to see the salesman's credentials and Exhibits "A" to "Z" of the wares he offers for sale.

Luke has heard something about the power of the hypnotic eye. Someone told him about a very strong salesman who made effective use of direct talk, with no documents or samples in sight, but he doesn't seem to know that the twelve-cylinder salesman had gumption enough to discern that he had encountered a particular case and that the next man might hanker to see the credentials of the house. The strong man had the dope with him, all right, but he did not pull it out that time.

Luke doesn't take his outfit along for the simple reason that he hasn't wit enough to figure out in advance what

he will need in a tight place. Roosevelt never killed anybody, but if he ever had committed murder, the victim would surely have been the movie cameraman who went out to Oyster Bay, persuaded Teddy to quit an important conference, dress up in riding togs, have his favorite horse saddled, and canter down the Sagamore Hill path—and then find that the photographer had failed to bring any film along. That was all that kept the party from being a great success.

He may come painfully to learn that all the gods on Olympus couldn't do anything for a fool—and he may try to cease being one. Then, every day, he'll figure out in advance whatever may be necessary for the day's work, and he'll have his ammunition handy when the game is flushed.

FARM KITCHEN WATER SUPPLY

(Continued from page 23)

same way as would be connected up in a city home. Such an installation, as shown and described here, would prove to be a great help to every rural housewife, saving many steps and much time.

SHOWS COMFORT OF "HEAT BY RADIATORS"

(Continued from page 17)

excessive use of heavy lumber. Into the top of the corners of front frame screw two screw eyes and from these run stove pipe wire to four points, two in front and two to back of picture. Make these points well to the side and at least a little above the picture, and in tightening the wire, which is quite unnoticeable, one can easily line up the framework to be straight.

Where beaverboard is inclined to not fit true or show ragged the use of quarter round, or shoestrip, will overcome this.

In sawing beaverboard always keep the finished surface nearest to the saw hand but roughness can be easily removed by a rub of sandpaper along the edges.

If the entire back and sides, wood and beaverboard, are also tinted with the same color or paint a much cleaner view is given on the store side.

If you will create a space where this material you have used here can be stored away and kept clean, then you will find that, after you have done three or four different windows, you have equipment for a steady change of window trim with very little future expenditure. The small pieces of beaverboard are useful for future windows and can be used any number of times. Be sure to keep in a dry place.

Paint Floor Brown

The floor should be painted a brown or any harmonizing color for oak.

Wire in two concealed cleat receptacles inside the top member of front framework with two 40 watt bulbs for lighting.

Procure a radiator of a size say 2 x 10 x 32 and screw the necessary valve and

air vent in. See that the radiator is at least clean, if not painted.

Set up a doll and a dog as shown.

Make the four small signs and place on the side walls.

Cut a circular piece of beaverboard about twenty-four inches in diameter and a reasonably recognizable sun can be made by a blotch of red in the center, with shafts of yellow and white paint (water or oil) worked to points at the edge.

Paint a sign, on beaverboard eighteen inches wide by six feet six inches long, with the words "Heat by Radiators." You may have to have these signs done by a show card writer.

Granted that you have to do this then the material for this window should not cost more than \$12.00 as follows:—

3—4 x 8 sheets of Beaverboard ...	5.76
Lumber75
Mahogany stain45
Water paint (1 color)45
Angle brackets or plate (10)50
Nails09

If the lights in the picture alone are used, larger ones may be better, with the surroundings in darkness you will find that this window will stand out very prominently and because of its out-of-the-ordinary appearance will cause many to stop and view it.

Catalogs and Booklets

Those interested in any of the catalogs described below can procure a copy of the same by writing direct to these firms. Mention that you noticed this in Sanitary Engineer.

HOME INSTRUCTION FOR SHEET METAL WORKERS

A new book entitled, Home Instruction for Sheet Metal Workers, is being published by the U. P. C. Book Co., Inc., of New York City. This book contains much practical information on sheet metal and building in general. It is by William Neubecker, and edited by Frank X. Morie. There are over 400 pages and 684 illustrations. There are also fifteen folding charts in a separate binder, which are intended for use in conjunction with the instruction manual. It includes instructions on cutting, forming, soldering, preparing full-size details from architects blue-prints, developing the patterns, laying out the work on sheet metal, and setting the work together. Other features in the book are chapters on skylight and louvre work, including flat, hipped and pitched skylights, stationary and movable louvres, turret sash, gearing, etc.

WARMTH—A NECESSITY

"Warmth—A Necessity," is the title of a new booklet issued by the Gurney Foundry Co., Ltd., Toronto. This book is a brief treatise on mankind's necessity for warmth. It pictures a comparison between the darkness and chill of winter's night scenes compared with the warmth of the modern heated home. It is aptly illustrated throughout, special drawings illustrating the radiation of heat, attracting attention. This booklet also draws attention to the Gurney "G" series of round hot water boilers. The various types of radiators applicable to different styles of rooms, is another feature in this handy book.

Patterns for Octagonal Branch

By O. W. Kothe, Principal, St. Louis Technical Institute, St. Louis, Missouri. Written for Sanitary Engineer.

AS A PROBLEM of development, the octagonal branch is interesting, in that it shows the features clear as an instruction problem, than a round branch. Sheet metal construction is one of geometry and hence pattern drafting forms part of the sheet metal worker's education; but it is not all that is required. The matter of design and proportion and calculation is equally important to the laying out of patterns. In fact, the mere pattern drafting is more for the layman mechanic, while the design, proportion and engineering part of it as well as the pattern drafting is for the foreman, superintendent and employer.

In taking on our branch in this drawing, we first draw the axis line of branch and proportion the base to section A and then draw section B, after which section C is developed. After this the elevation is divided into triangles and for these triangles diagram of true lengths is constructed. That is picking the lines from the elevation as 2-3; 3-4; 4-5; 5-6,

etc., and setting them on a horizontal line in diagram, after which lines are erected to equal those in the sections. This will give the true flare between the points of the section and produces the true lengths.

After this the pattern can be set out by drawing a line 0-0 equal to 1-2 of elevation. Then square out lines in patterns as 0-1 and 0-2, making those distances equal to the points in section A and also in B, which will give lines 1-2 in pattern. This can also be done by picking line 0-1 and setting as 0-1 in pattern and then picking line 1-2 in diagram and setting as 1-2 in pattern. Then pick the octagonal lines from B and also from A and strike the arcs 3 and 4, as shown. Cross these lines with true lines 2-3 and 3-4 from diagram. Repeat in this way until points 10-11 are established and draw lines through all points where arcs cross and the pattern is finished. Laps for assembling should be allowed extra. draw lines through all points where arcs cross and the pattern is finished. Laps for assembling should be allowed extra.

WATER PLANT MAY START IN 1924

Windsor.—The Border cities can have their water filtration plant in operation late in 1924, J. Clark Keith, engineer of the Essex Border Utilities Commission, said following the announcement that the project had been approved in Ford, Sandwich and Riverside.

"I am confident that we can complete the plant by that time," said Mr. Keith. "It's up to the commission, however. Just how fast they will want to go ahead with the project, now that they have been given a mandate from the ratepayers, I do not know."

"The plans we have made to date have only been very general ones; just detailed enough for us to compile our estimate of cost. They will have to be prepared in detail, and a great deal of preliminary organization work will have to be done. But, with all of this, I am confident that we can begin the delivery of filtered water by the end of 1924 if the commission wants to push construction work."

News Notes From Coast to Coast

CONTRACTS AWARDED

London, Ont.—Liphardt Bros., Waterloo, have plumbing contract for new school in the south ward of the town.

OBITUARY

The sympathy of the trade is extended to John Wright, Toronto, in the death on January 30 of his wife. Mr. Wright has long been prominent in the plumbing industry and has held several important offices in the provincial and Dominion plumbing societies.

INCORPORATION

Victoria, B. C.—Incorporation of the Andrew Sheret, Limited, covering the interests of Mr. Andrew Sheret, for many years conducting a plumbing business in this city, is announced in the current number of the Provincial Gazette.

STEAMFITTER OVERCOME BY GAS

Montreal.—While repairing gas pipes, 1. Chevalier, steamfitter, residing at 271 Gauthier street, was overcome by gas and had to be removed to the Notre Dame Hospital. He was kept there overnight but had so far recovered that he was able to leave the hospital and go to his home.

HAMILTON SOCIETY ELECTS OFFICERS FOR 1923

On Monday evening, January 22nd, the Hamilton Society of Sanitary & Heating Engineers held their annual election of officers. The new officers for 1923 are President, P. A. Moore. Vice-President, Wm. Newell; Secty.-Treas., C. G. Stewart; Assistant Secty., Thos. E. Arthur.

GROUP ALL INSPECTORS UNDER ONE HEAD

Montreal.—Creation of a Civic Inspection Department in which will be centralized the functions of inspectors now operating under four separate city departments is among proposals for reorganization of City Hall services planned for 1923.

With the allotment of one inspector to one district, it is claimed that the man would soon become familiar with all conditions in his area, would be able to report on them more intelligently than one man can when passing from one new place to another, and that inspection therefore would be tightened up, to the benefit of both city and taxpayers.

Doings in the Plumbing and Heating Industry

WANT TENDERS

Grimsby, Ont.—Town council wants tenders on installation of a hot-water heating system in fire hall. No closing date set.

INCINERATOR AS CENTRAL HEATING PLANT

St. John, N. B.—Although it has not been discussed publicly, some of St. John's citizens are of the opinion that a local incinerator might be used as a central heating plant, and in that way bring in a revenue of a considerable amount to the city's funds.

NEW PUMP IS NOW BEING INSTALLED

Lethbridge, Alta.—The American Well company, of Aurora, Ill., are now installing the new waterworks pump to take the place of the one which failed to live up to the guarantee. The capacity of this pump is four million imperial gallons per day. The average amount of water pumped per day is one and a half million gallons. This will put the city well within the requirements of the board of insurance underwriters in the matter of pumping capacity.

THOS. E. ARTHUR

Elected Assistant-Secretary of Hamilton Society of Sanitary and Heating Engineers.

PLUMBING CONTRACTOR HAS EXCITING STRUGGLE WITH WILDCAT

St. John, N. B.—For an hour, struggling against a wildcat, A. P. Conwell, of Sussex, N. B., one of the well-known plumbing and heating contractors of Eastern Canada, had a very exciting and menacing experience.

Mr. Conwell was in the woods on a rabbit-shooting trip with one of his young sons. As he was walking through a grove of trees a wildcat sprang from the boughs. It missed Mr. Conwell and landed nearby in the snow, the contractor having heard the warning rustle overhead and dodged just in time. The wildcat sprang at Mr. Conwell from the snow and fastened its claws in his flesh about the legs. Mr. Conwell used the shotgun he carried very effectively on the ferocious animal, but although he forced the wildcat to release its hold a number of times, the animal would return to the attack after a pause.

Mr. Conwell's young son brought two farmers, who shot the animal. Mr. Conwell was carried to a farmhouse and given first aid. In a few hours he was able to walk home to Sussex.

WANT PUBLIC CONVENIENCES IN ST. JOHN

St. John, N. B.—A problem which has long been before the citizens is that of public conveniences. Although St. John has a population of around eighty thousand, there are no premises set aside for the convenience of the public. Although practically every citizen has at one time or another commented on the situation, and some years ago the matter was placed before the city council by one of its members, nothing has been done in the matter, and therefore things remain as they were. However, in certain circles, the matter is again coming under discussion, and Sanitary Engineer's representative has been informed that it will not be long before it is pointed out to the city council that two or three buildings could be erected in the city of St. John for the convenience of the public, and made self-supporting. It was pointed out to our representative that in the centre of the city it would be possible to have premises underground for ladies and gentlemen, with a small charge for use of W. C. and for a wash and brush up. A shoe shine could also be run in connection with the service. It is not known what attitude the city council may take when this question is brought up, but it is believed that if the city fathers could be convinced that such places can be made self-supporting, they would carry the thing through.

WILL LAY OUT HEATING FOR VESSELS

Windsor.—Donald Stewart, consulting engineer in heating and radiation, has been retained to lay out the heating and ventilation systems on the Detroit and Cleveland Navigation Company's two new boats. The boats, which are nearing completion, are 600 feet long, the largest inland navigation vessels in the world.

CUNNINGHAM & HILL PROPERTIES NOT AFFECTED

In an item referring to transfers of property in Toronto, a daily newspaper erroneously stated that the properties of W. H. Cunningham & Hill, Ltd., wholesale plumbing and heating specialties, had been sold. W. H. Cunningham stated to Sanitary Engineer that his properties at 269 and 271 Richmond St. W., Toronto, had not been affected in this manner.

ADVISES JANITORS TO TAKE PLUMBING COURSE

London, Ont.—A rather unique suggestion was made at a meeting of building committee of Board of Education when, during a discussion over cost of plumbing repairs in city schools, Trustee Mrs. Hunt suggested that the janitors be given a short course in pipe fitting and plumbing at the Technical School, so that they could take charge of all minor repairs of this sort.

Trustee Lawrason expressed the opinion that small repairs should be taken care of by the school caretakers, but Trustee Willmot was of the opinion that such an undertaking might involve the purchase of a large amount of expensive tools for the various schools where this work was being done.

Superintendent Robinson, however, pointed out that the works department already has complete equipment of tools and in the case of small repairs the janitor already does the work. In some cases, however, it would be rather an expensive undertaking to allow an inexperienced man to repair or renew plumbing when the job required a skilled workman.

Trustee Mrs. Hunt then voiced her suggestion that the janitors be trained in this work. It was a matter well worth investigating, she said. The Technical School had the facilities and the men could be trained at no expense to the board in their spare time.

Trustee Lawrason thought that a janitor qualified to take charge of a boiler and with a stationary engineer's certificate should be able to take charge of minor work of this sort.

No action was taken but the matter will undoubtedly be discussed at a later date.

C. G. STEWART

Elected Secretary-Treasurer Hamilton Society of Sanitary and Heating Engineers.

WILL INSTALL NEW SOFTENING PLANT AT POWER HOUSE

Moose Jaw, Sask.—The city electric superintendent, J. D. Peters, placed before the city council, through the city

commissioners, a recommendation calling for the installation of an additional water softening plant at a cost of \$1,877 f.o.b. Toronto, or about \$1,900 laid down in this city. The superintendent mentioned that the plant at present installed did excellent work, but was only capable of handling about half of the raw water that was used. The intention when the plant was installed had been that the system should be a two-unit one, and the superintendent therefore now recommended the purchase of the additional machinery.

FIND FARM HOME LACKS DEVICES TO SAVE LABOR

Brandon, Man.—Delegates to the United Farmers' convention occupied the greater part of the morning session in discussing the survey of rural conditions made by the farm women. This survey brought out a lack of labor-saving devices in the convention that a greater degree of comfort and content among the farm women would do more to advertise the agricultural advantages of Western Canada than many immigration agents. The United Farm Women are to continue their rural survey and the present exhaustive report will be printed and given with circulation in an effort to raise the status of comfort and convenience in Manitoba farm homes.

Annual Sales Convention Empire Brass Co.

Practical Demonstrations of Lines Installed as in Actual Service Very Instructive to Salesmen—
Social Events Much Appreciated

THE Empire Brass Mfg. Co., Ltd., of London and Toronto, (Manufacturers of "Emco Quality" Brass Goods) held their Third Annual General Sales Convention at their head office in London, in January. The meetings were full of life and spirit and practical demonstrations were given covering a number of lines—installed as in actual service. The technical information imparted is expected to prove of great value to the salesmen in further fitting them for supplying the trade with its proper needs.

By way of recreation the evenings were full of enjoyment. One very pleasant evening was spent at the home of C. H. Ivey, when the salesmen were entertained at bridge whist, followed by a buffet luncheon and refreshments.

The opening address at the convention was given by C. F. Stevens, Vice-President, in the absence (on account of illness) of T. A. Stevens, President and general manager. Addresses on the following subjects were also given during the convention:—

Foundry Practice, A. J. Palmer, Supt.
Steam & Water Valves, Herbert Smith, Asst. Supt.

Metals, C. H. Ivey.

Closet Tanks, Fittings & Automatic Syphons, J. H. Stevens.

Machine Shop Practice, Samuel Thorpe.

Supply Pipes and Traps, W. H. Darling.

Corporation Brass Goods & Tapping Machine Demonstration, A. S. Branston.

Compression and Self Closing Work, Chas. Chapman.

What was said to be the outstanding address at the convention was that given by Herbert Smith, newly appointed assistant superintendent. Mr. Smith is the latest addition to the firm's factory staff. He has made a specialty of valves and their manufacture for the past twenty years, having been connected with several of the largest organizations in that line.

Sir Edmund Walker Suggests Turnover Tax of One Per Cent

Sir Edmund Walker, president of the Canadian Bank of Commerce, in discussing the subject of taxation in his recent address at the annual meeting of the Bank said:—

"In 1919 and in every year since I have referred to the very serious and difficult problem of taxation. In that year I ventured to say that 'the whole question should be approached without that class feeling which often causes taxes to be so apportioned that bitterness and a sense of injustice are felt by many who do not object to being heavily taxed so long as those who really can afford to pay their share do not escape. The income tax should be paid by a much larger number of citizens. In 1920 I urged a turnover tax of one per cent. on sales of commodities, and I stated that such a tax would provide a substratum of tax revenue, in which it is true that all would join alike, paying in precise proportion to their expenditures for commodities, but the manner in which those who have larger incomes would be taxed through the income tax would provide for that difference in treatment which modern taxation recognizes.' Much study has been given, especially in the United States, to such a form of taxation and, while we must avoid double taxation on great staples dealt in by brokers and dealers on the public exchanges, the turnover tax is one of the least complicated and most easily collected of taxes.

The Turnover Tax

"Canada is frequently complimented by students of taxation in the United States and Great Britain on its sales tax, but a much larger revenue, in a form much less hurtful to production, would result from a turnover tax of one per cent. Such a revenue would make it possible to lessen the scale of super-taxes now imposed on incomes and other unfair taxes on enterprises, the ruinous result of which is evident to all who give any thoughtful attention to the matter. A study of conditions in Great Britain to-day should convince the most ardent believer in super-taxes that you cannot have it both ways. You cannot on the one hand by unfair taxation strip those who have saved or made money, and on the other look to the same individuals for aid."

CITY CAN DISTRIBUTE COST OF LAYING PIPES

Montreal.—By an amendment to the city charter, passed at the recent session of the Legislature, the laying of water service pipes to dwelling houses at a distance from water mains will be facilitated, according to information supplied by H. A. Terreault, chief en-

F. R. MAXWELL.

The cut of Thos. Maxwell of Toronto was inadvertently published in place of the above cut of F. R. Maxwell of Toronto, former President of Canadian Society D. S. & H. E., who was re-elected Alderman in Ward 8, Toronto, for 1923, and elected Chairman of the Board of Works for the city.

gineer of the city. There are many instances where houses, constructed in the outlying wards have difficulty in getting water supply on account of the cost of laying the water pipes. An amendment made a few years ago to the city charter authorized the city to proceed with the work provided the interested owners of property are willing to pay 6 per cent. on the amount of the investment. The latest amendment enables the city to distribute the cost on proprietors without getting their previous consent.

Discussing the new amendment, Mr. Terreault showed that it was advantageous for the city to possess the larger powers, and it would obviate delays that now occur. The Legislature, in the first amendment, restricted the expenditure for laying water service pipes to \$250,000 a year which was a guarantee that extravagant expenditure would not be indulged in for the benefit of those householders living at impractical distances from the water mains of the city.

SEWERAGE SCHEME TO COST MILLIONS

Replying to deputations from North Toronto which asked the Toronto civic Works Committee for information regarding sewers, Works Commissioner Harris let drop the information that the proposed new sewerage scheme for North Toronto will cost "many millions of dollars."

A deputation of property owners wanted a sewer constructed on Millwood road, to fit in with the proposed new scheme. They did not wish to wait until the scheme was formulated and

adopted by Council, but to go ahead as soon as possible, so that they could commence building. Commissioner Harris promised to have a report on this for the next meeting.

The next deputation consisted of A. O. Thorne and W. G. Ellis of the North Toronto Ratepayers' Association, who said the people of North Toronto were anxious to know what the Works Commissioner had in mind for them. They thought that publication of the extent of the scheme now would cause an influx of people into North Toronto.

Mr. Harris promised that details of the new sewerage plan for North Toronto would be brought before the committee at the earliest possible date.

Henry: "Say, what's the best way to teach a girl to swim?"

Harold: "That's a cinch. First, put your left arm under her waist, then gently take her left hand—"

Henry: "Oh, say, boy, she's my sister,"

Harold: "Aw. Push her off the dock."

* * *

We imagine a good many persons would be in favor of joining an organization which would have for its objective the extermination of that class (which doesn't include plumbers) who go out for something to eat at 10.30 a. m., combining breakfast and lunch in one. This is not serious in itself. It might be allowed to pass if they did not refer to the thing as "bruncheon"—breakfast and luncheon, you get the idea. We feel this matter so keenly that we are quite ready to whet an axe any time.

* * * *

Roy Simpson, negro laborer, was putting in his first day with a construction gang whose foreman was known for getting the maximum amount of work out of his men. Simpson was helping in the task of moving the right-of-way and all day long he carried heavy timbers and ties until at the close of the day he was completely tired out. Came quitting time. Before he went he approached the boss and said:

"Mister, you sure you got me down on the payroll?"

The foreman looked over the list of names he held. "Yes," he said, finally. "Here you are—Simpson—Roy Simpson. That's right, isn't it?"

"Yaas suh, boss," said the negro, "das right. I thought mebbe you had me down as Sampson."

Market Conditions and Tendencies

Price Trend on Sanitary and Heating Supplies

Markets at a Glance

WITH the exception of closet tanks and seats, practically all the current market developments affecting sanitary and heating materials are in an upward direction. Higher quotations appear on cast and malleable pipe fittings, as well as bushings, unions and plugs. Radiators have also been advanced in price through a revision of four points in the discounts. Higher prices have now materialized on cotton wastes, while upward developments in pig iron again attract attention from the viewpoint of their effect on finished materials. The slightly lower price levels on tanks and seats are in line with the revisions formerly listed on closet combinations. Other plumbing and steam-fitting supplies appearing with higher prices are: zinc sheets, tin plates and wrenches of various kinds. The new discount on radiator

valves is 55 and 25 per cent. Copper and brass sheets have been slightly advanced in some quarters, and a firm tone exists in primary markets. This upward tendency is also evident in other lines, such as tubing sheets and lead products. Wrought piping remains very firm, while it is stated that some slightly higher levels on boiler tubes would not be surprising in the near future. The opinion also prevails that lead pipe and solders may be revised upward. That certain discounts on brass compression goods may also develop is the opinion in certain quarters of the trade. It is noted that the stove foundry men receive a wage increase, this being one of the factors outlined by range and furnace manufacturers when the recent new prices went into effect.

Montreal Markets

MONTREAL, January 30.—A firm tendency in the markets for plumbing and steam-fitting supplies is again evidenced by a number of price revisions in an upward direction. Various lines are quoted at higher figures, including tin plate, bar iron and steel products, cotton wastes, larger sized eavestrough and conductor pipe, brass and copper sheets. A change upwards of minor proportions is also made in zinc sheet quotations. Various lines of scrap materials display a firmer tone, and brass and copper, rubber and wrought iron waste are slightly higher in price. The stronger tendency in galvanized sheets is reflected in some quarters, certain jobbing houses increasing their prices, while this firmer tone is also causing a stiffer feeling in the market for range boilers and corrugated sheets. Revised discounts off new lists are now quoted on radiator valves.

NEW HIGHER PRICES ON TIN PLATE

Montreal.

As outlined two weeks ago, there has been a very firm tone on primary tin-plate markets, and higher prices on the local market would not be surprising. These have now materialized, and following are revised quotations;

TIN PLATE—

20 x 28 x 100 lb. basis	14 00
20 x 28 IC, 112s	14 50
20 x 28 IX, 112s	16 00
20 x 28 IXX, 56s	9 50
20 x 28 IXXX, 56s	11 00

TERNE PLATE—

20 x 28 IC, 112s, 200 lb.	13 25
20 x 28 IC, 112c, 214 lb.	13 75

CANADA PLATE—

Half bright 52s	4 85
Half bright 60s	4 90
Blued 52s	5 10
Blued 60s	5 15
Welsh, polished, 52s	6 50
Welsh, polished, 60s	6 75
Galvanized 52s	7 50
Galvanized 60s	7 75

LARGER SIZED TROUGH AND PIPE QUOTED HIGHER

Montreal.

Through increasing list prices, substantial advances are shown in quotations on 15 inch and 18 inch eavestrough and 5 inch and 6 inch conductor pipe. It is pointed out by manufacturers that these sizes are not sold in large quantities, in fact they are not usually stocked. When an order is received it requires special attention and time, thus the cost of producing is much higher than on ordinary sizes sold. Formerly differentials did not allow this extra expense. Other sizes of both trough and pipe are unchanged, as follows;

EAVESTROUGH—

O. G. round and half round, per 100 ft. 8 in., \$16.90; 10 in., \$18.70; 12 in., \$22.20; 15 in., \$35.50; 18 in., \$45.00.

O. G. Square bead, per 100 ft.: 8 in., \$15.90; 10 in., \$17.70; 12 in., \$21.20; 15 in., \$34.50; 18 in., \$44.00.

Discount 70 per cent.

CONDUCTOR PIPE—Round, Plain and Corrugated, per 100 ft.: 2 in., \$18.40; 3 in., \$22.30; 4 in., \$29.60; 5 in., \$48.00; 6 in., \$58.80.
Discount 70 per cent.

CONDUCTOR ELBOWS—

Plain or corrugated, price per doz.
2 in., \$5.25; 3 in., \$6.00; 4 in., \$10.50; 5 in., \$24.00; 6 in., \$29.00.
Discount 60 per cent.

SLIGHT INCREASE NOTED IN ZINC SHEETS

Montreal.

Following the advance in quotations on other lead and zinc products two weeks ago, a slight increase is now made in zinc sheet prices in broken lots. Although spelter on primary markets has been a little easier, this market is again firmer, in line with other metals. Tin, copper and lead remain in their improved market position, remarkable strength being shown in lead at the present time. Prevailing prices are the following;

LEAD AND ZINC PRODUCTS—

Lead pipe, per 100 lbs., up to 2"	14 00
Do., 2" to 8"	15 00
Do., 8" and over	16 00
Lead waste, per 100 lbs.	15 00
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	15 1/2
Lead wool, lb.	0 14 1/2
Lead sheets, 2 1/2 lbs., sq. ft. lb.	0 12
Lead sheets, 2 1/2 lbs., sq. ft. lb.	0 12
Lead sheets, 3 to 3 1/2 lbs., sq. ft. lb.	0 11 1/4
Do., 4 to 8 lbs., sq. ft. lb.	0 10 1/2
Cut sheets, 1/4c. lb. extra and cut sheets to size, 3/4c. lb. extra.	
Solder, guaranteed, lb.	0 27
Do., strictly, lb.	0 24
Do., commercial, lb.	0 23
Do., wiping, lb.	0 23
Do., wire, lb.	0 38
Zinc, sheets, casks	0 11
Do., broken lots	0 12

GENERAL ADVANCE IN COTTON WASTE QUOTATIONS

Montreal.

As outlined in previous reports in Sanitary Engineer new higher prices have been expected on cotton wastes.

These have now materialized, cream polishing being two cents per pound higher, while other grades of white wastes are increased one cent per lb. Certain lines of colored are also increased one cent per lb. Although the lower grades are unchanged. Wool packings are one cent higher on all grades. Following are present prices;

COTTON WASTES—		Per lb.
Cream polishing		0 21
White, XXX extra		0 18
White, XX grand		0 17
White XLCR		0 16
X Empire		0 14½
X Press		0 13

Colored—		
Fancy		0 15
Lion		0 13½
Standard		0 12
Popular		0 10
Keen		0 08

Wool Packing—		
Arrow		0 25
Axle		0 21
Anvil		0 17
Dominion Wipers—		
White cotton		0 18
Colored cotton		0 13

FAIR VOLUME OF BUSINESS IN SOIL PIPE

Montreal.

Current trade in soil pipe and fittings is again said to be fair, and up to expectations for this time of year. Manufacturers describe the undertone of the market as firm in view of the increased costs of raw material and fuel, and following are prevailing discounts;

SOIL PIPE—		
2 and 3 inch		35%
4 inch		35%
5 and 6 inch		35%
8 inch		net
FITTINGS—		
2 to 6 inch		45%
8 inch		net

FIRMER TONE IN SOME SCRAP METALS

Montreal.

A firming tendency is noted in certain lines of scrap metals, particularly brass and copper, and quotations on these are generally advanced slightly. Wrought iron prices are one dollar per ton higher, although other lines of iron and steel are dull and unchanged. The strength of rubber in primary markets is reflected in waste, and both automobile tires and rubber shoes show a slight advance. Dealers report an improvement during the past few weeks, a fair amount of activity accompanying the firmer market tone. Following are average dealers' buying prices;

SCRAP MATERIALS—		
Automobile tires		0 50
Rubber shoes		0 03
Yellow brass		0 05½ to 0 06
Red brass		0 09
Light brass		0 04½
Scrap zinc		0 04¾
Lead, heavy		0 05
Lead, tea		0 03
Light copper		0 08½ to 0 09
Heavy copper		0 11½
Wrought iron, R. Rd., No. 1, per gr. ton		12 00
Malleable scrap (ton)		9 00 to 10 00
Pipe scrap (ton)		7 90
Heavy melting steel		9 00
No. 2 busheling		3 00
Boiler plate		3 00 to 9 00
No. 1 machinery cast		20 00 to 22 00

NEW DISCOUNTS IN EFFECT ON PIPE FITTINGS

Montreal.

Quotations on cast and malleable pipe fittings have been advanced approxi-

mately five per cent, through a revision in discounts. Following are revised discounts:—

PIPE FITTINGS—

Cast iron fittings	22%
Plugs, cast iron	22%
Do., solid	22%
Do., countersunk	22%
Bushings, cast	25%
Do., malleable	25%
Unions	40%
Flanged unions	22%
Flanged fittings	27½%
Flanged fittings	27%
Dart unions, black,	33 1-8%
Dart unions, galv.	13%
Nipples, ½ to 4", close and short	55%
Do., long	60%
Do., 4½ to 8", close and short	45%
Do., long	50%
Couplings, 4" and under	25%
Do., 4½" and larger	5%

Malleable Fittings—
Piece list effective June 1st, 1922. Discount* 68 per cent.

CHAIN WRENCHES ARE ADVANCED IN PRICE

Montreal.

New higher prices are issued on chain wrenches, showing an increase of approximately 12½ per cent.

VERY FIRM UNDERTONE IN WROUGHT PIPE

Montreal.

While the undertone of the wrought iron and steel pipe market has been firm for some weeks past, this tendency is now even more pronounced according to local manufacturers. This tendency is evidenced by the action on the part of certain American producers in increasing quotations one point. This revision has not been generally announced up to the present, but such a development would not be surprising. Domestic quotations remain under list No. 57.

WROUGHT PIPE

Price List No. 57.	Standard Butt Weld		November, 1922.	
	Steel Blk.	Pipe S/C	Gen. Wrot. Iron	Galv. Blk. Galv.

INCREASED PRICES ON BAR PRODUCTS

Montreal.

The firmer tendency in the market for bar products, as outlined in recent issues of Sanitary Engineer, has resulted in higher prices on practically all lines. Common bar iron is advanced twenty cents per 100 lbs., bringing the local quotation to \$3.35 base. Other

bars of both iron and steel show a corresponding increase with the exception of spring steel and prices on this product are purely nominal and according to grade. In announcing the higher quotation producers state that the advanced costs of production are merely taken into consideration, and there is still a firm undertone in the market. Primary markets have shown a gradual increasing tendency and for some weeks past mills have been announcing advanced levels on semi-finished products. Following are revised quotations;

BAR IRON—

Common bar iron, 100 lbs.	3 35
Refined iron	4 85
Irish finish machinery steel	3 40
Mild steel	3 35
Single reeled machinery steel	5 25
Band steel	3 85
Spring steel	5 00 to 8 50
Sleighshoe steel	3 35
Tire steel	3 55
Harrow tooth steel	3 50
Toe caulk steel	4 25
Mining tool steel, per lb.	0 19
Black Diamond tool and cast steel per lb.	0 19

NOTE—Refined iron is approximately \$1.60 per 100 lbs. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

GENERAL PRICE INCREASE ON WRENCHES

Montreal.

An increase of about five per cent. is quoted on wrenches, including agricultural, knife handled, bull dog and alligator.

ADVANCED GALVANIZED SHEET PRICES IN SOME QUARTERS

Montreal.

Following the announcement made by importers of English galvanized sheets a week or so ago that quotations were advanced on English sheets, and owing to the firm tendency in other markets on these products, certain local distributors are putting into effect slightly higher quotations. This revision, while not generally quoted as yet, indicates the strong tone which remains in the market. Galvanized Canada plates in smaller boxes are also twenty-five cents per box higher. No change is made in other lines, and following are prevailing prices;

BLACK SHEETS—

10 gauge, base	4 25
12 gauge	4 35
14 gauge	4 45
16 gauge	4 55
18—20 gauge	4 80
22—24 gauge	4 85
26 gauge	4 90
28 gauge	5 10

GALVANIZED SHEETS—

Queen's Head Fleur de Lis		
28 gauge	7 25	7 00
26 gauge	7 00	6 75
24 gauge	6 70	6 45
22 gauge	6 65	6 40
18—20 gauge	6 40	6 15

Other Brands—

10½ oz.	7 00	—
28 U. S. base	6 50	—
26 U. S. base	6 25	—
24—22 gauge	6 10	—
20—18 gauge	5 90	—
16 gauge	5 75	—

Above prices are for ½ ton lots in English iron and 1000 lb. lots in American iron with an extra charge of 25c for less quantities. Extra for sheets 3 ft. wide, 28 gauge and 10½ oz., 25c. per 100 lbs. Further extra for sheets 4 ft. wide according to gauge.

MAY BE HIGHER PRICES ON
CORRUGATED SHEETS

Montreal.

A much firmer tone has now developed in the market for corrugated sheets and one local manufacturer stated that advanced quotations may be reached at an early date. It was previously thought the stronger tendency in flat sheets would not reflect on corrugated for some little time owing to the present quiet season, but stocks are gradually becoming depleted and manufacturers will soon be forced into the higher market values. Following are present list and discount:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 26. U. S. gauge	8 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50
Less 10 per cent.	
Lighter than 24 gauge and wider than 27 inches, 75c. per square extra.	

RADIATOR VALVES HAVE NEW
DISCOUNTS

Montreal.

As stated in last issue, new list prices were quoted on radiator valves but up to that time local distributors had not adopted the new discounts. These are now given as 55 and 25 per cent. off new list on both standard and removable disc. Other lines of valves and bibbs are unchanged at the following discounts:

VALVES—	
Compression work, standard	45%
Fuller work, standard	30%
Quick opening compression bibbs	43%
Bath cocks, quick opening	41%
Bath cocks, compression	41%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, standard	56%
Roundway stop and waste cocks, standard	56%
Brass steam cocks, standard, 1/4 in.	50%
Radiator valves, standard	55/25%
Do., removable discs	55/25%
Globe, angle and check valves, standard	25%
Gate or straightway	25%
Emco globe valves	33%
Emco check valves	33%
Jenkins globe, angle, check and swing	
check	10%
Jenkins gate or straightway	16%
Jenkins iron body, globe and angle	15%
Jenkins iron body, gate	25%
N. P. "O" and "S" traps	40%

BRASS AND COPPER SHEETS ONE
CENT HIGHER

Montreal.

Slightly higher quotations are given on brass and tinned copper sheets, both lines being increased one cent per pound. Other lines such as rods and tubing are unchanged. The improved tone of copper on primary markets has reflected a firmer undertone in these products, this metal making further slight advances during more recent weeks. Following are revised quotations:

BRASS—	Base.
Sheet, base	0 25
Rods, base 1/2 to 1 in., round	0 22
Tubing, seamless, base	0 30
F.o.b.	
COPPER—	
Rods, 1/2 to 2 in.	0 29
Soft sheets, plain, 16 oz. and heavier	0 30
Plain tinned, 16 oz. and heavier	0 38
Polished, and tinned, 16 oz. and	
heavier, lb.	0 41
Tubing, lb.	0 32
Above prices are full sheets and bars. Cut sheets and bars are 5c. per lb. higher.	

MAY BE HIGHER QUOTATIONS ON
RANGE BOILERS

Montreal.

A very firm tendency is noted in the market for range boilers, in line with other galvanized products. The strong tone in flat sheets has been in evidence for some weeks past, and the difficulty in securing ample supplies of heavier gauges for the manufacturing boilers is becoming more apparent from week to week. One local manufacturer stated that he would not be surprised if prices were forced upwards in the near future. Following are present discounts from standard list:

RANGE BOILERS:—	
5 Gallon	\$13.50
12 "	14.00
18 "	15.00
25 "	16.50
30 "	17.50
35 "	20.50
40 "	22.75
52 "	38.00
66 "	60.75
82 "	74.00
100 "	103.00
120 "	117.00
144 "	164.00
168 "	187.00
192 "	210.00
Std., less 40 per cent.; Ex. Heavy, 30 per cent.	

KEEN COMPETITION IN CLOSET
COMBINATIONS

Montreal.

Although current nominal quotations on closet outfits are still unchanged locally, an easier tendency continues in the market. When discussing the lower prices appearing on other domestic markets one local distributor stated that in all probability a similar development would be noted here also in the not far distant future. Competition is very keen on what little business is showing, with rumours of further price-shading, while at the same time dealers contend that existing levels allow very little profit. It is also reported that an easier feeling now exists among manufacturers and importers, with a possibility of reduced figures at sources of supply. Average price levels are:

CLOSET COMBINATIONS—

Low down outfits, each	
Closet, standard outfit, oak	25 00
Do., post hinge seat	26 00
Do., oak vitro or Pussyfoot	26 00

Enamelled iron with fittings, flush	
elbow and supply	16 50

UNSETTLEMENT AGAIN NOTED IN
ENAMELLED WARE

Montreal.

There are again indications of unsettlement on the local market for enamelled ware, after a period of improvement in this connection. Local supply houses state that although trade is only of moderate proportions a good percentage of this is only obtainable at a sacrifice in prices, especially larger sized orders. It is reported however that some arrangement will probably be made in the near future in the hope of again producing a more stable market. Average quotations are unchanged as follows:

ENAMELLED WARE—

Sinks, roll rim—	
18 x 30	\$23 00
Sinks, flat rim—	
16 x 24	1 only 2 only 3 only
18 x 30	\$ 7 50 \$ 7 40 \$ 7 30

17x19 in. Roll rim. F241 or P4345	12 60
Less 33 1-3 per cent.	

STRENGTH STILL SHOWN IN LEAD
MARKETS

Montreal.

Ingot metal markets continue to show a firmer tone, notably lead which registers a further sharp advance. The decline in zinc seems to have ceased, and a re-action upwards may follow. Generally speaking the outlook may be said to be firm.

TIN.—London has advanced again this week and Straits are selling at over 40 cents in New York for the first time in many months. It is considered that this metal has acted well in view of disturbed conditions, but a reaction is of course probable. The local market is strong at 44 1/2 cents.

COPPER.—The slight recession in prices noted a week or so ago has disappeared, and the market is again firmer. Export business is more or less unsettled, but sentiment remains bullish and producers are in some cases declining to quote for forward deliveries. Should there be any sign of a settlement of the trouble in Germany prices would in all probability respond rapidly. Prices are firm at 18 cts. for electro, 17 1/2 cts. for casting.

LEAD.—Lead is showing remarkable strength with East St. Louis quoted at over 8 cts., while the London market has also advanced sharply. Consumption is very heavy in the U. S. A. and supplies are comparatively scarce over the next few months. Local market is firm at 8 1/2 cts.

SPELTER.—The American market has been sagging during the past few weeks, with a light demand and a cessation of export business. A firmer tone has now developed and it is thought likely that prices will again advance, especially as domestic buying has been

light recently. Market locally is steady at 9½ cts.

ANTIMONY.—The Chinese situation remains very firm and offerings from there are limited. Demand is only fair, but prices locally have stiffened somewhat and stocks are light. English is quoted at 8 cts., Chinese at 7½ cts.

Toronto Markets

TORONTO, January 30.—The majority of current price revisions in sanitary and heating materials are again in an upward direction. The only reduction affects closet seats and tanks, this change falling into line with the recent downward revision on closet combinations. Price increases affect radiation pipe fittings and pig iron. Both cast and malleable fittings are quoted higher through the issuing of new discounts, while bushings, unions and plugs are also affected. Radiators are revised all through the list, but boilers maintain former levels. Higher prices have also materialized on cotton wastes. The new discount on radiator valves and union elbows is 55 and 25 per cent. An upward tendency is still evident on many products, including sheets, brass and copper and tubing.

ADVANCED PRICES MATERIALIZE ON COTTON WASTES

Toronto.

As previously foreshadowed in Sanitary Engineer, some higher prices have now developed on cotton wastes. The extent of this further increase is approximately one cent per pound on the various grades of both white and colored. Cream polishing, however, is advanced two cents. This revision is attributed to the strength of raw materials, chiefly accentuated by the climb of cotton in general. Following are new quotations:

COTTON WASTES—	
Cream, polishing	0 21
White, XXX	0 21
Do., XX	0 18
Do., X	0 17
Do., XC	0 15½
Do., XXX extra	0 18

Above lines subject to trade discount for quantity.

UPWARD REVISION IN RADIATOR PRICE LEVELS

Toronto.

Quotations on radiation are now placed on a higher basis through a revision in discounts. The extent of the change is four points, that is, the discounts on standard radiators which was formerly 55 per cent. for water and 56 for steam are now 51 for water and 52 for steam. Changes of similar extent are made all through the list, with the exception of boilers, where no revision is recorded. The strength of the market has been pointed out in former market reports. Following are the revised quotations which apply in Ontario, f. o. b., factory,

with the exception of the following points which take discounts one point lower than those given herewith:—London, Windsor, Sarnia, Amherstburg, Walkerville, Sandwich, Ford City, Ottawa and Hull, Que.

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.

Discount on 2, 3, 4 and 5 column standard sizes, 51 per cent. for water and 52 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 43 per cent. for water and 44 per cent. for steam.

Discounts on 1-column hospital size, water 29 per cent; steam, 30 per cent.

Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 43 per cent.

BOILERS—

Water:

Round, 60 per cent. off list. Square, 20 per cent. off list.

Steam:

Round, 25 per cent. off list; Square, 15 per cent. off list.

DISCOUNT OF 55 AND 25 ON RADIATOR VALVES

Toronto.

Following the issuing of the new price list on radiator valves and union elbows, which was reproduced in a former issue of Sanitary Engineer, uniform discounts applying to this list have now been generally adopted by local distributors. The new level is 55 and 25 per cent. In the last issue it was pointed out that a variety of discounts were being quoted, some around 60 per cent. off, others 50 and 10, and again 50 and 10 and 10.

REVISED QUOTATIONS ON CLOSET TANKS AND SEATS

Toronto.

Closet tanks and closet seats are now changed in price, these revisions corresponding to the new lower prices recently announced on closet combinations. The extent of the changes, however, are

moderate, the quotations now in effect being as follows:—

CLOSET COMBINATIONS—		Each
Oak, Wood Tank, Oak W. S. Seat and Cover	24	00
Oak Vitro Tank, Oak W.S. Seat and Cover	24	96
Oak Pussyfoot Tank, Oak W.S. Seat and Cover	24	09
Oak Wood Tank Oak P.H., Seat and Cover	24	50
Oak Vitro Tank, Oak P.H. Seat and Cover	24	50

CLOSET SEATS—		
Oak Rich. Seat and Cover to wall	3	50
Oak Woodstrip Seat and Cover with bolts	3	50
Oak Woodstrip Seat less Cover with bolts	2	90
Oak Post Hinge Seat and Cover	3	85
Mahog. Fin. Post Hinge Seat and Cover	4	75

STOVE FOUNDRYMEN GET WAGE INCREASE

Toronto.

Among the reasons advanced by stove and furnace manufacturers for the recent advance in prices on these products was the fact that wage levels in the manufacturing end of the industry had advanced. This was stated to be in addition to the higher trend of raw material prices. At a conference of Ontario stove foundrymen, members of the International Molders' Union were granted a wage increase of approximately 16 per cent. Men who formerly received \$5.40 per day of 8 hours will now receive \$6.

QUOTATIONS ON PIPE FITTINGS REVISED UPWARDS

Toronto.

As outlined in former issues of Sanitary Engineer, revised quotations have now appeared on the market for pipe fittings. Revisions have been made all along the list, thus placing quotations upon a higher level. The advance varies to some extent, but is chiefly in the neighbourhood of seven per cent. Both cast iron and malleable fittings are

changed, as well as bushings, unions and plugs. Following are the revised quotations:—

PIPE FITTINGS—	Per Cent.
Cast iron fittings standard.....	22
Do., extra heavy	25
Plugs, cast iron	22
Do., solid	22
Do., countersunk	22
Bushings, malleable	25

MAY BE REVISION IN VALVE DISCOUNTS

Toronto.

A revision towards higher price levels on certain lines of brass compression work is considered possible in the near future, according to current opinion on local markets. It is noted that quotations on iron body and brass valves are being revised upward in the United States, and a covering of future requirements by local distributors is taken as an indication that a similar movement may possibly develop on domestic centres. Up to the present no changes have been made from the following discounts:

VALVES—	Per cent
Compression work, standard	45
Fuller work, standard	30
Bath cocks, compression	41
Do., Fuller	25
Flatway stop and wastecoaks, stand'd.	58
Brass steam cocks, standard 1/2" to 2"	50

Webber gate valves, screwed	33
Emco globe valves, std.	25
Emco globe valves, J.D., screwed	33
Basin Cocks—	
No. 0 and 1 Fuller pattern	30
Quick opening No. 3633	50
No. 3623, plain or index handle	34

PIG IRON PRICES AGAIN RECORD ADVANCE

Toronto.

Pig iron prices have taken another upward step, the extent of this current increase being one dollar per ton. This revision brings the prevailing local level to \$33.55. This is the third advance during the last few weeks. The movement is attributed in some quarters to increased buying in primary centres. On the other hand, the fact that pig iron is not offered for sale so freely as formerly has added a certain element of strength

to the market. There has been some consideration of pig iron being stored against a possible coal strike in April next, but the possibility of such labor disturbances has now subsided, and the necessity for hoarding supplies has therefore diminished.

BOILER TUBES MAY REACH SLIGHTLY HIGHER LEVELS

Toronto.

The upward tendency which has prevailed in the boiler tube market during recent weeks is considered likely to result in slightly higher price levels being announced in the near future. This revision is stated by local distributors to be in line with current advances taking place in the primary markets. It is stated that new domestic quotations are under consideration in some quarters. On the other hand, the degree of improvement in this direction is described as hampered to some extent through the liquidation of stocks. As soon as these are disposed of, higher replacement values are expected to become effective.

BOILER TUBES—

Size	Seamless.	Lapweld
3/4 inch	\$19 00	\$.....
1 inch	20 00
1 1/4 inch	22 00
1 1/2 inch	24 00
1 3/4 inch	24 00	23 00
2 inch	22 00	19 00
2 1/4 inch	24 00	21 50
2 1/2 inch	27 00	23 50
3 inch	34 00	28 50
3 1/4 inch	36 00	33 00
3 1/2 inch	38 00	33 00
4 inch	50 00	42 00

WROUGHT PIPING CONTINUES ON FIRM BASIS

Toronto.

While list No. 57 continues to govern the domestic wrought iron pipe markets, yet quotations remain on a very firm basis. It is pointed out that genuine wrought iron in the United States has shown an appreciable advance in price, but steel has not increased to the same extent, although basic conditions are described as very strong. This tendency is also reflected in domestic circles.

WROUGHT PIPE

Price List No. 57.		November, 1922.	
Standard Butt-weld Pipe S/C		Per 100 ft.

EARLY BUILDING BRINGS CALL FOR ENAMELED WARE

Toronto.

Although some price revisions have appeared on closet tanks and seats, no variations are made in prices on enameled ware products. These are being maintained at the levels quoted below, with the general situation described as fair for this season of the year. Whether revised quotations will develop in the near future is considered problematic in some quarters, it being pointed out that while another brisk season is being anticipated in building circles, some rumors of price shading have been apparent in certain districts.

ENAMELED WARE—

Enameled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5 1/2 ft.	57 10
Lavatories—

20x30	9 70 9 80 9 90
Above prices, list, less 33 1-3 per cent.	

FIRM UNDERTONE NOTED IN RANGE BOILERS

Toronto.

The strength of galvanized sheets and the upward tendency of the market has been reflected to some extent in the finished products, including range boilers. These are described as being on a very firm basis, with the recently revised quotations being firmly maintained. Current trade is described as good for this time of the year. Lists and discounts remain as follows:

RANGE BOILERS—

Size.	List Price
5-gallon	\$13 50
12 to 15 gallon	14 00
18-gallon	15 00
25-gallon	16 50
30-gallon	17 50
35-gallon	20 50
40-gallon	22 75
52-gallon	38 00
66-gallon	60 75
82-gallon	74 00
100-gallon	103 00

144-gallon	164 00
168-gallon	187 00
192-gallon	210 00
Discounts, Standard weight, 40 per cent.	
Extra heavy, 30 per cent.	

EARLY TRADE FOR SOIL PIPE AND FITTINGS

Toronto.

Early anticipations for trade in soil pipe and fittings are now apparent, this being one of the results of more or less extensive building programs for the coming season. The demand is described as generally good for this time of the year and quotations remain unchanged at the following levels:

SOIL PIPE—

2 inch	Less 33 1-3%
3 inch	Less 33 1-3%
4 inch	Less 33 1-3%
5 and 6 inch	Less 33 1-3%
8 inch	net

FITTINGS—

2 to 6 inch	Less 45 per cent.
8 inch fittings	net.

FAIR TRADE IN LEAD AND ZINC PRODUCTS

Toronto.

Lead and zinc goods present a fairly steady market tone, there having been no change in current local quotations on these lines. Business at present is described as good for the early weeks of the year, and this has enabled the market to hold its own through the customary quiet trade session. Lead in primary metal centres is again strengthening and some slight price advances have been recorded on pig lead. This revision, however, is not considered of sufficient extent to affect the finished products as yet. Unchanged quotations on solders, etc., follow:

LEAD AND ZINC GOODS—

Lead pipe, list, per lb.	0 14
Lead waste pipe, list, per lb.	0 15
Do., over 8 in., list, per lb.	0 16
Lead pipe is subject to a discount of ten per cent.	
Lead traps and bends, less 15 per cent.	
Lead sheets, 4 to 6 lbs., sq. ft. in rolls, lb. \$0.09½—0.10.	
Cut sheets, ½c to ¾c lb. extra and cut sheets to size, 1c lb. extra.	
Solder wire, per lb.	0 31
Do., commercial, lb.	0 25
Do., strictly, lb.	0 23½
Do., guaranteed, lb.	0 26½
Do., wiping, lb.	0 23½
Zinc sheets, per lb.	0 11 0 12

ANTICIPATE BUSY SEASON IN EAVESTROUGH

Toronto.

Quotations on eavestrough and conductor piping remain at the recently revised levels quoted in former lists. A firm tone prevails in these products, the market being described as unusually strong and active for this season of the year. Distributors are anticipating another active period, as prospects for early construction work are considered very bright. Following are prevailing local quotations:

TROUGH (EAVE)—

O. G. Square Bead—	
Per 100 ft.	Per 100 ft.
8 inch . . . \$15 90	15 inch . . . 34 50
10 inch . . . 17 70	18 inch . . . 44 00
12 inch . . . 21 20	

O. G. Round and Half Round

8 inch . . . 16 90	15 inch . . . 35 50
10 inch . . . 18 70	18 inch . . . 45 00
12 inch . . . 22 20	

PIPE (CONDUCTOR)—

Plain, round or corrugated.

5 inch, list . . .	24 00
6 inch, list . . .	29 00
Less 60 per cent.	

MAY ELIMINATE RANGE IN BAR IRON PRICES

Toronto.

Effective from February 1, certain local distributors state they are revising bar iron price levels upward to the extent of fifteen cents per cwt., through eliminating the lower figure of \$3.25. This change would place the average quotation at \$3.40 base. Shapes and angle iron may also be changed accord-

ingly. This movement is not uniform, however, but has been foreshadowed in former issues and would come as no surprise owing to the recent strength displayed in primary markets, which has been more or less reflected in domestic steel circles. While easier levels are still recorded on eastern centres, it is pointed out that such quotations do not represent current replacement values, and a similar movement here is also expected in the near future. The general conclusion that there will be no coal strike on April 1 has not resulted in any weakening in the general position. The steel market is gaining strength, as regards prices ruling, and it stated that whatever influence the improved coal outlook may have had, it has been overcome by the stronger position of mills.

IRON AND STEEL—

Mild steel bars, base . . .	3 25	3 40
Mild steel bands, 3-16 base . . .	3 75	3 90
Bar iron, base . . .	3 25	3 40
Angle iron base . . .	3 35	3 50
Horseshoe iron . . .	3 90	
Tire steel . . .	3 50	
Spring steel . . .	7 00	8 00
Sleigh shoe steel . . .		3 40
Cold drawn steel . . .		4 50
Tee caulk iron . . .		4 10
Hoop Steel . . .		4 75
Norway iron . . .		12 50
Crucible cast sheet steel . . .		28 00
Mining Drill steel . . .		18 50
Cast tool steel, high grade . . .		30 00
Cast tool steel, medium . . .		18 00

FIRMING TENDENCY IN SHEET MARKETS

Toronto.

Former predictions regarding the firming tendency in the sheet markets are now being borne out by recent developments in primary centres, where prices heretofore quoted by the Steel Corporation are now withdrawn, it being generally expected that an advance is imminent. Current business is described as exceptionally brisk for this season of the year, and forward bookings indicate to some extent the confidence in the market. Unchanged local quotations follow:

GALVANIZED SHEETS—

Premier and Apollo	
10½ oz.	6 65
U. S. 28 base	6 25
U. S. 26 base	5 95
22 and 24	5 80
18 and 20	5 65
16	5 50
12 and 14	5 35
Queen's Head	
28 gauge base	7 15
26	6 75
24	6 45
22	6 30
Fleur de Lis	
28 gauge, base	6 90
26	6 50
24	6 20
22	6 05

An extra 40c. per 100 lbs. is charged for Keystone and Premier bands copper-bearing sheets. An extra is now charged on galvanized sheets, 10½ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown in 20c. per 100 pounds.

BLUE ANNEALED SHEETS—

10 gauge, base	4 20
12 gauge	4 25
14 gauge	4 30
16 gauge	4 35

BLACK SHEETS—

18-20 gauge	4 90
22-24 gauge	4 95
26 gauge	5 00
28 gauge	5 10

A charge of 25c. per 100 lbs. is made for less than case lots. An extra 10c. per 100 lbs. is also charged on sheets 26 in. wide.

FAIR VOLUME IN BRASS AND COPPER

Toronto.

The basic metals entering into the production of brass and copper goods, such as rods, tubing and sheets, are apparently attempting to climb up again. While this movement has been of a minor extent up to the present, it is described as the forerunner to general improvement in these products. Current business is also very good, that is for this time of the year. Quotations on these lines remain unchanged, as follows:

BRASS—

Sheets, base, per lb.	0 26
Rods, base, per lb.	0 23
Tubing, base, per lb.	0 31

COPPER—

Rods, base, per lb.	0 29
Soft sheets, plain, 16 oz. and heavier, lb. 0 30	
Do., plain tinned, 16 oz. and heavier, per lb.	0 43
Do., polishing, 16 oz. and heavier, lb. 0 36	
Tubing	0 34
Copper, bus bars, base	0 29

SCRAP RUBBER PRICES ALSO CLIMB UPWARD

Toronto.

In the waste material markets, scrap rubbers have maintained their steady tone, with prices on an upward trend, due to further advances in crude rubber.

Scrap metals have just about been holding their own. Most demand is still for red and yellow grades. The white metals are moving in a fair way.

Consuming demand is still hand-to-mouth in scrap iron, but steadily expanding. Higher prices are asked.

The following are the usual average of dealers' buying prices for large quantities:

SCRAP MATERIALS—

Scrap Iron	
Heavy melting steel	11 00
Scrap pipe	6 00
Steel turnings	10 00
Malleable scrap	10 50
Rails scrap	11 00
Net tons—	
No. 1 cast	18 00
Stove plate	14 50
Car wheels (std)	14 00
Scrap Metals	
Heavy copper wire	11 25
Light copper	9 25
No. 1 composition	9 00
Red brass turnings	7 00
Light brass	4 00
Heavy yellow brass	5 30
Heavy lead	4 50
Tea lead	3 00
Scrap zinc	4 00
Scrap Rubber	
Boots and shoes	2 50 3 00
High rubber boots	1 75 2 00
Auto tires	0 25 0 50
Solid tires	0 75 1 00

STRONG UNDERTONE IN CORRUGATED SHEETS

Toronto.

As an indication of the strength underlying the current trend of corrugated sheets, it is pointed out that, "English mills last year were selling No. 24 gauge corrugated sheets, which they regard as a sort of standard at about £15 sterling, and now they are firm at £18 with an advance of 30 cents in the cost of a pound sterling to a Canadian buyer; all of which has a very stimulating tendency towards firmness in domestic markets." While present trading is quiet, another

TIN PLATE MAKERS LOOK FOR ADVANCE

Toronto.

It is foreshadowed in certain quarters that there may be an upward revision in tin plate prices in the near future. Producers in southern fields claim that owing to rising costs they are hardly breaking even at existing levels. Current domestic quotations are considered strong.

REACTION HAS DEVELOPED IN INGOT COPPER

Toronto.

Lead and antimony have recorded slight price advances in the ingot metal markets. The general undertone, however, remains steady, in the non-ferrous group, with the exception of copper. In this metal another reaction has developed.

COPPER.—A reactionary movement has been the feature of the copper markets. There has developed a break in sterling exchange which resulted in corresponding easier prices, and a reluctance to trade. Business is described as dull and inquiries are light. Domestic price levels remain fundamentally unchanged.

TIN.—This market remains steady, although some slightly lower prices have developed in primary centres. Fair-sized purchases are being made by consumers, which degree of trading serves to keep up interest. Local tin prices are firm at the levels given below, with some slightly higher quotations appearing in certain quarters.

LEAD.—This metal continues in a strong position, both in primary and domestic markets. Local price levels have risen in proportion, the increase, however, being of minor extent. The trend of the market is described as upward owing to limited offerings.

SPELTER.—There is no outstanding development in zinc. The markets are described as moderate at present, with the general situation unchanged. Quotations are reported a shade easier in primary centres, but local figures remain unchanged.

ANTIMONY.—Quotations locally have recorded a slight advance, but current trading shows no unusual feature this week. The general tone is described as steady. The current tendency is considered steady to firm.

ALUMINUM.—Business in aluminum is said to be improving, especially in primary markets. Forward bookings are reported in good volume, with a stronger

undertone consequently evident. Some rumors of further price advances pending are noted, but no changes have developed up to the present.

INGOT METALS—

Copper	17 25
Tin	45 00
Lead	7 75
Spelter	9 50
Antimony	9 00
Aluminum	22 00

Winnipeg Markets

WINNIPEG, January 30.—A lengthy budget of price revisions is recorded on plumbing and steam-fitting supplies. Higher price levels are noted on range boilers and cotton waste. Lever handle throttle valves, and Lunkenheimer valves show a slight decline. Compression bibbs, sill cocks, injectors and basin, pantry and compression bath cocks are also quoted at lower levels.

LEVER HANDLED THROTTLE VALVES AT LOWER DISCOUNTS

Winnipeg.

New discounts are in effect on Lunkenheimer relief safety and lever handled throttle valves. Throttle valves are quoted at 14 per cent. advance, relief valves at 9 per cent. and safety valves at 16 per cent.

LUNKENHEIMER VALVES SHOW DECLINE

Winnipeg.

A decline in discounts has also been recorded in Lunkenheimer valves. Following are the latest quotations.

LUNKENHEIMER VALVES—

No. 140	32% Adv.
No. 141	32½ Adv.
No. 144	11%

No. 143, ½ to ¾ in.	29% Adv.
1 to 4 in.	17% Adv.

DURO BLOW OFF VALVES AT LOWER LEVELS

Winnipeg.

Lower discounts are in effect on Duro blow off valves. Latest discount is plus 55 per cent.

REVISED PRICES ON LUNKENHEIMER INJECTORS

Winnipeg.

There has been a revision in discounts on Lunkenheimer injectors and injector repairs. Lunkenheimer injectors are quoted at 59 per cent. and repairs at 4 per cent.

COMPRESSION BIBBS SHOW REVISION IN DISCOUNT

Winnipeg.

Compression bibbs show a revision in discount and are quoted at less 45 per cent. off list price.

SILL COCKS AT LOWER DISCOUNTS

Winnipeg.

Sill cocks, wash trays, bibbs, boiler drain cocks, compression stops and stop and waste cocks show a decline in dis-

counts. The following lines are quoted as follows;

SILL COCKS—

Nos. 835 and 835½—discount price .. 50%

Good Plumbing Calls For JENKINS VALVES

Fig. 106
Jenkins Brass Globe Valve.

What makes Jenkins Valves so
much better than ordinary valves
is—

The high-grade Brass, Iron
or Cast Steel from which
they are made.

The scientific way in which
they are constructed.

The scrupulous care with
which every valve is tested
for service before leaving
the factory.

Jenkins Valves are **DEPENDABLE** even
under unusually severe conditions.

Plumbing and Heating Contractors
should write for interesting literature
describing the complete Jenkins line.
It will be mailed on request.

The manufacturer or jobber of plumbing and heating supplies who has an honest product and honest service to sell is always anxious to tell his message to the trade.

The announcements of those manufacturers and jobbers of plumbing and heating supplies who have neither of these things to offer will not be found in the pages of this journal because open publicity is the last thing desired in such cases.

Advertising is not lightly accepted by this paper and the product to be advertised must measure up to this standard—"Will it give honest service to the ultimate buyer—Will the manufacturer stand back of it four square?"

That's why Canadian Sanitary and Heating Engineers can feel quite safe in buying products advertised in this paper. And that's why only the best products will be found advertised here.

The Heart of the Heating System

"Mogul" Hot Water Boiler

(Nos. 1, 2, 3, Constructed
as above)

The Mogul Boiler is the heart of the heating system; a great, warm, pulsing dependable heart that withstands for years the effect of use and deterioration.

From base to fuel saver, the boltless-cotter-pinless grate bars, the specially designed fire-pot, the lined doors, the individual flue doors, the wire handles, the peculiarly designed sections, the rapid circulation, the packless joints, the few parts, the ease of handling and the guaranteed ratings, place the Safford Mogul Boiler in a class by itself.

Write for illustrated booklets.

The Difference in Advertising Is the Difference in Men

Of itself, advertising is little. And the differences in it are the differences which exist in men.

Just as some men are strong and virile and interesting, so is some advertising. And just as some men are ineffectual and weak and boring, so is some other advertising.

"Does it pay to advertise?" It pays those men who are keen enough students of the public to make it pay them. It pays those men who are truthful, sincere, interesting and believable.

It pays the men whose product deserves the payment, whose brains are keen enough to organize for success and judge enough of the human mind to know how to tell their story with sincerity and interest.

So when you judge advertising, judge it by how it is used and by whom—not of itself and of itself alone.

Remember, an ugly man looks just as ugly in a mirror.

The Everlasting Veneer Toilet Seat

**Strong, Clean
Hygienic**

This reliable, dependable toilet seat is made of 7 and 9-ply, air-seasoned wood veneer, held together by our special wood cement. This cement is proof against heat, cold or dampness. The veneering is distributed according to the strain and wear required of the different parts. The Everlasting Seat will never crack, warp or split.

It is a splendid seat for use in cold, damp basements where closets must be installed. The Everlasting Toilet Seat will meet, and successfully resist, these severe conditions of moisture, changing temperature, etc.

Endurance

As the granite cliffs of our storm-beaten coasts defy indefinitely the fury of the waters, so does the Vitro Tank successfully resist the assaults of time.

The sheer, white beauty of the New Design Vitro shines in all its pristine splendour years after its installation has been made—after the date of that installation has been forgotten.

That Canadian people appreciate those qualities of strength, permanence and efficiency which combined with beauty makes Vitro the triumph that it is—is demonstrated by the fact that this tank still leads the Canadian market in sales.

You can profitably use the "A-1" On 90% of your installations

FULLY 90% of all Sanitary installations call for the ordinary wash-down combination—simply because it is about the most inexpensive type of closet outfit available.

But if your client exercises economy in choosing a closet combination of relatively low price, surely you can only serve his best interests by furnishing only the best his money can buy—the "A-1" Closet and "Bellemeade Junior" Tank.

CANADIAN Solid Vitreous Ware stands pre-eminently superior as a truly sanitary material in the construction of both closet bowls and tanks. Its fine-grained, all-clay hard-burned vitreous body ensures a lifetime of unchanging service while its lustrous white surface adds beauty to any toilet room and is as easily kept clean as a china plate.

On the basis of present prices this combination affords a realization of value which cannot be challenged.

WE HAVE ready for distribution a series of four beautifully designed and printed bathroom scenes.

These truly beautiful pictures in four colors measure $10\frac{1}{2}$ x 13 inches and are worthy of framing. Used as ordinary hangers even, they compel attention by their charm.

Naturally these exquisite drawings depict "Standard" Fixtures. They carry in a delightful but impressive manner the charm of the modern, well equipped bathroom.

The high cost of these pictures necessitates careful distribution. Master plumbers are invited to write us on their business letterheads, when a set will be gladly mailed without charge.

The

Anthes Syphon

"The Heart of the Disposal System"

With the installation of a modern sewage disposal system, new standards of living are made possible in the farm home.

Gone forever is the out door toilet—gone the trick bath in a wash tub; gone the laborious hauling of water by hand from pump to kitchen—gone a thousand and one annoyances that have made farm life so unattractive, so drab, so primitive.

*And the Heart of the Disposal System
is the Anthes Syphon*

Scores of farmers in your district can be sold now on a disposal system—scores of them who have sworn to never again go through a winter without the sanitary conveniences that made life worth living.

And each sale of a disposal system opens up wonderful opportunities for further sales; automatic pumps, water heaters, bath tubs, lavatories, toilet bowls—and the job of their installation. Some one is going to get the business. Why not you?

Plumber Had to Re-Order Certain Lines of Bathroom Fittings in Special Sale

Direct Contact With Public Through the Shop Windows Used to Best Advantage—Uses Speed Truck for Small Jobs and Emergency Work—Keeping Goodwill of Customers in Collecting Accounts—Making the Customer Appreciate the Store

THE growth of the plumbing firm of Band & Cole, in Ottawa, Ont., during the past year has been very noticeable and quite apparent to observant citizens. Having been acquainted with the members of this firm for some years, Sanitary Engineer has been interested in noting its development, and it is but logical that the application of certain business methods followed by this firm in the last couple of years should have brought it to the place where its appearance is sufficiently inviting and its methods so effective that a good business has been developed.

The windows of the premises are always well dressed, giving expression to seasonal tendencies in the buying of plumbing and heating equipment as far as this is possible. Every helpful suggestion is applied by this firm, such, for instance, as the display which is illustrated in this article, and which was suggested in an issue of Sanitary Engineer at Christmas. The firm keep an open mind for such suggestions and investigate them as they apply to their particular trade.

The interior consists of a neatly arranged showroom and office. The accounting system and general methods of direction are modern and efficient and have been one of the chief foundations of its success.

Direct Contact With Public

Because direct contact with the public can be achieved through the window display, every care is taken to make it not only attractive but interesting. Prospective customers are invited by the window display to come inside. Here through courtesy and intelligent treatment on the part of salesmen many profitable sales are developed. Thus the window display not only advertises the goods and sells some of them direct, but it enables the merchant plumber to come into close contact with prospects.

A few weeks ago realizing the need of bathroom fittings in the home, a

supply was purchased and put on display. Within two weeks half the quantity purchased was sold and in some cases it was necessary to re-order certain lines. In view of the fact that these fittings had not been stocked for eight years and that customers had been turned away to go elsewhere, the wonderful possibilities of window displays and advertising are evident.

The prospects brought to the store in this way made many enquiries for enamelled ware and several profitable sales resulted. The display of such ware caused such an impression that one lady remarked, "It is a good thing to see something so new and attractive in a plumbing store." This, Mr. Cole says, only goes to show that the public are noticing the transition which is taking

place in the appearance of plumbing shops since the arrival of the modern domestic sanitary and heating engineer.

Use Prospect List

Prospect lists are compiled with care, divided into the various types of equipment in which the person is interested, and these are followed up vigorously. With a live mailing list available some direct influence of an important character is brought to bear on all special efforts put forward to sell equipment.

In the management of the business the same care is shown as is exhibited in the window and its showroom. The office is neat and well arranged. An extensive system of accounting is kept and audited monthly.

Efficiency and good management keep down the costs and increase the profits.

Separate Bins

In the workshop everything is in order and well marked. Every article is kept in a separate bin and everything arranged with the underlying idea of saving time and money. Everything is where it can be found quickly. The saving annually both in time and material can be reckoned in many dollars, according to Mr. Cole.

Use Speed Truck

Repairs are attended to promptly and a speed truck is always ready to transport men and material rapidly to and from each job.

The experience of this firm bears out that of other sanitary engineers, namely, that a speedy service is necessary to secure emergency repair work in various parts of a city such as Ottawa, and that the use of such a truck keeps the time spent on such repairs to a minimum. It is only by keeping time and expense to such a minimum this work can be made profitable. Ordinarily the customer is reluctant to pay the plumber to do a comparatively small job in the house, judging the job not by the time

W. CECIL COLE

of the plumbing firm of Band & Cole, Ottawa, Ont., who tells of some helpful and interesting business building plans for plumbers.

Making use of all helpful ideas for the window display, to maintain constant contact with the public, Band & Cole, Ottawa, Ont., made use of the window display suggestion for a Christmas tree of bathroom fittings, which appeared in Sanitary Engineer. The idea was a success. Note the arrangement of other bathroom fittings, radiator humidifiers, sinks, laundry tubs, etc. A timely appeal is conveyed as far as possible in the constantly changing displays of this firm. Read what tangible results have been traced to these windows.

consumed but by the value of material used. The speed truck used by Band & Cole has developed an active business in such work and it is made profitable.

Handling Overdue Accounts

Accounts are handled efficiently and with little cost. When an account is two months overdue the customer receives a letter requesting payment in a courteous way and these letters are continued each month until the account is paid or placed in a doubtful class. These letters are written in good faith and are written in such a manner as to give no offense. They not only drive in the money but they retain the goodwill of the customer. In this way collections are handled promptly and with little expense and the maintenance cost kept very low.

"Gradually the merchant plumber is coming into his own," said Mr. Cole, "and the plumber and steamfitter into his rightful place as a domestic sanitary and heating engineer. Soon the plumbing and heating industry will be universally recognized as an industry which renders one of the greatest services to mankind, that of providing the best in sanitary heating, and ventilation, so that the peoples of the universe may enjoy the greatest of all gifts—health and comfort."

Plumber Develops Filter Business

N. C. McGowan, Plumbers of St. John, N.B., Conducts Propaganda Work With Boards of Health to Have Filters Installed in Swimming Pools

ST JOHN, N. B.—N. C. McGowan, plumbing contractor of the St. John N. B., had been advocating action whereby the plumbing contractors in each city and town would benefit materially. Mr. McGowan states there is at least one swimming pool in each city and town, and during the warm weather months there are sunken scows, wharves, bath houses, beaches, flats, etc., devoted to bathing.

There are pools which are as yet not equipped with filtration apparatus and Mr. McGowan believes that if the plumbing contractors went after the owners of these pools diligently and sought the orders for installation of filtration systems, the owners would have the filters installed. He believes that many of the owners think the cost is much larger than it really is and consequently have failed to install the filtration systems in connection with pools. Mr. McGowan believes that the Boards of Health in the cities and towns and districts should forbid the using of pools containing unfiltered water owing to the prevalence

of germs in such water, particularly after being in use several days or a week or perhaps two weeks.

Then there is the question of the sunken scows, and the swimming beaches etc. Mr. McGowan points out that in many instances the water for these places is impure, and is often near sewage pipes. Mr. McGowan argues that the plumbing contractors should petition the city councils in the different cities and towns agitating purification of the water for these public bathing places. He advocates the installation of spray to be installed by plumbing firms, and which would minimize the menace of the germs in open waters.

Mr. McGowan has been doing some propaganda work on behalf of his people, and has taken up on his own account, the circularizing of owners of unfiltered swimming pools, and offering to install pools at stipulated figures. He has received one order already and considers himself repaid without going any farther, for his work in advancing his projects.

A \$200 Home Water Plant Sells Additional Equipment to the Value of \$400

Two Types of Power Pumps, i.e., Deep Well and Shallow Well
—The Elevated Tank and Pneumatic Pressure Tank—Small
Tanks Should be Galvanized—What to Look for in Good System

Written for Sanitary Engineer by J. W. McCammon, Manager Pump and Electrical
Dept., Canadian Fairbanks-Morse Co., Montreal

THE extension of hydro-electric distributing systems through the country and the improved design and quantity production of gasoline engines, have within recent years placed a power operated water system within the reach of almost every householder in districts where municipal systems or gravity supplies are not available.

The wide distribution of mechanical and electrical equipment in the form of gasoline engines, home lighting plants, automobiles, electric motors, etc., has familiarized the public with the use of apparatus and has clearly demonstrated the convenience, economy and comfort to be obtained by its use.

There is no single piece of mechanical or electrical apparatus which is as necessary to life, health and happiness as a good pumping equipment, one which at all times will give a clean, convenient and reliable supply of water.

Sells Other Equipment

Millions of dollars have to be spent in building up huge selling organizations for the sale and distribution of gasoline engines and automobiles. An equal distribution of water systems may be made without any costly distributing system, but through a country-wide organization which already exists. Do plumbing and heating engineers realize the possibilities of this business, that with one-half the effort required to sell an automobile or an engine, they could instal a water system and all that goes with it, complete bathroom equipment, modern kitchen plumbing, etc., and that every house needs these much more than it does a car? It has been proved by plumbing engineers who have kept careful records, that with every \$200.00 home water plant sold by them, they have sold additional equipment amounting to \$400.00.

With this vast field for new business there is every reason why plumbing and heating engineers should take advantage of it, especially as it requires no additional capital in the form of money. Energy, and a little intelligent thought and study are all that are required.

Experience indicates that in the past a great many pumping equipments have been sold which have not given satisfactory results. A knowledge of the different types of equipments, their application and limitations, will ensure satisfaction to both purchaser and seller.

There are in general two types of power pumps:

- (a) Shallow Well.
- (b) Deep Well.

(a) Shallow well pumping units are for use where the water level of the source of supply is not more than 20 feet vertically below the ground level at the point where the pump is to be installed, i.e., the pump must be located not more than 20 feet above the water level of the source, whether it be a well, lake, cistern, spring or river. The horizontal distance of the pump from the source of supply is another consideration, most especially where the suction is high, i.e., nearly 20 feet. It is desirable that pumps should be located as near to the source of supply as possible. If it is not possible to place the pump near the source, the size of the suction pipe should be large, i.e., larger than the suction connection of the pump. In extreme cases where the suction lift is over 18 ft. and the horizontal distance greater than 100 ft., reference should be made to the manufacturer for recommendation as to size of suction pipe to be used. Ninety-five per cent of pump troubles are due to improperly installed suction lines as follows:

- (1) Suction lift too high (over 20 ft.)
- (2) Suction line too small.
- (3) Suction line leaks air.
- (4) Suction line contains air pockets.
- (5) Leaky or defective foot valve.

(b) Deep well pumping units are used where the source of supply is a well either dug or drilled, where the surface of the water is more than 20 ft. below the ground level. With this type of equipment the pump cylinder is placed below the ground and usually below the water surface. The cylinder is then connected to the pump head by means of a drop pipe and a pump rod. Where this type of pump has to be used there are so many varying conditions such as:

- (1) Depth of water below surface.
- (2) Diameter of well,

that standard equipments are not made and each individual case should be referred to the manufacturer.

Storage and distributing systems are of two kinds:

- (1) Elevated tank.
- (2) Pneumatic pressure tank.

Elevated Tank

The elevated tank has in the past been the favored system and in some instances is desirable.

Primarily, it is cheap, and presents no unfamiliar details. As a general rule storage tanks have to be located in attics where they place unexpected loads on house timbers. They are liable to overflow and destroy ceilings and walls and the available head over faucets, etc., on the top floors is generally low, giving poor flow and very often complete stoppage due to air pockets and slight obstruction in pipe lines.

The pneumatic pressure tank system gets away from all these troubles. The tank may be placed in the basement, a good pressure can always be maintained and a constant supply of freshly aerated water is always at hand. This system lends itself very readily to automatic control. If a reliable source of electric power is available a small storage tank may be used giving a more nearly constant pressure and water will always be fresh. This system is the one which is commonly used to-day and will in a very short time almost entirely replace the older elevated tank system.

How it Operates

The system of operation is simply the pumping of air and water into a closed tank. The air being lighter than the water, rises to the top of the tank. As the tank fills, the air pressure on top of the water increases usually to 40—50 lbs. per square inch, when pumping is stopped either by means of an automatic stop or by an attendant by hand. A pressure of 40 lbs. per square inch is sufficient to raise water to a vertical height of approximately 92 feet. As water is drawn from the bottom of the tank and forced by air pressure to the points desired, the air expands and continues to exert a steadily decreasing pressure on the water. It is usually arranged that pumping should commence again when the pressure has reached a minimum of from 20 to 25 lbs. per square inch. This again is controlled in the case of electrically operated units by the automatic switch, or when hand operated or engine driven units are used is manually controlled.

The air supply is provided for either by a shifting valve placed in one end of the pump cylinder or in the case of deep well units by an air compressor attached to the pumping head or a separate air compressor.

"We Launch a Prodigious Publicity Campaign"

(With apologies to Ring W. Lardner)
By

MAJOR L.L. ANTHERS.

MANAGING DIRECTOR-ANTHERS FOUNDRY LTD.

Tarraboome, Ont.
Feb. 15, 1923

Dear Friend Al:-

THIS sellin gaim is a hot 1. I intymaited in my last affusion that we had lawunched a prudigeous publicity campane. The replize to our overatures were numerous.

Some of theeze hear hicks along the back concessn. lions has got a hide like dubble plie oke-tannd beltin, & the passage-weigh to there pance-pokets is stitted with binder-twein—likewise there bank a cs.

Praps I never tolde you ov a job we done for an old ginney named Si Ensilage. Si was 1 of theze hear guys what had wiskers like a weapin willer—youda sworre that they was birdes nests into em.

Fer menny yearze Si had strugeled with the olde fambly washtubb on Sat. nites. 1 nite he backed up into a hot stove in his bearskin burnin a hoal in his etc. & coodent set down fer weex. Laiteron he set in a tubb of bilin water another nite & cot pheumony. After that Old Si was off washtubz fer life. He sent fer Bill 1 day wile he was converlessin & Bill put him in 1 of the swelest jobs in theze partz. Ever since Si hez bin a boostter fer our firm & moar than 1 rural installn. can bee trased to hiz ko-operation.

Theirs annuther old hayseed naimed Si Low who livz abt. 1 ml. from Old Si & whooz so tite that he wares his wiskers fer a nek-tye. Hees lowzy with pelf but its abt. as eezy to get a \$1 bill away from him as it is to get otter of rozes frm. a biled onyon.

Well hee & Si ust 2 bee the kloset of frends in moar weighs than 1. Of coarse wen Old Si got in his plumbing fixtrs. & etc. the other Si (who I will

spell Sigh to extinguish him from Old Si) was 1 of the 1st to call on his old side-kick to look ova the noo trimmins. Old Si was so gosh-derned proud of hiz plumbing that he spent moast of hiz time at nites shown visiters arnd. the hous. 1 Sat. nite his nayber Sigh turnd up with a towl & ast Old Si if heed mind him takin a bath. "Shure," sez Old Si, "go ahead."

Sigh went ahead allrite & the saim the nxt Sat. nite & sew on fer a cupple of mnths.

Finely it got Old Si's gote, & he infurred to Sigh that anuff was 2 much & in futr. he cld. bi a bath ov hiz oan.

Thus 1 of the cloasest of frendshps. on reckered was bust up on a/c Old Si had got tirde of runneing a publik bathing resorte.

On diff. occasns. after that we had seen this old hick Sigh snoopin arnd. our show windy but if he seen any 1 lookin at him he hiked off like a dawg wat was expectin a kik.

"Theirs a prospeck," sez Bill 1 day as we seen Sigh peekin arnd. the corner of the windy.

"Think so," sez I but withoute convictn.

"He admitt heel bee a harrd 1," continyers Bill, "but its worth tryin."

"Go ahead," I retalyiated, "you hev my best whishes."

"Why not trie it yerselff," come back Bill not lookin me in the i.

"Yoove hed moar xperiance with hiks—look wot you dun with Old Si," I venchered seein as neether ov us was kean fer the onner.

Vilet beginn to hum the corus from "Hee Never Cairns to Wawnder Frm. His Oan Fierside."

I feltt sorta giltie like & I sez to Bill; "I tel you wat weal doo—weal tos as to hoo takles Sigh." I perduced a coyne & spunn it in the airr, sayin at the saime time, "Tales I winn heds you looze."

"No you dont," sez Bill, "weal match."

So I come to him & then he come to me but the lastt time I didnt come so I was alected the gote to put ovar the deal.

But Ime gain wen I get my bak to the wal—you know me Al.

Sew 1 fine starrlite nite I mounted the old lizzie & hoofed it over to Sighs hoam on the 4th concessn. It was set up on a hill & was a fien sustanchial lookin brick abroad. It was 1 of the best farms in this sectn. bein wel draned & good riche land. Their was a big up-to-dait barn on the plaice & it was ann ideel subjek fer a 1st klass plumbing & heating job.

I had fortyfide miself with sum segars what the smoak testin macheen peeple had sent at Xmas time allso sum chooing gumm in caise Sigh didn. smoak.

I hung arnd. the frunt gait fer a wile like a bachfull luvver as I wernt nun 2 shoor ov my wellcum wen I shld. annonce miself.

Its all verry well to starrt out 2 sell a plumbing outfitt but the pinch is how to brake the eyce wen yer goin to run up agenst a ornery old skinflynt titer nor a turkey—not on a broaken arterie. Wen I got to the gait my enthusiasim begin to meltt away like buter on a hot stoav. I stoode skratching 1 kaff with the tow of the uther tryin to figger out the best lion of doap to pull with the old tiedwadd.

"Hi, wat yer doin their," came a voyce outta the missty twylite.

"Oh good nite," I sez afable like, "Mr. Low I bleeve?"

"Well thats

me weather you bleeve it or not," he snapped like a starvin dawg back of a slotter hous.

"I thowt Ide drop in & sea you," I sez not jest shure what I was sayin.

"Wats yer bizness," he comes back, "I aint buyin no books."

"Oh, Ime not sellin books," I retortures, tryin to think up somethin to say.

"Wot yer got under yer arm," he snaps pointin to my cattalogs as if they was tea n. tea.

"Oh them," I sez effecting an ayr of nonchallons, "O theys cattalogs & desines."

"I aint byin nothin," he sez with an ayr of finelty.

"& Ime not sellin nothin," I shot back quick.

"I jist want to leeve some of theeze kutz with you."

"You kin keep yer kutz," he snarls. "I dont trust peebles wat wants to give you somethin fer nothin."

The situration was gettin tents. He shurr was a kas hardnd. old nutt.

"One nite he backed up into a hot stove in his bearskin and couldn't sit down for a week."

With desperashun I plunged in. "Ime a plumber."

"Ha," snortered the old hogg-herder, "I thot you lookd like a crooke."

"Thems harsh words Maggie," I remarkd with dignitie. "A plumber can bee a gentleman, I hoap."

"Well yed bettr abanddon yer fawlse hoaps," cam the coal-d-bludded sentence like a juddge condemming a wife-murrderar.

I leeve it 2 you Al—it was wurse than tryin to maik a um-pire reverse his decisin.

"Aint you interested in plumbing?" I ast, bringing

Price Cutting Easier than Selling

But Morale of Plumbing Business Has Been Affected by Continuous Price Cutting—An Epidemic of Spinelessology—Bids on a Job Range From \$245 to \$322.50

Written for Sanitary Engineer by Kenneth B. Allison
(Continued from last issue)

DURING the year just closed I have given considerable time to the compilation of figures which would be authentic so that any statements I made would be considered as such, rather than the exaggeration of someone seeking a little cheap notoriety.

We will discuss the plumbing of the average small house and, so that the figures I give here may be intelligently understood by those operators who, in other territories, use different material or a different installation method, I will enumerate the job.

The fixtures are:

1—5-foot enameled iron bath on feet with 3-in. roll rim and fitted with 1½-in. N.P. combination bath waste and overflow of 19 Imp. gauge ¾-in. N.P. brass full iron pipe size supplies for hot and cold water, and N.P. quick compression bath cocks with plain or sometimes indexed handles.

1—Enameled iron flat-back lavatory with apron, 18 in. x 21 in. or approximate in size, having 1¼-in. N.P. 19 Imp. gauge trap—plain P if to wall and vented S if to floor, ¾-in. N.P. brass supplies (unless supplies can be brought out from wall clear up to basin) N.P. quick compression indexed handle basin faucets.

1—Low-down closet combination consisting of wash-down bowl, oak tank with 10-oz. copper lining, also ballcock and syphon; wood strip seat, N.P. brass supply and flush; brass and rubber floor flange and bolts.

1—18 x 30 enameled iron roll rim one-piece sink with back; N.P. quick compression sink bibbs; lead trap.

1 set of 2 division cement laundry trays; cements legs with four compression bibbs.

The soilpipe is medium weight with a three-foot footing and carried up to three feet above any window within twenty feet, flashed at roof with 5-lb. sheet lead at least 20 in. x 20 in.

All fixtures are vented. All lead waste and traps are 8 lb. weight. All vents are galvanized iron pipe and fittings. Water closets are local vented to heated flue. Half-inch lead water service is laid in trench provided from street line to inside front wall of house. Roughing-in is water tested and finished work smoke tested.

What the Job is Worth

This job is worth three hundred and thirty five to three hundred and sixty

dollars of the public's money and there is no overcharge at that figure.

The material alone, closely estimated, will cost an average of two hundred and thirty-five dollars and these figures do not include the little odds and ends, or making good of defects, etc., which in other lines of business are figured at another ten per cent.

They say that there are one-man-working-boss shops who do these jobs in five days, if any of those fellows want a job I will deposit their full year's pay in advance against their regular weekly pay withdrawals and give them a year's contract—that is how much I think of their speed.

But the average run of mechanics take eight to ten days, and I have among this year's figures as high as fifteen days. Take your pick, and add the labour cost on to the material cost and show me howinsamhill a regular honest to goodness operator can meet two hundred and fifty five dollar competition—yes sir, two hundred and fifty five dollars for the job previously enumerated in this article.

Give Customer Donation

It seems to me that it would pay some of you folks to slip your customer

twenty five dollars and tell him that that is your donation towards the building of his house and then beat it for home and spend your time knitting socks.

I have seen material and labour costs of some of these jobs go as high as three hundred and sixty one dollars and sixty five cents (too high I will admit) and I have checked lots of material costs alone which showed up to two hundred and forty six dollars when the incidentals were taken care of.

Recently a block of bungalows brought out over a dozen plumbing bids. These jobs were similar to the previous one mentioned except that there was an enameled sink and laundry tray combination in place of the usual sink in the kitchen and double cement laundry tray in the basement. The combination fixture costs more than the two fixtures separately but there is a saving in the roughing-in labour and material. As one of the craft will you make such adjustment mentally as will take care of this difference and then read here that the prices ranged from three hundred and twenty two dollars and fifty cents down to two hundred and forty five dollars.

Another sad feature is that the fellow with the low price has publicly damned his fellow competitors for being price cutters.

I am afraid to give vent to my feelings because this article would only be thrown out because of foul language, but I can sympathize with the man who becomes an extremist because it seems that only extreme and very drastic action will awaken most folks to conditions.

Have to be Very Ill First

You know a lot of folks have to be dangerously ill before they want to act like Christians and then what a rush they make in case they should croak before they have a chance to show how good they really are.

Nineteen-twenty-two was a good year for business but the morale of the plumbing business was all shot by price-cutting.

Price cutting started with the wholesaler. Let us see why it did not stop there.

The average plumber reasoned it out that if eleven supply dealers had to price-cut below sound business practice then what chance had he, the plumber, with an apparently less efficient, and

Plumbing operators are worse off for price cutting. An Epidemic of Spinelessology.

naturally smaller organization, to get business in say, the city of Toronto, with some three hundred and fifty competitors on the trail, any one of whom might become competition with or without notice.

Because of price cutting, wholesalers require about 3.5 per cent. of their overhead to pay interest charges due in large measure to slow payment accounts.

A manufacturer sells his product to the trade at a certain discount off of a list and from this discount he allows one additional discount to the wholesaler so that he, the manufacturer, may have a greater number of distributing points, a greater number of salesmen, and therefore increased output by means of these wholesale house connections.

The problem rests right at home with you. It is for you as a business man to say, that, having realized the preferential you have is not any too great, you cannot afford, nor will you ever consider, having to part with it.

Almost daily does the question come to my mind—"What is your position as a human being in life?"

What is Your Duty?

What is your duty to your fellow beings? What is expected of you if you are to do your part towards the progression of the world, or of your country or your city, or of your calling or your own business, or of your own family, or of yourself?

Perhaps the Big Brother movement, or the Big Sister movement, or the development of the under-privileged boy has had its good effect in awakening one to their position in life.

If, as an ordinary human being, certain things become my duty then logically those same things should become the duty of the other ordinary human beings.

Perhaps in the past we have taken our own duty too lightly, have taken things for granted and have failed to do our duty in the past by not giving our efforts toward the development of others.

I am in business. A customer calls on me to do a piece of work. My interest therein is not one simply of satisfying the need of the moment, charging an amount that returns me a profit and collecting my money.

There is more to this problem of progressive living than barter and exchange. I think that it is essential that, when someone wants to become a debtor of mine, that I should be satisfied that they are able to fulfill in all particulars their part of the agreement, either written or implied. I think too that when I want to become a creditor of theirs that they are entitled to the same knowledge as to my ability to complete in all detail my portion of that agreement.

It appears almost self evident that in addition to one being sure of their debt-

ors they must be equally sure of their creditors.

A Retrogression

The failure of a master plumber or the failure of a supply house is a retrogression to the whole industry. Whatever the financial loss is that is incurred in those failures, it must be saddled on as an extra burden to those who are left.

I and you, whether we be supply dealers or plumbing operators, are vitally interested in the success of each one connected in the industry, and I and you as buyers are entitled to know that the concern or concerns with whom we deal are making a profit and making progress as a result of our buying else, as they cannot remain stationary, they must be incurring a loss and a loss to anyone

in the industry is a loss to every one else in the industry.

Is it possible therefore for me to pray, beseech, exhort, chastise, or blaspheme those connected with this industry to take stock right now, not alone of the ware on their shelves but, of their business good-will and of themselves as human beings that they may find out if they have progressed during the year just passed and are therefore an asset to the community, or if, in sheer stupidity and insanity they have, by price cutting, helped to wreck an industry and become worse than dead stock to the community?

Let us see ahead, and plan, and act to avoid future difficulties rather than later on becoming an indignation committee when the holocaust is over.

THE QUESTION BOX

USE OF GENERATOR

Question.—Please advise if the Honeywell generator is still on the market or are other generators on the market. Do they improve hot water systems and are many of them used? Which is the best hot water system and cheapest to instal? The old gravity 2 pipe system with separate flow and separate return pipes for the ground floor or the so-called Honeywell small pipe system with generator? Which will heat up first and which requires least fuel?

Moist Air Furnace Co., Ltd., Ottawa.

Answer.—Your letter of Jan. 29th contains some very interesting questions and to answer these we will refer to your letter paragraph by paragraph.

1st. The Honeywell heat generator is still on the market to the best of our knowledge. The firm still conducts an establishment at Wabash, Indiana. Our records of many years ago tell us that you installed quite a lot of Honeywell systems in Ottawa. Hence we would assume that you were closer in touch with the pros and cons than we are, but we believe that the accelerated systems of hot water heating is much preferable than the "Old 2 pipe gravity jobs."

2nd and 3rd. As there are scores of methods that can be adopted in the installation of hot water heating all of which are good according to prevailing conditions we would not care to express our opinion as to which system is the best.

4th. There isn't any doubt about the fact that an accelerated system creates a more active circulation, and under efficient management will give off a larger amount of heat per lb. of coal consumed. But unless care is exercised in installing any hot water job there is likely to be trouble

HOW TO CLEAN SHOPSOILED VALVES

Editor, Sanitary Engineer: We have just finished taking an inventory of our stock and other worldly goods, part of which are a lot of new brass valves, checks, brass fittings and supplies of various kinds.

These goods have never been used, yet do not look just as good from consumer's standpoint. Is there any way to clean these goods up so as to give them the freshness they had when we bought them? We have tried washing them and using polishing powders and other cleaning fluids, but all to no purpose, that is, the goods do not have the appearance we would like them to have. (Signed) Shop Soiled Brass Goods.

Replying to the above question re cleaning brass valves, etc., would say that this can easily be done. One or two precautions must be taken. Be sure and remove all valve discs, all packing; loosen up and take apart every piece, for the simple reason that some of the acids, mentioned below, are liable to get into crevices in the valves and not easily drain out. This would set up corrosion and likely damage the interior parts.

The following dips and solutions will give the desired results:

Having taken goods apart, attach wire or hooks to same, then immerse in boiling hot water, containing caustic soda, about one pound a gallon. Then dip in clean hot water, and repeat these operations once or twice. This will remove the grease. Next, make up a solution of 4 parts hot water, 2 parts nitric acid and 1 part Salammoniac. Leave goods in for a few moments, then take out and dip in hot, clean water. While the goods are hot rub well in box of fine sawdust until dry.

Rural Sewage Disposal Systems

Water Allowance Per Person—Its Importance—How Figures Were Determined—Danger in Making Allowance Too Great—Water Not to be Conserved at the Cost of Cleanliness—Why Cultivating Chamber Requires to be Larger Than Dosing Chamber

Written for Sanitary Engineer by Edwin Newsome, Consulting Sanitary and Heating Engineer

THE concluding paragraphs of the article which appeared in the January 15th issue of the Sanitary Engineer referred to the water allowance per person, occupying a house. Where a septic tank and disposal field tile area is in operation, and, realizing that the quantity of water being discharged with a septic tank is important and particularly seeing that where a septic tank is installed, the water allowance has a most important bearing upon the proper workings of it, the readers require to have no misgiving as to why the figures given in previous articles were used as a basis upon which to determine the size of a septic tank.

For example, all the drawings, both plans and elevations were drawn and prepared, and sizes given in such plans, were based upon a water allowance per day of 27 gallons per person. The writer has many times had these figures questioned. By some the allowance was said to be too low, by others too high, and while it was stated that when certain types of water supply systems were in operation, the allowance could be reduced. Yet the figures given were ar-

rived at after many practical experiences and much research work being conducted.

It is not necessary to quote more than a few instances to prove the figures previously given and to assure the reader that those figures are reliable and worthy of consideration and confidence.

Proving the Figures

In one city for example, a very careful survey was made of 2,553 families, the total number of persons numbered 12,765 living in the houses, each house was metered and every gallon of water was accounted for which passed through the meters. That is, no flat rates or certain bulk allowances made for certain periods of the year, but each meter was set at zero and every gallon counted in.

It will be noted that the figures show that the total number, 12,765, works out at an average of 5 persons per family, and, by the way these people resided in various part of the city. Some in high class and wealthy residential districts. Some in middle class districts and some in the poor localities of the city. The work of measuring this water was spread

over a period of one year exactly, and the figures are astounding.

167 families used only 6.15 gallons per person per day.

237 families used only 8.20 gallons per person per day.

361 families only used 10.25 gallons per person per day.

445 families used only 12.30 gallons per person per day.

446 families used only 14.35 gallons per person per day.

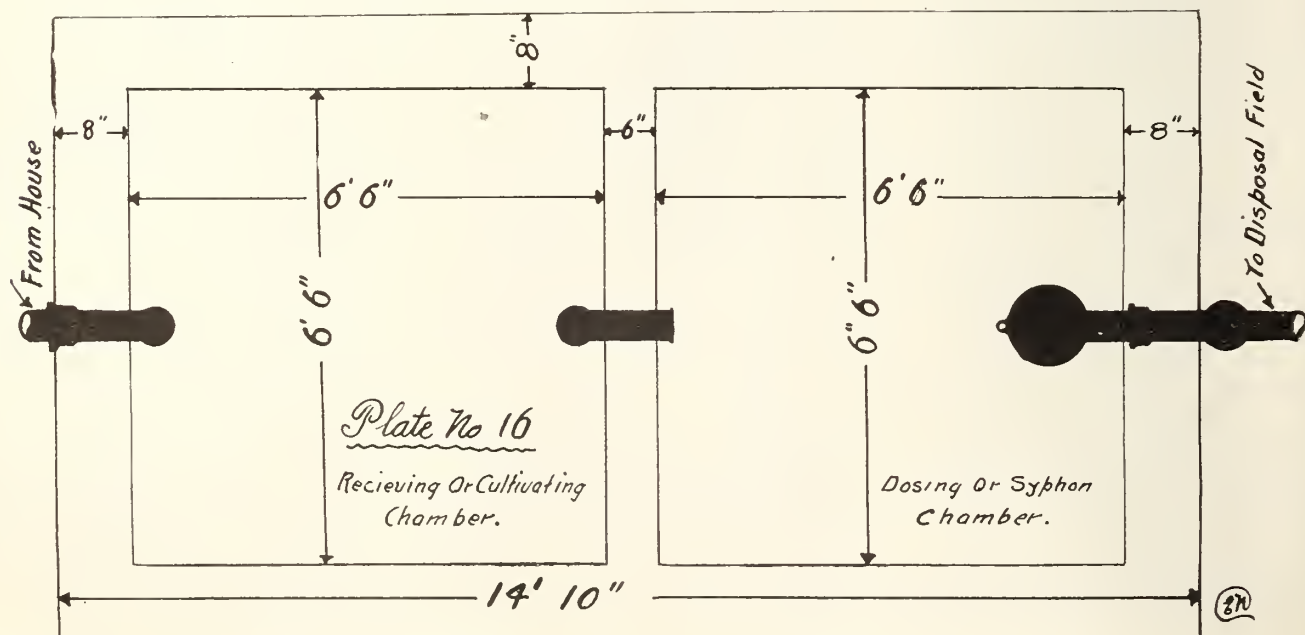

462 families only used 16.40 gallons per person per day.

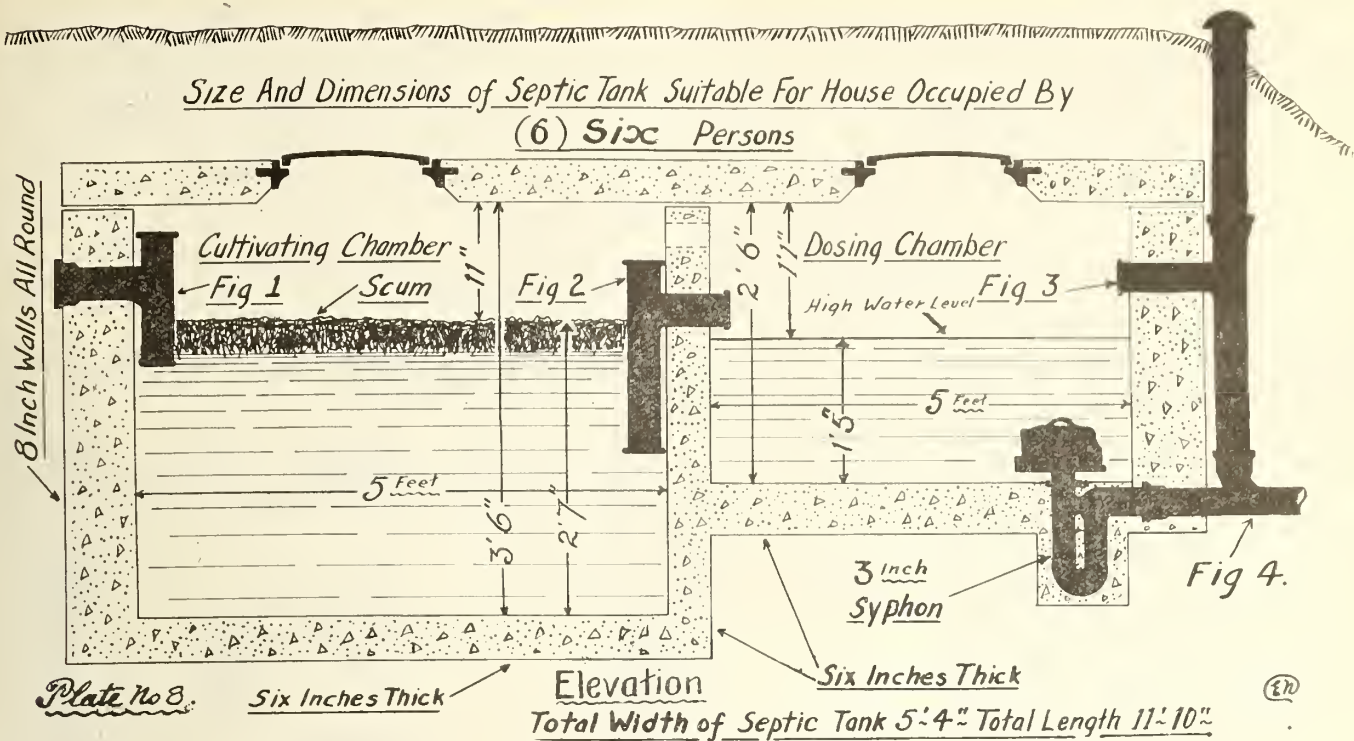

435 families only used 18.27 gallons per person per day.

Those figures work out at about 12½ to 13 gallons of water per person per day. But there is another condition to be considered which will justify the allowance of 27 gallons per person per day which the writer advises.

The average city dweller takes advantage of sanitary laundries, people living in a rural district do not patronize outside laundries to the same extent. The average city dweller works away from home, in offices, factories, etc., etc., and the daily consumption would likely have

Plan With Size Of Septic Tank Suitable For House Occupied By Twelve (12) Persons.

been somewhat greater, if living conditions were similar to rural or farm life. The average person living in a city takes a wash several times a day, and so will a farmer, or his folk, if water is on tap 24 hours a day. But the water not consumed or otherwise used at home by a city dweller would not be taken into consideration as would have to be in the case of the farmer, so that to add 50 per cent. or so as the allowance for a rural home would not be out of the way.

A Case in Point

Another proof that our figures can be taken as a reliable basis upon which to determine the size and other details for a septic tank may be cited in the case of a house occupied by a friend of the writers. The water supply is metered, an allowance of 1,666 cubic feet of water is made for a period of six months and over and above that amount is charged for at so much per 1000 cubic feet. By working out these figures it was found that the normal allowance of 1,666 cubic feet of water per six months, gave each person about $7\frac{1}{2}$ gallons per day per person. The house is occupied by 8 persons.

But during the months of June to November inclusive, the total consumption for that family was actually 4,998 cubic feet, so it will be noted that the daily amount of water used for all purposes, worked out at approximately 23 gallons per person. During the 6 winter months, December to May, both months inclusive, the consumption of water dropped down to approximately 15 gallons per person per day. This family however has access to outside laundry work and very little family washing is done.

The writer found upon investigation that these figures given above were ap-

proximately correct for the whole town, so that it can be plainly seen that they are reliable and can be used as a fair basis upon which to arrive at the size of a septic tank. That is why we find the allowance of 27 gallons per person per day to be fair.

Too Great an Allowance Dangerous

And now to consider what would take place if too great an allowance of water is made when arriving at the size of any septic tank.

Let us assume that provisions have been made to take care of an allowance of 50 gallons of water per person per day and again let us assume that six persons are going to occupy the house. The first mistake would be the unnecessary cost of the installation, but this, by no means is the most serious, a dosing chamber, in which a syphon is fitted would require to discharge the full allowance of 300 gallons every 24 hours and 600 lineal feet of field tile would have to be provided, thus also requiring a larger area in which to lay the pipe.

Next, if a system such as mentioned only received say 27 gallons of fluid per person per day. It would not operate much more frequently than once in every 45 hours or so instead of every 24 hours. Therefore the sewage would be held back too long a period in the cultivating chamber and the bacteria, not having sufficient new raw sewage solids to work upon, would become languid as it were, lose life and finally become putrid, a condition to be avoided by all means.

And almost the same condition would take place in the disposal field piping. In the summer there would not be sufficient moisture to keep the bacteria in a healthy state, and in the winter this con-

dition would lead to trouble from freezing, because, the frequent, predetermined, intermittent discharge of sewage keeps the tile area warm and free from frost and there are just as many arguments against a system being too small for the allowance made.

Disposal Systems Made Too Small

The above reasons quoted against too large an allowance of water are no more important than would be the case where too small allowance is provided. For example we find that 27 gallons per person per day is advisable and say only 15 gallons were provided along with a septic tank and disposal area. Say also that 6 persons are to occupy the house. Here is what we find, the total amount of water actually used is 162 gallons, requiring 324 lineal feet of 4 inch field tile, and the septic tank is only large enough to handle 90 gallons of fluid per day, the field tile 180 lineal feet, and, let us assume too that the ground is inclined to be clay loam, the syphon will discharge nearly twice every 24 hours. The bacteria in the cultivating chamber will have no opportunity to break down the solids and the effluent entering the dosing chamber will contain too much solid matter in suspension.

Not only will the disposal bed be overworked, but the field tile will very soon be filled up with partially broken down solids resulting in a very undesirable condition as well as unsanitary.

The reader must not, however, be of the opinion that water must be conserved at the expense of cleanliness. That is the last thought which the writer has in mind. But seeing that such a lot of work has been done in this connection,

(Continued on page 36)

Rating of Furnaces Must be Based on Register Temperature as Well as Leader Pipe Area

Professor Willard Makes It Plain Why the Latter is Not a Safe Guide as to Furnace Capacity

By A. C. Willard, Professor of Heating and Ventilation and Head of Department of Mechanical Engineering, University of Illinois

ONE of the most important objects of the research work of the Warm Air Furnace Heating Investigation, which is now in progress at the University of Illinois, has been the determination of the factors affecting the rating of a warm air furnace. Every manufacturer is vitally concerned with the basis upon which furnace ratings are determined. Most manufacturers are agreed that the square inches of leader pipe area which a furnace can supply is a satisfactory basis for expressing the heating capacity of a furnace. Unfortunately, this is not the end of the story by any means, as such a basis of rating is still indefinite, unless the air temperature at the registers is also stated.

The real significance of this air temperature at the registers can be shown very easily by reference to any series of tests run at the University on piped furnaces. In fact, it is a very simple matter to show that a given furnace, connected to a given system of leaders, stacks, and registers as shown in Figure 1 can be made to develop several different heating capacities when operating with the same number of square inches of leader pipe area. It is only necessary to increase the draft, thereby burning more coal per square foot, of grate, and as a consequence secure a higher air temperature at the register face. That the heating capacity of the furnace will be increased by such a procedure is obvious to anyone, and it should be equally obvious that any attempt to express the rating of a furnace in square inches of leader pipe area means nothing unless the register temperature is stated at the same time.

In order to illustrate just how important this item of air temperature at the registers really is, the results of three tests on the piped furnace plant (Figure 1) are presented in Figure 2 and analyzed. Absolutely no changes were made in the furnace or plant during these tests. In the right hand half of the figure each inclined line represents one test; the lowest line shows the results from a test with the air temperatures at the registers for the three floors averaging 141.2 deg. F., the middle line is taken from a test with an average register temperature of 175.8 deg. F., and the upper line represents the results of a test with an average register temperature of 197.5 deg. F. The

Figure 1—Sectional Elevation of Piped Furnace Testing Plant.

horizontal axis indicates the height of the register above the grate in feet, and the vertical axis gives the heating effect

produced in the room per square inch of leader pipe area.

For example, during the first or low

temperature test, each square inch of leader pipe to the first floor registers supplied 50 B. t. u. per hour for useful heating effect in the rooms, each square inch of leader pipe to second floor registers supplied 89 B. t. u. per hour for useful heating effect in the rooms, and each square inch of leader pipe to third floor registers supplied 122 B. t. u. per hour for useful heating effect in the rooms. At this time the draft was 0.05 inches of water and the combustion rate was 3.8 pounds of coal per square foot of grate.

By merely increasing the draft to 0.14 inches of water, the combustion rate in the second test increased to 5.6 pounds of coal per square foot of grate and the average air temperatures at the registers became 175.8 deg. F. This raised the useful heat carrying capacity of each square inch of leader pipe for the first floor from 50 to 103 B. t. u. per hour, for the second floor from 89 to 153 B. t. u. per hour, and for the third floor from 122 to 204 B. t. u. per hour. A further increase of the draft to 0.61 inches of water gave a still higher combustion rate of 6.5 pounds per square foot of grate and correspondingly greater heat carrying capacities for each square inch of leader as shown in the upper curve of the right hand half of Figure 2.

The left hand half of Figure 2 shows the air velocities in the leaders to each floor for each test. A glance at the curves (each curve represents one test) will show that the velocity and hence the quantity of air delivered was materially increased each time the register temperature was increased, hence an increase in register temperature not only adds

more heat to each pound of air supplied at the registers, but also increases the number of pounds of the hotter air which is supplied. In all cases the leader area was the same.

It is also possible to determine exactly just what effect the changes in air temperature at the registers has had on the heating capacity of this furnace and plant. The first floor leader area is $4 \times 113 = 452$ square inches, the second floor leader area is $2 \times 50 + 2 \times 64 = 228$ square inches, and the third floor leaders area is $2 \times 64 = 128$ square inches, or a total of 808 square inches. The free area of the furnace is 838.4 square inches. Hence this furnace developed the following useful heating capacities (that is, heat supplied at registers for heating rooms at 70 deg. F.) in each of the three tests:

Test Number 1.

Register temperature = 141.2 deg. F.
(Draft = 0.05 inches and combustion rate = 3.8 pounds per square foot of grates.)

$$\begin{aligned} 452 \times 50 &= 22,600 \\ 228 \times 89 &= 20,300 \\ 128 \times 122 &= 15,600 \end{aligned}$$

58,500 B. t. u. per hour

Test Number 2.

Register temperature = 175.8 deg. F.
(Draft = 0.14 inches and combustion rate = 5.6 pounds per square foot of grate.)

$$\begin{aligned} 452 \times 103 &= 46,600 \\ 228 \times 153 &= 34,900 \\ 128 \times 204 &= 26,100 \end{aligned}$$

107,600 B. t. u. per hour

Test Number 3.

Register temperature = 197.5 deg. F.
(Draft = 0.16 inches and combustion rate = 6.5 pounds per square foot of grate.)

$$\begin{aligned} 452 \times 134 &= 60,500 \\ 228 \times 168 &= 38,400 \\ 128 \times 243 &= 31,000 \end{aligned}$$

130,000 B. t. u. per hour

By merely increasing the draft and combustion rate the register temperature rate has been raised from 141.2 deg. to 197.5 deg. F., and the heat capacity has been increased from 58,500 to 130,000 B. t. u. per hour, or an increase of 122 per cent., but the free area through the furnace and the leader pipe area has remained the same.

It should, therefore, be apparent that the rating of any furnace in square inches of leader pipe area means nothing unless the air temperature at the registers is also definitely stated at the same time. The preceding discussion is in no sense an agreement against rating on the free air basis, but rather an argument to show the manufacturer and installer the vital importance of fixing upon some standard register temperature, so that ratings in square inches of leader pipe area will be definite and can be made comparable and understandable by both the manufacturer and the engineer. The Advisory Committee on Furnace Research of the National Warm Air Heating and Ventilating Association has recently approved a maximum register temperature of 180 deg. F. for warm air furnace heating systems.

Figure 2—Charts Showing Effect of Height Above Grate Upon Velocity of Air Flow and Heating Capacity.

Mueller Pumping Systems,

MR. PLUMBER, can be installed with confidence that their satisfactory operation at all times is an assured fact—guesswork is eliminated.

Compact—durable—efficient, the system will last a life-time without repairs or replacements. Under test a MUELLER Pumping System has pumped over a million gallons, equivalent to over thirty years' average service, with no attention other than occasional oiling, and is **STILL GOING STRONG**. The product of years of study, the Mueller Pump with but one moving part is without a peer. **NO GEARS, NO VALVES, NO BELTS, NO CAMS, NO SPRINGS, NO PISTONS, NO IDLERS, NO FLYWHEEL, NO COUPLING** — these features make it possible for the Mueller Pump to give such service and satisfaction as has never before been realized. An added feature of the Mueller System is that drinking water is pumped direct from the well, and not from a storage tank.

The Suburban and Rural Markets have been scarcely touched—the opportunities are wonderful—Mr. Plumber, get your share of the business! And—on every job instal a Mueller Pumping System along with Mueller plumbing goods. It will mean satisfaction to your customer and Reputation for yourself.

*Descriptive Literature and Prices
Gladly Furnished on Request.*

H. MUELLER MFG.

SARNIA

Fig. 300

Self Contained Water Supply System

Is especially recommended for homes having but one bath and other usual plumbing fixtures. Costs but little to instal and operate, fully warranted by the House of Mueller. A life-time of service built into every system. Full details on request.

Modern Plumbing Essential in Homes

MODERN plumbing is the science which gives the modern home comforts and conveniences which put to shame the homes of wealth and splendor of former years, and which safeguards the health of the family and works hand in hand with medical science in the prevention of disease.

Modern plumbing is not merely a net work of concealed pipes, valves and fittings, supplying a few fixtures with water, but it is an ideal—an ideal of comfort with economy, beauty with utility, finish with durability. It has given the cottage of to-day better fixtures than are to be found in the mansions of 20 years ago.

Modern plumbing teaches us how to live and puts the means within the reach of every family. It has carried its tenets to the small village and to the farm. It has conquered stubborn opposition in its efforts to better living conditions. It has made the factory a source of pride to its owner and a model of cleanliness and sanitation to the employees. It has raised the standard of living throughout the land. It has established a greater difference between this and other countries than any other one thing in the daily life of the people.

People select the furnishings of various rooms with infinite care. But how often do they pass over the equipment of their bathrooms and their plumbing in general, with a shrug? And how much more important it is that the bathroom be properly equipped, though judiciously, there. Plumbing fixtures are used every day. They are not to be shifted about to secure variety or to satisfy a whim. They are not to be quickly discarded when fashions change. The layout of the bathroom, the selection of plumbing fixtures and especially of mechanical trimmings such as valves and faucets, which above all else should have easily renewable wearing parts—these matters are worthy of the utmost consideration.

Pointers for Heating Equipment

THERE are a number of arguments which the heating engineer can advance in connection with a campaign to encourage hot water and steam heating. One Toronto plumber who has taken part in this campaign with good results, uses his show windows a great deal to further the idea. It has been found that there are a great many heating installations where the use of radiators would be much more satisfactory than other systems. In addition to the use of such window displays the heating engineer can make good use of his advertising space to develop the idea.

One ad recently appearing on this subject under the heading "Heat by Radiators" stated "Faulty heating by old fashioned furnaces and stoves accounts for many a 'cold' and many more serious winter ailments. If one room is too hot—another too cold, you suffer 'indoor exposure'—surest source of sickness in the cold weather. Why take the chances, risk the discomfort, lack the convenience of heat by radiators? There's health in the home warmed by radiators; no risk of 'indoor exposure' and no dirt, soot, dust or gaseous fumes are carried into the rooms. All rooms are cheerfully, genially warmed when you heat by radiators, properly installed. Let us tell you more about it; economical in use, lasting a lifetime."

Another plumber's ad on this topic stated "Most warmth for the least money for the rest of your life. Modern radiator heating soon pays for itself in fuel saved, and gives lifetime service, keeps uniform, easily regulated warmth throughout the house. It adds far more than the cost to the value of the property. Our heating systems are economical and inexpensive. Let's talk over your heating problems now."

These are just some suggestions for suitable ad. copy.

Dangers of Gas Poisoning

IT IS again shown by the death of ten Toronto men in the gas works recently that carbon monoxide, one of the principal constituents, is highly poisonous, and is the more dangerous because it is invisible and without smell. A room might be full of it, yet a person entering would be quite unaware that he had entered a lethal chamber, it is pointed out by a correspondent in a late issue of The London Morning Post. "Consciousness would suddenly be lost, and the end would come speedily. The only sure remedy, were the victim discovered and removed from the room, would be the transfusion of blood from a healthy subject—and it would be practically impossible, of course, to find a person willing to provide a pint of his own blood (the loss of which would seriously endanger his own life) within a very short time limit. It is said as little as a half of one per cent. of carbon monoxide in the air breathed has caused death in cases where coke or charcoal has been burning in an ill-ventilated room, while as little as one-tenth of one per cent. has had most injurious effects."

This gas, as numerous fatal cases show, is a chief ingredient of the fumes of burning charcoal. It is given off by iron stoves at a red heat, and even by hot-water pipes. Tramps who sleep in warm brick kilns have often been poisoned by it. It is responsible for the deaths caused in places where water-gas is used for industrial purposes, e.g., in steel smelting.

Editorials in Brief

THOSE WHO accomplish most are the ones who begin at home and work outward in an ever-widening circle. Let us remember this: "The light that shines farthest, shines brightest at home." That is to say we will prove ourselves worthy of seasonal joys if we aim definitely to make our own business organization finer, stronger, and of loftier ideals.

* * * *

THE PROGRESS of the world depends upon the men who walk in the fresh furrows and through the rustling corn; upon those who sow and reap; upon those whose faces are radiant with the glare of furnace fires; upon the delvers in mines, and the workers in shops; upon those who give to the winter air the ringing music of the axe; upon those who battle with the boisterous billows of the sea; upon the inventors and discoverers; upon the brave thinkers.—Robert Ingersoll.

EDITOR'S ANNOUNCEMENT

FRANK STOCKDALE TO WRITE FOR EVERY ISSUE OF SANITARY ENGINEER

"Minute Messages" for the Busy Sanitary Engineer

IN THE March 1 issue of Sanitary Engineer we will offer the first of a series of "MINUTE MESSAGES" by Frank Stockdale, nationally known authority on business store problems.

A great many of the readers of Sanitary Engineer are acquainted with Mr. Stockdale and his work and will welcome the announcement that we have secured his service in furnishing a series of inspiring and instructive articles for **exclusive** publication in Sanitary Engineer. The series will be continued throughout the year.

Mr. Stockdale's "MINUTE MESSAGES" will be presented in a most graphic way by use of cartoons. Each cartoon, made by one of America's greatest cartoonists, will be accompanied by a brief "snappy" right-to-the-point article by Mr. Stockdale, emphasizing and supplementing the message portrayed by the picture itself. Pictures are Universal Language—everybody reads and enjoys them.

Pictures relieve mental effort—they rest the tired mind.

Pictures are Forceful—they hit hard, sink deep, and the ideas stay put.

Pictures save time—the busy man demands them, all others like them.

You busy plumbers will revel in the simplicity and force of the "MINUTE MESSAGES" as they will embody worth-while,

business-building ideas—delivered with a clean, constructive, lasting punch—ideas which will be of great value in solving your everyday business problems.

Mr. Stockdale's work during the past twenty years in organizing Merchants' Institutes, at business conventions and in rendering actual personal service to Merchants in their stores has been a great value to the merchant in lifting him out of the drudgery of old time methods of doing business and adding to his power to do more for himself and his customers.

Mr. Stockdale's "MINUTE MESSAGES" will tell you at a glance the big, vital, profitable things you ought to know. "THEY HIT THE NAIL ON THE HEAD," "THEY DRIVE THE POINT HOME" and "THEY MAKE IT STICK."

Every day new problems arise as result of some development in merchandising, and as competition of other trades, and keen competition among plumbers themselves increases, the need for such terse and timely messages is very apparent.

These "MINUTE MESSAGES" are written for **you**, the busy plumber. You will profit greatly by following them closely in each issue of **SANITARY ENGINEER**.

Watch for the first "MINUTE MESSAGES" in our March 1 issue.

THE EDITOR.

FRANK STOCKDALE

WATCH FOR THE FIRST ARTICLE IN MARCH 1st ISSUE

*THEN—read his articles in every issue of **SANITARY ENGINEER** throughout the year.*

News Notes From Coast to Coast

Doings in the Plumbing and Heating Industry

BUSINESS CHANGES

Montreal.—Pilon & Beauchamp, plumbers, have dissolved.

Kitchener, Ont.—L. Durst has withdrawn from the plumbing firm of Hollinger and Durst and will be in business for himself.

PERSONAL

H. N. McAlpine, Manager of the Water System Department of Empire Brass Mfg. Co., Ltd., representatives in Eastern Canada of the Duro Pump & Mfg. Co., Dayton, Ohio, was accorded standing of 180.1 per cent. and entitled to the title of Ambassador McAlpine of Canada, in an unique election contest held as a stimulant to the sales forces of the company.

FOUR FURNACE MANUFACTURERS MAY AMALGAMATE

Sanitary Engineer understands that plans are in progress for the amalgamation of four Ontario manufacturers of furnaces. Some firms approached for a statement have declined to commit themselves, but an announcement may be forthcoming shortly.

TO DUPLICATE WATER SYSTEM

Toronto.—The matter of expropriating some 17 acres of land at Victoria Park in the east end as a site for the Water Works duplication system, which will involve the spending of millions of dollars, went through council without as much as a question being asked, as did the by-law giving effect to the Board of Control recommendation.

NEW HEATING PLANT PROPOSALS ARE LAID BEFORE CITY COUNCIL

Vancouver.—Despite the electorate's refusal to pass the Central Heating Franchise By-law at the recent municipal elections, another concern is contemplating asking for a civic franchise, which, under the charter must also be submitted to the people.

First intimation of the new enterprise was received through A. D. Creer, former engineer of the Joint Sewerage Board. In a letter to the City Council he stated that application would be made for a lease to Granville street property located between the Robertson & Hackett mill site and C. P. R. holdings.

The lease would be required, said the letter, as a company was being incorporated to construct and operate central heating plants in Vancouver, for which application for franchise would be made in due time.

WILL EXPEND \$1,000,000 ON AQUEDUCT

Montreal.—The city council, upon the recommendation of the executive committee, has passed the by-law authorizing the expenditure of another \$1,000,000 for the improvement to the city aqueduct system. The by-law states that the aforesaid amount is required to further enlarge and develop the aqueduct and for the construction of reservoirs and filtering basins.

MONTREAL SANITARY BRANCH HAD ACTIVE YEAR

Montreal.—Dr. S. Boucher, Director of Public Health, has issued his report for 1922 covering the work of the Sanitary Department, under J. E. Durocher, superintendent, and Aime Cousineau, sanitary engineer.

Inspectors made 38,129 visits to dwellings, 400 school inspections, and 5,152 calls at divers establishments. New buildings inspected numbered 3,465, plumbing systems, 2,864, and 1,815 alterations.

Complaints made by the department total 9,325, of which 6,961 were found warranted upon investigation. Warnings sent out numbered 5,909, and of 104 actions taken, judgments were realized in 98 cases. In 6 actions the court suspended sentence.

The laboratory department made 16,757 analyses, of a chemical or bacteriological nature. Of these, drinking water, water from public baths and illuminating gas numbered 218.

PLUMBERS SEEK 40 P. C. BOOST IN SCALE OF WAGES

Winnipeg, Man.—An increase of 40 per cent. over the scale paid last year is demanded by union plumbers of Winnipeg, who went into conference with a committee of employing plumbers to negotiate a wage scale for the 1923 building season.

It was learned from officers of the union that at the preliminary conference, agreement was reached in regard to all of their demands with the exception of the wage scale.

A 44-hour week, the same as last year,

was agreed to, also the master plumbers consented to a continuation of last year's agreement with regard to legal holidays and overtime. The increase demanded by the plumbers union, if granted, would bring their scale up from 90 cents to 1.26 an hour.

The chief argument advanced by the union men for a 40 per cent. increase was that it will have to be paid if the steady exodus of men of their craft from Winnipeg to the large building centres of the United States is to be stemmed. Pointing out that many of their union have already gone south and more are contemplating moving, the union representatives stated that the only hope for bringing any of them back, or even preventing a further exodus, is in the increased demand.

ENGINEERS DECLARE SYSTEM AT WEST LONDON MOST EFFICIENT OF ITS KIND

London, Ont.—London's new sewage pumping station, according to the London Engineering Society, is so efficient that it can be said to be much in advance of any other system of its kind.

The society carried out an inspection in every way and pronounced it satisfactory.

The new sewage pumping station was installed last year in West London, to deal with what was at that time one of the great problems confronting the city.

The greatest difficulty that lay before the engineers was the fact that West London, was so very low that no sewage could flow of its own accord to the septic tanks down by the river and it was necessary to pump the fluid up to a level whence it could run down to the tanks.

Plans were accordingly drawn up by Hector S. Phillips, the late assistant engineer of the city, and the work of construction, begun in September, 1921, was carried out under the supervision of W. M. Veitch, the present sewer engineer for London, to a successful conclusion in June of last year, when the new station was finally completed.

WORK ON KITCHENER BY-LAW

Kitchener, Ont.—It is expected that the committee which is revising the plumbing by-law will meet in the near future. All possible information on by-laws in other cities is being secured by the chairman, Ald. E. Ratz, and the city engineer who is a member of the committee is also formulating proposals.

WATER CONSUMPTION IN HAMILTON IS HIGH

Hamilton, Ont.—Under direction of City Engineer Gray, men have commenced sinking a shaft on the lake side to the 36-inch wooden intake. This intake has been in disuse for a number of years by order of the health department, as it was in very shallow water and too close to the shore, and was completely choked with sand. This conduit is only about 200 feet in length and in 8 feet of water. The plan of the engineer is to drill a hole in the top of the pipe and dig a shallow ditch so that the water could flow into it from the lake. The men of the department are still working on this plan, which will be resorted to in case of emergency.

The water consumption in Hamilton per capita is 130 gallons a day, the engineer stated, and on the mountain 208 gallons per capita per day. Even if the mountain hospital and the nurses' home were not supplied, the rate would be extremely high on the hilltop.

On the other hand, in cities where the water is metered, the consumption per capita is much lower, ranging from 65 gallons to 40 gallons per day, and as low as 70 to 85 gallons in cities the size of Hamilton with about the same number of industries.

WORK IS COMPLETED ON PLUMBING BY-LAW

Ottawa.—At a round table conference the newly appointed plumbing by-law committee, at its first meeting completed all its work and definitely compiled a by-law which will be presented to the Board of Control. The committee for this task last year failed to come to any agreement. Many clauses in the by-law had been opposed by the plumbing trade on the grounds that it would increase the cost of the work. After considering a number of amendments, proposed by City Plumbing Inspector S. Daughtry, the committee came to an agreement and unanimously adopted the amendments. Under these new changes, plumbing will remain at the same price. The by-law will make compulsory a number of alterations, now commonly in force. After being dealt with by the Board of Control, the amended by-law, Number 2262, was submitted to City Council on February 5 and will be put in force March 1.

Under the amendments adopted by the commission, the principal changes to be made are as follows:

A minimum charge for permits to be made by the plumbing inspectors for plumbing installation and alterations; separate drains for all buildings other than tenement houses which have to have six-inch drain pipes; a minimum of four inches diameter for sewer drainage pipes; deep seal traps in the basement of all buildings; no sheet metal piping to be used; plumbers to be responsible for all work performed and not the owners of the building.

Oil Burners Much Used In London

London, Ont.—Indications point to an unusually early opening of building activities in the spring. Architects are already busy on many projects. That an unusually large number of homes will be erected is certain from plans already on the boards. Many of the homes will run from \$10,000 to \$25,000. A number of more moderate priced homes running from \$4,000 to \$7,000 will be built also. Plumbers are looking forward to a splendid volume of business in all lines of materials and home requirements.

An interesting phase of the situation is the keen interest being shown in oil burning equipment for heating. Home owners who have been getting along on scanty supplies of fuel and who have been uncertain as to whether they were even going to get that, are planning if possible to get away from the coal shortage in future. Many inquiries are being received by architects for oil burning equipment and several architects in discussing the question predicted that there will be a big and profitable field open for anyone who can supply people with dependable oil burning heating apparatus.

In connection with this it might be of interest to note that in the new \$75,000 monastery for which plans are being prepared for the Redemptorist Fathers here, the heating will be hot water and oil burners.

Present indications point to new records being made in building this year as in addition to the many new homes there are several large projects under way. Between \$1,500,000 and \$2,000,000 will be expended in new buildings for the Western University. A new seminary to cost \$600,000 is planned by Bishop Fallon. A new \$200,000 plant to replace the buildings recently destroy-

ed by fire is contemplated by Reid Bros., manufacturing stationers, and a new factory for the Orange Crush Bottlers will be erected shortly. In addition to these the Board of Education has a school building program that will involve an expenditure of \$600,000 and the council will start work shortly on a new \$300,000 city hall and a new \$50,000 registry office.

Conference of Hamilton Stove & Heater Company

Hamilton, Ont.—The salesmen of the Hamilton Stove & Heater Co., Limited, Hamilton, Ont., met in conference at their headquarters in Hamilton and discussed with the general sales manager, Mr. S. C. Moore, their selling problems for the coming year. In speaking with Mr. Moore, he reports that there is a very optimistic feeling among his staff in reference to 1923 business. The Hamilton Stove & Heater Company has inaugurated a new sales policy; this was heartily approved by the sales force who returned to the various fields more enthusiastic than ever. They believe that a big volume of business will be done in the stove and furnace trade this year, not only by themselves, but by other stove manufacturers.

Business Men's Association Adopt Novel Ad. Slogan

"No further need to hesitate. Just what you need is at your gate."

This is the message which the members of the Yonge and Bloor Business Men's Association, Toronto, are advertising throughout their own district. Chairman Wm. Cowan believes that by the use of judicious advertising this locality might in time become the "Fifth Avenue" of Toronto.

"Jimmy" Yates on the right, sanitary engineer of Brandon, with his friend R. N. Willoughby, on their return from a day's shooting in the Brandon hills. They got seventy rabbits in four hours. Can you beat that?

Heating Engineer Gives a Demonstration

Townsend Plumbing and Heating Co., Winnipeg, Man., Arouse Interest in Warm Air Furnaces by Demonstrating Quick Lighting Facilities

WINNIPEG, Man.—A furnace completely lighted, heated, and banked with sufficient soft coal for ten hours, with drafts closed, and all in the space of eleven minutes was the result announced after a trial demonstration by the Townsend Plumbing and Heating company. The object of the demonstration was to show how an ordinary hot air furnace might, at small cost and little inconvenience, be turned into an efficient consumer of soft coal with none of the usual concomitant dangers from gas explosion or the necessity of frequent banking.

The experiment was carried out under the direction of G. R. Pratt, fuel engineer, who had been working on the subject for four years. The furnace was cold at the start. The demonstration commenced with the installation into the furnace of a specially constructed hollow L-shaped arch through which air had access to the fire box. This was inserted in such a way to divide the coal chambers in two, while lying at no point nearer than eight inches to the grate. The longer arm of the device was perforated. A kindling fire was then started in the furnace, and on this was placed nut and pea soft coal. One side of the coal chamber was filled with coal level

with the furnace door. The other side was left free. Gas from the highly banked coal was drawn down under the arch and was burned up by the urgency of the air imported through the perforations of the arch. In this way all the gas caused by the combustion of the coal was utilized, so that not only was the heating power of the coal increased but the danger of explosion minimized. A second saving would be effected, it was explained, in the ability to burn smaller coal which was not only cheaper in terms of money but went farther.

Should one side of the furnace become clogged or dirty the fire might be transferred to the other by allowing the banked coal to dwindle and re-coaling on the other side of the arch. Either side of the grate might be shaken separately it was stated, but shaking was not necessary before re-stoking. Coal was normally put in on top of the supply already there.

Economy in coal as to both quality and price, lessening of the danger of explosion and increased facility in looking after the furnace were summarised as the results of the demonstration, which passed off to the satisfaction of all present.

SHOWS VALUE OF CENTRE HEATING

Winnipeg.—In popular language, intelligible to everyone, J. W. Sanger, chief engineer of the hydro-electric system, gave a full and scientific description of the city's proposed steam standby and central heating plant to the Canadian Credit Men's Trust Association.

Central heating systems, said Mr. Sanger, dated back to the time of James Watt. But they got their impetus from the discovery that 35 per cent. of the heat in coal went up the smokestack of a locomotive and only 10 per cent. of the heat energy went to turn into the crank shaft to perform useful work. The remaining 55 per cent. went into the atmosphere in the form of exhaust steam.

In the first central heating plants it was exhaust steam that was utilized. Then the plants became so popular that live steam had to be used as well. Some electrical light and power companies in the United States to-day sold their exhaust steam because they figured it cost them nothing to produce, while other companies had gone into the business of selling live steam.

Temperature records of large cities on the North American continent showed that there was no city more favorably

situated than Winnipeg for a central heating plant. New York had a heating season of 197 days and a mean January temperature of 30 degrees Fahr. Harrisburg, the capital of Pennsylvania, had a mean January temperature of 32 degrees Fahr. The corresponding figures for other cities were as follows: Detroit, 206 days, 27 degrees; Chicago 212 days, 25 degrees; St. Paul, 222 days, 12 degrees, while Winnipeg had a heating system of 253 days and a mean January temperature of one degree below zero.

PLUMBING SCRUTINIZED AT TOWNSHIP INQUIRY

Taking of evidence in the York Township inquiry conducted by Judge Denton has been completed after a lapse of about three weeks. The interest had centred in the probe of the Treasurer's Department and into the manner in which the township had carried on its plumbing.

H. Hughes, chief plumbing inspector for the township, was able to establish that he was a duly qualified plumber, and was followed by Harry Rushby, a plumber, who said that he was unaware of any general dissatisfaction among the plumbers regarding instructions received from the chief plumber.

A \$200 HOME WATER PLANT

(Continued from page 13)

It is important that the air and water should both enter the tank on or near the bottom and that water should be drawn from the tank at or near the bottom. It is preferable that the inlet and outlet connections should be on the opposite sides of the tank so that the air and water may separate and air will not be forced into or allowed to escape into the distributing pipe lines.

Galvanized Tank Not Imperative

The question of whether a galvanized tank is necessary is often brought up. Generally they are not necessary, unless water is alkaline or other unusual water conditions prevail. It is desirable, however, if small tanks are used that they be galvanized. This is because in all-iron tanks a small amount of rust will form. If, however, the tank is large the water movement in the tank will not be fast enough to disturb this rust. If the tank is small the water will rise and fall rapidly and is likely to disturb the rust, discoloring the water and washing the rust from the sides of the tank so that another coating will form and gradually the walls of the tank will become corroded and thin.

So many domestic pumping systems have been put on the market during the past few years that it is difficult for the prospective purchaser to make a choice.

As a general rule low priced units will be found to have nothing but their cheapness to recommend them. A good unit costs more than a poor one but in 100% of cases will be more satisfactory in operating and cost less to keep up.

A first class pumping unit must be equipped with the proper kind of motor. If for use on alternating current this should be of the repulsion type and not of the cheaper split phase type.

Construction of Pump

The pump should be compactly built, operate at as slow a speed as possible and should have good long shaft bearings. In the best pumps all bolts, nuts, screws, which have to be removed for repairs are made of brass so that they will not rust in place. Piston rods should be of bronze or bronze covered and should be so designed that water cannot creep along them from the stuffing box to the cross head and thence get into the crank case. Water in the crank case displaces the oil and crank bearing will not get proper lubrication.

Don't sell a unit because a salesman tells you it is the best made. He probably thinks it is but he may be wrong. Find out all about it and about the manufacturer, what he has made and how his goods have stood up. How much does he know about pumping equipment?

If he can satisfy you on these points and will co-operate with you in helping to sell his apparatus and keep it sold, you can make no mistake and will reap a handsome profit from the sale of domestic water systems.

Patterns for Smoke Pipe Branch

Prepared for Sanitary Engineer by O. W. Kothe, Principal, St. Louis
Technical Institute, St. Louis, Missouri

RESPONDING to an inquiry for a smoke pipe branch as per sketch, and which is reproduced in the drawing, will say that this is an impractical fitting to lay out. You cannot mitre a larger pipe over a smaller pipe as measurements seem to indicate, although put them in your sketch from your letter. I may have the wrong viewpoint on your idea; but that is the interpretation you left. To lay this fitting out accurately, a person would have to use triangulation.

About the best way to treat the fitting is to lay out each pattern as if they were tees of similar diameters, and then squeeze the sides together so as to take out the opening X in the plan view. This will elongate the tees and only an approximate fit is assured. Possibly some one else might work this different, in fact possibly a dozen mechanics may each go at it different in order to achieve their aim. But you see, since tees must be elongated, no true mitre line can be established; and, therefore, there is liable to be more or less trimming before a suitable fit is secured.

But anyway you first draw the center line of "A" and then the center line of "B" and then of -d-. After this measure your diameters, and describe semi-circles "A" and "B" and treat in equal spaces, and extend them to the mitre lines 1-b, also -c-d-e as shown. This gives your intersections with which to develop the patterns. For the larger tee: pick the girth from half circle "A" and set off on a line as 1-4 and then develop the lines from the mitre 1-b as points 1'-2'-3'-4' in pattern. This pattern is then reversed over four times and you have the whole pattern. Some trimming will be necessary in order to account for the elongation it will have to undergo.

The pattern for the pipe "B" is developed by picking the girth from semi-circle "B" and setting it off as 1-7 in pattern. Draw stretchout lines, and then drop lines from mitre line -c-d-e- which establishes points 7'-6'-5'-4' etc. to 1'. Sketch a line through these points and you have your pattern as shown. The necessary lengths between pipes must be added and you can cut out the pattern, double it over, and you have the full pattern.

The openings had best be marked out after the tees are made up and shaped to make a snug fit—then mark out the opening in your pipes and make your connection. Laps must be allowed extra on all patterns because the development is net, and edges must be allowed extra or the girth will be short.

Development of Patterns for Smoke Pipe Branch.

WE LAUNCH A PRODIGIOUS PUBLICITY CAMPAIGN

(Continued from page 15)

tearze to my voyce.

"No and I ain't interested in plumb-ers neether," he sez with the cruelty of a inquizitioner.

"Well I'm goin to leeve these kutz with you," I sez, puttin them on the gait poste and layin 2 smoak-testin segars on top of them.

"I'll be around again nxt. wk.," was my partening shot. "Good-nite," and with that I turned on my heal and remounted the lizzie.

"Yeh neadn't bother," he hollered out as I turned the lizzie tords town. But as I looked over my sholder I seen him pick up the segars 1st and put them in his vesst pokt and then took up the kutz.

Next a. m. when I breazed into the shop Bill and Vilet was their with a look of xpectancy on there faze.

"Well," sez Bill, "got the kontrak in yr. pokt.?"

"Roam warnt bilt in 1 day," I responds. "Jest give me a little time. A feller dont usulie ann. his ingaigement the 1st time he culls on a girl does he?"

I looked tword Vilet but she had her head reverted and if she herd what I sed she didnt turn a hare witch was jest as well as it sounded kinda follish.

"Did you see Sigh?" ast Bill.

"Oh I scene him all O. K. but he scene me 1st."

"Did he order you off the premisses?"

"No; I went on. Seein as he didnt invyte me in but hung onto the gait as if he was skeered I was going to swipe it, our conversatn. was moar less formel. However I sed Ide call agen and left a cupple of segars."

"If them segars is like what you give me last weak heel have the ax reddy for you the nxt. time," sez Bill with a laff.

"You leave that 2 me," I retortured with confydence. "Ime goin to land that old hick or braik a legg."

Vilet give me a smile that maid me feal like I cood a konkered the world.

ENGINEERS OF WATER WORKS MEET IN TORONTO

The mid-Winter meeting of the Canadian section of the American Waterworks Association is being held in Toronto, and the men responsible for the design, construction and operation of waterworks plants all over Canada are in attendance. There is an exhibition of waterworks equipment and supplies, and over 25 representative firm reserved space.

The officers under whose auspices the meeting is being held are as follows:—Chairman, R. L. Dobbin, Peterboro; vice-chairman, F. A. Dallyn, Toronto; trustees, H. R. Starr, Orillia; N. R. Wilson, Brantford; Jas. J. Salmond, Toronto; secretary-treasurer, C. D. Brown, Walkerville, Ont.

Market Conditions and Tendencies

Price Trend on Sanitary and Heating Supplies

Markets at a Glance

IN THIS issue there is shown an extensive list of price changes in many lines of plumbing and heating supplies. These changes are all toward higher levels and reflect the strength of primary markets and the general feeling of optimism throughout business circles. Prominent among the changes noted in the general advance are those on galvanized products, which have risen from 25c to 50c per hundred square feet, tinware, graniteware, embossed and japanned ware which have advanced from 2 to 5 per cent., iron pipe and nipples, on which new higher lists have been announced, putty quotations are 50c per hundred lbs. above old levels, solder with a raise in price of 1c per pound and slightly higher quotations on ingot metals. From primary sources the indications, in some other lines, are for still more price adjustments toward higher levels, the opinion being that

with increased demand, production will be taxed and deliveries slow. In the case of the steel and iron sheet market it is pointed out that very few U.S. producers have any galvanized sheets to sell for first quarter delivery and they are quoting premiums of not less than \$5.00 a ton over U.S. steel corporation price, for any sale now made and as far as the steel corporation is concerned they have absolutely nothing to offer, although they have not advanced their price.

It is also noted that in local circles, industrial plants are becoming daily more active and capacity operation is fast becoming the rule, in some cases for the first time in three years. Since the French occupation of the Ruhr, few shipments have been reported from European sources, this accounts in some measure for the industrial activity in American centres.

Montreal Markets

MONTREAL, February 13.—Price developments continue to attract attention in the markets for plumbing and steam-fitting supplies. Revisions now recorded are all in an upward direction with the exception of closet combinations, nominal quotations on which are a little lower. A new higher list on wrought piping is one of the chief changes upwards, both black and galvanized pipe being shown at increased quotations. Revised discounts on wrought nipples bring advanced prices, while bar and wire solders are slightly higher. Radiators, boiler tubes, and in tools, stocks and dies, are also increased in price. Various lines of tin shop supplies are affected in the general revision upwards announced by ware manufacturers, and the new season's prices on tin sap buckets and spouts are higher than last year. Strength remains in primary steel markets, and this is reflected on various iron and steel products, including sheets, bar products, soil pipe and fittings, corrugated sheets, range boilers, etc. Revisions in certain of these lines would not be surprising at an early date. Ingot metal markets are also displaying a firm tone.

TINSHOP SUPPLIES AFFECTED BY NEW WARE PRICES

Montreal.

Manufacturers of enamelled ware, galvanized and tin ware announce new higher prices on practically all products, and certain lines of tin shop requirements are included. Following are also new quotations on certain wares which will be of interest to many merchants:

Pieced tin ware, plus 40 p.c.; Stove boards (wood lined) 10-5 per cent. Stove boards (paper lined), 30 per cent. Fire shovels, plus 15 per cent. Steel sinks, plus 20 per cent. Stove pipe elbows, Net list. Stove pipe, Net list; Light black elbows, 6" \$1.60 doz. net; Light black elbows, 7 inch, \$1.85 doz. net. Chimney thimbles, plus 10 per cent. Tinners' trimmings, plain, 50 per cent. Tinners' trimmings, retinned, 10-5 per cent. Milk can trimmings, plus 40 per cent. Copper bottoms Net list. Trimmings, general plus 10 per cent. Creamery can taps, prices on application.

SOIL PIPE AND FITTINGS ON FIRM MARKET TREND

Montreal.

Current quotations on soil pipe and fittings remain at unchanged discounts with the undertone of the market again described as firm, owing to higher costs of fuel and raw materials. Although new higher prices on radiation, an allied product, are issued, there is said to be no indication of any immediate changes in either pipe or fittings. Prices, however, are considered firm as follows:

SOIL PIPE—

2 and 3 inch	35%
4 inch	35%

NEW SEASON'S PRICES ON SAP BUCKETS AND SPOUTS

Montreal.

Quotations for the coming season are now issued on sap buckets, syrup cans and spouts. Tin buckets and spouts are about ten per cent. higher than last year, while galvanized buckets are slightly lower. Syrup can prices are unchanged. Following are new quotations:

SAP BUCKETS—

Straight pattern—Per 100 No. 7, \$14.95; No. 8, \$16.25; No. 9, \$18.20; No. 12, \$19.50; No. 16, \$23.40.

Western pattern 6 pt. \$14.63; 10 qt. \$19.50.

Extra heavy—No. 12, \$24.05; No. 16, \$29.25.

Frontenac—10 qt. \$20.59.

Galvanized straight—No. 9, \$20.70; No. 12, \$21.20; No. 16, \$27.90.

Galvanized Western—10 qt. \$21.30.

Square syrup cans, one gallon, \$16.75 per hundred.

Spouts Perfection, \$20.00; Eureka, \$17.00;

Sterling \$24.65 in lots of 1000.

CORRUGATED SHEETS REMAIN ON FIRM PRICE BASIS

Montreal.

In some quarters higher quotations on corrugated sheets are thought likely at any time. Other dealers describe the market as very firm, but with no definite indication of a change in an upward direction at present. There is undoubtedly a firm undertone in these products due to the strong tendency in flat galvanized sheet markets. Prevailing list prices and discount are as follows:

CORRUGATED SHEETS—

	Per 100 Sq. Ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 26 U. S. gauge	8 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50
Less 10 per cent.	
Lighter than 24 gauge and wider than 27 inches, \$0.75 per square extra.	

REVISED QUOTATIONS ON CLOSET COMBINATIONS

Montreal.

The easier tendency recently noted in the market for closet outfits has resulted in slightly lower prices on combinations and bowls. Outfits are reduced approximately one dollar each, while a recession of varying extent is recorded on bowls. Seats and tanks are unchanged, although present levels on these are more or less nominal, certain jobbers quoting a little lower than others. Following are revised quotations:

CLOSET COMBINATIONS—

Low Down Outfits, each	
Closet, standard outfit, oak	24 00
Do., post hinge seat	25 00
Do., oak vitro or Pussyfoot	24 00
Do., post hinge seat	25 00
Do., mahogany vitro or Pussyfoot, post hinge seat and cover	27 45
Do., vitreous china, oak post hinge seat and cover	27 45
Do., vitreous china, mahogany post hinge seat and cover	27 70
Do., white vitro or Pussyfoot, oak post hinge seat and cover	27 50
Do., white vitro or Pussyfoot, mahogany post hinge seat and cover	27 70
Do., enamelled iron tank, oak post hinge seat and cover	28 45
Do., enamelled iron tank, mahogany post hinge seat and cover	28 70
Add for 3/4" valve on supply pipe	1 25
Add for spud	0 60
Add for reverse trap bowl	1 00
Add for syphon jet bowl	7 00
Deduct for supply pipe	0 80
Deduct for floor hinge	0 60

CLOSET BOWLS—

Richefeu bowl	8 00
Washdown bowl with spud	9 90
Reverse trap bowl with spud	9 90
Syphon jet bowl with spud	15 40

CLOSET SEATS—

Oak post hinge seat and cover	3 85
Oak wood strip seat and cover	3 50
Mahogany finish post hinge seat and cover	4 05

CLOSET TANKS—

Low down, oak vitro or Pussyfoot with fittings less seat	13 20

Vitreous china tank with fittings, flush elbow and supply	18 00
Enamelled iron with fittings, flush elbow and supply	18 00

SLIGHTLY IMPROVED SALE OF ENAMELLED WARE

Montreal.

With the winter weeks passing, a slight improvement is noted in the movement of enamelled ware products, and dealers anticipate a continued betterment as the season advances. No change is made in quotations, with rumors of unsettlement in some quarters. Following are list prices and discount:

ENAMELLED WARE—

Sinks, roll rim—	
18 x 30	\$23 00
Sinks, flat rim—	
16 x 24	1 only 2 only 3 only
18 x 30	\$7 50 \$7 40 \$7 30

17x19 in. Roll rim. F241 or P4345	12 60
Less 33 1-3 per cent.	

NEW HIGHER LIST ON WROUGHT PIPING

Montreal.

As pointed out in recent issues of Sanitary Engineer, the undertone of the wrought pipe market has been very firm. A new list is now issued, superseding No. 57, showing higher prices on both

black and galvanized pipe. The new list, No. 58, is as follows, recording an advance of \$6 a ton on black pipe and \$4 per ton on galvanized:

Price List No. 58.	WROUGHT PIPE				February, 1922.	
	Standard	Butt-weld	Pipe S.C.			
Size	Blk.	Galv.	Blk.	Galv.	Blk.	Galv.

12 in.	2.60	3.21	3.75	4.45

REVISION NOTED IN RADIATOR DISCOUNTS

Montreal.

Through a revision in discounts quotations on radiation are increased four points. On the upright radiators the discount on hot water is now 51 per cent., and on steam 52 per cent., former discounts being 55 and 56 per cent. respectively. On wall radiators, discount is changed from 52 to 48 per cent. As pointed out in recent market reports, there has been a firm undertone in these products, with labor and fuel costs on the increase. No change is made in boiler prices and following are prevailing discounts:

RADIATORS AND BOILERS—

Radiator list prices are for 1, 2, 3, 4 and 5 column radiators, per sq. ft.
45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount 51 per cent for hot water, and 52 per cent for steam.
Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05; Discount 48 per cent.

Boilers—Round hot water boilers, sizes from 0 to 10, 60 per cent. off list. Square or sectional hot water or steam boilers, 15 in., 15 per cent. Square or sectional water boilers, 19 in. to 36 in., 20 per cent. Square or sectional steam boilers, 19 in. to 36 in., 17 per cent. Ontario Government trimmings, 15 per cent.

Round steam boilers, standard trimmings, 28 per cent. Ontario Government trimmings, 25 per cent.

F.o.b. Montreal, Toronto, Guelph.

PROMISING OUTLOOK FOR ASBESTOS PRODUCTS

Montreal.

Local dealers in asbestos products state that, while current trade can only be described as seasonal, there is a quite promising outlook for business at a little later date. By the number of inquiries and requests for figurings on requirements it is felt that a resumption of activities will be noted toward the latter end of this month and March. There

is a firm undertone in the market, with quotations unchanged as follows:

ASBESTOS PRODUCTS—

	Off list prices
2 ply pipe covering	57 1/2%
3 ply pipe covering	55%
4 ply pipe covering	50%
85% magnesia	40%

	Per bag
Boiler covering	7 75
Asbestos sheathing	8 25

NO CHANGE IN VALVE AND BIBB DISCOUNTS

Montreal.

No change is made in quotations on compression goods, notwithstanding higher prices recently appeared on other outside markets. There is a firm undertone in the market, but it is thought that no change will appear during the ensuing weeks at least. Following are present discounts:

VALVES AND BIBBS—

Compression work, standard	45%
Fuller work, standard	30%
Quick opening compression bibbs	43%
Bath cocks, quick opening	41%
Bath cocks, compression	41%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, standard	56%
Roundway stop and waste cocks, standard	56%
Brass steam cocks, standard, 1/4 in.	50%
Radiator valves, standard	55, 25%
Do., removable discs	55, 25%
Globe, angle and check valves, standard	25%
Gate or straightway	25%
Emco globe valves	33%
Emco check valves	33%
Jenkins globe, angle, check and swing check	10%
Jenkins gate or straightway	16%
Jenkins iron body, globe and angle	15%
Jenkins iron body, gate	25%
N P. "O" and "S" traps	40%

FIRM TONE STILL DISPLAYED IN INGOT METALS

Montreal.

Firmness is still shown in ingot metal market, although advances have not recently been as marked as in former weeks. The unsettled conditions in Europe have reflected in metals generally and until the situation clears, developments may be numerous in these markets. Tin is firm, but quieter, while copper is also reported on the quiet side. Local quotations on both metals are practically unchanged. Lead remains as strong as ever on the New York market, with London also holding its own. Spelter appears to be marking time, and prices are again slightly easier. Antimony is very firm, with offerings from China practically nil. There is little if any change in the aluminum market, this metal continuing quiet.

STRONG TONE REMAINS IN PRIMARY STEEL MARKETS

Montreal.

Continued strength is apparent in basic steel market conditions. With British producers overseas announcing a general increase in practically all lines, mills to the south are gradually lining up higher prices from week to week in some quarters, although the larger interests have not yet taken any action in this direction. It is thought, however, that increased levels may be generally announced in the near future. Locally no change has been made since the revision three weeks ago, but local producers again state that the trend is un-

doubtedly upwards. Warehouse trade continues to show a slight improvement, and there are indications of a better movement in industrial circles. Unchanged price levels are:

BAR IRON—

Common bar iron, 100 lbs.	3 35
Refined iron	4 85
Irish finish machinery steel	3 40
Mild steel	3 35
Single reeled machinery steel	5 25
Band steel	3 85
Spring steel	7 00
Sleighshoe steel	3 35
Tire steel	3 55
Harrow tooth steel	3 50
Toe caulk steel	4 25
Mining tool steel, per lb.	0 19
Black Diamond tool and cast steel per lb. 0 19	

NOTE—Refined iron is approximately \$1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

REVISED DISCOUNTS ON WROUGHT NIPPLES

Montreal.

Following a general revision in other cast iron and malleable fittings two weeks ago is a price increase on wrought iron nipples. The change in discounts is five per cent. on all sizes, and following are revised quotations:

PIPE FITTINGS—

Cast iron fittings	22%
Plugs, cast iron	22%
Do., solid	22%
Do., countersunk	22%
Bushings, cast	25%
Do., malleable	25%
Unions	40%
Flanged unions	22%
Flanged fittings	27½%
Dart unions, black, ½ to 2 in.	33½-3%
Do., ½ in., 2½ in., and larger	23%
Do., galv. add to black	30%
Nipples, ½ to 4", close and short	50%
Do., long	55%
Do., 4½ to 8", close and short	40%
Do., long	45%
Couplings, 4" and under	25%
Do., 4½" and larger	5%

Malleable Fittings—

Piece list effective June 1st, 1922. Discount 68 per cent.

FIRM TREND CONTINUES ON PRIMARY SHEETS

Montreal.

The upward tendency in sheet markets is still evident, quotations on Canada plate showing an increase of twenty-six cents per box. Bookings on import in these products have in many cases been taken care of, and the present increase is made on warehouse stocks. Tinplate and turn plate quotations remain at recent revisions.

While local price levels on galvanized and black sheets are nominally unchanged, a very strong tone remains on primary markets. In certain quarters on American markets it is noted that the trend is decidedly upward as the weeks pass, and although larger interests have not yet announced increased values, it is felt that such a development is not unlikely in the near future. This move has been taken by British manufacturers overseas, and the situation there is little changed, firmness still existing. The opinion among local distributors is unanimous that if the present season was a more active one for sheets, higher prices would now be ruling. It is also predicted that with an improvement in sales during the coming weeks, the required factor for higher

prices will be given. At present, following are nominal quotations:

BLACK SHEETS—

10 gauge, base	4 25
12 gauge	4 35
14 gauge	4 45
16 gauge	4 55
18—20 gauge	4 80

Welsh, polished, 60s	6 95
Galvanized 52s	7 50
Galvanized 60s	7 75

RANGE BOILER PRICES FIRM BUT UNCHANGED

Montreal.

Although range boilers are not included in the list of galvanized goods shown at higher figures this week, the undertone of the market remains in a very firm position. One manufacturer stated that increased quotations were certainly warranted, but there had been a certain amount of unsettlement in the sale of these products, and any change upwards was deferred, for the present at least. In this connection, it is now noted that distributors who were formerly quoting a slight recession in prices have adjusted discounts off standard list prices, and net quotations are on a more uniform basis. List and discounts are:

RANGE BOILERS:—

5 Gallon	\$13.50
12 "	14.00
18 "	15.00
25 "	16.50
30 "	17.50
35 "	20.50
40 "	22.75
52 "	38.00
66 "	60.75
82 "	74.00
100 "	103.00
120 "	117.00
144 "	164.00
168 "	187.00
192 "	210.00

Std., less 40 per cent.; Ex. Heavy, 30 per cent.

BAR SOLDER PRICES ADVANCED ONE CENT PER POUND

Montreal.

All grades of bar solder are advanced one cent per pound, and wire solder one-half cent, on the local market. This is the second revision upwards on these products in recent weeks. Tin on primary markets is still in a very firm market position, while, as expected, spelter has regained its former strength. Lead is reported a little steadier, after continued advances, and the opinion is expressed that the peak has been reached on the present movement. Following are prevailing quotations:

LEAD AND ZINC PRODUCTS—

Lead pipe, per 100 lbs., up to 2"	14 00
Do., 2" to 8"	15 00
Do., 8" and over	16 00
Lead waste, per 100 lbs.	15 00
Note—Lead pipe is subject to a discount of 10%	
Lead trunks and bends	15%
Lead wool, lb.	0 14½

Lead sheets, 3 to 3½ lbs., sq. ft. lb. . . .	0 11¼
Do., 4 to 8 lbs., sq. ft. lb.	0 11
Cut sheets, ¼c. lb. extra and cut sheets to size, ¾c. lb. extra.	
Solder, guaranteed, lb.	0 28
Do., strictly, lb.	0 25
Do., commercial	0 24
Do., wiping, lb.	0 24
Do., wire, lb.	0 38½
Zinc, sheets, casks	0 11
Do., broken lots	0 12

HIGHER PRICES QUOTED ON BOILER TUBES

Montreal.

Following a firm undertone in the market, quotations on boiler tubes now show a revision, sizes from 2 inch upwards being advanced about 5 per cent. Both seamless and lapweld tubes are affected by the change, and local dealers state that with a general firming tendency in mill centres the question of deliveries must still be considered. As in other iron and steel products, producers are faced with rising values in raw material and fuel costs. The movement of tubes is slightly improved, and should continue to show a betterment as the season advances. Following are revised prices:

BOILER TUBES—

	Seamless	Lapweld
1 inch	20 00	—
1¼ inch	22 00	—
1½ inch	21 00	—
1¾ inch	24 50	24 00
2 inch	21 50	20 00
2¼ inch	24 50	23 00
2½ inch	29 00	24 50
3 inch	34 00	31 00
3½ inch	39 50	35 50
4 inch	50 00	45 00

Prices, per 100 ft., f.o.b. Montreal.

REVISED DISCOUNTS QUOTED ON STOCKS AND DIES

Montreal.

Higher quotations are shown on Bull Dog stocks and dies through changing the discount to 12½ per cent. These were formerly quoted at 20 per cent. off list prices.

GRADUAL BUT STEADY IMPROVEMENT IN SCRAP

Montreal.

Dealers in scrap materials describe the market as showing a slow but steady improvement. Consumption for the most part is still of a hand-to-mouth nature, but gradually growing. Yellow and red metals are, if anything, a little more ac-

tive than other lines. There is a fairly firm tone in both markets, rubber scrap continuing stronger in sympathy with advances made in crude rubber circles.

COTTON WASTES CONTINUE ON FIRM BASIS

Montreal.

There is still a firm undertone in the market for cotton wastes, and, according to one local manufacturer, if the present tendency continues there are chances of a further revision at a little later date. Raw cotton in primary circles is fluctuating with a strong tone still pre-

sent. Quotations remain at the revision of last month, as follows:

COTTON WASTES—	Per lb.
Cream polishing	0 21
White, XXX extra	0 18
White, XX grand	0 17
White XLGR	0 16
X Empire	0 14½
X Press	0 13

Discounts, Standard weight, 40 per cent.	
Extra heavy, 30 per cent.	

Toronto Markets

TORONTO, February 17.—The markets in all lines of plumbing, heating and sheet metal goods have been consistently firm for some time and indications point to a steady maintenance of prices at least at present levels. Each week has brought its changes in quotations, with a great majority of them higher and this week is no exception. The firm trend of the iron primary market has resulted in an advance in wrought iron pipe and nipples, pipe showing an average advance in price of 5 per cent and nipples by a reduced discount, about the same advance. Galvanized sheets have also reflected the firm tone noted in a recent issue of Sanitary Engineer and while there is still a variation in local quotations, the majority of distributors are maintaining the higher price. General hardware, enamelled ware and tinsmiths' sundries have advanced from 2 to 5 per cent. in the last week and putty prices were moved up 50c per hundred lbs.

The recent firmness noted in primary markets have been reflected in the quotations on practically all galvanized iron products. Corrugated sheets are now quoted 50c per hundred square feet higher, galvanized shingles and galvanized sidings 25c per hundred square feet in advance of recent quotations and eavestrough and conductor pipe are advanced 10% over old levels. These prices go into effect March 1st.

Recent reports were to the effect that an advance had been put into effect on range boilers but local quotations have not been changed. Asbestos products are also among the lines on which a firm trend is reported and future developments in quotations are predicted.

Manufacturers report a steady improvement in business and many local plants are reported running to capacity.

NEW DISCOUNTS NOW IN EFFECT ON WROUGHT NIPPLES

Toronto.

By a lowering of discounts on wrought nipples an increase of 5 per cent. has become effective. The new discounts now in effect are given below.

NIPPLES, WROUGHT—

Close and short, 4 in. and under, 50 per cent., 4½ and larger, 40 per cent; long, 4 in. and under, 55 per cent; 4½ in. and larger, 45 per cent; running thread, 4 in. and under, 30 per cent.

NO PRICE DEVELOPMENTS RECORDED IN FITTINGS

Toronto.

Although prices of iron pipe and nipples have undergone an upward revision, no new developments of a similar character have affected fittings prices. The recently revised discount on malleable fittings from 70 to 68 per cent. is the last

change noted in this line. Below is the list in effect to date.

FITTINGS—	Mont.	Tor
Cast iron fittings.....	27	22
Malleable bushings	30	25
Cast bushings	30	25
Unions	45	40
Flanged unions	27	22
Plugs, cast iron	27	22
Couplings, 4 in., and under.....	25	25
Do., 4½ in. and larger.....	5	5

MALLEABLE FITTINGS—

New piece list adopted June 1, 1922. Discount, 68 per cent.

REVISION IN RANGE BOILER PRICES LOOKED FOR

Toronto.

A revision in range boiler prices is being looked for following the firmness in the galvanized sheet market, noted in a recent issue of Sanitary Engineer. From recent reports on basic markets this firmness is still in evidence and it is

CORRUGATED SHEETS ADVANCED IN PRICE

Toronto.

Galvanized corrugated sheets have reflected the recent upward trend in primary markets noted in Sanitary Engineer and an advance of 50c per hundred square feet is announced in the price of this product. Galvanized shingles and galvanized sidings are both advanced 25c per hundred square feet and galvanized flat roofing prices are increased 75c per hundred square feet. Below is the list to be in effect on corrugated sheets on March 1st.

No. 28 gauge	7 00
No. 26 gauge	7 50
No. 24 gauge	9 50
No. 22 gauge	11 50
No. 20 gauge	13 00
No. 18 gauge	17 00

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c. a square extra.

ENAMELED WARE PRICES MAINTAINED ON A STEADY BASIS

Toronto.

Current prices on enameled baths, lavatories and sinks have remained on a steady basis for some time. Business in this line is said to be satisfactory and in most cases considerably in excess of the same period last year. No price changes are looked for in the immediate future although the market tendency is distinctly firm.

ENAMELED WARE—

Enameled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.....	51 40
Do., 5½ ft.	57 10
Lavatories—	
17x10" Apron F139 or P4045	15 30
18x24" Apron F154 or P3845 or P3847	23 60
18x21" Apron F169 or P4206.....	17 60
18x21" Roll Rim, F197, F199 or P4656-6	15 40
17x19" Roll Rim, F241 or P4345	12 60

Do., 18 x 30 in.	23 00
Do., 20 x 30 in.	24 70
Sinks, Flat Rim—	3 only 2 only 1 only
16x24	\$7 60 \$7 70 \$7 80
18x30	8 60 8 60 8 70
20x30	9 70 9 80 9 90
Above prices, list, less 33 1-3 per cent.	

BRASS AND NICKEL PLATED COMPRESSION GOODS ARE ACTIVE

Toronto.

The prices on brass and nickel plated compression goods has shown no change this week. The recently advanced price on American markets has not been reflected in local circles to date. The movement in this line is reported in excess of last year and Sanitary Engineer

was informed by a local manufacturer that whereas it is not usually necessary to operate their plant on Saturday morning, they have been obliged to keep it going for the past three weeks. The outlook for spring business in all brass and nickel plated compression goods is described as good, the list remains as given below.

COMPRESSION GOODS—

Compression work, standard	45%
Fuller work, standard	30%
Quick opening compression bibbs	45%
Bath cocks, compression	41%
Jenkins iron body, gate	25%
Bath cocks, quick opening	41%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, standard	56%
Roundway stop and waste cocks, standard	56%
Brass steam cocks, standard	50%
Radiator valves, standard	55/25%
Do., removable discs	55/25%
Globe, angle and check valves, standard	25%
Gate or straightway	25%
Emco Globe valves	33%
Emco check valves	33%
Jenkins gate or straightway	16%
Jenkins iron body, globe and angle	15%
Jenkins Globe, angle, check and swing check	10%
Jenkins iron body, gate	25%

EAVESTROUGH AND CONDUCTOR PIPE PRICES ADVANCED

Toronto.

The firmness noted in recent issues of Sanitary Engineer has been borne out by another increase in price of 10 per cent. on eavestrough and conductor pipe. The former discount from the list price was 70 per cent., this has now been reduced to 60 per cent. as shown below, the advance to take effect March 1st.

TROUGH (EAVE)—

O. G. Square Bead—		Per 100 ft.	
8 inch	15 90	15 inch	34 50
10 inch	17 70	18 inch	44 00
12 inch	21 20		
O. G. Round and Half Round		Per 100 ft.	
8 inch	16 50	15 inch	35 50
10 inch	18 70	18 inch	45 00
12 inch	22 20		
Less 60 per cent.			

PIPE (CONDUCTOR)—

3 in., in 10 ft. lengths, list		22 30	
4 in., in 10 ft. lengths, list		29 60	
5 in., in 10 ft. lengths, list		48 00	
6 in., in 10 ft. lengths, list		58 80	
Less 60 per cent.			

ELBOWS (CONDUCTOR)—

2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 60 per cent.	

SOIL PIPE CONTINUES ACTIVE WITH NO PRICE CHANGE NOTED

Toronto.

No change has been announced in the price of soil pipe fittings for the present. The anticipations for an active season in this line are gradually materializing and local distributors report prospects for spring business to be bright. Below is the list of discounts covering soil pipe and fittings.

SOIL PIPE—

2 inch	Less 33 1-3%
3 inch	Less 33 1-3%
4 inch	Less 33 1-3%
5 and 6 inch	Less 33 1-3%
3 inch	net

FITTINGS—

3 inch fittings	net.
2 to 6 inch	Less 45 per cent.

CONTINUED UPWARD PRESSURE NOTICEABLE IN GALVANIZED SHEET PRICES

Toronto.

The firmness noted in the quotations on galvanized sheets, in a recent issue of Sanitary Engineer is having an effect on quotations on this product. There is a slight variation in prices quoted in local quarters but the upward trend is favored in most cases. It has been stated that European iron has not been plentiful in local markets for some time and the domestic product has been booked ahead to such an extent that present deliveries are retarded.

GALVANIZED SHEETS—

	Premier and Apollo	
10 3/4 oz.	6 65	
U. S. 28 base	6 25	6 50
U. S. 26 base	5 95	6 20
22 and 24	5 80	6 05
18 and 20	5 65	5 90
16	5 50	5 75
12 and 14	5 35	5 60
Queen's Head		
28 gauge base	7 15	
26	6 75	
24	6 45	
22	6 30	
Fleur de Lis		
28 gauge, base	6 90	
26	6 50	
24	6 20	
22	6 05	

An extra 40c. per 100 lbs. is charged for Keystone and Premier bands copper-bearing sheets. An extra is now charged on galvanized sheets. 10 3/4 oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown in 20c. per 100 pounds.

IRON PIPE LIST TAKES CHANGE IN UPWARD DIRECTION

Toronto.

Wrought iron pipe prices have again been revised in an upward direction following the steady advance in basic markets. The new list which supersedes list number 57 is given below.

WROUGHT PIPE

Price List No. 57.		February, 1922.

A DECIDED ADVANCE IN INGOT METALS

Toronto.

Bar solder has reflected the recent price advances on basic metals and a raise of .01c per lb. is announced. In

ingot metals there is again a decided advance effecting copper, tin and lead.

SOLDER—

Wire, lb.	0 32
Strictly, lb.	0 24 1/2
Guaranteed, lb.	0 27 1/2
Commercial, lb.	0 26
Wiping, lb.	0 24 1/2

CLOSET COMBINATIONS AND BOWLS REMAIN UNCHANGED

Toronto.

No changes are reported in the prices governing closet combinations, bowls, tanks and seats. Local trade in these lines is said to be moderately good and in excess of last season. The recent reduction in price in closet combinations and tanks has been adopted in outside markets corresponding with the recently revised list given below.

CLOSET COMBINATIONS—		Each
Oak, Wood Tank, Oak W. S. Seat and Cover	24 00	
Oak Vitro Tank, Oak W.S. Seat and Cover	24 00	
Oak Pussyfoot Tank, Oak W.S. Seat and Cover	24 00

GOOD VOLUME OF TRADE IN BOILER TUBES

Toronto.

Current business in boiler tubes is described as very good for this time of the year, with a distinct upward tendency recorded in both primary and domestic markets. No price changes have been made, however, from recent price lists, but the current levels shown below

(Continued on page 36)

How's this for a test?

This *actual Photograph* shows a "LITTLE GIANT" Pipe Wrench turning a pipe $\frac{1}{4}$ inch from a wall. A pipe almost inaccessible to the ordinary pipe wrench.

Notice the firm positive grip -- Notice that almost a half turn can be made without "ratcheting."

Wouldn't you find this wrench handy a dozen times a day?
You would.

One thing more—

No matter how "handy" the "LITTLE GIANT" might be if it didn't have "guts" it wouldn't make a friend in the world.

But it has! It has only three parts- handle, jaw and nut -none of the pins, springs, frames, etc. that are always breaking in the ordinary wrench.

Uncle Sam says 14 inch wrenches must withstand stresses of 2,800 inch pounds. The 14 inch "LITTLE GIANT" has repeatedly tested over 4,700 inch pounds without bending or weakening. It is made to stand rough treatment. Prove out the "LITTLE GIANT" by actual trial. Get one through your regular source of tool supply or write us direct.

Little Giant

PATENTED FEBRUARY 4, 1913

IT GETS INTO THE CORNERS

G GREENFIELD **T** TAP AND DIE **D**

OF CANADA, LIMITED GALT, ONTARIO

are stated to represent replacement values. Distributors also state that they would be justified in raising prices to correspond with the present upward trend of the markets. Basic conditions in the United States are described as strong, and while the demand is not unusually heavy, certain physical conditions prevailing in mill centres affect operation and delivery. Following are current local boiler tube quotations:

BOILER TUBES—

	Seamless	Lapweld
¾ inch	19 00
1 inch	20 00
1¼ inch	22 00
1½ inch	24 00
1¾ inch	24 00	23 00
2 inch	22 00	19 00
2¼ inch	24 00	21 50
2½ inch	27 00	23 50
3 inch	34 00	28 50
3½ inch	36 00	33 00
4 inch	38 00	32 00
4 inch	50 00	42 00

Winnipeg Markets

WINNIPEG, February 17.—The upward trend is still evident in local markets. Steam and water radiators are advanced in price, revised discounts are in effect on boiler elbows and couplings and cast iron fittings reflect the firmness evident in primary sources. There is also a firm trend noted in cotton waste and soil-pipe and fittings.

STEAM AND WATER RADIATORS AT HIGHER LEVELS

Winnipeg.

There is a revision in discounts on steam and water radiators. Two and four column steam radiators are quoted at less 44 per cent. off list price, and water radiators at less 43 per cent.

WALL RADIATORS SHOW UPWARD TREND

Winnipeg.

Wall radiators of both water and steam have shown an upward trend in price. Hospital radiators as well have also moved upwards. Wall radiators are quoted at list price less 40 per cent. and steam hospital radiators at list price less 36 per cent. and water at 35 per cent. Wall radiator brackets are quoted at net list price, while radiator buttons are quoted at less 10 per cent. off list price.

REVISION IN PRICE ON BOILER ELBOWS AND COUPLINGS

Winnipeg.

There is a revision in quotations on boiler elbows and couplings and latest discounts are 50 and 5 per cent. off list price. Unions show a revision and are quoted at 35 per cent., while Jefferson unions are quoted at 20 per cent. off list price.

CAST IRON FITTINGS AT REVISED QUOTATIONS

Winnipeg.

Cast iron fittings, including elbows, tees, crosses, return bends, caps and lock nuts, show a revision in discounts of 15 per cent. off list price. Reducers and eccentric reducers are quoted at the same discount. Bushings are quoted

FIRM TREND REPORTED IN ASBESTOS PRODUCTS

Toronto.

There has been no change reported in the quotations on asbestos air cell pipe covering, asbestos boiler covering or asbestos paper. It is pointed out however that a very firm trend is in evidence in primary sources and that under existing circumstances there is no possibility of any reductions in this line but that higher levels may be looked for. Below is a list of the quotations in effect.

ASBESTOS PRODUCTS—

Pipe Covering—	
Air cell, 4 ply	50 per cent. off list.
Air cell, 3 ply	55 per cent. off list.
Air cell, 2 ply	57½ per cent. off list.
Boiler Covering	\$1.50 — \$2.00 per bag.
Asbestos Sheathing	\$8.00 per 100 lbs.
Magnesia pipe covering	less 35 per cent.

FIRMNESS IN SOIL PIPE MARKET

Winnipeg.

Firmness is described as prevailing in the trend of soil pipe fittings. The market remains with a steady tone and although trading is quiet at the present time, indications are for increased activities with the approach of spring and summer.

STRONG TONE TO COTTON WASTE

Winnipeg.

There is a strong tone to the cotton market and quotations on cotton waste are ruling firm. The following lines are quoted as follows:

COTTON WASTE—

Full bales, per 100 pounds	17 25
Broken quantities	0 18½
10 pound packages	0 20
R.E.M. Full bales 100 pounds	20 00
Broken quantities	0 21

COLORED COTTON—

Full bales 100 pounds	14 75
Broken quantities	0 15¾

WOOL WASTE—

100 pounds	20 00
Broken quantities	0 21

RURAL SEWAGE DISPOSAL SYSTEM

(Continued from page 19)

and the results are available, there does not appear to be any logical reason why such information based upon such experience should not be taken advantage of and followed out.

Why Cultivating Chamber Must Be Larger

It is estimated that when sewage enters the first or cultivating chamber, that it requires from 36 to 48 hours to allow the anaerobic bacteria to digest, or break down the solids. This being the case, the raw sewage requires to be held back for a rather longer period than is required to permit the fluid, (which may be charged with anaerobic bacteria) to be freed from undigested sewage in suspension, and once the period of say 36 to 48 hours has elapsed, the effluent is more than likely to be ready to discharge up and through the centre pipe, previously shown on septic tank designs and known as fitting number 2.

That is the reason why the cultivating chamber must be larger than the dosing chamber. The writer has been asked what objections there would be to having both tanks the same depth. The fact that the syphon discharges when the sewage has reached a height of 17 inches would mean that it would be too low if placed on the bottom of a compartment the same depth as the cultivating chamber, or if both tanks were made shallow, say the same depth as the dosing chamber, the cultivating chamber would have to be too long or too wide to contain sufficient sewage, and furthermore, there would not be sufficient depth of sewage for the anaerobic bacteria to work in a vertical direction.

(Continued in next issue)

at 25 per cent. and plugs at 20 per cent. off list price. Flange union standards show a revision and are quoted at less 15 per cent. while dart flange unions are quoted at net list. Companion flanges are quoted at less 20 per cent., floor flanges at less 25 per cent., and branch tees at 15 per cent.

MALLEABLE IRON FITTINGS AT HIGHER LEVELS

Winnipeg.

Malleable iron fittings of class A, B and C are now quoted at less 55 per cent. off list price. Crossovers are quoted at less 50 per cent. off list price and union elbows and tees at less 50 and 5 per cent.

HIGHER DISCOUNT ON RADIATOR VALVES

Winnipeg.

Radiator valves and elbows show a revision in discount. Rough body radiator valves with Jenkins disc are quoted at list prices less 55 per cent. Radiator elbows are quoted at the same discount. Detroit packless radiator valves are quoted at list price less 20 per cent.

STEADY TONE TO GALVANIZED RANGE BOILERS

Winnipeg.

Since the recent advance range boilers are ruling firm and quotations are as follows:

RANGE BOILERS—(Galvanized)—	
18 ga., \$10.25; 30 ga., \$11.35; 35 ga., \$12.45;	
40 ga., \$17.05; 52 ga., \$24.60; 66 ga., \$35.30;	
82 ga., \$50.00; 100 ga., \$65.00; 120 ga., \$76.25.	
RANGE BOILERS—(Extra Heavy)—	
30 ga., \$13.50.	
Boiler Stands—	
12 in. \$2.40; 13" \$2.56; 14" \$2.64; 16" \$2.84;	
19" \$3.24; 20" \$3.74; 22" \$4.05; 24" \$4.45.	

KERR VALVES

**Iron Body, Bronze Mounted
with Outside Screw and Yoke.**

These gate valves are specially designed to comply with the requirements of the Factory Mutual Fire Insurance Companies' specifications for Sprinkler Equipment.

Bronze bushed Stuffing Boxes, and Malleable Iron Glands are employed, and stems are of the dimensions and strength required on this exacting work.

Commercial valves of our manufacture are supplied in this pattern and with this equipment, thus insuring a remarkably high class valve.

The valves are compact in design, sturdy construction, and modern throughout.

Don't Argue!

You're wasting your time, patience and good-temper when you argue in the face of cold hard facts.

You **may** be able to get along by basing your estimates on stale price information from irregular sources. You **may** be fairly certain that you're making a profit. But—

Cold facts tell you plainly that only positive, reliable price information can protect you.

ALLPRISER protects you on every job, small or large, by giving you an accurate, day-to-day service on prices. The successful Sanitary Engineer carries his ALLPRISER in his pocket at all times.

Get acquainted with ALLPRISER to-day.

WRITE TO

K. B. ALLISON

4 Irwin Avenue - Toronto, Ont.

The Ideal Sewage System Includes a "Chicago" Pump

Mt. Dennis Public School, Mt. Dennis, Ont.

This sewage disposal system is considered the "last word" in sanitation and efficiency.

Mr. Edwin Newsome's article in the January 1st issue of the Sanitary Engineer described the whole layout completely and vividly. The pumping equipment which he said played such an important part in the whole plan is a "CHICAGO" product.

Our Engineering Department is at the disposal of any architect, engineer, contractor, plumber or steamfitter who is in need of information or assistance in connection with their pumping problems. Get in touch with our Toronto representative or come to us direct.

Chicago Pump Company

D. M. Allen, Representative
50 DUNDONALD ST., TORONTO, ONT.,
Main Office and Works:
2309-2336 Wolfram St., Chicago, Ill.

AMONG a plumber's best friends are his tools and, among his tools, many a plumber claims Williams' "Vulcan" Chain Pipe Vise as his best friend.

It's the **only** Pipe Vise made entirely of wrought steel. 3 sizes for $\frac{1}{8}$ to 8 in. pipe.

RIVETED RANGE BOILERS

Made by the old reliable

**TORONTO HARDWARE
MFG. CO., LIMITED**

The Everlasting Veneer Toilet Seat

*Strong, Clean
Hygienic*

This reliable, dependable toilet seat is made of 7 and 9-ply, air-seasoned wood veneer, held together by our special wood cement. This cement is proof against heat, cold or dampness. The veneering is distributed according to the strain and wear required of the different parts. The Everlasting Seat will never crack, warp or split.

It is a splendid seat for use in cold, damp basements where closets must be installed. The Everlasting Toilet Seat will meet, and successfully resist, these severe conditions of moisture, changing temperature, etc.

A Permanent Job

When installing plumbing or fittings make your job permanent—with Rawlplugs.

You can save time and know the job is done right when you use Rawlplugs, because the screws will **never** fall out and there is no waste of labor. Rawlplugs **hold** screws securely in brick, concrete, cement, hollow tile, bath-room tiles, slate or any other material.

Contractors who take part in the construction of a building should see that these fibre plugs are used with every screw. They are cheaper, neater and stronger. Positively the best device for securing screws that has ever been used.

Write to us to-day for more interesting information, samples and price list.

Perfection

Here is a closet tank that is beautiful and attractive enough, externally, to satisfy the most fastidious purchaser, and yet is so perfect inwardly, mechanically, that every plumber knows it will give the most satisfaction for the greatest length of time for the least expenditure of money.

That both the trade and the public are appreciative of this rare combination of beauty and mechanical excellence is proved by the fact that the New Design Vitro Tank has the greatest sale of any tank in Canada.

Bankrupt

The Result of Guessing at Prices
75% of the failures in the plumbing and heating business are caused by prices being too low.

We Guarantee your profits

Years of actual experience in the Plumbing and Heating business fits us to compile suggested selling prices. Whether it be a $\frac{1}{8}$ plug or a bath tub we absolutely guarantee you a reasonable profit. Our system has saved many a Sanitary Engineer from bankruptcy during the past 5 years.

Here's How

We furnish you with a large leather covered loose leaf book containing suggested selling prices on over 3,000 items. No matter how often prices change it's our business to keep your book up-to-date and we have 4 people in our office who do nothing else but watch your profits. You should try out this Service for a year but if you are skeptical, send and get our booklet. It's interesting.

Your Own Salesmanship Is Not Enough

The testimony of satisfied owners—owners of boilers and radiators that you have installed, is necessary to the up-building of a successful heating business.

The average Canadian wants, and demands from his heating plant adequate heat—and wants it at a minimum of trouble and of fuel consumption.

Daisy Boilers and Viking Radiators always, unfailingly, give just this service; they build good will for the dealer; they enhance his reputation; they are his surest salesman.

Spring Home-Builders are alive to the necessity for reliable heating systems. Estimates are being furnished and plans being made—now. Your golden opportunity is at hand to recommend, sell, and instal “Daisy Boilers” and “Viking Radiators.” We are ready to go over specifications with you.

NATIONAL

U BEND TYPE

STORAGE HEATERS

Years of Experience in the Design and Construction of Feed Water and Storage Heaters explains in part the preference so many engineers show for heaters that bear the National name.

Cast iron or steel shells; seamless drawn copper tubes. "Out of Service" periods are few and far between where **National "U" Bend Heaters** are installed. The ease with which the heating element may be removed, for cleaning or repair, is ap-

preciated by owner and engineer alike.

National "U" Bend Storage Heaters assure a hot water supply whenever you want it. They use live or exhaust steam, and heat either continuously or intermittently.

We have found the Perfect Burner

The Seymour Oil Burner

To-day the using of oil fuel for domestic heating has passed the experimental stage; it is a thoroughly proven success—with the right type of burner.

We have been carefully watching this new development in the heating field, and two years ago we began to examine and test various types of burners.

We examined 22 different oil burners and each was unsatisfactory. Then we found it—the perfect burner. It had been made in Toronto for over three years.

THE SEYMOUR BURNER

Prominent engineers and professors from the University of Toronto were called upon to make tests; investigators interviewed every user—some of the burners had been in use three years. The burner passed every test with flying colors and every user was more than satisfied with the service he was getting.

We took over the manufacture of the Seymour Burner and have sold it all over Canada. Every dealer has re-ordered.

Mr. E. H. Jewett, president of this company, is a founder and director of the Page and Jewett automobile companies. Jealous for his business reputation, only the highest quality merchandise is manufactured in our plant.

The Jewett reputation and a Million Dollar Company guarantee the worth of the Seymour Oil Burner.

The Price is Reasonable. For further information write:

Are You Lying Down on the Job?

Only a plumber's very best endeavors will bring him success in these days of keen competition. He must not only know the practical and technical end of his business, have a capacity for hard work, and a shrewd grasp of salesmanship, but he must also know his markets—where to buy to best advantage.

The plumber who through carelessness or neglect fails in any of these important matters is lying down on the job.

There is no excuse for a plumber being uncertain or ignorant of prices in his field. With an Allpriser on his desk and the Allpriser service, he takes the guess out of estimates and substitutes accuracy—the cost is negligible.

STEAM HEATING For Town and Country Homes

Dunham Packless Radiator Valve.

Users of Dunham Heating often remark, "Zero or below has caused us to appreciate still more our Dunham System."

Dunham Radiator Trap.

THE merits of Dunham Steam Heating in large buildings have been universally recognized. Contractors recommending and installing Dunham Steam Heat in homes do so because it provides the same characteristic services:

Simplicity in operation. Quick response to changes in outside temperature. Individual radiator control with Dunham Packless Valve, which admits as much or as little heat as required. Freedom of circulation through each and every radiator, insured by the Dunham Radiator Trap, attached as an outlet on the radiator. No noise; no cold radiators. Ideal heat in spring and fall, when only a little fire is required and unsurpassed efficiency in bitter cold weather.

'Phone or write any Dunham office for information or assistance in putting your Dunham Steam System proposal before your customers.

First Installation Hardest to Get

Garth Company, Ottawa, Talk Winter Conditions Hard and Long to Farmer Prospects for Water and Sewage Systems—Farmer Will Buy Automobile in Hurry But Hesitates Over Sanitary Conveniences

SELLING the farmer on the idea of water systems and sewage disposal systems is no mean task, but like every other business proposition, there are ways and means of landing your prospect. Some very telling methods along this line have been adopted by the Ottawa branch of the Garth Company of Montreal, as outlined to Sanitary Engineer by T. E. McGrail, branch manager.

This company has been successful in the immediate past in putting across the idea of steel septic tanks in conditions where water difficulties threaten and where it is necessary to eliminate the possibility of heaving on account of clay. This system has been sold largely on the strength of its money saving possibilities. The farmer has been brought to realize that it is a cheaper proposition than others, because no concrete work is necessary.

Mr. McGrail pointed out that these tanks were being made in steel, adaptable to any condition, and in such a manner that they could be installed in basements of buildings. This was proving quite a feature, and it was the intention of his company to boost it as much as possible in rural communities.

House Canvass

When it came to a discussion of the methods of getting prospects, Mr. McGrail very emphatically stated that he favored the house-to-house canvass in preference to any other idea which might be carried out.

He did not think there was a great deal to be accomplished by sending circulars or letters. It was much more satisfactory for the contractor or trader to sit down with the farmer in his own house and tell him in the most convincing manner how he was going to benefit by the installation of modern sanitary improvements.

"I have found," said Mr. McGrail, "that if you talk winter conditions hard and long enough to the average farmer, you will win him over. A discussion of the danger of outside privies especially to his children will at first, in most

cases be met with the rejoinder: 'Well, what has been good enough for me is surely good enough for my children.' But I have found that the self-same farmer can be sold on the strength of examples of young people who are constantly leaving their rural homes for life in the city where sanitary conditions are more agreeable and healthful.

Doesn't Hesitate to Buy Car

"Very often you can 'get' your farmer prospect by drawing comparisons. And one comparison which will set him thinking is that he does not hesitate to spend a thousand dollars on an automobile, whereas for an outlay of less than half that amount he could have modern sanitary conveniences installed in his home. Where you find a farmer putting up a good building to replace the old home you have a chance of a lifetime

to sell him, and he can usually be sold on the argument that his new home will lack a great deal to make it up-to-date, through the absence of modern sanitary improvements.

Land the First One

"In districts where people live fairly close together, the big thing is to land the first installation, the remainder will come easier. That has been our experience. There is a great deal of pride among farmers and where they live close together one fellow is not overjoyed at seeing his neighbor get something he has not got."

Mr. McGrail when asked what he thought of the idea of trying to influence the farmers through the agency of the county council replied that he did not place much faith in this method for the simple reason that members of county councils, were as a rule the most difficult class of people to sell. "And if you cannot sell the councillor himself, there is little use in spending time trying to get him to influence others," he said.

Give Immediate Estimate

Speaking from the experience he had gained while representing the T. G. Griffith Company of Toronto, Mr. McGrail laid emphasis upon the necessity of giving the farmer an immediate estimate on the job. He always asked for it. Therefore it was essential that whoever went after the job, whether it be the manufacturer, the trader or the contractor, he should have a combined knowledge of estimating, installation, and the principles of water supply and sewage disposal. A good man, Mr. McGrail thought, should have little difficulty in giving an estimate on the spot.

Other plumbers with much experience in rural business have also told of the necessity of giving careful estimates to farmers. In view of the approach of the season when farmers will appreciate the value of farm sanitary equipment, now is a good time to figure on putting these suggestions into practice.

Show farmer danger to his family of outside privies.

Plumbers Discuss Raising of Standards

Committee Appointed to Draw Up Amendments to Existing Plumbing By-laws of York Township
—Value of the Plumbing Trade Paper

THE York Township Master Plumbers' Association held their monthly meeting, followed by a repast, at Hunt's Limited, Yonge St., Toronto, on Wednesday evening.

Under the able direction of President MacDonald and Secretary Garrick, the meeting got away to a good start, and after regular routine business had been dealt with, a lengthy and thorough discussion under the heading of "Raising the Standard of Work," took place.

Reeve W. S. Jury, known to the trade through his many years' connection with the Gurney Foundry Co. and Crane Limited, showed in his interesting address that a vast amount of time had been given by him toward the general improvement of conditions in the Township, and particularly toward making

the class of work done by the craft as safe and sane as possible for the public good.

He made a spirited appeal for sound plumbing by-laws and advocated rigid and impartial enforcement.

That his views expressed the consensus of opinion of the majority present was shown by the general spirit of the meeting.

Harry W. Rushby and John McCandlish particularly stressed the idea that by-laws and their enforcement must be primarily for the protection of the public, and with this end in view the meeting approved a motion, giving a committee under the chairmanship of Mr. Rushby, power to draw up proposed amendments to the existing by-laws in

York Township. These will be discussed at the next meeting in detail.

This was followed by a splendid educational talk by Kenneth B. Allison, whose illuminating and convincing arguments in which the subject of overhead was dealt with very fully and clearly.

Mr. Allison made reference to the value of the trade paper in collecting and passing on news and technical information of value to the craft, and made particular reference to 'Sanitary Engineer,' as being the only paper of its kind in Canada. The applause which Mr. Allison received upon finishing his address indicated in a very striking way the attitude of members present.

Following items dealing with developments in the plumbing and heating field in Canada in 1903 are reproduced from the trade paper files of the MacLean Publishing Company:

"An excellent sewerage system has been installed in Amherst, N.S., and plumbers are very busy."

.....

"Purdy, Mansell & Co., Toronto, have the contract for hot water heating for the R. C. Presbytery, Penetanguishene, Ont."

.....

"It is rumored a new hotel will be built in Montreal this summer, to be called the Grand Central and to be built on Victoria Square."

.....

"Toronto journeymen plumbers will hold their annual At Home in the Temple Bldg. on Friday evening. President J. A. Drogan is chairman."

.....

"The trouble between Lemmon, Claxton & Lawrenson and the Plumbers and Sheet Metal Workers' Union at Kingston, Ont., has been amicably settled."

.....

"Permits issued for building in Toronto total \$3,834,923 against \$3,568,883 in 1901 when the permit for the \$1,000,000 King Edward Hotel was taken out."

.....

"At the last meeting of the Plumbers' Supply Association, the following resolution was passed: 'Resolved, that each member notify all his travellers, agents, etc., that associational prices are now firmly enforced and must be rigidly adhered to.'"

.....

"It often happens that the droppings from a nickel-plated pipe or from a brass pipe, stain an enamelled bath. It is not easy to clean stains from enamelled ware but in this instance it will be found that a complete polish can be obtained with oxide of tin which does not destroy the enamel."

Where a Bath is a Rare Luxury

Here are shown two burden bearers in the city of Constantinople, the city where much hardship has been experienced as result of the varying fortunes of war. This mode of transportation would hardly be in keeping with the Canadian plumbers' ideas of profitable business and turnover would be pretty small in proportion to costs if it were done this way in this country. Someone is soon to have a new bath tub, which is a rare luxury in Constantinople. The style of the bath is not altogether unlike some of those found in this country.

Merchandising Plumbing Goods Through the Best Use of Window Displays

Standard Plumbing and Heating Co., of Winnipeg, Man., Find Windows Big Help in Selling Small Bathroom Accessories and Bringing Prospects for Heavier Equipment—Selling the Western Farmer on Quality Plumbing and Heating Goods

Window displays are an important factor in the success of the Standard Plumbing & Heating Co., Ltd., of Winnipeg, Man., in the merchandising of plumbing and heating equipment of all classes from small bathroom accessories to large installations. The windows dressed as illustrated created quite a sensation, the Christmas tree idea, as suggested in Sanitary Engineer in December last, being quite a sensation. Sales of lines displayed were in fair volume but the chief advantage was the list of prospects secured for follow-up work.

A SURVEY of the plumbing field in Canada, recently made by one interested in this field, brought home very forcibly the impression that the progressive plumbers who were getting the business and not talking of hard times were ones who, among other things, were making best use of their window displays to merchandise plumbing equipment. The idea of varying the display according to seasons and subjects has been used by a number of plumbers, and the Christmas tree idea as suggested in an issue of Sanitary Engineer last December was very widely used with good effect.

One of the plumbing firms which has great faith in the value of the windows is the Standard Plumbing and Heating Co. Ltd., of Winnipeg. In the accompanying illustration are to be seen two broad windows and two windows at the door entrance, all dressed attractively with plumbing and heating equipment and kindred lines. On the right is seen a built-in type of bath, shower, and a group of small bathroom accessories grouped around the tree. In one of the small windows is seen a pedestal lavatory; coffee urn, mirrors, etc. In the

opposite window a sink, closet seats, etc., are arranged. The broad window on the left contains a grouping of electrical lines showing electric water heater connected up to range boiler, electrical grate, vacuum cleaner, range, etc. This latter business is conducted in conjunction with a firm of electricians.

This firm is located at 290 Graham Ave., Winnipeg, and is under the direction of Joseph Turner. Discussing plumbing and heating matters with Mr. Turner, it was pointed out to Sanitary Engineer that sales of high quality

equipment to Westerners, particularly farmers, were made by the use of the argument that the average Westerner insisted upon having the best grade of tools and implements for harvesting, and that they should see to it that their household was equipped with modern sanitary fixtures. The idea of giving the farm housewife an even break on the deal is also stressed.

In the City of Winnipeg, this firm does considerable contracting business and large installations, such as hotels, restaurants, etc.

Householders First on List for Gas

A COPY of the latest regulations made by the minister of mines under the Natural Gas Conservation Act of 1921, has been received.

The regulations, as issued for the year 1922, first designate the consumers to whom natural gas may be supplied. Householders have preference over all other users. The use of the gas for cooking meals anywhere comes second, the heating of dwelling houses third. A long

list of classes of structures which may also burn gas for heating follows.

New consumers may be supplied where the property to be supplied abuts upon the present mains and can be reached by private service lines from the said mains. Further limitations are placed on the use for heating purposes in the following clause:

"In the foregoing classifications the heating equipment for which gas may
(Continued on page 38)

Sanitary and Heating Equipment of World's Largest Hotel

Mount Royal Hotel Costing
\$7,000,000 Has Interesting Ven-
tilating, Heating and Refriger-
ating System

By J. G. SOUCY

DURING the last 10 years there has been felt a growing need for additional hotel accommodation in Montreal, designed not only to meet the needs of the travelling men and the ever-increasing number of tourists, but to meet the growing demand for better and larger accommodation for general conferences and international conventions. The Mount Royal, with its many beautiful and convenient appointments, was the logical outcome of such an unmistakable demand. The hotel is under the direction of the United Hotels Company of America.

Much could be written about the commercial importance of this enterprise from both a national and an international aspect, but the outstanding purpose of this article is to describe features of the plant equipment, which are of particular interest to our readers.

The hotel has a most convenient location, just one block north of the busy corner of St. Catherine and Peel Sts. The main entrance is on the east side of Peel St. It is in the heart of Montreal's busy shopping district and convenient to all theatres, railroad depots and boat landings.

Just north of it is Mount Royal and to the south flows the majestic St. Lawrence, with its important shipping facilities. To the east are to be seen large industrial centres, here and there studded with churches and office buildings. A little to the south, is the great financial centre, while to the west are fine residential districts.

The Finished Undertaking and General Plan

Some idea of the magnitude of the undertaking may be gained from the fact that the building is 130 feet high, occupies a space 306 ft. long by 227 ft. wide, or an area of 70,000 sq. ft., weighs approximately 150,000 tons; it has cost more than \$7,000,000 to build and required over one year to complete. There have been more than 1,500 men employed directly on the site, which included laborers, mechanics and artists; besides a large staff of expert architects, accountants,

draftsmen, mechanical and electrical engineers, superintendents, supervisors and inspectors.

Away from the site, hundreds of workmen were provided employment in quarries and forests, brick-kilns, cement works and saw-mills, steel works, foundries, and machine shops; various kinds of factories and warehouses, in stores and studios, all for the purpose of providing structural beauty and supplying necessary comfort to the travelling public.

Besides being one of the finest hotel buildings in Canada from an architectural standpoint, it is fireproof throughout. It is the largest hotel in the British Empire. It has 1,100 rooms with bath and toilet conveniences, a large, commodious vestibule and main corridor, as well as two large convention halls. One of these halls, known as the grand ball room, has a seating capacity of 2,000 and the other of 1,200; also, there are several private dining rooms besides the large main dining room.

The ground floor is occupied by stores and there are 10 stories above for the accommodation of guests, the tenth floor being used for banquet and convention halls. In the "Pent House" above the roof, additional separate and complete units for ventilation, refrigeration, etc., are installed. The ground floor further contains the most complete and up-to-date kitchen bake ovens, cold storage, refrigerators and general storage spaces. Below is the basement which contains the most modern laundry equipment, refrigerating and ice-making machinery, also power plant for heating, lighting, ventilation, steam-driven refrigerating apparatus, steam-driven electrical generating sets and switchboards, also water softening and filtering systems.

Architecture—Georgian and Italian Renaissance

The exterior architecture of the building is "Georgian," and the materials used were well selected for the style so adopted. The principal materials used consist of Stanstead granite and Canadian Benedict buff stone also Hocking Valley

and Upper Kittanic light buff brick. The interior design is generally what is known as "Italian Renaissance."

The "Georgian" is a neo-classic style of architecture which flourished in England from 1715 to 1800, during the reign of the Georges. It is a combination of the Italian and the Palladian styles, divested of excessive ornamentation.

The architects were Ross & MacDonald, 1 Belmont Place, Montreal. The general contractors were Thompson, Starrett Company, Ltd., Drummond Building, Montreal, A. G. Moulton, vice-president and general manager.

Power Plant and Equipment

Some idea of the amount of plant equipment required to meet the needs of this hotel may be gained from the fact that there is about 8,000,000 cubic feet of space to be lighted, heated and ventilated; besides the fact that the hotel may be called upon to entertain, feed and otherwise look after the personal comforts of four to five thousand people at any time, and provide sleeping quarters, fully equipped with bath, toilet, etc., for 1,100 to 2,500 persons.

The basement and sub-basements are probably better ventilated than the average hotel or private home, and the whole arrangement is so complete in every detail that nearly all the wants or needs of its patrons can be supplied within the confines of this building.

Ample space and capacity is provided for store-rooms, kitchen bake ovens, laundries, work-shops, ice-making, refrigerating and cold storage; also an abundant supply of fresh air and cold drinking water to each room.

Steam Engine Driving Stoker.

The drinking water is supplied from an artesian well, 10 inches in diameter and 830 feet deep, (875 feet below street level). The well penetrates and gets its supply from two veins, located respectively at levels of 362 and 830 feet below the basement floor. The supply would seem ample, as a test made showed a capacity flow of 7,200 gallons per hour of pure water at 42°F. The water is elevated from the 91 foot level by means of an air lift or ejector, and the air compressors used will be described later in this article. The water, after passing through suitable filters, is circulated through brine-cooled coils which reduces its temperature to that desired for human consumption. The brass pipes through which it is circulated are all covered with heavy cork insulation. The surplus water goes into the two large storage tanks on the roof used for general supply.

The power plant proper consists of 4 Robb water tube boilers, 2 steam-driven generators, 2 steam-driven feed pumps, 2 steam-driven vacuum pumps, 2 steam-driven supply pumps, 2 air compressors (one steam-driven and one motor driven); 2 steam-driven refrigerating machines, 2 motor generator sets and large motor-driven ventilating fans, motor-driven

VISION — THEN AND NOW

INDOMITABLE faith and wonderful vision are terms that have been frequently used in descriptions of the New Mount Royal Hotel. It may be interesting to recall that faith and vision had much to do with the founding of Ville Marie de Montreal in 1641—1642. The romantic story had its beginning in Old France where one, Jerome de la Dauversiere, desirous of launching some plan whereby the red men of Canada might be won over to Christianity, claimed to have been told by an angel that the first step toward this object would be the setting up of a mission on the Island of Montreal. From this inspiration developed the expedition of Maisonneuve who, with a company of fifty, landed on the site of the future metropolis some two hundred and eighty years ago. The spot had been visited by Cartier one hundred years before, but there had been no subsequent settlement. Not long did the Iroquois permit the newcomers to remain unmolested and the story of Maisonneuve's heroic defence is one of the finest epics of early days in this country. His memory has been perpetuated in graceful form by the statue in Place d'Armes Square. It is from this spot that the eastern metropolis has radiated with characteristic faith, courage, perseverance. Maisonneuve and his little company might easily lose themselves in the splendid structure that has just been completed. It is not the only instance in Canadian history where the visit of a missionary has formed the foundation for modern perspective and enterprise.

elevator hoists and numerous smaller electric driven circulating and sump pumps. The boiler and engine room floors are approximately 30 feet below the street level and the main portion of the power plant is located in the north-east portion of the sub-basement or near the corner of Burnside and Medcalf Streets.

About 10 feet below the boiler room floor is the smoke tun-

nel, ash pit tunnel and coal conveyor tunnel. The bottom horizontal section of the coal conveyor is about 100 feet long.

Boiler Room Equipment

There are installed in the boiler room 4 Robb water tube boilers. Two of the boilers are of 400 h.p. capacity each and two others are of 300 h.p. each, making a total of 1,400 h.p. installed. The boilers are of the double cross-drum type and designed to carry 160 lbs. pressure.

They are not equipped with regular super-heater units, although there has been provided a special superheating

feature, the top rows of tubes being so designed that the equalizing steam passing through them is exposed to the hot combustion gasses in the first stage or pass. The boiler ratings are based on the usual formula of 10 sq. ft. of heating surface per h.p. The boilers are supported upon steel columns. The boilers are equipped with Turner baffles, which together with the brick settings, and furnace linings, were installed by Mander & Lucas. The furnaces are lined with Glenboig fire brick and the back passes with Lumber City fire brick. The boilers are all equipped with stokers, furnished by the Taylor Stoker Company of Canada, Ltd. Two of the stokers have 3 retorts each and the two others 4 retorts each, there being one retort per 100 h.p. demand. Each retort is provided with 17 tuyeres. The stokers are driven by 4 12½ h.p. vertical steam engines. The stokers are intended to burn either anthracite screenings or slack (bituminous) coal or a mixture of both. The overload capacity of these stokers is 200% of rating.

The compressor plant is described as comprising an Ingersoll-Rand class ER-1 single stage straight line short belt motor driven air compressor equipped with the latest type of I-R plate valves, permitting higher overall efficiency than any similar equipment yet produced. This unit is used for regular operation, and for standby purposes, an Ingersoll-Rand class FR-1 I-R single stage straight line steam driven compressor is installed. This machine is also equipped with the latest type of plate valves and I-R balanced piston steam valve. An unique feature of the compressor or plant, which is strictly up-to-date in all respects, is that special precautions were made to prevent the noise of operation from travelling throughout the building.

The advantages of this plant are extreme simplicity and

Inside view of furnace showing multiple retorts of stoker.

Sectional view of stoker, showing series of coal feeding plungers.

reliability, large capacity, limited only by the source of supply, low maintenance cost and great flexibility. A further advantage is that the water is very thoroughly aerated by the amalgamation of the air and water passing through the discharge pipe. The extensive aeration to which the water is subjected and the natural filtration due to the subterranean sources of supply produce a pure undefiled water which is particularly adapted to hotels, breweries, bottling works and municipalities.

The advantages of the particular type of pump installed are: Realization in the most efficient manner of all of the advantages to be gained by use of an air lift pump. In practice the air in the Type "VA" Pump is divided into fine streams which is an essential requirement in air lift pump efficiency.

A proper amount of back pressure is held in the pump and prevents sudden rush of air due to the coalescence of bubbles and lightening of the discharge column. There are no moving parts whatever. The foot piece offers a smooth, unobstructed

entrance and discharge chamber. There are no nozzles or obstructions.

It is impossible to prevent scale and dirt passing down the air lines into the pumps, consequently provision must be made to eliminate any such trouble with certainty. In the class "VA" pump any foreign material which may come down the air pipe falls through the unobstructed openings between the outside casing and the inner tube.

This regulator made by the Craig Regulator Company of Canada is a very simple device, and its control of the damper is actuated by fluctuation in the draft over the fire, with the result that if the draft becomes excessive beyond the point for which the regulator is set, the damper is closed sufficiently to bring it back to normal, and vice versa.

A glance at the line drawing will make the following description very clear. The 2 in. pipe B opens directly into the combustion chamber, at one end, and as shown under the gasometer float A in the regulator itself, the gasometer float is connected through a chain F to a plunger C which moves vertically in a multi-port valve opening and closing the ports with the movement of A. The piston E is in a cylinder off which the multi-ports of the valve just mentioned open. This cylinder is fed by water from a pipe G from city water supply, which is controlled by a needle valve. The counterweight D balances the plunger C, chain F, and gasometer float A, and any extra weight in this counterweight takes care of the position of the damper to give the required draft.

The action, briefly, is as follows: Any extra suction at D exerts a downward pull on A, and consequent downward movement of C, closing off the ports in the multi-port valve. Immediately the pressure in the piston chamber above E is built up through the inflow of water at G, causing a downward movement of the piston and a closing of the damper which will reduce the suction. It should be noted that the piston E by the closing action of the damper, will be comparatively slow, as the inflow of water through G is cut down to a minimum by the needle valve. On the other hand, when the reverse action takes place, the plunger C rises and opens as many ports in the valve as the decreased draft condition dictates, allowing a quick rise of the piston E, and the consequent quick opening of the damper.

Forced (Balanced) Draft System

The forced draft equipment consists of 2 (Keith) Sheldon's, Ltd., fans supplied by Ross G. Greig, of Montreal. The fans are driven by two 25 h.p. vertical steam engines, by the Troy Engine Foundry & Machinery Company, of Troy, Pa. The forced draft fans and engines are set in an offset directly in front of the boilers. These fans are used in combination

Pressure Filters.

Water Softener.

H. W. Supply Tank.

Vacuum Pumps and Return Traps.

with a Craig damper regulator attached to each boiler which results in a balanced draft being maintained automatically.

An unusual feature encountered here is the "down-draft" direction of the gases or products of combustion from the last pass to a smoke tunnel below and thence up to a round (brick-lined) steel stack or chimney.

The water columns are all equipped with high and low water alarms. The safety valves consist of two 4" "Pop" or spring leaded type of valve supplied by T. McAvity & Sons.

Feed water regulators—Each boiler is equipped with

Main Sump-Pumps and Fan Room.

Copes feed water regulators, made by the Northern Equipment Company, and supplied by Peacock Bros., Montreal. They automatically regulate the flow of feed water to meet requirements.

Main stop and non-return valves—There are four 6 "D" main stop non-return Lunkenheimer steam valves, supplied by the Garth Company, Montreal; also Lunkenheimer stop and check valves in the feed water lines.

Blow-down valves—There are two sets of blow-down valves to each boiler, one is of the type of everlasting B. O. valve; and the other consists of Lunkenheimer gate valves. The

Brine and Fresh Water Pumps.

blow-down discharges into a large B. O. or expansion tank, made by Darling Bros., Montreal. The drains from the above tank are led into a sump-pit or tank below the boiler room floor, and a set of ejector pumps remove the waste water to the main sump-pit. The steam gauges, made by the Foxboro Company, Foxboro, Mass., and were supplied by Peacock Bros., of Montreal.

Boiler meters.—Each boiler is equipped with a Bailey boiler meter type 26, class 56, which indicates and records the air flow, steam flow and the flue gas temperature, also the draft in the fire box; in addition to the above there is an integrating feature which totalizes the flow of steam for any desired period.

Steam flow meters.—There are two Bailey steam flow meters, type C6, class 1, which indicate and record the flow of steam other than that used for power and heating purposes. They are also equipped with an integrating feature for totalizing the amount used for any desired period. One of them is used to meter the steam used in the kitchen, and the other to meter the steam used in the laundry. It is quite important that the steam used for power in summer and that used for heating in winter should be determined by similar instruments. In this way the amount of condensate going to the sewer could be determined and in such a large plant the corrective value of such information would prove valuable and result in a direct economy.

Steam and Hot Water Distribution

Steam branches from the boilers are all connected into a 10 in. main steam header or "log" from which an 8 in. loop provided steam for all the auxiliary steam pumps and engines located in the engine and fan room.

The steam is distributed first at 160 lbs. as above described, another line known as the high intermediate carries 80 lbs., another known as the low intermediate carries 40 lbs. and the low pressure from 2 to 3 lbs. is used for heating purposes entirely. All the steam piping from 5" up to 10" as well as all brass and iron pipe is of the Crane make, and all high pressure steam valves are of the Lunkenheimer make; Crane valves are used for low pressure steam heating.

Philip Carey—85 per cent. magnesia pipe covering was used by Wm. Rutherford & Sons for all tanks and steam pipes. The feed water control and check valves are Lunkenheimer make supplied by Garth & Co.

A Bailey feed water meter, type C2, class A, is used to indicate and record the flow of feed water to the boilers; the temperature of the feed water is also indicated and recorded; also this meter is equipped with a special integrating feature which totalizes the amount of feed water used for any desired period.

Feed water pumps.—The two 10½x8x24" steam driven, vertical direct acting, Weir feed water pumps, through Peacock Bros., are the latest design of the G. & J. Weir Pump Company. Their capacity is, in excess of that required, (200 lbs. head at a speed of 12 double strokes per minute), 5,930 imp. gallons each per hour. These pumps are equipped with Copes feed water pump regulators. There are two size 5 Blackburn & Smith Corp. feed water filters.

The feed water heater, illustrated here, has a capacity of 3,950 gallons per hour and is of the closed type. It is heated generally by exhaust steam and is equipped with a Powers automatic temperature regulator.

In the winter time there will be a large amount of condensate from the heating system returned to the hot well or feed water supply tank; and the make-up water is taken from the two large storage tanks upon the roof. Each storage tank has a capacity of 10,000 gallons of filtered water. Further provision has been made for supplying the boilers direct from the two city water service connections. There are in all five sources of feed water supply.

- (1) High pressure city water direct to boilers at 135 lb
- (2) Filtered water from the service supply pumps at 150 lbs.
- (3) Low pressure city water (60 lbs.) by feed pumps at 175 lbs.

Air Compressor Outfits.

Refrigerating Machine.

(4) Hot water returns from the heating system by feed pumps at 175 lbs.

(5) Water from the artesian well, should an emergency require at 15 to 175 lbs.

City water connections—Provision has been made for two water connections, one from the high pressure service (Peel St.) at 135 lbs., and another from the low pressure (Burnside) at 60 lb. One very objectionable feature, an engineer will note here, is the use by the city of Montreal of left-handed stop valves. Such a practice should be discontinued at the earliest possible moment.

Pressure water filters—The 6-78" Refinite pressure filters shown here have a capacity each of 6,000 Imperial gals. on a basis of three gallons per square foot per minute. The hot water supply for wash basins, baths and shower baths, also kitchen and laundry, is provided for by five large cylindrical tanks, heated by exhaust steam. One of them is used exclusively for the laundry. They have a combined capacity of 19,000 gallons per hour.

Water softener and brine tank—The 60 inch water softener and brine tank by Refinite Co. of Canada has a guaranteed capacity of 46,000 Imperial gals. in 10 hours. The softened water is provided for use in the laundry.

General supply and fire pumps—The general water supply for the building, also emergency for fire purposes, is provided for by two steam driven 17x12x21 direct acting vertical Weir pumps. They were supplied by Peacock Bros., and have a capacity each of 24,000 Imperial gals. per hour at 170 lbs., (speed 26 double strokes per minute). Although the building is thoroughly fireproof, there will be at times considerable combustible material stored in it, so that arrangements were made that either one or both of these pumps could be used for fire purposes.

Vacuum pumps—The condensate from the heating system is handled by means of four Darling Bros. steam-driven vacuum pumps.

Condensate from the laundry during the summer is handled by Crane lifting traps.

Engine and Fan For Forced Draft.

Johnson Regulator and Air Compressor.

An air compressor in a modern power plant is now considered indispensable. The Mount Royal is provided with two 12x10, made by the Canadian Ingersoll-Rand Company, Sherbrooke, Que. One is a steam driven unit and the other is motor driven by a Westinghouse electric motor.

Direct and Indirect Heating

Direct Heating—Some idea of the amount of radiation required may be gained from the fact that there is approximately 8,000,000 cubic feet of space to be heated, with a very large glass and outside wall exposure. There are installed 2,500 units of varying sizes of steam radiators by the Dominion Radiator Co. in the various bed, bath, reception, dining and special rooms, and the heating of them is controlled as required by modulation valves and thermostatic traps. It is estimated that from 60,000 to 63,000 square feet of radiation

WALTER T. ARMSTRONG,

was required to heat the building, including both the direct and indirect systems.

Indirect Heating—In connection with each fresh air supply fan, is a heating unit consisting of a bank of steam-heated pipe coils and in combination with it is an air washing or spraying system which controls and regulates the humidity or proper amount of moisture which the air should contain for health and comfort. The indirect radiation installed is approximately 11,000 square feet.

The heating equipment, the Kieley & Mueller steam pressure reducing valves, as well as Lunkenheimer valves constitute a Garth Co. installation. Low pressure steam valves were by Crane Company. All steam and water pressure gauges used, both indicating and recording, were of Foxboro make through Peacock Bros., Montreal. The condensate or hot water returns are handled in winter time by four Darling vacuum pumps. During the summer time the hot water returns are handled by Crane tilting and lifting traps.

Ventilation and Air Exhaust

There are a number of screened openings from which a fresh air supply is taken in at different parts of the building; however, there has been provided a cold air shaft direct from the roof which supplies fresh air to the main fan room situated in the sub-basement.

The fresh air supply to the main indirect heating is washed and carries the proper amount of moisture introduced before it is delivered to the lobby, main dining and special rooms. There are installed 10 fresh air supply fans and 14 air exhaust fans, all of which are of the Keith pattern, by Sheldons, Ltd., of Galt, Ont. They are driven by Westinghouse motors,

which vary in capacity from 3 to 30 h.p. Auxiliary ventilation in the "Pent House" on roof is provided to take care of the grand ball or banquet room and convention halls on the 9th floor.

The hot air supplied to the various rooms passes through a "diagonal grill" or lattice-like face plate, by Tuttle & Bailey, Bridgeburg, Ont. The galvanized air-boxes or duct through which the hot air is supplied to the rooms and the used air is changed frequently or exhausted, are by Baxter & Webber, Montreal. Two hundred tons of Keystone galvanized iron was used to complete the amount of air duct required, and an average of 30 men have been employed constantly for several months making and erecting the work right on the job.

Ice-Making and Refrigeration

The main refrigerating and ice-making machines consist of what is said to be the first steam uniflow engines with poppet valves for both intake and exhaust, driving ammonia gas compressors. The complete outfit was manufactured and installed by the Frick Ice and Refrigerating Machine Company, Montreal. The engines are fly-wheel-governed and designed to operate at high speeds, ranging from 150 r.p.m. normal to 325 r.p.m. maximum. The vertical enclosed type of ammonia compressors are designed to compress the gas to 125 lbs. normal and 175 lbs. maximum. They have a capacity, each of 40 tons normal and 60 tons maximum. They were installed with a guaranteed capacity of 75 tons of ice per day.

The ammonia gas, after being compressed, is passed through a bank of condenser coils, where the temperature of the compressed gas is further reduced at least to 52 F., after which some of it passes either to a low temperature refrigerator or the ice making room, where expansion takes place and the gas absorbs the heat from the substances to be frozen. Another

Frick Uniflow Engine and Ammonia Compressors.

portion of the compressed gas is expanded in coils about which the brine is circulated. The brine, after imparting its heat to the ammonia gas while it is expanding, becomes reduced in temperature and is circulated to the various tanks and refrigerators where only a moderately low temperature is desired. The drinking water supply for the guests is cooled by passing through a brine-cooled tank. The ammonia gas after expansion and absorption is drawn back into the compressors by the suction effect of the receding compressor pistons, and there compressed as previously described, thus completing the cycle.

In the ice-making room, which is about 30 feet square, there are about 500 large cans (8" x 16" x 32"), immersed in a tank full of a brine solution. The brine is circulated around and in between the immersed cans by means of two special brine agitators, driven by two 54 h.p. Reliance electric motors. The cans are filled with 100 lbs. of filtered water and when frozen are removed from the tank to the unloading and ice storage room; the cans are later returned to the tank filled with water and immersed again in the brine circulation.

Giving Preference in Heating Systems

The High Spots Told in Story Form—First Applications, and How History Appears to be Repeating Itself—Why, How and When to Give Preference to the Various Systems of Heating—Steam Vapor, or Hot Water Heating

By Edwin Newsome, Consulting Engineer

WHEN steam is looked upon as dangerous, when vapor or vacuum steam heating is viewed with some amount of suspicion, when one pipe job is preferred to regular two pipe jobs, when hot water heating is boosted sky high no matter what the conditions are, well—there's something wrong. The heating engineer who, under every condition prefers any of the systems referred to, has not taken the subject of heating seriously.

The "smart alec" who invented a one pipe steam job should have lived to hear all the hammering and all the "cuss words" caused by such impractical and unnatural systems, and he would have made a capital booster for two pipe jobs, or else held both hands up in favor of hot water heating. Steam should be looked upon as a blessing in the heating world and it is to those who know what steam is and the flexibility of a steam heating system. This does not mean that no matter what kind of a building is to be heated, that steam should be given preference. But, before entering with the fundamentals governing systems of heating one thing at least can be said in favor of steam, that while it can reasonably be adapted to the heating of any building in some form or another under any condition, the same cannot be said of hot water heating every time. It has its limitations.

Big Strides Made

The heating engineer, therefore, if he ever truly wishes to be worthy of the name, must accept the responsibilities attached to such a title, and must study thoroughly the fundamental principles connected and related to the science of heating. And, if he does so he will be amazed at the great strides being made in the application of heat, and the various methods now being adopted.

Some of the most radical steps made recently in the heating of buildings, appear to be taking us back to a period something like 4,000 years ago, that of the method of indirect heating adopted in the Oriental countries and by the cave men of prehistoric times.

The prehistoric cave man built fire places outside his cave, made tunnels under the floor of his abode to act as a kind of chimney, and the heat from the flame and the smoke were utilized to heat the interior of his home.

In Japan, houses were built, and, it is said, are still built with hollow tile floors.

Some of these hollow tiles are similarly used.

How System is Laid Out

In the British Isles the very same method or rather the principle is adopted by some of the largest heating engineering firms there. The general system is laid out in the following manner:

First, a steam boiler is installed in a basement or sub-basement, vento radiators or box coils are hung up in the ceilings of the basement, and iron casings placed around the coils or vento radiators, cold air pipes are fitted to same with a small individual fan to each box, warm air ducts are placed in the boxes too, and installed under floors and through walls. The fans

also re-circulate the air through the warm air ducts, and no outlets in the floors or walls are installed, so that none of the actual heated air is allowed to enter the buildings, none of this warm air is inhaled by the occupants of the rooms.

As the heat passes through the ducts, it warms the rooms. Of course, the walls and floors are literally full of warm air ducts, so that one would almost be led to believe that we are only a few steps ahead in the final results procured by our prehistoric ancestors, if results are to be considered.

What is Heat?

It is regrettable to note how very few men who are engaged in the installing of heating systems, know even the first principles involved in the heating of a building or buildings. Too many by far, are there who (while to be admired for the apparent courage) know so little about heating. They are those who, having worked a few years with pipe fitting tools, installed a few jobs that have been laid out by manufacturers of boilers and radiators, think they know all about heating. It would be safe to say that 20 per cent. more coal is wasted than would be if some laws were put into force that would require each man engaged in the heating engineering profession to pass some examination and all his work be inspected by competent engineers. However, this is taking us away from the question, "What is Heat?"

Very often the simplest question regarding every-day phenomena, will puzzle the wisest of us. We are so familiar with the effect, with the things we look upon as quite commonplace, and the effects which those things have upon our daily life that we seldom, if ever, trouble ourselves as to the cause of these various conditions so very necessary to our standard of living and as a matter of fact to every progressive stride made.

If we could only see what really happens when we strike a match, and watch it burn, we would witness such an elemental battle as has never taken place on any battle field recorded in history.

Thousands of trillions of minute molecules clashing with enormous velocity against each other, countless brigades of contestants forming and reforming into battle line, hurling each other together against as many trillions of apparent

enemies. Such a battle as would make the battle of the Marne appear more like a garden party conducted by a Sunday school executive.

A Form of Motion

And the application of heat, in various forms is wonderful, which to know of would fill one with wonderment. If we could only see what takes place when heat is applied to iron or steel, brass, copper or any other incompressible matter we would be filled with awe. And, more than all, we would then only begin to realize what heat is. "Heat is a form of motion." "Heat is energy." "Life is heat."

Matter is made up of tiny particles called molecules, so small, says Sir William Thomson, that if a small drop of water was magnified to the size of the earth, the molecules of water would each be less than the size of an ordinary baseball.

On the other hand, if we cool, or allow to cool, either water or gases, steam or even anything compressible, as well as iron, brass, copper, steel or any other incompressible solids, these tiny, tiny molecules move slower. Proving still conclusively that according to temperature all elements, material of a metal, fluid or gaseous nature, is warmer when the natural or specific molecules are in active motion.

How Molecules Move

There is, however, a difference in the molecules, and the molecular motion in the three conditions in which matter exists:—In solids, the molecules move back and forth, just like tiny pendulums; in liquids, the molecules wander all around without any apparent aim and in no regular set path; in gases the motion is supposed to be in perfectly straight lines.

We are all familiar with the effects of heat upon the body, and are not slow to recognize the presence or absence of heat by the sense of feeling. This heat or temperature, we would define as sensible unsafe guide to the real condition of substance with respect to their temperature.

A person, returning from a walk in zero weather, entering a room the temperature therein being, say, 50° Faht., has the impression that the room is very nice and warm, whereas if another person entering the same room at the same moment from another room in which the temperature registered 75° Faht. would feel the room very cold, hence the need for some reliable temperature recording instrument which will tell the occupants of a room or building, exactly what the actual temperature of a room is.

The first practical thermometer was invented by Galileo prior to the year 1597. It consisted of a glass bulb, filled with air and dipping it into a vessel containing colored water.

When the air in the bulb became hot-

ter, its molecules moved faster and exerted more pressure upon anything with which they came in contact. They subsequently pushed the liquid down the tube. When the air was cooled, the very reverse happened and the atmospheric pressure forced the liquid up the tube. This tube is marked with an arbitrary scale.

This instrument crude as it was did one thing, or at least convinced scientists that some standard and reliable fixed scale must be formed if such instrument were ever to rise to the dignity of an accurate "measurer" of temperature.

It was then found that water at sea level will boil at 212° Faht. and this was adopted as one of the important markings. Then it was found that water would become frozen at 32° Faht. sea level. But more interesting than all is how even these figures were arrived at by Fahrenheit, cumbersome as they no doubt are. He did, however, plan to make a thermometer that would without question tell the truth, the absolute truth about the temperature of a body, no matter in what form that body may be.

Fahrenheit did not want to start his scale at freezing point, because he knew quite well that there was a lower degree, or many degrees below mere freezing point, because he could create a lower temperature than 32° by mixing pounded ice with common salt. This he could do any time of the year, at any altitude and in any place. He then, in his experimental work, took such a mixture, suddenly plunged a tube and bulb containing mercury, into a vessel containing the ice and salt and scratched a zero mark on the glass tube at the top of the mercury column and this was the beginning of the Fahrenheit thermometer. The temperature thus recorded, he defined as being the absolute zero point.

He then calculated the mercury volume at that temperature and found it to be 11,124 parts. Next he promptly expanded the mercury in the same tube, by placing it in a mixture of ice and water and found that it occupied 11,156 parts by volume or 32 parts of an increase over the zero volume, and accordingly scratched the number 32 at this new height of the mercury column, and called it freezing point of water. Next he placed his newly designed "thermometer" in boiling water. The mercury expanded to 11,376 parts, or 212 parts higher than zero. This he called the boiling point of water. He then divided the scale between 32 and 212 into 180 equal divisions which he called degrees, and his scale was complete.

Our readers will see by the above experiments, that there appears to be a motive power in mercury and air, as well as in all substances, when such materials are subjected to varying temperatures. This motive power requires some form of energy such as coal, fuel

oil, wood or any substance containing heat and subjected to the ordinary treatment we call burning. Thus bringing us to our main subject, that of the science of heating systems.

(To Be Continued)

DeBroke (roused by his wife): "What's that you say? A burglar?"

Mrs. DeBroke: "Yes. Fancy a burglar calling on us!"

DeBroke: "Suppose we let him climb in. Then I'll give a yell and it may make him drop something he has got somewhere else."

* * * *

"I can't do a thing with Jones," said the manager. "I've had him in three departments, and he dozes all day long."

"That's easy," replied the really efficient efficiency engineer.

"Put him at the pyjama counter, and fasten this card on him:

"Our night-clothes are of such superior quality that even the man who sells them cannot keep awake."

* * * *

A tourist in Scotland, stopping at a cottage for a drink, observed the old inhabitant attempting to chop a large log of wood with an ancient-looking axe.

"That's an old axe you've got there, isn't it, dad?" he asked.

"Aye, it is," came the reply; "it's nigh on a hundred years old."

"Indeed," said the surprised tourist, "I shouldn't have thought it was so old as that."

"A'well, mebbe it's not exactly that," answered the old man. "It's had two new heads and three new handles since then!"

* * * *

Old Ebenezer was whitewashing his barn with a brush that had very few bristles left in it. The squire happened to pass and said:

"Why don't you get a brush with more bristles in it, Ebenezer?"

"What for, squire?" asked the old man.

"What for?" shouted the squire. "Why, man, if you had a proper brush you could do twice as much work."

"Mebbe so, squire; mebbe so," responded the old chap placidly. "Only I ain't got twice as much work to do."

Compound Angle Elbow Patterns

Prepared for Sanitary Engineer by O. W. Kothe, Principal, St. Louis Technical Institute, St. Louis, Missouri

Designs for Compound Angle Elbows.

IN HEATING and ventilating square duct work, it is often necessary to make fittings that branch out from a main duct, taking on a quarter turn and also drop in the space of a few feet. Fittings of this kind are necessary in public buildings as well as ventilation systems on board ships. For such a problem we first draw a section through main duct and then we describe the amount of angle this branch is to have, giving the radius of throat preferably two diameters or widths. Next describe the plan of duct and the branch from the center Y. Observe the end elevation branch is described from X and that we divide the throat of plan in equal spaces. From each of these points we erect lines to cross the heel of plan and also the throat and heel lines of end elevation.

Observe this treatment adjusts the lines on all sides of the fitting if though lines were square around all four sides made equal to the width as they will work out on that side, which widths are shown on the lines I, II, III and IV. The shaded rectangle of plan begets its line from the elevation which is bisected in order to treat that space which could not be treated from the throat of plan.

Now to set out the patterns, we pick

the girth from the end elevation and develop it from the plan, while the girth from the plan is picked and developed from the end elevation. So we pick the girth, taking each space separately from the heel III and set it on line A-B in pattern III. Drop stretchout lines and from each point in branch of end elevation square over lines, thus developing the miters as shown. In the same way pick the girth from the throat of plan IV and set on a line as E-F and develop in the same way. Repeat this by picking the girth from elevation as heel I and set on line G-H and develop from plan. Next pick the throat line from elevation II and set on line C-D and develop from plan as shown.

Observe the throat and heel lines of both the elevation and plan are used as staves for forming these patterns, since the patterns must take on the same bend shown by these heel and throat lines in our working drawings.

Fairbanks-Morse Co. Sales Convention

Montreal.—A five-day sales convention of the Canadian Fairbanks-Morse Co. Ltd., was held in Montreal, those

present including a number of heads of divisions of the United States Company, including the following from Chicago: J. P. Harper, oil engines; E. D. West, farm engines; F. V. Roy, scales; L. J. Osborn, electrical. Henry J. Fuller, New York, chairman of the board of directors, was also in attendance.

Speaking at the opening session of the convention on Tuesday, Mr. Fuller evinced much optimism regarding trade prospects for the year, both as regards the company and as to the business world as a whole. A similar trend of thought ran through all the addresses which followed. Each of the visiting division heads addressed the convention along the particular line in which he is a specialist.

The sessions were held in the new Mount Royal Hotel, a dinner being held there on Thursday followed by a theatre the whole staff of the head office were the guests of the firm.

The following managers of the Canadian branches of the organization were in Montreal for the convention: W. A. Akhurst, Vancouver; K. N. Forbes, Winnipeg; F. W. Evans, Toronto; W. J. Hill, St. John; J. N. Charles, Windsor; T. H. McWilliam, Ottawa; J. J. Marnell, Quebec; M. V. Cordell, Montreal.

Inter-Provincial Boiler Code

THE Inter-Provincial boiler code is now a fact, and is in use in the larger number of the provinces of the Dominion. The regulations have been set out in book form, and are now available to the public, at a price of \$1 per copy.

It is interesting to note that the first conference held at which representatives of the different provincial governments were present, to consider a uniform law, was as far back as 1909. The provinces represented on that occasion were British Columbia, Alberta, Saskatchewan, Manitoba and Ontario. The regulations drawn up at that conference were adopted by the provinces of Alberta, Saskatchewan and Ontario.

The regulations then adopted, while good in their way, were not comprehensive enough, and left many points uncovered, so that there naturally arose differences of interpretation. Owing to this, a further conference was held in Ontario in 1914, at which the regulations were revised and amendments recommended, but owing to the outbreak of war, and the general disorganization which followed, these recommendations were not officially adopted.

Nothing more was done until 1918, when a further meeting of the interested provinces was held in the Manitoba provincial buildings, at which the whole question was thoroughly gone into, and consideration given to suggestions which had been put forward by manufacturers, boiler makers, etc. The regulations as drawn up at this meeting were submitted to the Boiler Code Committee of the Engineering Institute of Canada, the Canadian Manufacturers' Association, and others for criticism. After this, a meeting was held in New Westminster in 1920, at which final revision of the code was made after studying the reports received. It will thus be seen that from the time of the first consideration of this question until its final adoption a period of thirteen years has elapsed. Of course, there is no doubt that the war threw things back to some extent, but in any case, it is evident that at least eight or nine years would have been consumed in effecting this very desirable reform.

It is an excellent thing from the point of view of the boiler manufacturer, and also of the boiler purchaser. It ensures the manufacturer the opportunity of building a boiler that will comply with the regulations in any province, while the purchaser has no fear of buying a boiler in Ontario that will not pass inspection in Manitoba, and vice versa. The regulations adopted have also provided for the use of boiler material which has been made to the specifications of the British Board of Trade, so that a manufacturer importing his plates, or a firm importing boilers from Great Britain will not be penalised.

Practically every province, with the exception of New Brunswick and Prince Edward Island, have adopted these regulations, and it will most likely be but a short time until they are in force in these latter provinces. The advantages of uniformity are too many for them to be neglected by any modern government department or private business concern.

Watching Your Collections

"TOO MANY plumbers are hesitant in forcing payment of long outstanding bills against families which have been trading with them for years. They take the attitude that they are good and will eventually pay up, and for the sake of old friendships don't like to force them into payment for fear of alienating associations and losing their trade." Thus spoke a credit man connected with a large wholesale institution to the writer recently. There is undoubtedly good grounds for the above assertion and we could even go a little farther and add that some plumbers make little effort to collect any account be it long outstanding or not. Apparently they are quite content to sit back and wait until the customers are good and ready to pay up.

At this period in the year when the business has been inventoried and profits and perhaps losses are being tallied, there is no better time to get after some of the slow pays and for the plumber to establish a system of credit which will bring in the money more promptly.

One good rule to follow is to adhere rigidly to a set time when accounts should be paid. An understanding should be had with customers as to when that time should be. A plumber may find he has some customers who get a weekly pay envelope while others get theirs fortnightly or monthly, but whatever the credit limit is, the plumber should see that the account is settled on the date specified. This may mean losing a few accounts, but once a credit policy is determined and adopted, it will not be long before the trade will come around, willing to play the game according to the rules of the plumber.

Keen competition and the establishing of cash and carry stores are two factors which are working hand in hand to eliminate "long time accounts" but to help the good thing along it needs the shoulder of every plumber at the wheel. Outstanding accounts of long duration should be cleared up. Bills should be collected promptly. No balances should be allowed to accumulate and a firm policy of credits should be adopted and enforced.

Character Through Advertising

WHILE attending a recent convention, of which an exhibition of manufactured products was a feature, a large buyer observed that he, more or less unconsciously, felt a keener interest in those goods that were always most consistently advertised. This feeling he attributed to the fact that he had been made familiar with those lines through their advertising, and felt that he needed no introduction in his visit of inspection to their displays.

Another phase of the same matter was commented upon by the president of a manufacturing concern doing an export business. He emphasized the fact that advertising was valuable to salesmen because it prepared beforehand those territories with which he was unfamiliar. In other words, the advertising preceded the salesmen and did a certain amount of pioneering work for them.

Advertisers are sometimes inclined to overlook the development work that is always going on through the columns of their trade newspapers. It emphasizes the fact that an advertising appropriation well placed is of the nature of an investment.

Two years ago ribald journalists were commenting elegantly on the advertising of deodorants for ladies; to-day we find advertising of deodorants for men.

Now that every well-regulated hotel and apartment is supposed to have at least as many baths as rooms, is a reaction starting?

MINUTE MESSAGE

Written for "Sanitary Engineer" by FRANK STOCKDALE

(Profit Figuring Series)

Take a Tip from this Fellow—He Cuts the Right Pie

WHEN you say your cost of doing business is 25%, or whatever it happens to be, you mean 25% of the sale. And you are right.

The reason is that you divided the total amount of your expenses by the total amount of your sales to get this 25%. 25% is the same as a quarter of the pie and it is plain to see that a quarter of the cost pie is not as much as a quarter of the sale pie.

There is no chance for you to get anything out of the small pie, because that goes to the wholesaler or manufacturer who sold you the goods. The one place to get your share is from the larger pie, and—

To get your share you must mark your goods right.

Suppose for example you want to make a net profit of 5% of your sales. What you want is 5% or 1/20 of the larger pie. In this case your gross profit or margin must be 25% to cover your cost of doing business and 5% for your net profit or a total of 30% of the sale.

The total sale, of course, is 100% and if the margin (gross profit) is 30%, the cost of the goods must be 70%. If the cost of your goods is 70% of your sale, then divide your cost by 70 and you have the right selling price.

Apply this to any article in your store.

First cost of goods \div (100%—gross profit) = selling price.

Example: $\$1.40 \div (100\% - 30\%) 70 = \2.00 .

Substitute your own figures. You can depend on this method. It always works out right.

THINK IT OVER—APPLY IT IN YOUR BUSINESS

"Landing Old Sigh Low for a Compleat Plumbing and Heating Job"

Jerry Continues His Relation of Experiences Commenced in Last Issue, Showing His Progress With Old Sigh Low

With apologies to Ring Lardner, by MAJOR L. L. ANTHERS, Managing Director
Anthes Foundry Company, Toronto

Tarraboome, Feb. 26, 1923.

Dear Friend Al—

Well, Old Cock, Ime still on the traile of Old Sigh Low. Ive swoarne to miself that Ime goin to land the old chinwhisker for a compleat plumbing and heating job, and wen I make up my mind to put ennything over—well, you know me Al.

I tolde you of my 1st visit and as how I left sum catalogs & kutz & etc. with him beesides a cuppla nocksious wead torches, like the kind my friend Johnny Yowston of the Robberson Co. smoaks.

Nxt. time I goes 2 sea Sigh I startz abt. the middl. of the p. m. When I gets their I walks boldcly threw the gait and up 2 the front dore. I nox severial timse but theirs no response. I finely went arnd. 2 to the bak, & their I scene an old dame climbin up the hill with a pale of water.

I hurried down 2 her & sez, "Hear laidy let me carry that." She was 2 suprizd 2 offar enny resistns. as I tuk the pale frm. her.

"Do you have to go all the weigh down their for water?" I sez, indycatin the barn yard.

"Oh Ime ust 2 it," she sez. "Ive bean doin it fer 40 yrs."

"Forty years," I exclmd. "Why you musta bean a babie then."

Honest 2 goodness she lookd abt. 90 but its always fatel 2 tell a womman the trewth where her aige is concernd.

The old dame smiled and shook her hed. "A purty big one," she sez, "seen as I was married."

"Aw gwan," I came bak, "I guess it jest seams like 40 yrs. Is Mr. Low around?"

"Hees down in the lower feeld, but he & the men will bee along for supper before long. If you dont mind a walk you kin go down their if your in a hurry," & she pointed out to where the old geezer was pushin a plow abt. a ¼ of a ml. away.

"Oh Ile wait," I respondz careless like. "Ime in no hurry."

2 tell the honnest trewth I had come early on the chanct that the old boy wld. bee out of the weigh and 1 cld. get a slant at the old laidy. If you kin get the wimmen 2 yr. weigh of thinkin ½ the batl is 1. So I interdooced myself & told her all abt. the wunders of modern plumbing & heating.

"If your the gent what left them books hear last wk.," she sez. "Ive bean lookin them over—but Ime afraide their 2 xpensif."

"Dont you bleeve it mother," I sez in my most engraishiating manor, "not when you figger all you get fer yer money. Whats the good of monney if you dont spend it on the comforts of life? Youve got a good farm hear and lots of money in the bank—why not live in

comfort and have conveyenances like city fokes has?"

"I gess your rite," sez the old dame with a sie, "but its hard to make my old man see things that way. But I bleeve hees thinkin abt. it tho he dont say nothin. When he think nobodys lookin he goes over thoze books you left last week & yesterday I see him go up-stairs with a yard stick & 1 of thoze books in his hand."

"Good news," I xclames, "hees fallin."

"Hees what," said the old sister lookin around scared-like.

"Only an xprsn. meanin weeve got him goin; Ile betcha a slop-sink 2 a pale of potatoes youll hev plumbing in hear in lessn a month."

The old dame smiled but shook her hed. I new she felt it was 2 good 2 be trew.

"Well hear he comes," she announces, looking down the road & sure enuff old whiskers & his gang were headin our weigh for the evenin banquit.

The old laidy hustled inside wile I waited fer old alfalfa-chin to come up and k'ck me off the lot.

Unbenoticed to me the Heavings had become overclouded & while Si was still abt. 3 base hits off old Jupiter Polluvius begin to spill in rite earnest.

This give me an xcuse to keap under the verandy. The hirde men hed switched off to the barn with the hoarses but Si kept rite on 2 the house. I hed that feeling of wonderin jest ware he was goin to bite me 1st, but Ide maid up my mind to stick like grimm dethe.

"Good evein Mr. Low," I sez as affible as I cld. with a week hart.

"Huh," he grunted. "Good evenin." So far so good. He warnt goin to bite ennyway.

"Goin to rain I guess," I contd. fol-lerin up my addvantage.

"Purty good gesser aint you?" he come back a little sourcastic like.

It was a bum remark I addmit, but yule agreea the conditns was tryeing. However he didnt order me off the premmises so I begin to feal more at eeze. I watched the old geezer dip some water into a tin basin & then perceed to try and reemove a pek of dirt with a qt. of water. Wen he thot heed gone the limit he tries to dry hiself on a roaler towl witch hung at the side of the verandy but witch towl was wetten his faice on ac. of the rain driven in & etc. Wile the towl was no grate sucess at driefing, it did make up for the unsufficiency of the water fer accordin to apeariences after Si had performed his absolutions their was more dirt on the towl than they was in the basin judgin by looks.

I maid a mental note of all this intendin to use it when the proper time come.

The rain hed settled down purty stiff & steddly and I begin to think Ide hev my troubles gettin home on ac. of the roads & etc if I waited much longer. But my currage wasnt registerin high enough to maik a brake for it.

The hirde men come along in a few minits & looked me over.

"Good evenin," they sez seamin enclined to be friendly-like & I replied in like manor.

Then they went at the wash basin & the wet towl. They tride to dry the towl by usin some hot languidge on it but it didnt do no good & they had to wiggle there faices like rabbits to dry them in the wind.

"A shower'd go ood," I sed casual-like.

"Aint we gettin enuff," sez 1 of the

hirde men lookin up at the sky.

"Oh I meen a shower-bath," I sez.

"Bath 'ell—hot chanet around hear," sez the other feller under his voice so the old man who had gone inside eldnt here.

I eld. smell supper cookin & bleeve me Al it smelt good. I begin to reelize I was hungriern a starved wulf. I eld. heer the old man & woman inside talkin in undertones, & I begins to feel cheep like what a feller does when the conductor asts him sudden fer his ticket & he can't find it.

Finely I herd the old man say, "Better ast him to stay."

With that the old lady came to the kitchen door and meerly sez, "I'm settin a plaice fer you."

Honest to goodness Al, I felt like what somebuddy had give me a wallup in the souler plecksus.

I tride to murmur some xcuse but the old laidy was gone back into the kitchen.

"Should I stay," I ast my inner conscience of myself. "Dampfool if you dont," sez my inner conscience, and that settled it. Somethin seamed 2 tell me that opertunitie was nockin at the dore so I staid.

It was a libberal edycation to see them hirde men fawl 2. The old man may hev a rep as a tite-wad but he new how to feed hirde men and the old laidy new how to cook it. Talk abt. eatin peeze with a nife, they wasn't nothin the old man eldnt eat with hissn. He had me hypnertized.

But as time pergressed I felt it was up to me to do some stunt to make up fer my feed. The old mans nife act had ennything I eld. do backed off the map, but I hev a loose tung and I know baseball and when I talk baseball the gang has jist nactely got to lissen—you know me Al. I side-stepped enny ref. to plumbing but give a luminated treaties on baseball as she should be played and has been played and wasnt enny more. Them talks Johnny McGraw is runnin threw the noosepapers is all rite in its weigh but wen it comes down to intymate stuff McGraws not their. Does he make enny ref. to you or mee in those artickles? You bet he doant. He nose who put baseball on the map but he wants the publick to think its McGraw. But we know, dont we Al? You bet we do.

So I let these hicks into some of the inside doap and if they didnt soon tumble as to hooze hoo in baseball well it wasnt my fault. You know me Al.

Well, after supper was over the stok hed to be milked and fed and bedded, so I went down to the barn with the gang.

It hed stopped rainen and the sun was just abt. wirkin good nite threw some bloody tear-stained clouds and as their was a good gravel walk I didnt worry abt. gettin my feet wet. The stock was holding a convention around the water trowfs and 1 of the hirde men begin to pump. I noticed the water looked a little riley but he sez it was always like that after a rain. A littl of the serfice water always leaked threw. I maid annother mental note rite heer.

Talk about eating peeze with a knife. They wasn't nothin' the old man couldn't eat with his'n. He had me hypnertized.

I hed took a new brand of cigars with me and passed them all round after we was on the weigh 2 the house agen. They was good wons and even the old man noticed that fact. The old feller didnt seem so bad after you git to know him and soon I interdooced the delycate subject of plumbing. As he didnt seem to object but got down on a chair in the corner of the verandy as if he had maid up his mind he mite as well lissen to the bitter end. 1st as finis., I was soon warmin up in good shape. Befoar long the hole family, hirde men and awl was listenin jist the same as wen I was talking baseball. Oh boy but I did put my hart in it. No Mother eld. hev pleaded with a judge over her weighward boy with greater fervor. The old man was unrestless at times as if his consceyence was trubbling him, especailly wen the old laidy wld. say, "Oh my, Oh my." Onct the old laidy actly wept. It was wen I maid reference to young fokes leavin the farm. I find that uslly hits a soft spot in the wimmin. Why? Because its the trewth.

Finely it was time to go home, and I thanked them fer the nice time I had and sed Ide call agen. I invited them all to pay the shop a visit wen in town and no oblygations

The boys helped me start the lizzy as she always get a water jag on wen she hez been standin in the rain, but I got away finely, everybuddy but the old man wavin good by. He was busy thinkin and I was hopin it was plumbing he was thinkin of.

I was feelin pretty good goin hoam as I felt that job was well on the way to be landed. Shure I didnt hev the contrack in my pokt, but the spaid werk hed bean done.

Wen I get time Ile tell you wat happened laiter on.

Yourse & etc.,
Jerry.

METERS WOULD SAVE MORE

London, Ont.—General Manager E. V. Buchanan of the public utilities, pointed out that enough money can be saved through the meter system, either to reduce the water rate, or, after paying for the purchase and installation of the meters, within two or three years, turn a large annual surplus over to the city treasury, which would go to materially reduce the tax rate.

News Notes From Coast to Coast

Doings in the Plumbing and Heating Industry

FIRE LOSS

J. E. Rouillard, plumber, Quebec City, suffered fire loss.

FORT ERIE PLUMBER LEFT LARGE ESTATE

Welland, Ont.—Charles E. Harris, a plumber of Fort Erie, whose will is filed for probate, left an estate of \$15,500.

NEW FIRMS

Ramsay & McIntosh, Limited, have opened up a new plumbing shop at 114 Jarvis St., Toronto. Both Mr. Ramsay and Mr. McIntosh were formerly connected with W. G. Edge, Limited, and carry the good wishes of all their friends for success in their new endeavors.

PERSONAL

C. E. Burnett, president of The Duro Pump & Manufacturing Co., Dayton, Ohio, has just returned from a vacation in the Bermudas, where he enjoyed a complete rest for the last month.

C. A. Kuebler, general sales manager and H. I. Field, Eastern sales manager of the Duro Pump & Manufacturing Co., Dayton, Ohio, are in Cuba looking after some of the foreign interests of the Duro Co. They will also conduct echo conventions throughout some of the southern distributing points upon their return to Dayton.

THIEVES LOOT SAFE IN PLUMBING SHOP

Windsor, Ont.—Gaining an entrance by means of a front door that had been left open, burglars robbed a safe in the office of the Edwards' Plumbing shop, London and Church streets, of \$150.

When the police arrived at the scene of the robbery they found that not only the front door but the door of the safe had been left unlocked and it was a simple matter for anyone to walk in and help themselves to the safe's contents. Whoever removed the money left no clue to his identity.

STEAMFITTER MEETS FATAL ACCIDENT

Toronto.—Ray Metcalfe, aged 19, died in the Western Hospital of a fractured skull as the result of falling down an elevator shaft at the Samuels Building, 431 King Street, West.

Metcalfe was a steamfitter employed by the Western Plumbing Company, and he and his helper were fixing some pipes on the third floor of the Samuels Building. While the helper was absent on an errand, Metcalfe in some as yet unexplained manner fell down the elevator

shaft. His body was found in the well in the basement. No one saw the tragedy. Metcalfe was picked up and removed to the hospital, where he died a short time after admittance.

NO EXCUSE

Hamilton, Ont.—Alex. Bonner, business agent of the Plumbers' and Steamfitters' Union, stated that business in that trade is quiet at present, and that quite a few tradesmen are out of work. In view of this, he said, the reason given by the house owner in police court that he had not been able to make sanitary improvements ordered by the board of health was a very poor one.

REPORTS BIG INCREASE IN BUSINESS

W. H. Cunningham of W. H. Cunningham & Hill, Richmond St. West, Toronto, stated to a Sanitary Engineer representative that his company had noted a marked increase in business during the past few months, and so far as his own company was concerned they had an increase of 100 per cent. in their business during an eight-month period. Another indication of returning prosperity pointed out by Mr. Cunningham was that their company when they closed their books for the year, reported losses from bad debts as amounting to \$12.60. This is a most unusual record and is an indication of the soundness of the trade at this time.

Mr. Cunningham is exceedingly optimistic regarding the future in the plumbing trade in Canada.

EXPERT ADVICE ON WATER QUESTION

Kingston.—At the inaugural meeting of the Public Utilities Commission it was decided that first the commission would have to consider the question of water pumping. Altogether too much water was pumped by the Kingston station, the total amount being over four million gallons a day, or about from 175 to 200 gallons per capita. The average water consumption of cities was from sixty-five to seventy gallons per capita. It cost money to pump water. The leaks would have to be reduced wherever they were. The second big question before the commission would be the purification of the water supply. This was a matter that would require the greatest consideration and the advice to the commission was to not be stampeded into doing anything without the fullest information. The best expert advice was needed.

LEAVE TAPS RUNNING ALL NIGHT

Montreal.—While it is impossible to judge accurately the amount of extra water being thus consumed, much extra pumping has been required in Montreal this winter on account of people leaving their taps running all night long to avoid freezing. It is estimated that as many as 30,000 taps are open at night. Such a large flow of water increases the demand on the pumping service with the result that the winter peak has on occasions been higher than the summer peak.

PUMPS FORCED TO DO MUCH UNNECESSARY WORK

Montreal.—Local waterworks officials puzzled for a week over the mysterious reduction in the level of water at the McTavish Street reservoir where a drop of over four feet had taken place some days ago and had been maintained, with the result that the pumps were forced to do extra work to keep up the necessary supply. On investigating it was found that the twelve-inch pipe which serves this street had broken. There was no evidence on the surface to indicate any leak, it being found that the escaping water, instead of forcing its way upward to the street, had found a weak point in the brick sewer and had been flowing into it, thus draining much of the reservoir reserve.

WATER PIPED THROUGH TREE TRUNKS

Relics of ancient water pipes, consisting of the hollow trunks of very fine elm trees were recently dug up in London. These wooden conduits, although they had been laid down more than two hundred years ago, were still in a wonderful state of preservation. Up to the early part of last century the New River Company had laid several hundred of miles of wooden pipes. But they needed so much attention and repairing that they were replaced by iron piping at a cost of 300,000 pounds. Another advantage of the change was that whereas the tree trunks had a bore of a few inches only, the metal substitutes measured several feet across. Consequently a much greater volume of water was obtainable. In those days the water for London came either from the waterworks at London Bridge or from those of the New River Company. Before this, the water was obtained from the Thames or the springs which arise in the elevated ground on the north or west of the city. It was conveyed by means of earthen or leaden pipes to different conduits or fountains erected to receive it.

Waterworks Men Discuss Water Purification

Delegates to Meeting of American Water Works Association in Toronto Consider Violet Ray and Other Means of Purifying Water

SOME 150 delegates, including a number from Quebec and the United States, registered at the mid-winter meeting of the Canadian Section, American Water Works Association, in the Carls-Rite Hotel, Toronto. In the absence of Mayor Maguire, the convention was welcomed at its luncheon by Commissioner of Works R. C. Harris.

In extending the official welcome of the city, Mayor Maguire took occasion to comment upon the purity of Toronto water since the installation of a filtration plant. He recognized the responsibility which devolved upon them in guarding the public health of their respective municipalities.

With the liberal use of charts and blackboards, different speakers discussed water works problems. Prof. R. W. Angus, of the University of Toronto, read a scholarly paper upon intakes, drawing upon his extensive experience in laboratory work. F. A. Dallyn, provincial sanitary engineer, contributed a paper which dealt with the preparation of water for filtration. He weighed the comparative merits of various chemicals in destroying what he termed "the bacteriological efficiency of water."

Some discussion centred about a recent act which requires firms equipped with the sprinkler system to have dual checks between the private system and the main. The reason advanced for such legislation was that water frequently remained in the firm's tank for lengthy periods, and, on getting back into the main, contaminated the city water supply. Several members thought that an unnecessary inconvenience was being occasioned the firms.

Quite an extensive exhibit of equipment and chemicals employed in water works systems was situated on the same floor. Of interest, as marking the innovation in Canada of the preparation of liquid chlorine, was a huge cylinder container of that deadly gas. It was being used in that form for the chlorination of water in preference to chloride of lime, as the latter contains only about 35 per cent. chlorine.

The officers of the Canadian section are: Chairman, R. L. Dobbin, Peterboro, who presided; vice-president, F. A. Dallyn, Toronto; trustees, R. H. Starr of Orillia, N. R. Wilson of Brantford, and James J. Salmond of Toronto. The secretary-treasurer is C. D. Brown of Walkerville, Ont.

Members spent a profitable hour or two in a discussion of the methods of purifying public water supplies. The discussion was based on the paper recently prepared by Norman J. Howard, bacteriologist in charge of the Toronto filtration plant. The paper dealt in detail with various methods, such as sedi-

mentation or storage, slow sand filtration, mechanical or rapid sand filtration and sterilization. Under the last head the reagent properties of chlorine, ozone and violet rays were discussed.

The treatment by violet rays was stated to be very effective but rather costly. The treatment consists in the exposure of the water to the rays from an electric mercury vapor lamp with walls of quartz. Exposure to the rays not only kills bacteria, but imparts a potential sterilizing power which kills bacteria subsequently encountered. This method has not been found practical for very large plants, however.

In the discussion members from different parts of the Dominion gave their views on the different processes and the general trend of the discussion showed that no particular system could be singled out for special commendation, as the question resolved itself into one that was dependent on the different elements

SEPTIC TANKS DISAPPEARING IN ST. JOHN

St. John, N. B.—Septic tanks and cess-pools will soon become a thing of the past in St. John, N. B., as the whole area is rapidly being linked up with the sewerage system. Splendid progress is being made with a new trunk sewer, and owing to the nature of the soil, the commissioner of water and sewerage states that headway is made much more rapidly during the cold weather, as the frost in the ground does away with the necessity of lining the trench with timber to keep it from caving in, thereby lessening the expense considerably.

He phoned his fiancée, aged twenty-four, that he was sending her a rose for every year of her age. To the florist he gave the order to send the lady two dozen of the finest roses he could procure.

"He is a very good customer," remarked the florist to his assistant who was packing the bouquet, "so put in an extra half dozen."

That is how the engagement was wrecked.

Fred Holliday is Appointed Advertising Manager of "Sanitary Engineer"

Also other additions to the staff

SANITARY ENGINEER, Plumber and Steamfitter of Canada is glad to announce the appointment of Fred Holliday as Advertising Manager.

Mr. Holliday has had many years' advertising experience, particularly in connection with lines closely allied with fields served by this paper. Mr. Holliday has also had wide experience in publication work, having been connected with publications such as Construction, Western Canada Contractor and other well known publications. The coming of Mr. Holliday to Sanitary Engineer Advertising Department will add strength to an already strong department.

Mr. B. C. Culley has been appointed advertising representative in Montreal. Mr. Culley has had considerable experience in trade publication work with the MacLean organization.

Mr. O. T. Martin with four years' editorial experience, has been appointed to the editorial staff of Sanitary Engineer at the Montreal branch and will cover the City of Montreal and Quebec province.

Mr. F. R. McKinley has recently been added to the Editorial staff at the Toronto office. Mr. McKinley is well known among the trade, having done business with many firms when in business in Parry Sound.

The next issue, March 15, will carry several new features, and in the April 1 issue an announcement of unusual interest will appear regarding a new editorial development of Sanitary Engineer.

Market Conditions and Tendencies

Price Trend on Sanitary and Heating Supplies

Markets at a Glance

H EAVY price changes feature the local markets for this week. Many of the changes have been forecast in recent reports from primary market sources, but the upward trend of prices has spread to other branches of the trade and higher quotations have resulted.

The latest advances include $3\frac{1}{3}\%$ on enameled goods which are now quoted at list less 30% whereas formerly the discount was $33\frac{1}{3}\%$, an advance of about 10% on galvanized sheets. Sap buckets and blow torches, as well as a further advance of about 10% on galvanized sheets. Scrap materials have firmed up locally, new quotations

being from 5% to 15% higher on carlot quantities and further developments are said to be the possibility in cotton and tin goods.

The advance in solder noted, is the result of several raises in price which have occurred in tin and lead at primary sources, the new quotations are being rigidly maintained.

The recent optimistic feeling evident in local trade circles is being borne out by business activity, evidences of which are to be seen daily. Reports indicate a substantial increase in volume of business over last year will be reached.

Montreal Markets

MONTREAL, Feb. 26:—The upward tendency of the market is reflected in recent price revisions in several lines, while in a number of others where the quotations remain unchanged there are indications of an upward revision in the near future. One of the most important changes noted is the revision in discount on enameled wares where a $3\frac{1}{3}$ per cent. change has taken place, the new discount being 30 per cent. as compared with the previous discount of $33\frac{1}{3}$ per cent. Zinc and lead products have undergone a general revision, all solders increasing one cent per pound and lead pipe and waste advancing half a cent. A slight upward change has also been announced in copper and brass scrap. Sheets are expected to advance at the end of the week, a twenty-five cent advance having already been made in Queen's Head and Fleur de Lis lines of English galvanized.

SLIGHT ADVANCE IS QUOTED ON ENAMELED WARE

Montreal.

Enameled ware has taken a slight advance during the past week, discounts now being quoted at 30 per cent., whereas the former discount was 33 1-3 per cent. Spring trading has not yet opened up to any appreciable extent but early season sales are maintaining a firm undertone. The present quotations are as follows:

ENAMELED WARE—

Sinks, roll rim—	
18 x 30	\$23 00
Sinks, flat rim—	1 only 2 only 3 only
16 x 24	\$ 7 50 \$ 7 40 \$ 7 30

Less 30 per cent.	

FIRM MARKET MAINTAINED IN SOIL PIPE AND FITTINGS

Montreal.

Although sales are affected by the off season, local manufacturers report a satisfactory state of affairs so far as soil pipe and fittings are concerned. Rising productive costs have given the market a strong undertone and the prices quoted recently are maintained without difficulty. The quotations at present are as follows:

SOIL PIPE—

2 and 3 inch	35%
4 inch	35%
5 and 6 inch	36%
8 inch	net

FITTINGS—

2 to 6 inch	45%
8 inch	net

TRADING REPORTED LIGHT IN CLOSET COMBINATIONS

Montreal.

Quotations on closet combinations, bowls, seats and tanks remain unchanged at recent decreased revisions. Trading on the local market is not heavy

as yet but indications point to a successful season with trading brisk within the next few weeks. Current quotations are as follows:

CLOSET COMBINATIONS—

Low Down Outfits,	each
Closet, standard outfit, oak.....	24 00

Enamelled iron with fittings, flush elbow and supply	18 00

FURTHER UPWARD REVISION IN LEAD PRODUCTS

Montreal.

Lead and zinc products have shown a generally upward tendency of late, a more or less general price revision having been experienced. Solders, both bar and wire, are advanced one cent per pound, this making the second increase in the past three weeks. Lead pipe and waste are one-half cent higher, while

lead sheets in all weights show a corresponding tendency. Metals on primary markets are very firm, prices of lead and tin being again on the climb. Revised quotations on the finished products are as follows:

LEAD AND ZINC PRODUCTS—

Lead pipe, per 100 lbs., up to 2"	14 00
Do., 2" to 8"	15 00
Do., 8" and over	16 00
Lead waste, per 100 lbs.	15 00
Note—Lead pipe is subject to a discount of 10%.

Solder, guaranteed, lb.	0 28
Do., strictly, lb.	0 25
Do., commercial	0 24
Do., wiping, lb.	0 24
Do., wire, lb.	0 38½
Zinc, sheets, casks	0 11
Do., broken lots	0 12

ASBESTOS PRODUCTS PROMISE SPRING ACTIVITY

Montreal.

The local asbestos products market is quiet at present, little new business being offered and dealers well caught up with orders on hand. Inquiries being received, however, indicate that the latter part of March will see the opening of a brisk spring business which will reach its full development in April. Prices being quoted show no change during recent weeks, current quotations being as follows:

ASBESTOS PRODUCTS—

	Off list prices
2 ply pipe covering	57½%
3 ply pipe covering	55%
4 ply pipe covering	50%
85% magnesia	40%
	Per bag
Boiler covering	\$1 50
	Per 100 lbs.
Asbestos sheathing	7 75 8 25

BOILER TUBE QUOTATIONS SHOW NO CHANGES

Montreal.

Movement of boiler tubes shows a slight improvement and will continue to do so as the season advances. There has been no revision of prices since higher prices were quoted earlier in the month, although there is a slight intimation in some sources that another small advance is not out of the question. The quotations at present are as follows:

BOILER TUBES—

	Seamless	Lapweld
1 inch	20 00
1¼ inch	22 00
1½ inch	21 00
1¾ inch	24 50	24 00
2 inch	21 50	20 00
2½ inch	24 50	23 00
2 inch	29 00	24 50
3 inch	34 00	31 00

4 inch	50 00	45 00
Prices, per 100 ft., f.o.b. Montreal.		

COTTON WASTES CONTINUE ON FIRM BASIS

Montreal.

Market quotations on cotton waste still remain at the January revision on the local market with a firm undertone to the market. It had been expected in some quarters that an upward revision would take place on March 1, but the local situation does not warrant the change at the present time, although

there is little doubt but that it will come within a few weeks' time. In the meantime quotations remain as follows:

COTTON WASTES—

	Per lb.
Cream polishing	0 21
White, XXX extra	0 18
White, XX grand	0 17
White XLGR	0 16
X Empire	0 14½

192 "	210.00
Std., less 40 per cent.; Ex. Heavy, 30 per cent.	

STRENGTHENING TENDENCY IN COPPER SCRAP

Montreal.

A firmer tone is noticed in practically all lines in the scrap materials market, copper and brass waste showing a slight increase during the past two weeks. Rubber scrap is firm at recent advances and iron and steel is improved, although nominal quotations are unchanged. Average buying prices of local dealers are:

SCRAP MATERIALS—

Automobile tires	0 50
Rubber shoes	0 03
Yellow brass	0 05½ to 0 06
Red brass	0 09
Light brass	0 04½

No. 1 machinery cast	20 00 to 22 00

FIRM TONE MAINTAINED IN PIPE FITTINGS MARKETS

Montreal.

Trading in pipe fittings continues with a firm tone which may have a tendency towards increased price within a very short while, labor and fuel troubles making delivery uncertain at present. In the meantime, there is no change in the quo-

tations on the local market, they being as follows:

PIPE FITTINGS—

Cast iron fittings	22%
Plugs, cast iron	25%
Do., solid	22%
Do., countersunk	22%
Bushings, cast	25%

RADIATION PRODUCTS STEADY AT REVISED DISCOUNTS

Montreal.

Radiation quotations remain unchanged from the last listing. There has been a continued firm undertone in these products. The following are the prevailing quotations:

RADIATORS AND BOILERS—

Radiator list prices are for 1, 2, 3, 4 and 5 column radiators, per sq. ft.
45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount 51 per cent for hot water, and 52 per cent for steam.
Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05; Discount 48 per cent.

Boilers—Round hot water boilers, sizes from 0 to 10, 60 per cent. off list. Square or sectional hot water or steam boilers, 15 in., 15 per cent. Square or sectional water boilers, 19 in. to 36 in., 20 per cent. Square or sectional steam boilers, 19 in. to 36 in. 17 per cent. Ontario Government trimmings, 15 per cent.

Round steam boilers, standard trimmings, 28 per cent. Ontario Government trimmings, 25 per cent.

F.o.b. Montreal, Toronto, Guelph.

CEMENT QUOTATIONS REMAINING AT RECENT REVISION

Montreal.

While cement sales to-day are merely nominal, to remain so until the opening of the spring building season, local manufacturers declare sales to be of good

proportion. There has been no change in price since the six-cent drop of some time ago. Present quotations are as follows:

CEMENT—	
Car load lots, per bag. F.o.b. steam cars	0 86
Per Bag, delivered	0 94
Less car lots, per bag, f.o.b. yard—	
Per bag, delivered	0 94
Less 5 per cent	1 04
Rebate of 20 cents for empty bags.	

SAP BUCKETS SHOW REVISION IN AN UPWARD DIRECTION

Montreal.

A revision has taken place in the prices of sap buckets on the local market, an increase being made in all bucket prices. There has been no change in square syrup cans and spouts. Trading in the local market has been fairly good. The following are the new prices:

SAP BUCKETS—	
Straight Pattern—Per 100, No. 7, \$16.10; No. 8, \$17.50; No. 9, \$19.60; No. 12, \$21.00; No. 16, \$25.20.	
Extra Heavy—No. 12, \$25.90; No. 16, \$31.50.	
Frontenac—10 qt., \$22.19.	
Western Pattern—6 qt., \$15.75; 10 qt., \$21.00.	
Galvanized Straight—No. 9, \$23.00; No. 10, \$27.00; No. 12, \$27.00; No. 16, \$31.00.	
Square Syrup Cans, one gallon, \$16.75 per hundred.	
Spouts—Perfection, \$20.00; Eureka, \$17.00; Sterling, \$24.65 in lots of 1000.	

ENGLISH GALVANIZED SHEETS ARE ADVANCED

Mon real.

A 25-cent advance is announced in English galvanized sheets, the price having been increased by the makers in England. The new quotations on Queen's Head and Fleur de Lis, respectively, are as follows: 28 gauge, \$7.50 and \$7.25; 26 gauge, \$7.25 and \$7.00; 24 gauge, \$6.95 and \$6.70; 22 gauge, \$6.90 and \$6.65; 18-20 gauge, \$6.65 and \$6.40.

ADVANCED PRICES GENERAL IN METAL MARKETS

Montreal.

The metal market remains firm with tin and copper especially strong and the

former has shown a very sharp advance. The advance is a little too rapid to be healthy and while the situation is undoubtedly firm, a reaction temporarily would not be surprising.

TIN.—The London market registered a new high level on this movement of \$210 with New York on an equal basis. Speculation is quite active and consumers are naturally a little chary about buying at present prices. The local market is firm at 51 cents.

COPPER.—This is also very firm in London and New York and with buyers bidding against one another the market has been forced up considerably. It is difficult to buy at less than 17 cents refinery for electro. The local market is also firm at 20½ cents for electro and 20 cents for casting.

SPELTER.—This is also very firm in both London and U. S. A. and East St. Louis has touched a new high point at 7.70 cents. The situation appears strong at the moment and with stocks not very large a firm market may be expected for the next few months. The local market is firm at 10½ cents.

LEAD.—This remains steady with little change in prices and it is probable that there will not be much advance from present levels. The situation remains firm, however, with supplies none too plentiful. The local market is firm at 9 cents.

ANTIMONY.—The is very firm owing to lack of offerings from China and there is a keen demand for the little available. The local market is higher at 8¼ cents for English and 7¾ cents for Chinese.

ALUMINIUM.—This is also firmer in tone and the market has advanced to 24 cents per lb.

sinks and backs. Following is the list with the new discount now in effect.

ENAMELED WARE—	
Enameled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40

Above prices, list less 30 per cent.	

LEAD AND ZINC GOODS PRICES RISE

Toronto.

The steady advances in tin and lead prices have been reflected in quotations on solder. This is the second advance within a month and it is stated that the present levels will be well maintained in view of present primary market conditions. The new list follows:

LEAD AND ZINC GOODS—	
Lead pipe, per 100 lbs., up to 2"	14 50
Do., 2" to 8"	15 50
Do., 8" and over	16 50
Lead waste, per 100 lbs.	15 50
Note—Lead pipe is subject to a discount of 10 per cent.	
Lead traps and bends	15%
Lead wool, lb.	0 14½
Lead sheets, 2½ lbs. sq. ft. per lb.	0 12½
Lead sheets, 3 to 3½ lbs.	0 11½
Do., 4 to 8 lbs., sq. ft. lb.	0 11½
Do., 4 to 8 lbs. sq. ft. lb.	0 11½
Solder, guaranteed, lb.	0 29
Do., strictly, lb.	0 26
Do., commercial, lb.	0 25
Do., wiping, lb.	0 25
Do., wire, lb.	0 39½
Zinc sheets, casks	0 11
Do., broken lots	0 12

GALVANIZED SHEETS AGAIN ADVANCED

Toronto.

Galvanized sheet prices are again revised to higher levels. The steadily advancing prices at the mills and the scarcity of foreign sheets have caused local quotations to be adjusted to meet the new levels. It is pointed out that further advances may be looked for, if basic prices go any higher. The prices now in effect follow:

GALVANIZED SHEETS—	
	Premier and Apollo
10¾ oz.	6 65 7 00
U. S. 28 base	6 50
U. S. 26 base	6 20
22 and 24	6 05
18 and 20	5 90
16	5 75
12 and 14	5 60
	Queen's Head
28 gauge base	7 15 7 50
26	6 75 7 10
24	6 45 6 90
22	6 30 6 70
	Fleur de Lis
28 gauge, base	6 90
26	6 50
24	6 20
22	6 05

An extra 40c. per 100 lbs. is charged for Keystone and Premier bands copper-bearing sheets. An extra is now charged on galvanized sheets. 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown in 20c. per 100 pounds.

FIRM TONE MAINTAINED IN SOIL PIPE PRICES

Toronto.

Increasing business in the soil pipe trade is reported in local circles. Prices have remained unchanged but dealers

Toronto Markets

TORONTO, March 1.—There are several important price changes noted in this week's market reports, all of which are in the upward direction. Among the more important are the new discounts on enameled goods, the advanced price on sap buckets, new higher lists on blow torches and the advance in copper rivets and burrs. Galvanized sheets are also quoted at higher prices.

The continued activity of primary markets has kept quotations in an uncertain state, particularly in ingot metals, iron, steel and sheet metal. Many dealers being afraid to quote definite prices, not knowing what replacement figures will be. This feeling is offset to some extent by the feeling that a wave of prosperity is at hand and that even if higher prices are reached, goods could be readily disposed of without loss.

SOLDERING COPPERS ARE AT OLD LIST

Toronto.

There has been no change in the price on soldering coppers. The rising prices of ingot copper, however, are expected to have an effect on quotations on this line in the near future.

COPPERS, SOLDERING—

Base 4 to 8 lbs., 35c. per lb.; 3-lb., 38c; 2½-lb. 41c; 1½-lb. 44c; 1-lb. 48c. per lb.
F.o.b. Toronto, Hamilton.

ENAMELED WARE PRICES ADVANCED

Toronto.

The discount on enameled ware has been reduced from 33 1-3% to 30% as a result of higher prices on basic metals, and the continued firmness noted in primary sources. The advance, while not large, affects the complete range of enameled goods including baths, basins,

state that advances in price are warranted in view of the rising prices of raw materials.

RANGE BOILERS—

Size.	List Price.
5-gallon	\$13 50
12 to 15 gallon	14 00
18-gallon	15 00
26-gallon	16 50
30-gallon	17 50
35-gallon	20 50
46-gallon	22 75
52-gallon	38 00
66-gallon	60 75
82-gallon	74 00
100-gallon	103 00
120-gallon	117 00
144-gallon	164 00
168-gallon	187 00
192-gallon	210 00

Discounts, Standard weight, 40 per cent.
Extra heavy, 30 per cent.

WROUGHT PIPE PRICES REMAIN UNCHANGED

Toronto.

There has been no further change in the quotations on wrought pipe since the recent upward revision. Sales are gradually taking on larger proportions at the list following. Local dealers assert that they are looking for an active season's business in pipe.

CORRUGATED SHEETS REMAIN ON FIRM PRICE BASIS

Winnipeg.

There is a firm tone to the galvanized sheet market and indications point to an upward direction.

FIRM TONE TO BOILER TUBES

Winnipeg.

The upward tendency which has prevailed in the boiler tube market during recent weeks is likely to result in slightly higher price levels in the near future. Prices at the present time show no change.

REVISED QUOTATIONS ON GATE VALVES

Winnipeg.

There is a revision in quotations on gate valves; half inch to two inch is quoted at list less 35 per cent. with two and one half inch to six inch at list less 30 per cent.

PRICE REVISION ON MALLEABLE RAIL FITTINGS

Winnipeg.

Revision in discounts is in effect on malleable rail fittings. The revised price is list less 40 per cent.

BRASS STEAM COCKS MOVE UPWARD

Winnipeg.

Lower discounts are in effect on brass steam cocks. Sizes one quarter inch to two and one half inch are list less 40 per cent.

JACKSON BALL COCKS SHOW AN ADVANCE

Winnipeg.

Higher quotations are in effect on Jackson ball cocks without floats and the present prices are \$1.85 each.

Winnipeg Markets

WINNIPEG, February 28.—A firm tendency in the markets for plumbing and steam fitting supplies is again evidenced by a number of price revisions in an upward direction. Wrought iron pipe has shown an advance of approximately \$5 per ton. Malleable iron fittings show a revision in price. New discounts are in effect on wrought nipples. The strong tendency in primary markets is reflected in a firm local market on corrugated sheets, boiler tubes and soil pipe. Business is reported satisfactory for this time of the year and with the approach of Spring and renewed building activities an improvement is looked forward to.

REVISION IN DISCOUNTS ON MAL- LEABLE IRON FITTINGS

Winnipeg.

Revised discounts on malleable iron fittings are in effect. This revision is upward and class A is quoted at 55 per cent. with class B and C at 65 per cent.

NEW DISCOUNTS ANNOUNCED ON WROUGHT NIPPLES

Winnipeg.

New revisions upward are in effect this week on wrought iron nipples. Below is the new schedule of discounts:

NIPPLES—
Close and short 4 in. and under 45 per cent.; 4½ in. and larger 35 per cent; Long 4 in. and smaller, 50 per cent; 4½ inch and larger, 40 per cent.

PRIMARY LEAD MARKETS SHOW FIRMNESS

Winnipeg.

There is a steady tone to lead and zinc goods at primary points and it is expected that this strength will be reflected on the local market very shortly.

SOIL PIPE SHOWS NO CHANGE

Winnipeg.

There is no change in quotations on soil pipe but owing to productive cost the market is showing a strong undertone. The movement at present is quiet but with the approach of spring and building activities an improvement is expected.

Winnipeg.

There has been an advance in high tank closet combinations. One line of golden oak finish with varnished high tank, copper lining and nickel-plated brackets is now quoted at \$38.00.

HIGHER PRICES ON CLOSET SEATS

Winnipeg.

Higher prices are in effect on some lines of closet seats. Golden oak and birch mahogany are quoted at \$4.50 each and ivory white at \$7.00.

CLOSET TANKS AT HIGHER PRICES

Winnipeg.

Higher prices are quoted on closet tanks, one line complete with inside fittings, elbow and supply pipe is quoted at \$16.00, another at \$18.50 and one complete with supply pipe, elbow and coupling nut at \$17.25.

Are Opposed to Commercial Agreements Act Now Before the Ontario House

TORONTO, Ont.—An Act cited as Commercial Agreements Act has been given its first reading in the Ontario Legislature. This Act provides that an action may be brought by the Attorney-General of Ontario in the Supreme Court for a declaration that an agreement exists which:—

(a)—constitutes a conspiracy in restraint of trade as being an agreement between two or more persons to do or procure to be done an unlawful act in restraint of trade, (b)—is an agreement to unduly limit for transporting, producing, manufacturing, supplying, storing or dealing in any article or commodity which may be a subject of trade or commerce, (c)—is an agreement to restrain or injure trade or commerce in relation to any such article or commodity, (d)—is an agreement to unduly limit or restrain the manufacture or production of any such article or commodity or to unreasonably enhance the price thereof, (e)—is an agreement to unduly prevent or lessen competition in the production, manufacture, purchase, barter, sale, transportation or supply of any article or commodity, and that such agreement is unlawful and void, and for an injunction, mandatory order or other relief.

If the Court finds that such agreement comes within any of the clauses from (a) to (e) of the above section, it shall declare such agreement unlawful and void to all intents and purposes, and the Court may make such order with respect to past and future dealings, rights or obligations of the parties to such agreement as may be deemed just and expedient, having in view the course of business between the parties, the degree of good faith manifested by them in entering into acting under, or carrying out such agreement, and the protection of the public interest, and may make such further order as circumstances require to prevent the carrying out of such agreement or any similar agreement.

The Bill has only been introduced. It is designed to take the place of the Anti-Combines Bill which was introduced just at the close of the 1922 session, and against which there was so much opposition. The Commercial Agreement Act

as here outlined is not generally approved of, however. The feeling of manufacturers in regard to this Bill is certainly opposed to it; the Canadian Wholesale Grocers' Association when given an opportunity to express their position in regard to the above, last December, declared against it. It was stated by officers of the association at that time that such a Bill constituted the Attorney-General's department a detective bureau, giving its officials the right to investigate any firm's affairs where, in the Attorney-General's opinion, an agreement contrary to this Act exists.

HOUSEHOLDERS FIRST ON LIST FOR GAS

(Continued from page 15)

be supplied shall include only such appliances as are constructed and equipped for heating purposes; ordinary steam power boilers used for steam heating shall not be supplied with gas."

Provisions under which a special permit for the use of natural gas may be issued are made in the regulations.

The use of devices to pump an extra supply from the mains is prohibited.

"Any person who makes use of any device attached to any service pipe for the purpose of withdrawing gas from any main in a larger quantity or under greater pressure than the ordinary flow of gas from the main, unless under special permission from the commissioner, shall immediately be cut off from any further supply.

"Gas shall be supplied only in cases where suitable appliances for economical consumption are employed, and where such appliances are kept in good condition and adjustment. Service lines hereafter installed shall not be less than one inch in diameter."

Rules governing the drilling of wells are also embodied in the document. An inspection of all consumers' appliances for burning gas is also demanded:

"All distributors of natural gas shall inspect their consumers' appliances at least twice yearly, and shall either adjust or instruct and assist the consumer in adjusting all equipment to burn gas with the greatest possible economy."

JENKINS Brass Swing Check Valve

Sectional View of Fig. 475

A strong, handsome and durable valve with the Jenkins Renewable Disc feature.

The angle of the seat is such that it opens readily at low pressure and the shock of closing under high pressure in the most severe service is absorbed in the line piping.

This Jenkins model is adapted for use in either horizontal or vertical position.

Fig. 475 illustrated here is the Standard pattern for 150 pounds working pressure. Made in extra heavy patterns (Fig. 260) suitable for 300 lbs. working pressure.

The complete Jenkins line is pictured and described in Catalog No. 9—free on request.

Sell Desolvo As Well As Use It

Every time you call at a house and thaw out frozen pipes you lose money because if you charge what your time is really worth the customer thinks you are robbing him—so you charge him less—and lose money.

Sell him a can of Desolvo instead. Then tell him to keep a can on hand and to use it every month. Get a hundred customers like this buying a can every month—100 cans a month without effort and a real profit besides.

This will be easy for you because Desolvo is being advertised in the Canadian newspapers and every piece of copy emphasizes to the retailer the importance of using a can of Desolvo every month. Your jobber's salesman has Desolvo. Tell him to send you a trial order. Begin now to build up this big new business that is waiting for you.

K-K is a specially prepared chemical for cleaning solid porcelain or vitreous ware only. You can use K-K in your work as well as sell it along with Desolvo. Get a trial order from your jobber.

KERR VALVES

For Steam and Hot Water Heating

Kerr Radiator Valves need no introduction. They have been setting a standard of quality and efficiency in connection with Hot Water and Steam heating for many years, and continue as recognized leaders in this line of valves.

Kerr Valves on your Radiator is a stamp of quality on the job.

Ask your jobber for KERR valves. He likely has them in stock.

Kerr N. P. Union Elbows register with either the Hot Water or the Steam Valve, and are of same standard high quality.

Are These The Opportunities You're Looking For?

Fan Heating and Ventilating Engineering is the pinnacle of all other forms of heating, and of all branches of steam fitting and sheet metal work. It prepares you for:

1. For Employers it enlarges their business opportunities 100%.
2. Employees it raises to Foremanship of a large shop.
3. Or as Designing Engineer of some large Heating Contractor.
4. As an intelligent Salesman of Heating Appliances.
5. As Chief Engineer with a Heating or Furnace Manufacturing Co.
6. Later a Consulting Engineer to Architects and Building Contractors, etc.

Which of These Are You Working for?

Full Information Free.

Select Your Course.

THE Royal

Automatic Gas Water Heaters

A Better Heater at a Lower Price

The Cost of the Royal Automatic Heater is less than half that of the coal type heater of similar service capacity.

It is easy to install, uses little gas and delivers hot water instantly at the faucet 24 hours of the day.

The Royal thermostat may be set to maintain any desired temperature of water from 80° to 200°.

The Royal, once installed is fool proof. Nothing can get out of order; the plumber who sells it has no expensive trips, he retains all of his original profit.

Sold only through or by plumbers. Write today for full information.

Ever see two boilers in one?

That's what Burnham Boilers are. Great big man's size heat givers for cold, bleak days. Or on uncertain spring days, they run at half time just as economically as when at full blast. The grates shake half at a time, so you could run half the boiler at a time.

Write us for complete information.

Williams' Stillson Drop-Forged Pipe Wrenches

Grip pipe and fittings positively and instantly, yet release readily. They do not slip and neither do they crush nor lock on the pipe. The Bar and Jaw, drop-forged from a specially selected grade of steel, are hardened and tempered; the Adjusting Nut is of wrought steel, case-hardened. Unconditionally guaranteed against defective workmanship and material.

Wood or Steel Handle Patterns
8 Sizes — 6 to 48 inches

Made in Canada

The Everlasting Veneer Toilet Seat

**Strong, Clean
Hygienic**

This reliable, dependable toilet seat is made of 7 and 9-ply, air-seasoned wood veneer, held together by our special wood cement. This cement is proof against heat, cold or dampness. The veneering is distributed according to the strain and wear required of the different parts. The Everlasting Seat will never crack, warp or split.

It is a splendid seat for use in cold, damp basements where closets must be installed. The Everlasting Toilet Seat will meet, and successfully resist, these severe conditions of moisture, changing temperature, etc.

**Canadian
Veneering Company,

Acton Vale

Quebec

Few people realize the tremendous selling power of classified advertising or the exceptional opportunity which it offers.

Hundreds of Sanitary Engineers to-day are carrying equipment for which they have no further need, yet many others could use this same equipment to good advantage and would be glad to buy at a fair price, if they but knew of it.

How to get buyer and seller together—that's the question. The answer is—SANITARY ENGINEER classified advertising service. Thousands of Sanitary Engineers throughout the country read the classified advertisements every issue. That's why they produce results surely and quickly.

If you want to buy, sell or exchange equipment.

If you want to sell or exchange your store.

If you want to buy a store.

If you are looking for a location.

If you need a competent journeyman.

If you are seeking a position.

In fact if you wish to buy, sell or exchange anything used in a plumbing and steamfitting shop or for any reason desire to quickly get in touch with other Sanitary Engineers, use SANITARY ENGINEER'S classified advertising service. The charge is ridiculously low—\$1.50 for twenty-five words, 5 cents for each additional word.

**Look For The Classified Column
on Page 46**

A Complete Line Sells Better

"In many lines it has been proven that the dealer who makes the best sales record is the one who has a complete line of a varied group of products under one brand name, rather than the dealer who separates his orders among several manufacturers."

—Printers' Ink.

Experience has no doubt proven to you that the leading line of bathroom fittings and hardware specialties is the Gendron line.

YOU HAVE locks and bars on the doors and windows

of your store? You have provided that thieves shall not break in and steal your goods.

Have you done the same for your investments? Of course you have your bonds and stocks and insurance policies in a safety deposit box or in your office safe, but after all that is the smallest element of protection?

The really effective way to protect your investments is to buy only good investments; sound investments; investments suitable for your purposes. To do so requires a certain understanding of investments and a knowledge of week to week financial and business conditions.

When thieves break in—

Have you protected your investments as well as you have protected your store?

THE FINANCIAL POST is weekly giving 9,000 other Canadian investors and business men reliable news and well-tempered advice. It tells them about:

Business Conditions
Insurance
Bonds
Stocks
Mortgages
Political Developments
National Progress
Civic Affairs, etc.

Ask your bank manager about THE FINANCIAL POST

if you are doubtful if it would be of real value to you. He will explain how highly THE POST is regarded as an authority; how valuable its investment and business articles can be to you.

To make the most of your business and investments in 1923 you should subscribe now. Fill in the coupon; attach \$5 and we will start you off for a year.

THE FINANCIAL POST,

143 University Avenue, Toronto.

You may send me The Financial Post for one year (52 issues). I enclose \$5.00. Or you may draw on me.

Series 300

A Promise Backed with Performance and Our Guarantee Back of it ALL

When we tell you that the Decatur Complete Water System will give longer and better service than any other system made, it is no idle boast.

What the Decatur has done: A Figure 300 System has run for a whole year—24 hours a day without a stop, pumping on 22-ft. suction lift against an 80 ft. head. During this time it has pumped 1,675,560 gallons of water. After all of this hard service it shows no decrease in volume, pressure or efficiency. It is still running day and night. No repairs or attention of any kind other than regular oiling has been given the outfit.

Our liberal guarantee makes it perfectly safe for you to get one of these outfits for demonstration and your profits on sales are particularly generous.

Something New

The Teck Flush Valve

Today we are making in our plant the New Teck Flush Valve.

Here, truly, is a flush valve that is far from the ordinary run of such equipment.

Note carefully the following points of superiority:— Simplicity in construction and positive operation. Can be connected to any type of closet bowl. Cannot be held open to waste water. Can be regulated for any length of flush without shutting off water. Will not waste water in event of dirt lodging in relief valve. Not necessary to take down the whole valve in case dirt lodges in by-pass, only remove two screws.

In every respect this valve upholds and enhances the reputation that has been always maintained by the Galt Brass Company, Limited. Use it on your next job.

Your jobber sells it.

Merit Has No Substitute

"That used to be a good make but they have started to cheapen it now."

How many times have you heard a similar expression?

It means that another manufacturer has attempted to substitute reputation for merit—the beginning of the end for a one-time quality product.

To win a reputation for building the best automatic gas water heater is one thing—to hold that reputation is another.

During the quarter of a century which measures our business life, we have earned the enviable reputation of building only quality water heaters. To "rest on our oars" now would be breaking faith with you who have shared in our efforts and our success.

Nothing but quality endures.

We will therefore continue to build into RUUD Automatic Water Heaters only those things which make for lasting quality and service.

Some Income Tax Problems Raised

Western Ontario Plumber Asks re Value of Property on Which
Depreciation is Figured and Whether Depreciation is Considered
a Liability—Are Bad Debts a Liability?

EDITOR'S NOTE:—From enquiries being made of Sanitary Engineer, a number of plumbers are having difficulty in making out their Income Tax statements which must be in by the end of April. A number of enquiries have been made during the past week which raised some interesting points which will be outlined herewith:

ONE Western Ontario plumber writes: Our statement of assets and liabilities for the last year shows the following:

Real Estate	\$ 9,730.00
Fixtures and Trucks	1,640.00
	<hr/>
	\$11,370.00
Less:	
Depreciation	
2½ per annum on buildings value ..	\$3,910
=	\$97.75
10% per annum on fixtures and trucks	
=	\$164.00
	<hr/>
	261.75
	<hr/>
	\$11,108.25

For the second year, should \$11,108.25 be considered the value on which to calculate depreciation, and should this figure be shown as the asset value in a statement of assets and liabilities at the end of the second year? Should the depreciation of \$261.75 be considered as a liability?

Answer.—The statement at the end of the first year is not correct, but should have taken the following form:

STATEMENT OF ASSETS AND LIABILITIES

As at the end of Business Year.

ASSETS—

Stock of merchandise on hand at cost price.	
Real Estate, Buildings	\$3,910.00
Real Estate, Land	5,820.00
Machinery and Tools	
Furniture and Fixtures and Trucks	1,640.00

LIABILITIES—

Accounts Payable	\$
Depreciation Reserves:—	
Buildings 2½% per annum	97.75
Fixtures and Trucks 10% per annum	164.00

We see here that the depreciation, which was charged in the profit and loss statement, is treated as a liability, and is termed "Depreciation Reserve," or sometimes "Reserve for

Depreciation." The amount is actually a setting aside of a portion of the surplus which would otherwise be available for distribution to the proprietor or proprietors. By this setting aside, the danger of distributing, as profits, the amount that should rightly be held in the business for replacement purposes is overcome.

There is a highly important side issue here. Sound business demands that a balance of cash, some easily convertible investment, should be maintained at all times equal to the amount of reserve for depreciation. A business following this policy will never find itself in the position of wanting new buildings or fixtures—to replace those which have become old-fashioned, or worn out—and having to restrain its development and expansion because no money is available.

Depreciation should always be calculated on the full asset value (less a reasonable allowance for scrap value), irrespective of any amount which has been charged against profit and loss in that, or in previous years, and set up as a reserve for depreciation. If the depreciation is calculated on the diminished value, the following results:

	Amount on which dep'n is figured	Amount charged to profit and loss
1st year	100%	10%
2nd year	100%—10%=90%	9%
3rd year	100%—20%=80%	8%

It becomes an arithmetical impossibility to ever reach a reserve which is equal to the full value of the asset.

Bad Debts

Question.—Bad debts of \$136.00 have been charged in trading accounts during the year. Should these be taken in as a liability?

Answer.—There is no liability whatever in connection with actual losses on account of bad debts. If no provision has been made regularly, it must form a direct charge against profits.

Provision is frequently made periodically, by setting aside a small percentage of gross sales, say 1% or 2%. This amount is charged against profit and loss, and credited to a "Reserve for Bad Debts" account. This reserve is always a liability. Then, when an account must be written off, the charge is made to the reserve account instead of against profit and loss. In this way, if good judgment is used in determining the amount to be set up periodically, and in extending credits, the business is preserved from large losses in any one year, and a more equitable basis for comparing the results of any one year with another, is obtained.

Shows That Plumbing Installations Pay Big Dividends

Cook & Donohue, Plumbers of Stratford, Ont., Believe in Looking After Complete Contracts for Installations of Plumbing and Heating Equipment—Satisfied Women Customers Are Big Advertisers—Recommend Only the Best in Repairs

COOK & DONOHUE of Stratford, Ontario, believe that the ideal plan for corraling the greatest volume of business which carries maximum profits is to be able to look after the complete contract, plumbing, heating and electrical work. With this end in view they have equipped their shop, show rooms and display window so that prospective customers may at all times see just how the merchandise offered will look in their own homes.

A Big Talking Point

"It is indeed a big talking point as well as a selling point when we can invite a man and his wife, who are busy with plans for a new home, or plans for improving their present home, down to our shop and let them see exactly what an installation such as they contemplate will look like. It usually means that the sale is at least half made. Sometimes, of course, they wish to select fixtures or equipment that is more expensive, or sometimes less expensive, or change an arrangement to suit their own requirements, but the fact remains that when we can show them the equipment complete and set up just as it would be in their own home, they appreciate it and our service and it only remains to arrange details."

Improving Homes

A glance at the business handled by Cook and Donohue in the past few years shows that not only city people but dwellers in the rural sections are constantly improving their homes. It is quite true that many of them make improvements over a period of months or perhaps years, putting in perhaps a bathroom first, then heating and later electrical service, but the fact that they come back to Cook and Donohue for the entire contract proves the correctness of the firm's policy. As far as builders of new homes in the city are concerned, it usually works out without question, that by taking the complete contract, Cook and Donohue are enabled to give a figure that is so attractive that they secure the entire work and make a nice profit.

While they regard good work and satisfied customers as the best advertisement any business can have, Cook and Donohue believe that their means of attracting those interested in improving their homes is by their store and window displays.

"We give careful attention to our windows and our store," said Mr. Cook to Sanitary Engineer, "and we find that it pays well. We aim to keep our store display so clean that any man can come at any time with his wife and get ideas and talk over with us proposed installations. If the men in the trade only realized it this is a most important matter. Women are not at all anxious to enter the average plumber's establishment and for good reasons. We see to it that our stock is kept clean and in perfect order and that there is no merchandise littered about for people to step over or fall over. We frequently receive compliments from women who have come down with their husbands to talk over plans with us, and in not a few instances they have sent women friends to us with resultant good business."

Please The Women

The firm believes that it is a most important matter to please the women. They have to spend most of their time in the homes and they like to have nice homes and up-to-date fixtures and equipment. In supplying these, Cook and Donohue find there is excellent business and profits and the best kind of advertising for them.

"Women are great advertisers," said Mr. Cook. "When they get a nice home with nice fixtures and equipment they never tire of telling their friends about it, and they don't forget to tell who

put them in or that the price was reasonable and the work satisfactory and so on. We ask for no better advertising than this."

The firm finds also that home owners and home builders, both men and women, frequently buy better equipment and fixtures than they had intended as a result of seeing the store displays.

Want Them Good

In this connection the firm points out that the installation to be made is one which is going to pay for itself many times over in long years of real service, and that it would be a foolish policy to put in something not in keeping with the rest of the equipment for the sake of a few dollars.

This same policy of recommending only the best is followed out in connection with repairs. If a workman is sent out to make a repair and finds that the part is worn out and that it would be bad business to repair it, he reports to the firm, with the result that the matter is taken up at once with the owner. It is pointed out that while the part can be repaired, that the job at best would only be temporary and therefore unsatisfactory, and that it would be better all round to put in a new part. Cook and Donohue find that the great majority of their customers appreciate and follow out their suggestions along these lines.

Say Business Good

The firm has been kept busy all the time and is looking for continued good business. There is a big and profitable field for them they believe in following out their policy of going after the complete plumbing, heating and electrical contracts for new homes, and homes and other places which are being improved.

Location, they believe, is an important factor in obtaining business and it pays to be where the greatest number of people can see displays which are made, and come easily to the shop. With this object in view, Cook and Donohue have their location on the main business thoroughfare of Stratford, and they aim to keep their displays and store worthy, not only of their location but of the firm's standards.

As will be seen from the illustration the firm finds it well worth while to stock electric irons, grills, fans and a large assortment of plain and fancy globes. Sales which have resulted when

GOOD BUSINESS MAXIMS OF THIS FIRM

1. Be equipped to attend to the complete contract.
2. Rural field is worthy of increasing attention.
3. Windows and showroom indicate improvement that can be made in homes.
4. Make plumber's showroom a place to attract rather than repel prospects.
5. Make strong appeal to women. They are great advertisers if satisfied.
6. Emphasize that equipment pays for itself in service spread over years.
7. Recommend only the best in both new equipment and repairs.

Laundry tubs, closet sets, sinks and other small bathroom fittings occupy the most important location in the showroom of Cook & Donohue, plumbers, of Stratford, Ont., as illustrated herewith. Groups are shown indicating the manner in which the equipment will look in the customer's home.

home owners came in to discuss heating, plumbing and electrical work have been very satisfactory.

The electrical display at night or when it is turned on in the day time is an imposing one, and has been directly responsible for the sale of much merchandise that otherwise would not have been purchased. Fancy dining room lamps and reading lamps are frequently sold for gift purposes. The firm's splendid display of bath room fixtures has also meant increased turnover in these lines. Sales are made both to those building new homes and to those who already

have bath rooms in their homes. By keeping bath room fixtures where they can be seen all the time, Cook and Donohue have developed an all year trade in them. Some people who own homes come in and buy one piece at a time until they have a complete set of fixtures.

Laundry tubs are big sellers, as every woman who knows anything about them or has seen them in a friend's home want them. With the tubs right out on display, it usually requires very little sales talk to have the man and woman who are building a new home or are making improvements, include them in the contract.

coming June, and an invitation was extended for the meeting to be held here, which was accepted, the second week in June being suggested.

Before finally fixing the date it was considered advisable to communicate with the whole Executive of the Society, comprising the presidents of the various Provincial Associations. The secretary was therefore instructed to secure their views as to the date as soon as possible. A further meeting of the sub-committee will be held next week to make definite plans for the convention.

Those at the meeting were A. Latour-elle, president of the Canadian Society of Domestic Heating and Sanitary Engineers; George Delaney, president of the Montreal Master Plumbers' Association, John Watson, P. C. Ogilvie, and D. K. Trotter, secretary.

Canadian Society Convention in June

After Missing General Convention Last Year,
Parent Society in Canada is to Meet in Montreal
This June

MONTREAL.—At a meeting of the sub-committee of the Executive of the Canadian Society of Domestic Heating and Sanitary Engineers held at the Builders' Exchange offices preliminary arrangements were made for the annual convention of the Society, which will be held in Montreal next June. Although the constitution of the Society provides for an annual con-

vention to be held in June of each year, their last meeting was held at Quebec two years ago.

Last year, owing to the illness of the president and the great amount of business going forward it was decided by the association to forego their convention. At the last meeting of the Master Plumbers' Association it was urged that the convention should be held during the

PLUMBER GOES TO BOSTON

St. John, N.B.—H. H. Rouse, formerly a plumbing contractor in St. John, N.B., is now located in Boston. Recently, a young son of Mr. Rouse was killed by an automobile in the Dorchester district of Boston, where the family is residing. Rouse was one of the first plumbing contractors in St. John to use striking advertising as a means of acquiring business.

Rural Sewage Disposal Systems for Apartment Houses and Stores

Suburban Apartment Houses and Stores Equipped With Disposal System—The Ground Slopes Towards the Building—System Has Been in Operation Several Years

Written for Sanitary Engineer by EDWIN NEWSOME, Consulting Engineer

THAT there are exceptions to every rule should ever be accepted. In all the previous articles on this subject of sewage disposal systems for rural homes, two rules have been laid down as almost hard and fast, and under conditions previously considered those rules must be carried out to the letter. I refer to the rules that the main trunk line of a sewage disposal bed should not have a greater fall than one inch in ten feet and that all the laterals be laid perfectly level. The first of these rules will from time to time be altered to make way for conditions,

though open jointed laterals **MUST** always be laid level. Not, however, always in a straight line. Sometimes rocks or tree roots would require that the laterals be run round these or other obstacles.

Then there is the question of contour of the ground, for instance, the ground to be used as a disposal area may be a hillside sloping away from the building. Some different method of laying the piping would have to be followed out.

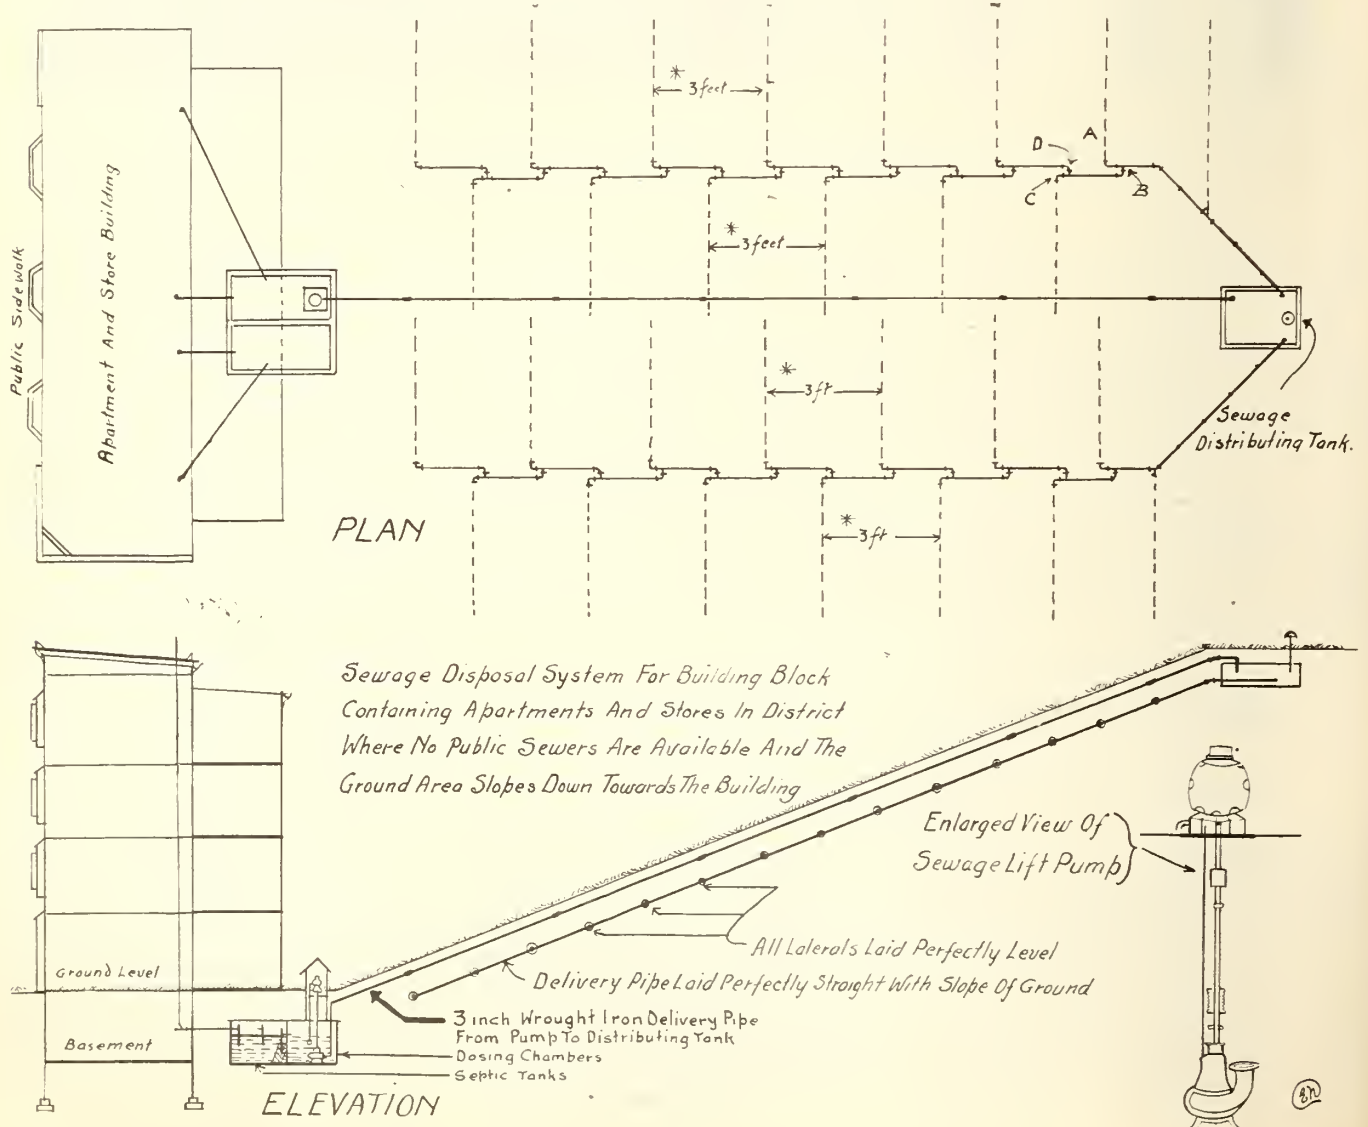

Sometimes the ground to be used slopes up from the house or building, as is shown in the accompanying plan and

elevation drawings, which, by the way, is an actual job installed over two years ago not far from Toronto. The situation found was as follows:

The land was bought, and it looked as if a large scheme of sewers and drains would be carried out. The apartments and stores were built and ready for occupancy, when the question of sewage disposal system had to be evolved, and the writer was consulted in the matter.

The ground was about as ideal as possible, good gravelly loam and lots of room. The septic tanks were constructed

** The Pipes Were 10 Feet Apart But Where Area Is Limited Pipes Must Not Be Closer Than 3 Feet*

in accordance with data already referred to in previous articles. The dosing chamber had holes cut through as also had the cultivating chambers of the two tanks, so as to make sure of the various fluids being equalized in height and bacterial conditions. The dosing chamber then had an extension built to it, to make a small pump-house to house the sewage lift pump. This job also required a large distributing tank at the top of the hill, the slope being about one foot in three, quite a slope.

The sewage lift forces the sewage through the pipe (see illustration) up into the distributing tank at the top, and main pipes laid in the manner shown. The reader should follow the line of pipe when reading this article and note how the sewage is conveyed from one side of the main pipes with the laterals alternately.

Action Described

For example, the sewage is pumped or forced up through the wrought iron pipe into the distributing tank. The sewage then flows down through the glazed tile pipe until it reaches the first clay tile bend, then it flows on into the line of laterals connected to the bend referred to.

When this line of laterals is full, the sewage backs up to the first glazed tile pipe branch and down to the second glazed tile bend, filling the laterals connected to the second bend, and again the sewage backs up as soon as the second line of laterals is full of sewage and so on until all the sewage has been pumped out of the dosing chamber into the distributing tank and out into field tile disposal bed.

Increase Allowance of 4-inch Field Tile

When such a plan of field tile piping has to be adopted, great care must be exercised in seeing that not less than 20 per cent. more open field tile laterals be furnished, because, should there be an extra number of persons come to stay in the apartments than was at first made allowance for, the situation would be serious. The lower lines of laterals would get all the surplus sewage and in all likelihood the extra amount of sewage would wash the ground up or the ground would become soggy and very unsanitary conditions set up, so it cannot be too strongly emphasized that not less than 20 per cent. more field tile be laid, and this should be added to the laterals situated nearest to the distributing chamber or tank at the top of the hill.

Keep Motor Dry and Free From Dampness

In constructing the house over the dosing chamber to house the sewage pump, there should be no gases allowed to escape into the housing. The damp air and gases are liable to damage the electric motor and if it is at all possible some means should be found to keep the little place warm and free from dampness. A small heating coil or section of a radiator would be good. Under no consideration, however, should any

method of heating be adopted that would make a flame, because many times the gases from a sewage disposal system are highly inflammable as well as explosive.

Ventilate Each Compartment

The dosing chamber and cultivating chamber must be ventilated in the same manner as is adopted in a regular septic tank and as shown in previous installations. And it will also be noted that, as there are four outlets or house drains discharging into the two cultivating chambers, they are all separate.

Upon no account should house drains be connected together so as to make fewer openings into the tank. This is a very bad mistake. Each soil pipe stack at least should run separately into the cultivating chambers, and a cast iron Y with cleanout fitted to the house drain so as to make the work of clearing any obstacle an easy matter, when it lies on its back so that a rod could be run into the Y clear of bends or other fittings, and under no consideration should offsets in such drains be made except by using the regular one-eighth or one-sixteenth bend.

Same Number of Field Tile Pipe

In this installation, as in others, the amount of field tile pipe for the work

depends upon the amount in gallons or cubic feet of sewage entering the dosing chamber and eventually to be taken care of in the field tile. As stated before, 13 lineal feet of 4-inch field tile is needed to each cubic foot of sewage, or about equal to 2 lineal feet of 4-inch field tile to each gallon with, in this case, an addition of 20 per cent. more.

The Distributing Tank Covered and Kept Warm

In a system such as described, adopting the plan shown, care should be taken that the distributing tank is kept free from frost if at all possible, as the tank, being very cold, is liable to chill the effluent and in that way may likely interfere with the proper working of the bacteria in the ground. Furthermore, some provision must be made to ensure the draining of all the effluent in the discharge pipe back into the dosing chamber. If this pipe is left full and a severe and sudden drop in temperature is experienced, the cold sewage will not permit the bacteria to work and it may be possible that this delivery pipe may, if left full of sewage, become frozen solid. The Sanitary Engineer courts all or any inquiries from our readers and would rather help out first than help clean up an unsanitary job.

Early Sanction of New Plumbing By-law

Master Plumbers' Association of York Township
Makes Minor Revisions in Suggested By-law Before Submission to County Council

AT THE last meeting of the Master Plumbers' Association of York Township, held at Hunt's, Yonge St., Toronto, the new plumbing by-law for the township was discussed very fully. This by-law has been endorsed in principle by the Township Council but had not been officially sanctioned at the time the meeting was held. Such sanction is expected before the next meeting, the voting on the matter being held up while some minor revisions are being made.

Future meetings of the association will be held on the second Tuesday in each month. The Educational Committee plans a discussion of bookkeeping methods and other educational matter at the next meeting.

In carrying the suggested by-law to the Town Council, W. H. Rushton, heading a deputation of the Master Plumbers' Association, made a plea for "a plumbing by-law that we can respect and understand."

"It is a big matter to go into and the plumbers should not be forced to agitate for such things as inspection because, although it looks like something for the plumbers, it is really for the benefit of the people of the township. We want a by-law with penalties that will be enforced," he said.

Reeve Jury.—"A by-law like the city by-law would answer the purpose, besides the advantage of having uniformity in the township and city by-laws."

Deputy Reeve R. H. McGregor—"If we adopted the city by-law, would it not have the effect of throwing a lot of plumbers in the township out of work who could not immediately conform with the necessary standards required?"

Deputy Reeve J. Galbraith—"If the plumbers get the by-law they want they will have a closed corporation and will be able to charge any prices that they wish."

Council will meet the plumbers later to discuss the situation.

PORT CREDIT WATER BY-LAW PASSED.

Port Credit, Ont.—After a session lasting over four hours, Council finally, wound up the town water by-law. All of the various rules and regulations governing the water supply were carefully gone over before the by-law was given its second and third readings.

With the by-law in perfect order and the rules as to rates and service agreed upon, everything is now ready for the supply to be turned on. This, however, will not be done for at least three weeks.

Problems Involved in Hydro Pneumatic Water Pumps

Average Buyer of Water Supply System Will Pay Higher Price if Good Value Can be Shown—Minimum of 10 Lbs. Pressure is Lowest for Satisfactory Use—Avoiding "Air Binding" in Pump

Written for Sanitary Engineer by M. Quinn, National Equipment Co., Toronto

THE hydro pneumatic system of water supply, which, until ten or twelve years ago, was practically unknown in Canada, though the principle had been in successful operation for many years previously in the United States, has now become part and parcel of almost every plumbing installation beyond the limits of the regular city or town water works system.

While the principle involved is an extremely simple one, there is a great variety of conditions under which the plumber is called upon to apply it, and a careful investigation has convinced us that a very large number among the trade are anxious to inform themselves fully upon the subject, and to be in a position to obtain reliable advice regarding any problem, no matter how large or how small, with which they may occasionally be confronted.

It is the object of this article, therefore, to deal to some extent with the general principles underlying this system, and to explain the various details entering into its composition, having regard to the character of service required, source or supply, motive power, etc. We believe that it would not be amiss right here, to emphasize the necessity and the wisdom, as a matter of good business, of each member of the trade giving careful thought to the duty that he owes the public in general, and his own clientele in particular, and perhaps this can be brought home more clearly by an analogy.

An Analogy

Let us assume that the reader has occasion to consult a lawyer about a matter, improper handling of which, may result in very serious consequences to him, and that the lawyer gives an opinion based entirely upon his general recollection of the law, as a result of which, the reader proceeds to court, and after being defeated at the end of very expensive proceedings, has to be satisfied with the explanation that his counsel was unaware of certain amendments that had been made, which, had he taken the trouble to read his law before he had given the off-hand opinion, would have entirely changed the attitude of his client, and saved him a lot of money.

The point we desire to make, therefore, and one which cannot be too strongly emphasized is, that the average

purchaser of a water system, or, indeed, any other class of work that the plumber does, is usually quite as ignorant regarding it as the average layman is regarding the law. He depends entirely upon the good faith of the plumber—who is supposed to have a complete knowledge of such matters and be able to advise him intelligently and honestly—regarding his requirements.

No plumber is in that position who has not carefully studied and compared the various features emphasized in connection with all of the water systems on the market.

The mere fact that he put in one system that gave reasonable satisfaction, does not at all mean that some other system might not prove to be much greater value for the money, and the fact that any part of a system works satisfactorily for a few months, is not in any sense evidence that it will not be a wreck in a comparatively short time, when perhaps any one of several other types of system could be depended upon to give service almost indefinitely.

For example, during the last few years, at least three concerns right in Canadian territory, specializing in this kind of equipment, have failed for one reason or another; some because they sought to sell to the public the lowest priced goods that could be produced, others because the design of various parts entering into their units, was faulty, and not based upon either experience or good engineering practice, but in all cases, the poor unfortunate plumber who installed the equipment, was ultimately "the goat."

Will Pay Higher Price

There is no doubt whatever, that the average consumer is willing to pay a somewhat higher price if he can be shown that he is getting full value. It is equally true that if what he buys from you "falls down," and he learns subsequently that you were in a position to furnish something better, then you will not only have a lost customer, but you will have made an enemy.

And remember this, if you install an absolutely high class outfit for your customer, show him what he has, and make him pay for it, you will have provided, at his expenses, a kind of advertising that cannot be bought with money. You cannot get a "boost" anywhere, like that from a satisfied customer.

Generally speaking, the hydro pneumatic system of water supply, may be likened to the ordinary syphon bottle in which the fluid is contained under considerable air or gas pressure, and in order that this pressure may be maintained until all the contents of the bottle are drawn off, the opening into the discharge pipe is at the very lowest point of the receptacle. Otherwise, air pressure would escape the moment the valve is opened, and the water remain. In other words, if a syphon bottle is held upside down, and the valve is opened, all the gas will rush out, leaving the water in the vessel.

It will strike the average reader as being quite unnecessary to explain so simple a fact, but the reason we do so is that we have seen from time to time a number of systems which were condemned as useless, where the whole cause of the trouble was the connection of the discharge pipe into the top of the tank, or perhaps a safety valve or other contrivance put in at that point, which allowed the compressed air to entirely escape, so that right here we desire to make our first point, viz.: Never connect anything of any kind, whether it be pressure gauge, safety valve, or any other device, into the tank anywhere above the water line, with the single exception of the top water glass mounting.

Still using the syphon bottle as an example, let us assume that a pipe connection is tapped into its side near the bottom and is extended up to a distance of several feet, and fitted at the top with a tap. It will be seen at once that if the tap is opened, the compressed air on the surface of the water in the bottle will force this water down and out through the pipe, discharging it into pail.

It will be equally clear that the greater the pressure present in the bottle, the higher may the tap and pail be placed, and as water will rise 28 inches for every pound of pressure, it will be seen that where a wash basin, for example, is located at say 14 feet above the tank, the water would continue to flow at that point until the pressure in the tank had dropped to six pounds, when it would entirely cease.

Minimum of 10 Lbs.

In practice, however, a minimum of ten pounds pressure is the very lowest
(Continued on page 18)

This is the Gas Age—Why?

History About Gas, Where Found, When and By Whom—How First Used and Supplied—The Most Wonderful Romance of the Nineteenth and Twentieth Centuries

Written specially for Sanitary Engineer by EDWIN NEWSOME, Consulting Sanitary and Heating Engineer

CHAPTER I

Let's Just Have a Personal Chat

SAY, fellow craftsmen, I often wonder how it is that we, (once plumbers and gasfitters) sanitary and heating engineers the world over, are the greatest rainbow chasers on earth. We are, that's sure. We scrap about rules and regulations, about the qualifications of a man as to his ability to install a job properly, and lose sight of the fact that labor, work done, and so on has the least value in the eyes of the general public. We have fought gas companies the world over and as a matter of fact gasfitting was first and foremost the foundation of our industry. This statement is so obvious that it cannot be refuted.

To-day, gas appliances are becoming more popular than ever, and who have we to thank? Gas manufacturers only, and if every member of our craft would consult his own heart, he would find that if the gas industry had depended upon us as a craft, there would be no gas industry, and, if such a condition did exist, the human race would be lacking one of the greatest servants known to science. The man who does not put forth every effort to create a greater demand for gas and gas appliances is, by his sins of omission, evading responsibility he little realizes.

Science, that spirit in man which is ever co-operating with the great Creator, is doing its best to tell man that some day, and not at too distant a date, that the gasification of ALL fuels will be the real beginning of the real gas age. It is coming and all the powers cannot stem the tide. The sooner every sanitary and heating engineer becomes convinced of this fact, the sooner will the public realize that our problems of cheap transportation, cost of living, and cost of heating will be solved.

And now friends, let us keep together during the period in which I will act as story-teller. Let me ask that each one of you be my silent listener for a while, and I will unfold to you some wonderful things about gas, gas appliances, how they should be sold and used. There so don't miss one, and I am sure you will enjoy every one will be about twelve if not more articles in this series, of them. Now, let's get on with the first chat.

IN THE first place, I want it to be strictly understood by every reader of these chapters that I am a firm believer in the use of gas for fuel. I don't care the snap of my finger for useless, self-interested criticism. My whole object in writing these articles is, that you, my fellow craftsman, be told just all the why's and wherefore's of gas, as a heating element. I know I will be severely criticised, but what of it? I know well that manufacturers of coal fired apparatus will assume that I am wrong, but they are only assuming. I know that the manufacturers of electric heating apparatus will resent such statements as I will make, but what of that?

The Great Creator never intended that burning coal, burning wood or using electric energy for heating and cooking should be the "finale" in the art of heating, else he would not have permitted the brains of the best known men of the age to evolve such wonderful uses for gas.

The Great Creator would not have shown scientific research men that gas, the inflammable element in all combustible substances is only one of thousands of other valuable elements to be found in the things we burn up in our mad rush

to get warm or to do things of all kinds that require heat.

The day is not far distant when gas will be the greatest element of the age, it is now, but is only one-tenth exploited. Electricity is not in reality a heating energy. It is a crime, an affront to the maker of all things, to use electricity as a heating element. It is a power energy, and as such will cut down cost of production, cut down cost of transportation and as a matter of fact reduce the cost of living at least by one-third.

Now, with the above statements made, let us begin and analyze them, let us delve first into the romantic story of gas, let us just, as it were, peep into the past as well as the present and future, and, in that way look the situation squarely and from all angles.

Discovery of Gas

In the first place comes the discovery of gas. Where it was first discovered is somewhat uncertain, but as far as can be learned, gas was discovered many centuries ago. A story is told of a Grecian shepherd, who, while tending his sheep, found that some of them began to wander about the pasture in an

aimless, half stupified manner, when in one particular spot.

He walked over to the place to find out the reason for this strange behaviour and became similarly affected by something coming from the ground. After recovering from the strange sensation he hurried to the village and told the neighbors of his experience. Crowds gathered round the place and decided that the odor was caused by some supernatural agency, because each person present appeared to become more talkative and light-headed and not only acted strangely, but speech became disconnected and difficult to understand.

The people finally decided that they were in the presence of some god, and later appointed a priestess to keep in touch with this god and built a temple where people could procure all manner of advice. Thus it is said that the oracle of Delphi became famous.

These Grecian experiences were no doubt the finding of natural gas, and while we at this date may laugh and sneer at the superstitions of those earlier Greek folk, yet if we were to look into some of our silly practices and superstitions, we would find that

"The Final Round in Landing Old Sigh Low for A Compleat Plumbing Job"

Jerry Meets With Unexpected Success in Bringing Old Sigh Low and His Wife to Look Over the Display of Plumbing Fixtures

With apologies to Ring Lardner by MAJOR L. L. ANTHERS, Managing Director, Anthes Foundry Co., Ltd., Toronto

Tarraboone, March 13, 1923

Dear Friend Al:—

I am now goin to tell you abt the 3rd and finel round with Sigh Low the 4th concessn hick. As purr my preevious lettrs. I had alreddy pade 2 visets 2 his farm & the last time I got a frea meel & a chanct to spill my doap on plumbing & heating.

"Aint you got that job landed yet?" sez Bill when I come back from my 2nd trip.

"No I havent," I retortured, "I tolde you befoar that it wernt no suddin dethe propcsn.—Its a big job & it takes time."

A Life Job

"If it takes as much time 2 finish it as it takes you 2 land it, itll bee a life job," come back Bill. "2 dilay is dang-gerous."

"Is zazzo," I snipped. "Well if, '2 dilay is dangerous, sometimes 2 delay 2 de-lay, is dangerous.' Witch means he hoo hezitates 2 hezitate is lost."

"Howzat," sez Bill lookin puzzled like.

"I thot it wld B 2 deap fer you," I sneared with satisfactn.

"In other words, 'look B 4 you leep,' lest 'fooles rush inn were angles feer to trod.'" I werent goin to let him think he was the only guy on erth that had studyed the Book of Proverbs. "Furthramore, 'sure & steddly wins the day.'" Wile I had Bill gaspin at my perdigious lernin I ask him, "Did you ever heer Esops faible of the Tortus & the Hair? If you reember the hair didnent win the race."

Wass too Long Sez Bill

"Praps it was too long," sez Bill.

"What?" sez I, "the race?"

"Naw," sez Bill, "the hair! Haw haw, haw." & with that he dived outta the back dore laffin fit to splitt.

Thats the way with some guys, jest as soon as you pull somethin that is over there heds they tries 2 retalyate with sum bum joak.

Well I was sittin in the show-room

JERRY

Read how he landed one of the hardest prospects in his rural district for a compleat plumbing and heating job.

figgern the next move in the great human drama wen hoo should come into the dore but Missus Sigh Low.

I hopped up quickern scat and lifted my cap to her.

Pize Makes Mouth Water

"Good-mornin Missus Low," I sez, "I'm awfully glad to see you agen. Them pize of yourn makes my mouth water every time I thinks of them." Thats the kind of stuff to hand them Al—they likes it.

She looked bashful like and coffer a little.

"Mr. Low just came to town with a load of grain so I thot Ide step in hear and wate fer him," she sez confushed-like.

"I'm sure glad you did," I retortured nown full-well it was a fraim up & that theyd come 2 town apurpus to look over

sum plumbing goods. But I didnt let on—that aint my style.

See What We're Here For

"Now that your hear," I sez, "Ide like 2 show you arnd.—let you see wot weer hear for." & with that I begin to go over every thing in the show-room with her. I felt jest like an artist xplainin the buties of sum wunderful lanscrape paintins. And did the old laidy lissen? Ile saye she did. She hung onto my everyy werd jest like I ust to hang onto Dutch Wagners flies.

A Voyce at the Door

I guess I musta bin speelin fer oaver ½ an hr. wen I herd a voyce at the shop dore say; "Are you reddy?"

I looked around & sure enuff it was old Sigh hisself. He was lookin strate at the old lady pertendin like he didnt see me.

"Ah how are you Mr. Low," I expostulates in my most affible manor.

"Good-day," he recipricates as if the effort hurt him.

"Come rite in," I continyers, "Ime jest xplainen fixtrs 2 Mrs. Low."

He didnt say nothin, I begins the lion of tock Ide bin carryin on for the last ½ hr. The old laidy was wize & lissens in as if it was all knew stuff she was hearin. I watched the old geezer outa the korner of my I & I cld C that he was fllern every werd I sed.

"Thats the kinda bath we put in fer Si Ensilage," I remarked incidentaly, "a 5 ft. 6 role rimm."

The Best You Got

"That the best you got," he sez frownin & lookin at the bath. I purty neer lost my ballence with serprize.

"Oh no," I shoots sudden, "weeve got somethin a little better but it dont cost much more," & I shode him 1 with a shower attachment. Then I got to explainen water sistems. & shode him a lay-out we had on the flore 2 gether with a blue print of a layout witch we had on the wall.

"How much wood a compleat outfit cost?" he shot at me.

I purty neer took the count but, a managed to keep my feat.

"Jest come in the office hear," I sez, fer I had his job all figgered out as neer as possible. "I think I can give you a fare estymate."

I wanted to git him outa the show-room for I didnt want to have him faint befoar the publik gaze wen I shode him the figgers.

But he didnt turn a hare & I new that he had a perty good idea hisself of what the cost wood B. "Dont you think your high," he mermers lookin hard at the figgers.

Not High

"No Mr. Low," I sez, "not fer the kind of a job you want. And rember this, your job is goin 2 have the carefulllest of supervizion & if your not satisfide weal take the hole job out & itll cost you nothin." That sounds big Al, but it dozent mean nothin. Ide maid up my mind he was goin 2 B satisfide & that was all their was 2 it.

"Come out & C me Thurs. nite," he sez, & with that he ges up & stawks outta the shop the old lady follern him. She stole me a look like a grate'ul dog.

"All-rite," I siz smilin my grashiest, "Ile B their. Good-by until then." I bowed like a Torryadoor with my hat in my hand until they was well on the weigh.

"Whew!" the sweat was bustin out of evry poar & I felt like Ide bin pitchin a dubble hedder at Louisville on a sultry day.

"Jerry your a wunder," come a still small voyce from the back of the shop.

There was Vilet

I looked up & their was Vilet smilin like a bit of sunshine after a rain. I was still week & smiled back weekly.

"Aw gwan," I sez feelin the blushes creapin all over me.

"Bleeve me Jerry," she sez blushin herself, "I opologize for raggin you like I did—fer I never herd enny 1 put up a better sails tock than you jest put over—onnest Injun I didnt."

2 heer Vilet tock that weigh maid me feal as if ide drunk a pale full of sham-pain. It was 2 good 2 B troo.

"Aw Vilet your foolin—your jest givin me a jolly," I manaiges to say not known jest what I was sayin.

Shows the Supplies Used in Contracts

St. John, N.B., Plumber Finds Customers Appreciate Opportunity of Inspecting and Choosing From Varied Stock the Requisites for Their Contracts

LAST spring W. B. McDonough, plumbing and heating contractor, opened a large shop on Charlotte Street in St. John, one of the busiest streets. One half of the store he allotted to the sale of plumbing supplies and the other half to the sale of hardware. In the rear is his plumbing and heating contracting and jobbing office.

Mr. McDonough has placed one of his

sons in charge of the store which is equipped with two large display windows. Attractive window exhibits are arranged and changes made at regular intervals. In the store, Mr. McDonough has shown to his clients the supplies he uses in his contracts. He has found that his customers have been delighted at the opportunity of inspecting and choosing
(Continued on page 24)

"Dont you bleeve it,—Ime in ded ernest."

"Vilet I eld kiss you fer sayin that," I blerts out, & then realizin what I sed I makes a iginiminius retreat fer the back door.

It had just come out I eldnt help it. But bleeve me Al I ment it & may be sum day I will. But moar of that anon.

Yours as ever,
Jerry.

"I pretty neer took the count but managed to keep my feet when he asked if this was the best outfit we had."—Jerry.

PROBLEMS OF HYDRO PUMPS

(Continued from page 14)

that will be found satisfactory, in order to give any reasonable flow, while manufacturers generally assume a minimum of 20 lbs., with a maximum of from 40 to 50 lbs.

It is an easy step from the syphon bottle example, to the typical hydro pneumatic system in which the tank takes the place of the bottle, and the pump delivers the water from the well into it, gradually compressing the air to the desired point.

The first essential of such an arrangement is that the tank must be absolutely air tight, because compressed air forms the entire motive power by which water is delivered at the fixtures.

The water is discharged into the tank on one side near the bottom, and out of the tank from the other side somewhat lower down, the only other two connections to the tank being those of the water glass mounting, only one of which is above the air line.

We are often asked "how high should the water be in the glass?"

The answer is, that in a general way the glass on a vertical tank should be approximately half full of water at fifty pounds pressure. This gives slightly less than $\frac{4}{5}$ of water, and a little more than $\frac{1}{5}$ of air.

There is really no hard and fast rule about this, the only difference in the effect is that if it is considerably higher, the pressure will have to be pumped up more frequently, because the amount that may be discharged between pumping periods is exactly determined by the volume of the air cushion.

Avoid "Air-Binding"

Reference was made to the fact that the discharge from the pump enters the tank at a level higher than that from the tank to the house. The reason for this is not yet sufficiently understood, even by tank manufacturers who have had no pump experience, but it is so that any air which may enter the pump, either designedly in an effort to re-establish a proper balance between air and water, or accidentally through a depleted water supply or a leaky suction pump, may continually rise, from the time it enters the system until it reaches the tank. In this way, what is known as "air binding" in the pump, is entirely avoided, unless the pump discharge connection is below its valves.

The reason for having the discharge from the tank at a lower point is to ensure a complete movement and renewal, circulation, if you will, of every bit of water that enters the tank.

As the construction of a device for pumping air is essentially different from the one for pumping water, and neither will efficiently perform the function of the other, it follows that in systems of this kind, all reasonable care should be taken to ensure the work of the pump being within its scope, and, too, that one

of the precautions which ought to be taken in every case, is to fit the suction line with a foot valve at approximately its lowest point, so that the moment the pump is put into operation, the line being full, will furnish water immediately.

While most well designed pumps, and by this we mean pumps not only built to operate with a minimum of resistance, but with valve construction so arranged as to freely and efficiently discharge air, will prime themselves after being operated for a sufficient length of time to discharge the air contained in the suction line, and catch the water which will follow in its wake. There are a considerable number of alleged "hydro pneumatic" pumps on the market which absolutely refuse to perform this action, and only the unfortunate plumber, who has happened to install some of that type, realizes the endless trouble and expense that its use involves.

Moral—put the best foot valve that you can buy, on every installation you make, and avoid 90 per cent. of the chances of trouble with the system.

THIS IS THE GAS AGE

(Continued from page 15)

in many ways the foundation for some of our thoughts and actions are just as foolish as the Grecians of old.

Several centuries ago the Chinese used what we now know as natural gas, for illuminating, this gas was conveyed through bamboo sticks. Later, one John Baptist van Helmont of Brussels, a chemist of note about the year 1609, found, during his experiments with certain fuels and chemicals that gas could be made and he described this gas as "a wild spirit," and so phantom-like and elusive was Van Helmont's discovery that he called it "geist" an old German term for spirit.

In England, Thomas Shirley found natural gas and describes the gas well, or the gas, which was saturated with water, as "Oyle," and in reporting his find says, "I found a spring, the water from which did burn like oyle, and did boyle and heave like water in a pot." Further on in his report, he says: "It is like unto a string of wind which, if ignited by the light of a candle did burn bright and very vigorous."

About the year 1660, Dr. John Clayton, a Yorkshire clergyman, who being endowed with certain scientific abilities, took some of the elusive spirit out of these gases. He heated "Shelly Coal" in a closed vessel, and found that a "spirit" which, when liberated, would burn like a candle.

He made a quantity of this "spirit" and put it into bladders, pricking holes in same, setting fire to it to provide amusement for his friends.

In 1792 William Murdock first distilled coal in an iron retort, and conducted the gas through tinned and copper pipes. He afterwards lighted his own home at Redruth with gas, and being

the construction engineer for James Watt, the developer of the steam engine, he built a large apparatus, the gas from which lighted the factory.

Some of the things Murdock did in his day made people think he was allied with Old Nick. He wore wooden hats, made a gas lantern by fixing a tube to the neck of a gas-filled bladder, and the village folk were filled with dismay at the sight of such a "ghostly contraption."

The first English patent for gas making was granted to a rich German scientist named Fred Winsor, and the first streets to be lighted by gas were about the same time. The streets thus lighted were the Pall-Mall, London, England, in the year 1807. In April, 1812, Parliament granted a charter to the London and Westminster Gas Light and Coke Co., the first gas company in the world.

Somewhere about the year 1817, a Baltimore artist named Rembrandt Peale, is said to have been the first user of gas in his museum and art gallery, using same as an illuminant and later becoming one of the pioneers and shareholders in the first gas company on the American continent.

From those days until about the year 1857, great strides were made in the gas industry, in spite of the fact that gas at that time was very much more expensive than it is now. In 1855 the San Francisco Gas Co. sold gas at \$15.00 per thousand feet, and sold lots of it. In New Orleans, about the same time, gas cost about \$22.50 per thousand, with New York about \$18.00 per thousand feet. It is only fair to say, however, that coal in those days cost around \$36.00 to \$40.00 per ton, and labor was \$6 to \$7 per day.

Then and Now

In those days the thousands of feet of gas used per day were few. To-day, for example, the Consumers Gas Co., Toronto, sell 19 to 20 million feet per day, and it is estimated that in the neighborhood of fifty million people are served by gas companies on this continent alone, and it is safe to say that only the surface has been scratched, as it were, of the possibilities and prospective business that will be procured in a very few years.

Today the efficiency of a product must be considered seriously. We need heat and fuel must be used of some kind. Gas is a fuel, yet it also is a by-product. Let this be thoroughly understood: "Gas is a by-product." Now, if we, as a people, mis-use a natural or even a manufactured product, we must pay the cost in some form or other. The users of electricity for heating and for cooking are just postponing that day when capital can and will no longer be found to erect huge power plants when this same electric current ought to be used for the purpose of electrify-

(Continued on page 24)

Oblique Angled Branch Pipe Patterns

By O. W. Kothe, Principal, St. Louis Technical Institute, St. Louis, Missouri. Written for Sanitary Engineer.

Development of Patterns for Oblique Angled Branch Pipe.

AT TIMES the workman meets with tee branches where they form an angle in elevation and also an offset angle in plan. This is in most cases tee branches of this kind that can be re-designed to intersect the main pipe by either changing one or the other angles and in that case, a common tee would be suitable.

But where we have an elevation where the tee inclines to a 30 degree or any degree for that matter; and the plan offsets, let us say 30 degrees in this case, then the following treatment would be used. We first project an end elevation describing the main pipe L from the center W and then set in the tee branch with section M. Observe this branch sets tangent with the main pipe L. Now our side elevation and our plan view are merely help out views in which we only consider the center axis line.

Therefore, at right angles to center of line of tee, a-c of end view, square out a line from the center W as W-Y. Then from any place as X strike a 30 degree angle as X-Z. Then from a of end view bring over a line parallel with X-Y and this will intersect line X-Z in point b. This enables drawing the section N and divide into the same number of equal spaces that section M is. Then from each point in section N project lines parallel with X-Z, extending them to about the central line X-Y. After this, consider each point where the lines from M intersect similar lines drawn from section N. This will give the intersections

between the tee and the main pipe. To set off the pattern pick the girth from N and set it at right angles to X-Y as I-I.

From each of these points in line I-I, draw stretchout lines and then from each point in the miter line of oblique view, project lines to intersect stretchout lines of similar number. This will give the miter cut for patterns as shown.

In general, the degree figures would be omitted and we would have elevation and off-set distances given by measurements of the rule. In that case, the end view would be developed in accordance with the off-set of the branch pipe in plan. Whatever measurements would be these measurements would be substituted instead of the degree lines we show. Then the elevation altitude would be picked and set in the oblique view, so that the line a-b would intersect this altitudinal line which would give the true angle of the branch in the oblique view. By considering these fittings in a triangulation fashion where the plan produces the off-set, or the base, and the elevation the altitude; then by putting these two together in the oblique view, the true length is produced. Otherwise, the actual development is identical to any of the other common tee branches of different diameters.

MORE INSPECTORS NEEDED

The wide expansion of building operations in Montreal has necessitated the augmenting of the present staff of six employed as building inspectors. It is

felt that the building regulations in the city could be more effectively enforced if the present staff was enlarged, the suggestion being that several men having technical building experience be added. The matter is now in the hands of the Executive Committee. Toronto employs nineteen inspectors as compared with six in this city.

QUESTION BOX

Kindly give us your opinion on the following. We have just installed a basin fitted with pedal action valves which of course have in their make up a spring and when the operator releases the pressure from the pedal the valve closes with a chuck and often when there is very little pressure on the pedal there is considerable vibration causing a rattling noise. Would air cushions remedy the above?—Ontario Subscriber.

Answer:—Yes, all such valves should be fitted with liberal sized air chambers.

MEETING PAT

A pawnbroker's shop was on fire and a woman spectator was greatly excited; every few minutes she would urge the firemen to more strenuous efforts, until presently a bystander said, "What's the matter, Missus? There ain't no one in there? What's all the fuss about?"

"Fuss? There ain't no fuss at present," replied the woman, "but there certainly will be if they don't get the fire out soon. My old man's dress suit is in hock there, and he don't know it."

Forsaking the "White Collar"

IT IS good news that clerks and other "white collar" men are deserting their desks and taking to the plumbers' tools, trowel, hammer and saw, in order to earn bigger wages and that the New York Y.M.C.A., in announcing the establishment of a school to teach brick-laying, plumbing, electric wiring and carpentering, states that the heavy enrolments indicate that a large number of office workers are turning to manual labor, attracted by the fatter pay envelope.

It is to be hoped this is an indication that young men are beginning to see that "white collar" jobs are by no means the most satisfactory in the end. This is a point which has been emphasized by many authorities. The tendency has been far too long for young men to seek such jobs, instigated in far too many cases by ambitious parents. We have often pointed out that the professions are becoming overcrowded, and that it would be far more profitable for a young man to become a skilled mechanic in many cases than a struggling professional man.

The point in this dispatch is, however, that clerks are leaving their jobs to take up manual labor. It is a good sign; and we hope that many "white collar" men will take to the plumbing trade. We hail this news from New York with great pleasure, and hope that men in Canada will be wise enough to take a hint from it. The plumbing industry will suffer from a shortage of efficient help in years to come if the apprenticeship problem is not dealt with now.

The Canadian Society

IT IS of interest to note that the officials of the Canadian Society, Domestic Sanitary and Heating Engineers have decided to hold a convention this year. The gathering is to be held in Montreal in the month of June, according to preliminary details secured by Sanitary Engineer and outlined elsewhere in this issue.

The annual convention of the Canadian Society was missed last year and there has been a good deal of discussion in provincial and municipal associations on the advisability of making a drastic revision of the status of the Canadian Society. Attendance at the last few conventions of the latter body has not been what it should be, and the reason has been given that the members of the craft as a whole cannot turn out in a body owing to the distance many of them would have to travel and the expense involved. Similarly it has been found

difficult at the conventions of the Canadian Society to get much definite action on matters of national interest due to the fact that there have been no representatives on hand from far Western associations, and also due to the wide difference of opinion which exists on many subjects between members in the various eastern provinces.

Whether or not the idea of making the Canadian Society an executive body which will hold annual gatherings attended by special representatives of the various provincial associations, is adopted, something should be done to enable the plumbers of the country to speak with one voice on many of their current problems. Then and only then will the plumbers of this country be able to bring about many of the reforms and improvements now contemplated.

There are many live local associations of plumbers and steamfitters, and there are live provincial associations in most of the provinces throughout Canada. There is much to be gained by a definite linking up of the efforts of these associations.

Fooling the Public Again

THE need for plumbers to be constantly on the watch for fake schemes is again demonstrated in the disposition of the case of R. J. McLelland, by which he is given seven years' imprisonment in connection with the sale of securities in the Instantaneous Heater Company in Canada and in a similar organization under a slightly different name in the United States. Claims were made for this electric heater by the so-called inventor which would not stand investigation, and care was taken that the product was not investigated. Electric heaters are now practically 100 per cent. efficient and in view of this it is surprising that claims of getting more than a hundred units of energy out of a hundred were accepted by such a large number of persons who should have known better.

Where Dollars Can be Saved

GREAT care should be exercised in connection with the preparation of the Income Tax forms which will provide the basis for taxation on individuals and businesses for this year. All retail merchants must have their returns filed with the Department of Taxation by April 30th. All reports of earnings of employees must be filed with the Department not later than March 31.

Judging from enquiries which have come to Sanitary Engineer, plumbers are taking more pains with these statements this year than in the past, or else they are more anxious to see that they are not overtaxed. The correct filling in of these forms has developed into a matter of much importance, as incorrect statements may involve the payment of a larger amount than is necessary, or bring a bill at a most unexpected time in the future for the balance due on taxes which the plumber considered to be fully paid. The question of depreciation on buildings, equipment, vehicles, etc., and the allocation of bad debts are two subjects on which difficulty very frequently arises. Elsewhere in this issue will be found a second article to guide the plumber in the preparation of his income tax reports; this article follows that which appeared in a recent issue. Also in this issue is an article covering a number of difficulties which have been experienced by plumbers in the preparation of their income tax statements. These articles should be studied carefully by the trade, as many dollars can be saved by following the forms as outlined.

MINUTE MESSAGE

Written for "Sanitary Engineer" by FRANK STOCKDALE
(Buying Series)

Forget the Fable—"Put Your Money" on the Rabbit

Turnover is purely a matter of speed.

Your stock is made up of "Hare" lines and "Tortoise" lines—fast and slow turnover lines.

Of course, some Hares are faster than others and some Tortoises are slower than others.

Rate of turnover will tell you nothing about your volume of sales, nor will your volume of sales tell you anything about rate of turnover.

Turnover only tells you how fast your stock moves.

Two turnovers mean that the goods moved twice in a year or once in six months. In other words it took six months for the goods to travel through your store.

Fast turnover lines cost *less* to carry and sell and can be sold at a lower margin for profit. Slow turnover lines cost *more* to carry and sell and must be sold at a higher margin for profit or you lose.

When you sell fast moving lines at a long margin you are likely to lose customers. When you sell slow moving lines at a short margin you usually lose profits.

It is very important, therefore, that you know which are the "Hare" lines and which are the "Tortoise" lines in your store.

THINK IT OVER—APPLY IT IN YOUR BUSINESS.

News Notes From Coast to Coast

Doings in the Plumbing and Heating Industry

INCORPORATION

Gill Plumbing Supplies Ltd., incorporated at Galt, Ont., with capital of \$40,000 to manufacture and deal in plumbers' supplies.

FIRE LOSS

Porcelain Products Ltd., Toronto, dealers in plumbing supplies suffered fire loss in a recent conflagration of large proportions.

OBITUARY

J. Madden, who conducted a plumbing shop at 1140 St. James St., Montreal, and who lived in the rear of the shop, is dead.

PLUMBER ON THE SHORT END OF THE DEAL

St. John, N.B.—James H. McPartland, well known plumbing and heating engineer, handed over a valuable diamond ring to the employee of a jewellery store for examination. A substitute for the valuable stone was placed in the setting and returned to Mr. McPartland. On noticing the difference he placed the case in the hands of the police. So far no recovery has been made of the ring nor any arrest been made of the principal thief.

MOVE TO NEW PREMISES

Growth in the business of T. G. Griffiths & Company, Toronto, manufacturers of septic tanks, drinking fountains, etc., has necessitated their removal from their former premises at 15 Jarvis St., Toronto, to much more commodious quarters at 165 Queen St. East. In their new quarters in which they are just now getting settled, they will have the advantage of an exceptionally fine ground floor showroom where the various lines they manufacture will be on display.

CONGRATULATIONS IN ORDER TO THOMAS JOHNSTON

Thomas Johnston, president Thomas Johnston Co. Ltd., plumbing and heating engineers, Summerside, P. E. I., has been elected Councillor for the ensuing term. Voting in that town is done in March of each year. In connection with Mr. Johnston's election it is noteworthy that R. T. Morrison, plumber; Messrs. Johnston & Huestis, plumbers; Harry F. Lee tinsmith; Jas. Arthur tinsmith; were prominent among the boosters for Mr. Johnston.

With such a galaxy of members of the craft supporting him it is little wonder that Mr. Johnston was elected. Sanitary Engineer extends congratulations.

SPEAKER FROM HARVARD

Montreal.—Dr. George C. Whipple, Professor of Sanitary Engineering at Harvard University, delivered a lecture at the Windsor Hotel, his subject being "Industrial Sanitation." This was the third of the series of lectures of Industrial Medicine which is being given under the auspices of McGill University.

WATER SYSTEM FOR INDIAN VILLAGE

Campbell River, B. C.—W. M. Halliday, of Alert Bay, Indian Agent, is at Cape Mudge Indian village superintending the installation of a water system, which the residents of the village are putting in under his tutelage.

A large concrete basin is being constructed to hold the water from the creek that flows down the hillside, and a two and a half inch pipe will carry the water to two and a half inch laterals. From these laterals the 25 or so houses will be connected up by each of the householders and good water and a continuous supply assured to all dwellers in Cape Mudge.

E. G. BROUSSEAU

Plumber of Quebec City, who has been elected President of the Quebec Builders' Exchange for 1923. The Vice-President is J. K. Leonard; Treasurer, F. A. Galarneau; Secretary, J. E. Picard.

CONTRACTS AWARDED

Peterboro, Ont.—Nelson Bros. have contract for plumbing in house of Albert Cripps providing the mortgagor joins in the request to have the work done, the cost to be paid for in five annual instalments with six per cent. interest as directed by the Board of Health.

McAVITY'S, LTD., NAME OF THIS FIRM IN QUEBEC PROVINCE

The Canada Gazette contains a notice of the incorporation of McAvity's Limited, with a capital stock of \$100,000, and head office at St. John. This is a branch of T. McAvity & Sons, Ltd., of St. John, hardware and metal merchants, and brass and iron founders, and will carry on the business in the Province of Quebec.

SAYS STOVE MERGER UNLIKELY

Rumors have been going the rounds in the hardware trade recently concerning the likelihood of a merger of five stove manufacturers, including one large Toronto firm. Hardware and Metal has made some enquiries and been advised authoritatively that the Toronto firm at least is not concerned and it is said to be quite likely that the rumor as far as the other firms is concerned is but a revival of the rumor which has been heard from time to time in the same connection.

SEWER TROUBLE IN NORTH TORONTO

North Toronto ratepayers are seriously worried over the sewer situation as it affects their district. They fear that the action of the city Works Department in connecting up the laterals for the proposed combined system will cause trouble next summer. After discussing the situation, the association at a meeting referred to the Executive the matter of procuring an injunction restraining the city Works Department from making further new connections.

North Toronto citizens want to see the plans for the new system at once. If the plans are not forthcoming they are determined to take drastic action to force their production. It was stated that the Works Commissioner had promised to submit them in June. The association passed another resolution urging its representatives in the City Council to insist on immediate production of the plans.

CENTRAL HEATING PLANT PROPOSED

Winnipeg.—Negotiations are now under way, it is learned on good authority, to establish a central steam-heating plant in Fort Rouge. Substantial interests willing to spend \$500,000 almost immediately will approach the city council soon with a request for a franchise. It is proposed to develop steam for the projected Fort Rouge plant by means of off-peak electricity bought from the hydro-electric system. This would make for cheap, economic operation of the plant through electrical boilers, but a certain amount of coal or oil firing would be necessary also. The revenue which such a plant would bring the hydro from the sale of its surplus energy, in this way, is estimated at \$30,000.

F. A. DALLYN SPEAKS IN FOREST, ONTARIO

Forest, Ont.—The ratepayers were present at a special meeting in the council chamber of the Forest council called to meet F. A. Dallyn, Chief Engineer of the Provincial Board of Health, who came to interview the council in regards to the Board's order re the installation of waterworks.

Mr. Dallyn in his opening remarks said the matter between the council and the Board of Health dated back several years. In September, 1921, a survey of the town wells was made, which showed there were 521 premises in the town and 304 wells; 201 of these wells were badly polluted and only 15 or 20 per cent. were considered satisfactory. They had already taken surveys in 79 municipalities and in no case did they find a municipality with water conditions as bad as they are in Forest. Thirty per cent. of polluted wells was the usual run, but in Forest's case it was 75 per cent. The cheapest and best way to remedy this was the installing of a waterworks system. As the ratepayers had defeated the project on two occasions, the Board of Health considered the only way was to act upon the powers given them in sec. 46 of the Municipal Act. The town had not very much leeway in the matter. As there has been no amendment to the Board's Order, it therefore should be enforced.

STOP WATER WASTE IN MIMICO

Mimico council at its meeting refused to grant the Mimico Utilities Commission \$10,000 to purchase water meters, and advised the commission to ask the water users to stop wasting water. The commission stated that the waste of water would be stopped if meters were installed, but the council thought that the cost was too high.

Two Plumbers Killed in Serious Accident

Motor Car Hit by Train Near Weston, Ont., Resulted in Death of Harry Wilson and Frank C. Warde, Employees of B. J. Miller, Sanitary Engineer

WESTON, Ont.—Frank C. Warde, aged 24, and Harry Wilson, aged 18, two employees of the plumbing firm of B. J. Miller & Co., Bathurst St., Toronto, were instantly killed when the motor car, driven by Warde, was struck by a train from Guelph at a level crossing two miles west of Weston. Hit squarely in the centre, pieces of the car were found along the tracks several hundred yards from the scene of the collision. Passengers knew nothing of the fatality until the train was brought to a stop and members of the crew had gone through the cars in search of a

physician. It is stated that the signal bell on the crossing was ringing but it was probably drowned by the greater noise of the train.

Harry Wilson had been with the Miller Co. about two years, learning the steam-fitting trade. Mr. Miller states that Warde, a qualified plumber, and young Wilson were highly esteemed by the firm and fellow employees. Warde had decided to go to Brampton to get a motor car and had asked if either of the apprentices cared to go. Wilson accepted the invitation.

HARRY WILSON

Harry Wilson, an apprentice, and Frank Warde, a qualified plumber, both employees of B. J. Miller & Co., sanitary engineers, of Toronto, who were instantly killed at Weston, Ont., when their motor car was struck by a train.

FRANK WARDE

WOULD ELIMINATE SMOKE TEST

The greater part of the last meeting of York Township Council was taken up with a discussion of the best ways and means to formulate a plumbing and drainage by-law, embodying the best points of the present city and township by-law. The idea of Reeve Jury and the members of council seemed to be to get away from any unnecessary cost in the matter and the elimination of the smoke test was held to be one of the best moves in this direction. At the present time no permits are issued to the men doing the drain work on township houses, nor yet in the city, and council are anxious to keep tab on the drain men, so that in the event of trouble later developing any difference between the drain men

and the plumbers can be followed to a conclusion.

EXTEND INTAKE PIPE

New Toronto.—An extension to the town's intake water pipe, costing approximately \$40,000, will be made early this spring. The Utilities Commission and Council have already agreed that the extension is necessary to insure a high pressure. In the meantime, council will issue debentures covering the expense.

Moves Premises

Port Arthur, Ont.—L. A. Greene, plumber, has moved to 5 S. Court St.

THIS IS THE GAS AGE

(Continued from page 18)

ing our railways and other transportation systems.

We could easily transport our own gas-producing coal to our towns and cities to convert the coal into gas much cheaper, if our steam roads were run by electricity. Just think of this, reader, one-third of all the coal mined on this continent is used to fire the steam locomotives, which draw the coal from the mines to where it is used. Then, to cap this costly waste, even the very coal used in the most efficient steam locomotive, only gives off about 6 per cent. energy at the draw bar. Meaning that out of the one-third of coal mined, we only procure about 6 per cent. efficiency, an absolute waste of millions of tons of coal every year.

Now regarding the cost of fuels based upon actual results, we are often confronted with the question as to cost or of efficiency in results.

The cost of any fuel should be measured by the amount of heat units delivered. For example, the Kansas Agricultural College recently made some tests which show what gas will do in heating water in comparison with other fuels.

The following table shows the percentage of B. T. U. delivered:

Coal	18 per cent
Kerosene	37 per cent
Gasolene	40 per cent
Artificial gas	64 per cent

The above figures were based upon gasoline at 19,000 B. T. U. per pound, coal 15,000, gasolene 20,000, and knowing the price per pound of each, it would be simple to make a clear comparison of cost, and thereby determine the efficiency.

(To be continued).

SHOWS SUPPLIES USED IN CONTRACTS

(Continued from page 17)

from a varied stock, the requisites for the contracts they assign to Mr. McDonough. And in addition, Mr. McDonough has found a considerable transient demand for small bath room supplies, such as soap holders, nickel bars, shower baths, sprays, shampoo motors, etc. The opening of the store has increased Mr. McDonough's contracting business, and further, has advertised his business as a contractor, placing him before the eyes of people who had never heard of him before he embarked in the supply business, catering to the public.

Does it pay for a plumbing and heating contractor to enter into the plumbing supply, and hardware business in a retail sense?

The experience of Mr. McDonough, plumbing and heating contractor of St. John, N. B., has been in the affirmative.

For many years Mr. McDonough has been a plumbing and heating contractor in St. John and has worked up an important business in both branches par-

ticularly in contracts for plumbing. Until last spring he engaged in contracting and jobbing only, with office on Princess Street in St. John. However, for some years he had been considering the establishing of a large plumbing supply store with which he associated also the sale of hardware. Mr. McDonough believed there would be trade for plumbing supplies such as bath tubs, lavatories, tubs, clothes washing machinery, shower baths, bath room necessities, etc. It was his idea that the person who wants plumbing done wants to see the supplies that are used, and so his showroom has been developed.

New Goods

Combination Improved Torch

A new combination torch, said to be characterized by four distinct improvements, is being introduced by the Otto Bernz Co., Newark, N. J., under the trade name of "always reliable." The improvements claimed are a blunted burner needle, which will not enlarge the orifice, conveniently located burner blocks for gasoline or kerosene, special

type burners are said to give a perfect blue flame in a minimum of time and heavier construction in the body and bottom of the torch. The top of the cylinder is flared to provide against injury to the washer when the plunger is inserted.

Gurney Electric Ranges

The Gurney Foundry Co., of Toronto, are introducing on the market a line of electric ranges and hot plates. There are three cabinet types of electric ranges, which differ in finish and a few details only, while there is also a lower oven model for small kitchens. It is pointed out that other types will follow. These are in addition to the hot plates. Referring to the finish of these electric stoves, it is stated that white rock porcelain enamel is used for all enamel

finishing, including the oven lining. All ranges are equipped with mercury thermometers. Switch front is finished in white rock enamel with blue lettering. The surface units are of the open type. The makers claim that the general assembly is such that all parts are accessible. The Northern Electric Co., Ltd., are acting as the exclusive sales distributors for Canada.

LETTER BOX

Bruce Stewart Co., Ltd.,
Charlottetown, P.E.I.

Replying to your telegram, asking information on oil burning equipment for Ideal steam heating boilers.

We inform you, that both these lines are handled in Canada by the Dominion Radiator Co., Ltd., Dufferin St., Toronto, and we have requested them to communicate with you by wire immediately.

SANITARY ENGINEER

Twenty Years - Ago -

Following items are reprinted from MacLean Publishing Company trade paper records of March, 1903:

"President Robert Ross occupied the chair at a special meeting of the Toronto Master Plumbers' Association this week."

"Bennett & Wright Co., Ltd., have contracts for plumbing, gasfitting and electric wiring two houses on Crescent Rd. for Macpherson Estate and for wiring Trinity Methodist Church, Toronto."

"The new factory which the Standard Ideal Sanitary Plumbing Co. are erecting in Port Hope, Ont., is progressing steadily. The company have decided that it is not quite big enough for their purposes and so are having plans prepared for an addition which will be 93x45 ft. in size."

"The National Association of Plumbers of Great Britain are agitating for the passage of the Plumbers' Registration Bill, which has been before the British House for some time. The association went on record approving the movement as a safeguard to public health."

"A meeting of the Joint Committee representing the Master Plumbers' Association and the Journeymen Plumbers' Union met to discuss the apprenticeship question, particularly the length of time one would have to be employed before getting the tools."

"The Hamilton Journeymen Plumbers' Union held their first annual banquet when sixty members were present. President Fred Staunton occupied the chair. The Master Plumbers' Association was represented by President George Stevenson and the manufacturers and supply houses by Robert Young. The meeting was harmonious and satisfactory in every respect."

"The St. John, N.B., Water and Sewerage Board at a meeting received tenders for 184 tons of iron pipe. Among the tenderers were Singleton & Dunn, Glasgow; Montreal Pipe and Foundry Co.; United States Iron Pipe and Foundry Co.; R. D. Wood & Co.; Wm. Jacobs & Co. The tender accepted was at the following price: 4-in. pipe at \$29.40 per ton; 6-in. \$28.22; 10 and 12-in. \$27.00."

Market Conditions and Tendencies

Price Trend on Sanitary and Heating Supplies

Markets at a Glance

THE feature of this week's market report is found in the new quotations on eavestrough and conductor pipe. The discount in effect early in February was 70% off the list, this was revised recently to 60% which was an advance of 10%. The new discount in effect this week is 65 and 5 per cent. off bringing quotations back almost to the early February price. This is in direct contrast to the tendency on galvanized sheets which have displayed a strong trend for some time and a slight advance is in effect on most gauges this week. Other changes were all toward higher levels and include slightly higher prices on nickel plated pipes and brass cocks, a new advance of about 7½% on copper rivets and burrs, higher quotations for spring on rubber hose, lower discounts on plugs, bushings and unions and another general advance on solder.

Cotton waste quotations may reach higher levels in the near future as a result of continued advances in basic markets, but there has been no change in oakum prices for some time. An important customs regulation is in effect on imports of German goods which will cause an advance in German tools and cutlery of from 15 to 25 per cent.

It has been noted for some time that finished steel prices have advanced without checking buying, but it is evident that buyers are becoming more cautious and higher prices are not in favor among local distributors. The same condition is indicated in other lines but advances have not occurred with the same rapidity as in steel. A stabilized condition of all markets would be welcomed in most industrial circles.

Montreal Markets

MONTREAL, March 15.—As has been the case for some time now, primary market advances continue to affect all lines in which any price changes are being made. The latest revisions show not a single one in the downward direction, though several important advances are noted. Chief among these is the condition in the sheet and plate market. As noted in the last issue, this advance has been general, two or three price changes having occurred since that time, leaving the local market firm but considerably unsettled, jobber quotations differing somewhat. Likewise, all bar products have been revised upwards, the change being from 20 to 25 cents on all lines excepting spring steel and single reeled machinery which remained at former levels. Lead pipe and solders are included in the climb, the former being revised to the extent of about 50 cents and the latter six cents a pound. All scrap materials are considerably higher than at last quotations, malleable being up \$8 per ton and the others in like proportion. Latest quotations on eavestroughs are slightly in advance of those current for some time past. The ingot market, after a period of steady climbing, has settled down in a firm position this week, tin alone remaining erratic.

RADIATION PRODUCTS REMAIN AT RECENT DISCOUNTS

Montreal.—While a firm tone still features the radiation market locally, there has been no change from quotations recently recorded. Trading is improving each week, according to local distributors, who are quoting as follows:

RADIATORS AND BOILERS—

Radiator list prices are for 1, 2, 3, 4 and 5 column radiators, per sq. ft.
45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount 51 per cent for hot water, and 52 per cent for steam.
Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05; Discount 48 per cent.

Boilers—Round hot water boilers, sizes from 0 to 10, 60 per cent. off list. Square or sectional hot water or steam boilers, 15 in., 15 per cent. Square or sectional water boilers, 19 in. to 36 in., 20 per cent. Square or sectional steam boilers, 19 in. to 36 in., 17 per cent. Ontario Government trimmings, 15 per cent.
Round steam boilers, standard trimmings, 28 per cent. Ontario Government trimmings, 25 per cent.

F.o.b. Montreal, Toronto, Guelph.

UPWARD REVISION IS EXPECTED IN COMPRESSION GOODS

Montreal.—

Compression goods are holding firm at recent levels, although a slight upward tendency still features the market, so that higher prices may be expected at any time. As a forerunner of the ad-

vance, Jenkins globe valves are this week quoted at a revised discount, the discount dropping from 10 per cent. to 5 per cent. The prices now being quoted locally are as follows:

VALVES AND BIBBS—

Compression work, standard	45%
Fuller work, standard	30%
Quick opening compression bibbs	43%
Bath cocks, quick opening	41%
Bath cocks, compression	41%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, standard	56%
Roundway stop and waste cocks, standard	56%
Brass steam cocks, standard, ¼ in.	50%
Radiator valves, standard	55/25%
Do., removable discs	55/25%
Globe, angle and check valves, standard	25%
Gate or straightway	25%
Emco globe valves	33%
Emco check valves	33%
Jenkins globe, angle, check and swing	
check	5%
Jenkins gate or straightway	16%
Jenkins iron body, globe and angle	15%
Jenkins iron body, gate	25%
N P. "O" and "S" traps	40%

STRENGTHENING MARKET NOTED IN BOILER TUBES

Montreal.

A firm market continues in boiler tubes, trading showing some little improvement which should continue from now on. As yet the slight advance which has been anticipated for the past week or so has not come into effect, the prices being quoted locally remaining as follows:

BOILER TUBES—

	Seamless	Lapweld
1 inch	20 00
1¼ inch	22 00
1½ inch	21 00
1¾ inch	24 50	24 00
2 inch	21 50	20 00
2¼ inch	24 50	23 00
2 inch	29 00	24 50
3 inch	34 00	31 00
3½ inch	39 50	35 50
4 inch	50 00	45 00

Prices, per 100 ft., f.o.b. Montreal.

PIPE FITTINGS RETAIN FIRM TENDENCIES

Montreal.

Prices are unchanged on pipe fittings in the local market, the tendencies being towards a firmer market with increased prices in the very near future. Prices now quoted are as follows:

PIPE FITTINGS—

Cast iron fittings	22%
Plugs, cast iron	22%
Do., solid	22%
Do., countersunk	22%
Bushings, cast	25%
Do., malleable	25%
Unions	40%
Flanged unions	22%
Flanged fittings	27 1/2%
Dart unions, black, 1/2 to 2 in.	331-3%
Do., 1/2 in., 2 1/2 in., and larger	23%
Do., galv. add to black	30%
Nipples, 1/2 to 4", close and short	50%
Do., long	55%
Do., 4 1/2 to 8", close and short	40%
Do., long	45%
Couplings, 4" and under	25%

Oak wood strip seat and cover	3 50
Mahogany finish post hinge seat and cover	4 05

CLOSET TANKS—

Low down, oak vitro or Pussyfoot with fittings less seat	13 20
White vitro or Pussyfoot with fittings, flush elbow and supply	15 65
Vitreous china tank with fittings, flush elbow and supply	18 00
Enamelled iron with fittings, flush elbow and supply	18 00

SHEETS AND PLATES CONTINUE UPWARD TREND

Montreal.

Galvanized sheets, black sheets and plates all continue their upward march, price changes coming so fast of late that it has caused a wide range locally, no two dealers quoting exactly the same on any of these lines. While the difference in most cases is slight, in one or two in-

stances, the variation runs high. There appears to be a steadying tendency developing during the past few days which is likely to result in the stabilization of quotations in the very near future. The following constitute the average of the prices being quoted locally at present:

BLACK SHEETS—

10 gauge, base	4 75	5 00
12 gauge	4 85	5 00
14 gauge	4 85	5 10
16 gauge	5 05	5 15
18—20 gauge	5 20	5 25
22—24 gauge	5 20	5 35

LEAD PRODUCTS IN STRONG UPWARD REVISION

Montreal.

Lead products have made a distinct climb during the past week or so, pipe making a fifty cent advance and solders mounting six cents in all lines. The market is very strong at the present time, with signs of additional strength immediately. The prices now being quoted are as follows:

LEAD AND ZINC PRODUCTS—

Lead pipe, per 100 lbs., up to 2"	14 50
Do., 2" to 8"	15 50
Do., 8" and over	16 50
Lead waste, per 100 lbs.	15 50
Note—Lead pipe is subject to a discount of 100%	
Lead traps and bends	15 60

Do., wire, lb.	0 44 1/2
Zinc, sheets, casks	0 11
Do., broken lots	0 12

GENERAL INCREASE IN PRICES OF BAR PRODUCTS

Montreal.

There has been a general advance of from twenty to twenty-five cents in all lines of bar iron and steel products, excepting spring steel and single reeled machinery steel which remain at former

prices. The market continues with a very firm tone, trading being good at the new prices. The following are the local quotations:

IRON AND STEEL—

Common bar iron, 100 lbs.	3 65
Refined iron	5 15
Irish finish machinery steel	3 70
Mild steel	3 65
Single reeled machinery steel	5 00
Band steel	4 15
Sleighshoe steel	3 65
Spring steel	6 00
Tire steel	3 85
Harrow tooth steel	3 80
Toe caulk steel	4 55
Mining tool steel, per lb.	0 19
Black Diamond tool and cast steel, per lb.	0 19

NOTE.—Refined iron is approximately \$1.50 per cwt. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.
Iron and steel 3-16 in. and thinner, 50c per 100 lbs. extra.

TRADING STILL LIGHT LOCALLY IN ENAMELED WARE

Montreal.

While trading is still reported as fairly light, the firming process on the market for enameled ware is already being felt. Prices quoted are unchanged from the upward revision noted in the last issue when they were fixed as follows:

ENAMELED WARE—

Sinks, roll rim—	
18 x 30	\$23 00
Sinks, flat rim—	1 only 2 only 3 only
16 x 24	\$ 7 50 \$ 7 40 \$ 7 30

QUOTATIONS ARE UNCHANGED ON RANGE BOILERS

Montreal.

Quotations on range boilers remain unchanged locally, no change having been recorded in some weeks. There is a firming tendency to trading, though the off-season slackness has not been

fully cleared as yet. List prices and discounts are as follows:

RANGE BOILERS:—

5 Gallon	\$13.50
12 "	14.00
18 "	15.00
25 "	16.50
30 "	17.50

120 "	117.00
144 "	164.00
168 "	187.00
192 "	210.00

Std., less 40 per cent.; Ex. Heavy, 30 per cent.

SOIL PIPE AND FITTINGS ARE FIRM LOCALLY

Montreal.

A firm undertone continues to feature the market locally in soil pipe and fittings. While spring trading has not yet opened up to any appreciable degree, local manufacturers report satisfactory business with indications for further strengthening shortly. Prices now quoted are as follows:

SOIL PIPE—

2 and 3 inch	35%
4 inch	35%
5 and 6 inch	35%
8 inch	net

FITTINGS—

2 to 6 inch	45%
8 inch	net

ASBESTOS PRODUCTS ARE FIRM WITH NO PRICE CHANGES

Montreal.

Asbestos products remain without change in quotations, the present levels having been maintained for some time past. Seasonal activities in trading are reported, business strengthening noticeably with the approach of spring. The current quotations are:

ASBESTOS PRODUCTS—

2 ply pipe covering	Off list prices 57 1/2%
3 ply pipe covering	55%
4 ply pipe covering	50%
85% magnesia	40%
Boiler covering	\$1 50
Asbestos sheathing	Per 100 7 75

SAP BUCKETS AND SPOUTS ARE REMAINING FIRM

Montreal.

Trading in sap buckets and spouts becomes more active with the early approach of spring. There has been no further change in local quotations which are as follows:

SAP BUCKETS—

Straight Pattern—Per 100, No. 7, \$16.10; No. 8, \$17.50; No. 9, \$19.60; No. 12, \$21.00; No. 16, \$25.20.
Extra Heavy—No. 12, \$25.90; No. 16, \$31.50.
Frontenac—10 qt., \$22.19.
Western Pattern—6 qt., \$15.75; 10 qt., \$21.00.
Galvanized Straight—No. 9, \$23.00; No. 10, \$27.00; No. 12, \$27.00; No. 16, \$31.00.
Square Syrup Cans, one gallon, \$16.75 per hundred.
Spouts—Perfection, \$20.00; Eureka, \$17.00; Sterling, \$24.65 in lots of 1000.

GENERAL UPWARD REVISION IN SCRAP METAL MARKETS

Montreal.

During recent weeks there has been an upward trend in the entire scrap metal market, although the upward march seems to have been stayed during the past few days, no new prices having

been announced. Since last issue there has been a general revision in all lines, brass, copper and lead having advanced from one cent to one and one half cents a pound, malleable scrap advanced \$8.00 per ton and like revisions have been made throughout the list. The current local quotations are as follows:

SCRAP MATERIALS—

Automobile tires	0 50
Rubber shoes	0 03
Yellow brass	0 05 1/2 to 0 06
Red brass	0 09
Light brass	0 04 1/2

No. 2 busheling	3 00
Boiler plate	3 00 to 9 00
No. 1 machinery cast	20 00 to 22 00

EAVESTROUGH PRICES REVISED TWICE RECENTLY

Montreal.

During the past fortnight eavestrough quotations have been twice revised, once upward and then downward, leaving the present quotation not far from that of two weeks ago. From a 70 per cent. discount, a cut was made to 60 per cent. but within the past few days a second revision has brought this up to 65 and 5 per cent. Trading is not so heavy

as it has been but is reported on the upgrade. The current prices being quoted locally are as follows:

EAVESTROUGH—

O. G. round and half round, per 100 ft. 3 in., \$16.90; 10 in., \$18.70; 12 in., \$22.20; 15 in., \$35.50; 18 in., \$45.00.
O. G. Square bead, per 100 ft. 8 in., \$15.90; 10 in., \$17.70; 12 in., \$21.20; 15 in., \$34.50; 18 in., \$44.00.

Discount 65 and 5 per cent.

CONDUCTOR PIPE—Round, Plain and Corrugated, per 100 ft. 2 in., \$18.40; 3 in., \$22.30; 4 in., \$29.60; 5 in., \$48.00; 6 in., \$58.80.

Discount 65 and 5 per cent.

CONDUCTOR ELBOWS—

Plain or corrugated, price per doz. 2 in., \$5.25; 3 in., \$6.00; 4 in., \$10.50; 5 in., \$24.00; 6 in., \$29.00.

Discount 65 and 5 per cent.

CORRUGATED SHEETS FIRM AT RECENT REVISION

Montreal.

Since the advance mentioned in the last issue there has been no further change in the local quotations on corrugated sheets. The revision at that time covered all sizes and varied from 7 to 15 per cent. The prices now being quoted for sheets are as follows:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	7 00
No. 26 gauge	7 50
No. 24 gauge	10 00
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	19 00
Less 10 per cent.	
Lighter than 24 gauge and wider than 27 ins., 75 cents per square extra.	

Toronto Markets

TORONTO, March 15.—Important price changes are again in evidence in local market reports, with the majority of adjustments toward higher levels, the exception being a reduction in quotations on eavestrough and conductor pipe. The lines on which advances are in effect include nickel plated supply pipes, waste pipes and traps, brass cocks, rubber hose, solder and galvanized sheets. There is also a slight advance in the price of blue and black sheets, and on plugs, unions and bushings.

The position of the iron and steel lines remains unchanged with the exception of cold rolled steel on which a slight increase is in effect. The other goods in this list have remained firm at the recently revised prices. There is an evident desire on the part of distributors to stabilize prices on steel and iron at present levels, higher prices being considered a hindrance to trade.

Canada plates and tin plates are maintained on a firm basis, the higher prices noted in basic market reports have not been reflected in the price of these sheets locally. Stocks of ordinary Canada plates are scarce and quotations are withdrawn in some quarters. Cotton waste prices are expected to reach higher levels in the near future as a result of recently noted advances in quotations from primary sources.

Trade conditions are generally satisfactory, with a slight improvement noted in some sections. Weather conditions are retarding spring activities to some extent but building programmes are taking shape in many centres.

GERMAN GOODS SUBJECT TO HIGHER TARIFFS

Toronto.

New customs regulations are in effect on imports of German goods. Cutlery, tools and general lines of hardware and plumbing supplies will be higher in price by 15 to 25 per cent. as a result.

TROUGH AND PIPE QUOTATIONS ARE LOWER

Toronto.

The feature of the week's market report is the drop in price of eavestrough and conductor pipe. Basic materials have continued firm and quotations on the local market have reflected the same

trend, trough and pipe however have taken lower price levels and are back very near the levels quoted in January. The new discounts are 65 and 5 per cent. from the following list.

TROUGH (EAVE)—

O. G. Square Eave—		Per 100 ft.	Per 100 ft.
8 inch	15 inch	\$15 90	34 50
10 inch	17 70	18 inch	44 00
12 inch	21 20		

O. G. Round and Half Round

8 inch	15 inch	35 50
10 inch	18 70	45 00
12 inch	22 20	

Less 65 and 5 per cent.

PIPE (CONDUCTOR)—

Plain, round or corrugated.		Per 100 ft. in 10 ft. lengths
2 in., in 10 ft. lengths, list		18 40

5 in., in 10 ft. lengths, list		48 00
6 in., in 10 ft. lengths		58 80

Less 65 and 5 per cent.

ELBOWS (CONDUCTOR)—

2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00

Less 65 and 5 per cent.

SLIGHT ADVANCE IN NICKEL PLATED PIPE AND FITTINGS

Toronto.

Advanced quotations are in effect on nickel plated supply pipes, waste and overflow pipes and traps on the local market. The new prices are about 1 per cent. higher than former quotations. There is also an advance of from 2 to 5 per cent. on some lines of brass cocks and brass fittings. Following are the new discounts applying on these lines.

BRASS COCKS—

Key stop and waste roadway	54%
Socket head stop and waste	42%
Patent cap stop and waste	33%
Brass fittings	53%

BATH AND BASIN SUPPLIES—

3/8" N. P. brass per pair	2 20
With Wheel handle stop per pair	4 60
Waste and overflow 1 1/4" each	3 75
Do., 1 1/2" each	4 15
Nickel plated traps, disc.	34%
No. 3633 basin cocks	43%
No. 3830 bath cocks	40%

BLUE AND BLACK SHEETS HIGHER IN PRICE

Toronto.

The price movement toward higher levels in primary markets, has been reflected in local quotations on blue and black sheets. Blue annealed quotations showed a wide variation recently, this has undergone a change and the variation to-day is slight. Black sheet prices have advanced about 2c per cwt., with a variation of 25c per cwt. quoted in some quarters. The new list follows:

BLUE ANNEALED SHEETS—

10 gauge, base	4 40	4 60
12 gauge	4 45	4 65
14 gauge	4 50	4 70
16 gauge	4 55	4 75

BLACK SHEETS—

18-20 gauge	5 00	5 25
22-24 gauge	5 05	5 30
26 gauge	5 10	5 35
28 gauge	5 25	5 50

A charge of 25c. per 100 lbs. is made for less than case lots. An extra 10c. per 100 lbs. is also charged on sheets 26 in. wide.

RUBBER GARDEN HOSE PRICES ADVANCED

Toronto.

The season's prices on garden hose are announced and it will be noted that they are higher than quotations formerly in

effect. The advance is about .01c per foot on all grades, the new list following shows to-day's prices.

GARDEN HOSE—Per 100 ft.—

Plain 1/2" three ply	\$9.50	1/2" four ply	\$10.50
1/2" five ply	\$12.00	1/2" six ply	\$13.50
3/4" three ply	\$11.00	3/4" four ply	\$12.00
3/4" five ply	\$13.00	3/4" six ply	\$15.00
1" four ply	\$14.00	1" five ply	\$15.50
1" six ply	\$18.00		

Corrugated—1/2" \$14.00; 3/4" \$15.50; 1" \$17.50.

SOLDER PRICES AGAIN SHOW AN ADVANCE

Toronto.

Following higher levels reached in quotations on basic metals, another advance has taken effect in the price of solder. There is a variation noticeable in local quotations but the difference is slight. The new list follows.

LEAD AND ZINC GOODS—

Lead pipe, per 100 lbs., up to 2"	14 50
Do., 2" to 8"	15 50
Do., 8" and over	16 50

No. 10, Western, galvanized	27 00

GALVANIZED SHEETS REFLECT FIRM PRICE TREND

Toronto.

Quotations on galvanized sheets have reflected the firm trend recently noted in primary market reports. Higher price levels being in effect on most regular lines of imported and domestic iron. The variation in quotations on Queen's Head has disappeared and slightly higher prices are in effect on the heavier gauges, 28 gauge remaining at the old level. The new list is shown below.

GALVANIZED SHEETS—

	Premier and Apollo
10 3/4 oz.	6 65 7 25

HIGHER QUOTATIONS IN EFFECT ON BOLT DIES

Toronto.

Quotations on bolt stocks and dies have been changed on the local market. The new prices are 10 per cent. higher than those formerly in effect. The new list is not available but will appear in an early issue of Sanitary Engineer.

CANADA PLATES AND TIN PLATES REMAIN FIRM

Toronto.

The price of Canada plates and tin plates has not shown any change recently. Basic market reports continue to show strength and higher levels would not be surprising. There is a wide shortage on plain Canada plates and quotations on this line are being made by the majority of dealers. The list below shows local quotations in effect.

PLATES, CANADA—	Per box
Dull, 60 sheets	6 75
Blued and oiled, boxes 52's	5 50

IRON AND STEEL PRICES HOLDING FIRM

Toronto.

The prices quoted locally on iron and steel have showed only one minor change during the week. Firmness is the feature of all quotations in this market both bars and sheets showing remarkable strength, the only price development of the week however was in cold drawn steel on which quotations were higher by 15¢ per cwt. To-day's list follows.

IRON AND STEEL—

Mild steel bars and small shapes \$3 60	\$3 75
Mild steel bands, 3-16 in. base 4 00	4 25
Bar iron, base	3 75
Horse shoe steel	4 25
Tire steel	3 60
Spring Steel	10 50
Sleigh shoe steel	3 50
Cold drawn steel	4 60
Hoop steel, heavier than 1"x20G 4 75	5 00
Do., Lighter than 1"x20G 5 35	5 50
Norway iron	12 50
Toe caulk iron	4 20
Crucible cast sheet steel	28 00
Mining drill steel	18 50
Cast tool steel, high grade	30 00

SOIL PIPE PRICES REMAIN STATIONARY

Toronto.

There has been no change in the quotations on soil pipe and fittings this week. The market is holding firm but spring trading has not assumed heavy proportions. Discounts continue at the following list.

SOIL PIPE—

2 inch	Less 33 1-3%
3 inch	Less 33 1-3%

Sanitary Engineer

Can Bring You Real Money

Have you something to sell—your business—tools—equipment?

Do you want more capital to extend your business?

Do you want to buy a business—second hand tools or equipment?

Do you require a salesman or other employees?

If you want to buy, sell or swap anything connected with the plumbing business, tell the trade about it through the classified columns of SANITARY ENGINEER.

For 2 cents a word with a minimum charge of \$1.00, you can put your message before 90 per cent. of the Sanitary Engineers of Canada.

Make Use of the Classified Columns

Dodging a Shower

How many of your customers are putting off the purchase of a shower because their water-heating equipment is unreliable?

The Marvel Gas Water Heater provides hot water for a shower or bath in a very few moments and at insignificant cost. The tank is extra heavy; boiler and all water fittings heavily galvanized, so that the Marvel, easy and inexpensive of installation, lasts a lifetime without repairs or replacements.

There is good money in the sale of Marvel Heaters.

WHAT IS YOUR ADVERTISING DOLLAR BUYING?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

PNEUMATIC WATER SUPPLY SYSTEM

Gives country residents all the advantages of a city water system without the excessive cost

The wide-awake dealer will make big profits out of this system among customers who now have difficulty with their water supply. It is so simple to operate and costs practically nothing for upkeep.

The outfit consists of an air-tight steel tank which can be placed in the basement, and a "Myers" famous guaranteed pump (hand or power), suitable for pumping air or water, together with pipes and fittings.

Any plumber or gas fitter can easily install it. Every outfit guaranteed to do the work for which it is designed. For small or large dwellings.

Write us for Water System Catalogue and prices. Now is the time to interest your customers.

KERR VALVES

No. 34

No Weakness at Any Point

Attention has been given, in the designing of this Valve, to the strains attending the connecting up of such valves, ample metal being provided where these strains usually come.

They are exceptionally well finished and plated, mounted with the best quality black wood wheels, and fitted with the "Radium Disc," insuring the utmost of service and satisfaction to the user. Each valve is thoroughly tested and packed before shipment.

When you order, ask for KERR RADIATOR VALVES always, and you will always get a good valve.

One Flue Opening or Many?

Many sectional boilers, you know, are made with one flue opening at the rear of the fire box. This draws the fire to the rear, leaving the front sections but partially effective.

In Burnham Boilers the flue openings are between each section, so that an equal amount of heat continually reaches each section.

Write for complete information.

Expansion means

Why did the Thos. J. Dyer Co. use Rawlplugs?

Because the Thos. J. Dyer Co., after fifteen years' experience with other plugs, found Rawlplugs the only really satisfactory type of screw anchor. Rawlplugs did not chip the marble or plaster; they held the fixtures securely and were more economical. This is why Rawlplugs were used!

All the bathroom and sanitary fixtures in the Mount Royal Hotel are secured with Rawlplugs!

Rawlplugs proved satisfactory in the construction of Canada's greatest hotel. They are the most satisfactory plug for attaching your Bathroom and Sanitary Fixtures too, and will save you money.

Write us for price list and samples so that you can use Rawlplugs on your next contract.

FIX IT WITH

New and Better

The Teck Flush Valve

Here for the first time is offered to the trade a flush valve with oscillating handle that can be regulated under pressure.

Without shutting off the water it can be adjusted for any length of flush.

In case dirt lodges in by-pass the removal of two screws permits instant cleansing—you don't have to pull down the whole valve.

The devising and manufacturing of this newer, better valve is but added evidence of this company's leadership in its chosen field.

Your jobber sells it.

A Great Labor Saver

The "Emco" A-967 Adjustable Bath Supply is a time and labor-saving fixture on bath installations. Only one joint is required at the floor and one at the cock. A cone rubber washer makes the adjustable joint absolutely water-tight.

The adjustable joint saves trouble where the "roughing in" is not perfect. Use this "Emco" fixture and note the improvement in your installations.

Sold by leading jobbers

The above diagram shows how the joint is adjustable and how it is held steadfast in position by the screw collar. There is no possible chance of the supply pipe slipping out.

How Much Shall I Charge?

The success of your business depends on this vital matter. If your prices are too high you court trouble—if they are too low you risk losing money. It should not be a case of guesswork. Your charges should be made on a business-like basis.

That's Our Business

We make a specialty of watching the markets and keeping the trade informed as to what prices they should charge in order to make a reasonable profit. Our prices will stand close investigation and your customers will have confidence in you when they know that you base your prices on our service.

Never Mind Your Competitor

By adopting our pricing system you **may not** get all the business but what you **do get will produce a profit** and that's what you are in business for. If your competitor is foolish enough to do work at cost let him do so but don't be foolish enough to try and meet him. The only successful concerns to-day in the Plumbing and Heating business are those who ignore cut-throat competition.

Perfection

Automatic Air Valves

You might as well try to operate a steam engine without a boiler as to expect the peak of efficiency from heating systems equipped with impractical air valves.

Perfection Automatic Air Valves were designed to give the acme of satisfactory performance—every installation proves that their design is right.

No matter the peculiarities of your system, there is a "Perfection" that will meet them exactly.

Let us give you the facts concerning the full line.

Farmers Will Buy More Furnaces in 1923

Every stove-heated farm house in your district is a real, live legitimate prospect for a Banner Furnace.

Farmers everywhere are getting rid of their antiquated heating equipment and installing a Banner; the Banner Pipeless for the average home; the Banner Pipe furnace for large, rambling farm houses.

The Banner Furnace

Both furnaces have a sturdy, cast iron combustion chamber, four individual shaker grate bars, full rated capacity, and roomy ash pit.

The Banner can be installed for one quarter the price of a steam or hot water job and once installed it "stays put"; you waste none of your profits in service calls. It is one of the most profitable of all furnaces to handle.

Banner Pipeless Furnace

Banner Pipeless Wood Furnace

The Banner Pipeless Wood Furnace shown on the left takes a stick from 2 to 4 $\frac{3}{4}$ ft. long, and the fire door is large enough to accommodate great, rough chunks of woods

The furnace is designed for use in districts where wood is the only fuel used.

Mueller Pumping Systems,

Mr. Plumber, can be installed with confidence that their satisfactory operation at all times is an assured fact—guesswork is eliminated.

Compact—durable—efficient, the system will last a life-time without repairs or replacements. Under test a MUELLER Pumping System has pumped over a million gallons, equivalent to over thirty year's average service, with no attention other than occasional oiling, and is STILL GOING STRONG. The product of years of study, the Mueller Pump with but one moving part is without a peer. NO GEARS, NO VALVES, NO BELTS, NO CAMS, NO SPRINGS, NO PISTONS, NO IDLERS, NO FLYWHEEL, NO COUPLING—these features make it possible for the Mueller Pump to give such service and satisfaction as has never before been realized. An added feature of the Mueller System is that drinking water is pumped direct from the well, and not from a storage tank.

The Suburban and Rural Markets have been scarcely touched—the opportunities are wonderful—Mr. Plumber, get your share of the business! And—on every job instal a Mueller Pumping System along with Mueller plumbing goods. It will mean Satisfaction to your customer and Reputation for yourself.

"The Only Satisfactory Plug for Holding Screws!"

That's what the Thos. J. Dyer Co., says. Read their letter. It tells you the advantage Rawlplugs have over all other screw anchors.

MOUNT ROYAL HOTEL
FEB. AND METCHES 378

TELEPHONE UPTOWN 5195

THE THOMAS J. DYER CO. LIMITED
PLUMBING AND HEATING CONTRACTORS

MONTREAL. Jan. 30, 1923.

Messrs. Inventions Limited,
128 Bleury Street,
Montreal, Que.

Dear Sirs:-

It will probably be of interest to you to know with what success we have used Rawlplugs in the Mount Royal Hotel.

The writer had various sizes tested in plaster backed with hollow tile and decided that for hanging basins your No. 12 x 2" Rawlplugs were very satisfactory. On the accessories we used the No. 8 x 1½" size and had them tested by two men trying to pull out a grab-rail, which they were unable to do.

As we have put in over 30,000 Rawlplugs on this job, we have been able to form a good idea as to the cost of installing them, and have found your method considerably cheaper than any other fixing device.

A considerable quantity of these Rawlplugs were used in marble and we found them, after fifteen years experience with other types of screw anchors, the only really satisfactory type, inasmuch as the marble did not crack or chip when your Rawlplugs were used.

We also want to thank you for your prompt service in connection with this work. We have never been delayed or held up one minute waiting for Rawlplugs and this in itself merits our heartiest appreciation.

Very truly yours,

My Cowie

Local Manager.

The Thomas J. Dyer Co. Limited.

Rawlplugs are made of specially prepared fibre, which expands as the screw enters and **GRIPS** the wall like a vise. A fixture cannot loosen with Rawlplugs and permanent work is always assured at a **minimum cost.**

Rawlplugs facilitate attachments to any material. Use them on your next job. Write us for price list and samples.

Put Your Tank Heater Business On A Profit-Paying Basis

The cost of merchandising RUUD Tank Water Heaters is low because installation and maintenance expense is reduced right in our factory when the heaters are built.

The RUUD is easily installed on account of the reversible detachable union manifolds. Both connections are on a straight line. Time saved on the installation means a greater net profit.

Quick inspection and repair is possible because all parts are instantly accessible and removable. Simplified construction eliminates all unnecessary parts—there are no cotter pins or set screws.

The RUUD sells. All the forces which for over a quarter of a century have been building RUUD prestige are levers that increase your sales, your turnover and your profit.

These pure white Canadian will please

Glendare No. 660-X
Size 18" x 20"

The sheer glossy whiteness of any Canadian Vitreous Lavatory will delight the heart of any home-maker. Its surface is as smooth as a pane of glass and as easily kept clean as a china plate, while its unchanging freshness will be a joy as long as the fixture may be used.

Each lavatory is one solid piece of burned-clay ware, with the beautiful lustrous white time-defying glaze an inseparable part of the body itself. It thus will not chip, peel, wear off nor discolor. There is no trace of metal to rust or disintegrate. Its smooth glass-like surface has no affinity for dirt or germs, while its solid vitreous body possesses the weight and strength that ensure freedom from breakage and a life-time of service even under strenuous usage.

"Prospective Plumbing Apprentices Must Know What the Prospects Are for Them"

Ex-President George Broomfield Takes a Fling at the Adolescent Act—Asks What the Plumbing Trade Has to Offer Apprentices—Plumbing Craft Are Being Raised to Higher Standards

Report of Convention of the Association of Plumbing and Drainage Inspectors of Ontario, held in London, Ont., by Special Representative

A GREAT many of the current problems in connection with plumbing and drainage were discussed at the fourth annual convention of the Association of Plumbing and Drainage Inspectors of Ontario, as held in the City Council chamber at London, Ont., for two days. There was a representative attendance of inspectors from various parts of the province and an enjoyable and helpful convention was the result. This association has been formed with the idea of suggesting plumbing regulations to govern the design and installation of plumbing systems, to encourage the adoption of such regulations, and to advance the standards of plumbing, drainage and hygiene by reading and discussion of papers, and interchange of practical and theoretical knowledge and experience, and to encourage and promote drainage inspectors after an examination as to qualifications, to be Plumbing and Drainage inspectors.

The election of officers resulted in the return for another year of the officers of last year. The delegates expressed utmost appreciation of the work of these officers during the year. These officers are as follows: President, F. C. Palmer, Oshawa, Ont.; vice-president, A. G. Metherall, Peterboro; secretary, W. H. Meadows, Toronto.

Next Convention in Toronto

The city of Toronto was decided upon as the place in which next year's convention will be held.

An address which dealt clearly and concisely with the apprenticeship problem in the plumbing industry was given by George Broomfield, ex-president of the association. Considerable favorable comment was heard concerning the outline of the situation as given by Mr. Broomfield concerning the reasons for the scarcity of apprentices, showing that boys were being educated to the point where they will not learn the plumbing or other such trades.

"When the boy is kept at school until he is 18 years old he does not want to go out and learn a trade," said Mr. Broomfield. "Mother looks at the lad and says 'I do not want my boy to go to work where he will dirty his hands. I want him to have a white-collared job. I will make a preacher out of him.' In many cases he would serve his risen Lord better digging post holes or planting potatoes than in pounding the pulpit."

Continuing Mr. Broomfield asked what the plumbing trade had to offer apprentices. In the matter of wages the boy could go into an automobile factory and earn twice or three times as much as he could as a plumber's apprentice.

"You have to show the boy that there

is something ahead of him in the trade." Mr. Broomfield concluded. "If we can't show him that he won't have to go home to heaven branded as an assisted immigrant with the country's stamp on the coffin we cannot expect to get apprentices."

B. Kirk of Toronto, recalled the days of his apprenticeship, when he worked for \$2 per week and he received \$6 when out of his time.

Use of Bicycles

Delegate McPherson of St. Catharines started some discussion when he stated that one reason for the high price of plumbing in his city was the action of the union in refusing to allow the members to use their own motor cycles or bicycles during working hours. This subject came in for discussion two or three times during the convention, Mr. McPherson pointing out that he did not wish to start any controversy but merely wanted to discover whether these same conditions obtained in other municipalities. It was the consensus of opinion that in none of the other municipalities does the union take any such steps. On the whole the delegates were inclined to the opinion that this question was one for the unions and the employers to settle. Secretary Meadows of Toronto pointed out that as inspectors they were more interested in having good work done than by attempting to interfere with the duties of other bodies.

R. G. Leaman of Toronto gave an address entitled "The inspector, the public, the health departments and the plumbers and manufacturers," as reproduced in full in this issue. He urged the necessity of educating the public to the danger of inferior plumbing installations.

Master Plumber and Plumber

Mr. Leaman prefaced his address with the following remarks concerning the status of the plumbing trade:

"The time is passing—it has well

F. C. Palmer

Sanitary inspector of Oshawa, Ont., re-elected president for 1923-24 of the Association of Plumbing and Drainage Inspectors of Ontario.

nigh passed—when your splendid calling is no longer to be jibed and joked at. You are going to be recognized as a craft that is a benefactor to mankind, that builds for comfort and sanitation, that has made possible to all humanity the God-given privilege of personal cleanliness, out of which grows a strong manhood and womanhood, improves the morale of the entire community, instills in every heart a sense of personal pride and brings out the natural glow and vigour in every human being who avails himself of the privileges your trade has made possible. The Bible says, 'The unclean cannot enter the Kingdom of Heaven,—meaning those unclean in mind.

"You have been the means to an end that science has never yet and never will accomplish. You have assisted and developed naturally with the means your creator placed at your disposal and not by artificial medicines or stimulants provided by man.

"Proud of your calling! Why, men, you can hold your heads high, you can look any man in the eye and say with pride, 'I am a plumber. You can't get along without me—I am an essential and co-ordinate part of your modern civilization. Without me you would retrograde to an unclean, heathenish mob, but with me, you progress and go higher in scale of civilization, honored and appreciated, a happy, strong, highly developed cog in nature's great scheme. When you can't, with pride, look a man in the eye

and talk to him like that, when you can't throw his cheap jibe back into his teeth and make him see the truth, then you fail to measure up to a proper appreciation of your high calling. Don't be modest about it. The argument is all on your side. Any man who belittles your trade is ignorant of its transcendent importance which falls like a benign blessing on mankind because of your knowledge and your skill in placing for his benefit in his own home the greatest gift that mankind enjoys.

"You have built better than you knew. But now you know, and it is about time you clipped the coupons and told the rest of the world to pay up—not with money alone, but with a proper respect for a calling which entitles you to regular commission in the ranks of benefactors of mankind, and a position in the world of commerce alongside Wanamaker, Field or any other so-called merchant prince. What did they ever do for humanity? They furnished the fine feathers that make fine birds, but if those birds did not feel the glow of vigor and pride which comes from a clean body they would not be ambitious for the fine feathers. Then, again admitting that without the clean body and the resultant personal pride they did want the fine feathers, who would want the birds after they plucked the feathers finding beneath the feathery covering, an unclean body?"

At the afternoon session of the first day Dr. Downham, M. O. H. for London,

read a paper on "Ventilation," in which he advanced some ideas which are quite opposite to the general opinion. He declared that the air in a room, even well filled with people, never contains sufficient carbonic acid gas to be injurious to the health of those occupying it. Nor is the amount of the oxygen sufficiently reduced to endanger health, providing the air is kept at a proper temperature, from 65 to 68 degrees, and at a proper humidity, about 65 per cent., and is kept in motion.

The visitors were the guests of the city at the DeLuxe Cafe for supper on the first day of the convention. Alderman Watt, as acting mayor, presided. He freely gave his opinions of plumbers in general and apprentices in particular. His opinions were given in a jocular mood and accepted accordingly. Some interesting addresses were also delivered by F. C. Palmer, C. H. Mitchell, Ald. Douglass, E. R. Seabrook, City Engineer Near, Rev. John Garbutt, George Broomfield and James C. Young, local plumbing inspector.

A very satisfactory condition of affairs was reported by the officers of the association. The treasurer reported a balance in hand of \$200, and the secretary dealt with the increase in membership which had taken place during the year and the increased interest taken by members in the work of the association as judged by the number of enquiries directed to him concerning problems arising in the work of inspectors.

Group of plumbing and drainage inspectors at the convention of the Ontario Association of Plumbing and Drainage Inspectors held in London, Ont., as reported herewith. Seated in the big chair in the centre is President F. C. Palmer, of Oshawa. Seated to the right of him is Secretary W. H. Meadows; seated to the left of him is G. Broomfield, Brantford, Ont., ex-president; standing behind is A. C. Metherall, Peterboro, vice-president of the association. Others are inspectors from various parts of Ontario.

Removes Plumbing Equipment Which is Not According to Existing By-Laws

Open Waste and Vent Pipes, Unused Fixtures, Vent Stacks Not Through the Roof, Steam Traps to Drains and Soil Pipe, Acid in Soil Pipes, etc., Some of Irregularities Found by Dept. of Industrial Hygiene and Housing

Address by E. J. K. NORRIS before Convention Association of Plumbing and Drain Inspectors of Ontario, London, Ont.

I WANT to try and interest you by bringing to your attention a few of the conditions found and dealt with by the Division of Industrial Hygiene and Housing of the Department of Public Health in Toronto.

The duties and personnel of the Division were explained in detail at our last meeting and you will remember there are two plumbing inspectors on this staff whose duties take them through the factories of Toronto and also to attend to complaints of citizens re nuisances, etc.

The factories of Toronto generally are in first class condition from a sanitary standpoint. The following remarks however, are in reference to some of those which were not up to standard but have since been made good.

Open Waste and Vent Pipes

The most glaring irregularity was the number of open waste and vent pipes found. Fixtures were removed and no attempt made to close and seal the open ends to prevent sewer air entering the building.

Unused Fixtures

In many factories plumbing fixtures were found that were not being used; some of these had the water on to the faucets, and others were shut off at stop cocks, with the result that traps were dry and admitting sewer air. Many of these factories had large lavatories containing several fixtures closed, as their staff of employees had become less. Under this heading it would be well to note that the average man is quite ignorant as to the use and duties of the various traps under fixtures. When they are told that it is necessary to flush these frequently in order to retain the seal, they are rather surprised. One factory was found where they made a very neat store room for food stuff in connection with their cafeteria, out of a lavatory containing two closets and a basin. The superintendent thought this arrangement satisfactory so long as the lavatory was not being used as a lavatory. When he was advised that his food was being kept in foul air he was horrified.

Some lavatories were found packed so full of stock that it was impossible to get near the fixtures and it took some explaining before the people would re-

move same in order to keep the traps sealed.

Lavatories Used by Both Sexes

There were very few under this heading and practically all have installed the necessary accommodation.

Plumbing Not According to By-law

There is considerable work in use at present of plumbing done by unscrupulous plumbers and handymen, practically

floors added and the vent stacks being left inside were found.

Steam Traps to Drain and Soil Pipe

Steam traps were found discharging into soil pipes. This usually takes some explaining in order to get the defects rectified. However, when the lead joints which are forced out due to the expansion and contraction are shown to the man who pays the plumber, he usually realizes that it is false economy.

Acid Into Soil Pipes

Not one place was found where acid had destroyed pipes. Most all places using acid have tile pipe.

Overcrowded Lavatory Accommodation

Very few cases of this and all made good.

Acid Fumes—Smoke—Dust, Etc.

Practically all the factories have dangerous dust and fumes controlled. Some have excellent systems, others not very elaborate systems, but nevertheless effective. Many instances were found where the employees were not taking advantage of the protection provided by removing the hoods and guards from machines, and neglecting to replace them.

Ventilation and Heating

There are very few factories found now with fault in ventilation and heating.

Light

A few isolated cases were found where the natural light could be improved, but unquestionably there is room for improvement in many lavatory lights. Lavatories that are dark are usually dirty and if they depend on electric light in many cases the bulb is burned out, or switch defective. Painting the corners of lavatories and stairs white is an excellent scheme; factories have been wonderfully improved by doing this.

Lunch and Rest Rooms

All of the larger industries have these and are usually well patronized. There are several very elaborate such rooms in the western district. One firm has a large Welfare building almost complete which should be the finest in the city.

A. G. METHERALL

Sanitary inspector of Peterboro, Ont., re-elected vice-president for 1923-24 of the Association of Plumbing and Drain Inspectors of Ontario.

all of this has been in use for years, but nevertheless there was quite a lot of it removed and installed satisfactorily.

Traps not vented—black wrought iron waste pipes—traps constructed of black iron fittings—fixtures wasting into fixtures—fixtures wasting into rain water pipes—waste pipes discharging through walls. No local vents. No windows to outside air—pipes repaired with taps, etc. Breather pipes inside premises—closet bowls loose at flange. These are some of the defects made good.

A few instances of buildings having

First Aid

Scarcely a factory can be found that has no first aid material. Most of them have a complete kit.

Housing

Under this heading we get a great variety of work. If a citizen has a complaint to register against a factory for making unnecessary noise, dust, smoke, etc., this division handles it for him.

One complaint came in from a hotel claiming sewer gas was permeating the premises. The guests were leaving hurriedly. After inspection it was found that a radio fan had fitted a flag staff into the top of the soil pipe stack to string his wires on. The result was that the traps were syphoning.

Gas Fired Appliances

This is a subject that requires more attention. Gas appliances are being installed in factories and houses in a very unworkmanlike manner. Of course we all know the class of mechanic that is usually sent to do gas fitting. But if a poor mechanic does install work a man who understands the conditions thoroughly should inspect his work.

Several fatalities have occurred from gas fired heaters; these appliances at

times give off a deadly gas and in many instances they are not equipped with a fume pipe.

At present this division is dealing with a case where there are eighteen apartments, all of which have a domestic boiler and heater combined. This is a new building and there is no provision made to carry off fumes from these heaters of gas ranges. Up to date the owner has spent considerable money installing galvanized iron ducts to the outside of the building, and after spending money and disfiguring the property, his job is not satisfactory, as there is a back draft at times that extinguishes the gas and is liable to create an explosion. These fumes should be amply arranged for, in new buildings in figuring size of chimney. Carrying ducts through and up the outside wall is not satisfactory as the life of the pipe is very short and the replacement of same, year after year, would be enormous and consequently would be neglected.

If a man is sent to install a gas fitted appliance, he should endeavour to install same as close as possible to a chimney and not consider that his work is complete until the fumes pipe is installed. Occasionally the owner will tell the gas fitter, "Oh, don't bother about the fume pipe, I will do that." Well, some

times it is done, but in most cases it is not.

Now this line of work has not been considered part of a plumbing inspector's duties, but in my opinion it is, because in most cases the man called to do work comes from a plumbing shop. The inspector should insist on all fumes being controlled from these gas fired appliances and there are several such as linotype and monotype printing machines, clothes presses, small high pressure boilers and various styles of tank heaters.

We occasionally run across the result of faulty work installed by plumbers when putting domestic coils in furnaces. They should make a neat hole for their pipe where it passes through the inner drum, so that coal gas can't pass into the hot air pipes.

Carbon monoxide is a gas due to incomplete combustion. This gas, like carbon dioxide, has neither taste nor smell and is very deadly in its effect. Whenever you find coal gas or illuminated gas, it is a sure and certain indication that there is carbon monoxide and if allowed to continue, death will undoubtedly result. Hence it is of vital importance that efficient means be provided to prevent this deadly gas escaping, whether in dwellings or work places and likely to be inhaled by human beings.

Would Make Master Plumber Responsible for Complete Sanitary Installation

Drains Laid on Swampy or Made Ground Should Have Solid Bed of Concrete—Make Owners Responsible for Final Smoke Test—Make Drain Contractors Responsible for Plans Filed for Tiled Drains—Condemn Woodwork on Sinks

Address by R. G. LEAMAN, Sanitary Inspector, Toronto, before Convention Association of Plumbing and Drain Inspectors of Ontario, London, Ont.

"I WILL deal with relations which exist between the master plumber, plumber, drainman and the inspector and whether we can improve on these conditions so as to give the feeling that when an inspector goes on the job that he is there to protect the public, master plumber, plumber and drainman.

In trying to bring my point of view before this convention I have brought with me a chart; before I start on this chart I may say that these are the views of some of the master plumbers and drainmen which I have gathered during the inspections.

Link No. 1. Health

Health is a factor in which the public are very much interested. It not only pertains to our line of work but it goes into the home; if people understand what this great link means it will be a very short time before they will find that their sanitary conditions are not what they ought to be. That is

where this great link connects with No. 9. You will find that they will get in touch with Link No. 4, the master plumber, and this is where No. 9 has a great bearing. Health is the one great link which we inspectors are so closely associated with.

Link No. 2

The link is the public who are striving to keep healthy. Where there is health there is always happiness.

Link No. 3. The Medical Health Department With its Hygienic Plumbing and Drainage Divisions

There are many people who still think the inspections are fads. I heard a minister once say, "As you sow so shall you reap," and it is true. Some day when they find their health impaired by evading their health acts and regulations, some people will know that they have reaped what they have sown.

Links No. 4, 5, 6, 7

No. 4, the Master Plumber; No. 5, The Journeyman Plumber; No. 6, the Drain-er; No. 7, the Manufacturer.

These are closely linked together, for together they manufacture and install the mechanical appliances that allow us to breathe fresh air, drink pure water and dwell in healthy surroundings. There is no room used oftener than a bathroom or a kitchen; the laundry when it is used is generally used for the day. Economy should be practised elsewhere but not on the sanitary equipment of a home.

Link No. 8. The Price of the Installations

In making inquiries during my inspections I have found that there are many grievances and suggestions. I will deal with the grievances now as I have made it a separate link.

Much of the reasons for unpleasant

relationship between the master plumber, drainer and inspector is claimed to be that they cannot get the proper price for their installations. But, you will ask, why should they have unpleasant feelings toward the inspector? The reason is, that the inspector has his duties to perform and in the daily routine of his inspections the following is found: the vents are low or they are falling the wrong way; the trap is drawn and its seal is broken; the lead waste is not supported; the stack is not properly supported, or the water pipe is trapped; a fitting or pipe is defective and it must be taken out; a W. C. is installed in the cellar with no direct ventilation to it; or the laundry tubs or W. C. are installed without vents. The drainer's troubles are similar in his line of work.

Link No. 3 has its duties to perform, the chain is as strong as its weakest link and the public cannot afford to have any weak links. The master plumber and drainer claim that the reason there are ill feelings toward the inspector is on account of Link No. 8, (the price of the installation), that they cannot take the proper time to see that all faults are made right before the inspection is made. After it is made good feeling prevails among all the links because we all realize that the public must not suffer for conditions that exist amongst the trade.

We now come to a very important link in the chain we are endeavouring to build.

Link No. 9. Education

If the public could be made to understand why vents and traps are necessary, why they must not run rain water leaders into fresh inlets, why they should not break holes in drains and soil pipes for refrigerator wastes and other fixtures, why they cannot make a bathroom out of a room with no windows or where direct air or light cannot get into the room; why a stack must be three ft. above a window or fifteen ft. away from a window, there would be much less misunderstanding.

Link No. 10. Stands for Co-operation

The chain as a whole should co-operate to give the public the best installations and materials that can be had. The following are recommendations which I have gathered from the trade:

Clause No. 1

In extreme cold weather water tests be discontinued and a smoke test be applied on all roughing work. That the master plumber supply machine approved by the chief inspector and all necessary equipment for same and that a time between two dates be made by chief inspector of the municipality.

Clause No. 2

To define responsibility of the plumber in regard to the plumbing and drainage installed by the different contractors.

They suggest that it be made compulsory for a test fitting at the foot of every stack and would make the connection between tile and iron the drainman's work. They further suggest and would recommend in the best interests of sanitation, that plumbing and drainage should come under the master plumber, making one man or firm responsible through the office of the Medical Health Department for the complete sanitary installation. It is also recommended that when all drains are to be laid on made or swampy ground that the same be laid

G. BROOMFIELD

Brantford, Ont., ex-president of the Association of Plumbing and Drain Inspectors of Ontario, who gave some interesting comments on the apprenticeship problem.

on a solid bed of concrete. They go further and say that all drains should be iron.

Clause No. 3

That patent breather cap be dispensed with and return bend or more suitable fitting attached to fresh air inlet.

Clause No. 4

They recommend and suggest that owners be notified through the press or the office of the Medical Health Department that they are responsible for the final inspection and in all cases smoke-tests must be supplied in so many days. If the owner knew that he was responsible he would hold final payment until he knew same was passed by the Health Office. Should Clause No. 2 not be dealt with they recommend that upon applying the smoke test and finding only the drain leaking, that the second inspection be put on by drain contractor.

Clause No. 5

That all drain contractors be licensed

and held responsible for plans filed for tiled drains.

Clause No. 6

They also recommend that it be a breach of the by-law to have any portion of the plumbing or drainage covered before inspections and that all inspectors be supplied by the Medical Health Dept. with a paper showing that all the work has been passed. They think that the plumber should have all necessary work ready for inspection so they could have the poster put up. They believe this would help them to get their first draw. They feel it would be a safeguard from other trades covering up work not inspected.

Clause No. 7

Where installations are made without a permit or inspection they suggest that not only shall persons doing such work be fined in the police court but they should be compelled to re-install according to the by-law and that a plumber's license be cancelled after third offense in two years.

Clause No. 8

In cases where a sink already exists and the client desires combination sink and tubs they recommend that 1 1/4 in. existing vent may be used for venting both traps. In cases where laundry tubs are wanted in basement that existing 1 1/4 in. sink vent may be used for the tubs.

Clause No. 9

That wood-strip closet seats be condemned as the wood-strip becomes unsanitary.

Clause No. 10

That woodwork frames for flat rimmed sinks be condemned and iron brackets be used instead on account of unsanitary conditions that woodwork causes through age.

They also recommend that master plumber and drain layer be called together at least once a year for the purpose of discussing any grievances which may arise from time to time. They feel by having the meetings, a more friendly feeling would be created amongst the chain as a whole.

TEST CENTRAL HEATING AS FUEL ISSUE SOLUTION

Ottawa.—Although the coming of spring has temporarily solved the fuel problem, the federal minister of mines is preparing to meet demands of next winter.

Upon the recommendation of the Dominion fuel board, the federal government has decided to proceed immediately with investigations into the possible development of central heating plants.

Broadening the Scope of the Plumbing and Drainage Inspectors' Duties

Danger of Unsanitary Conditions Under Certain Circumstances Should be Understood to Some Extent by Plumbing Inspector as Well as the Medical Health Dept.

Address by D. S. WARK, Plumbing Inspector of City of Hamilton, Ont., before Convention Association of Plumbing and Drainage Inspectors of Ontario, London, Ont.

THE WORK and duty of the plumbing inspector for generations past, or ever since this official came into existence, has been to inspect plumbing in general, and to direct plumbers as to what is, and what is not essential, under the building by-laws as relating to plumbing, and the plumbing by-laws in the district for which he is appointed.

He must of necessity be a man of practical knowledge, and thoroughly experienced in his work if he hopes to be successful in his duties, and to merit the confidence of the master and the journeyman plumber alike, and the esteem of the authority by whom he is appointed.

He should be able to detail in simple language what is demanded of the master and journeyman plumber, under the by-laws. He is required to know the whys, and the wherefors of all plumbing fixtures and fittings, both new and old. He should be able to demonstrate the points for and against every known type of water closet, urinal, sink, wash-basin, and other connections; he is expected to know exactly how such should be fitted, the size and material of the various pipes and connections, the most suitable position in which they should be located, and to be able to pass judgment upon workmanship and materials without the slightest hesitation. It might be said at this point that there is nothing new in this line of thought, for all plumbing inspectors know, or should know, these things.

Introduction of Sanitary Inspection

The passing of that great sanitary law, The Public Health Act, of 1875, in England, brought into being the sanitary inspector. From the initial passing of this act it became evident that men possessing sanitary knowledge were required to fill these positions, and they were designated inspectors of nuisances under the principal act and the amendments which followed.

It soon became evident that men should be trained along special lines of matters relating to Health Conditions. The Sanitary Institute of Great Britain, one of the earliest institutes to be established, began to train men as sanitary or health inspectors, and as time went on no man could be appointed as a sanitary inspector unless he possessed

the certificate of competency in sanitary knowledge from the Sanitary Institute, or if an unqualified man obtained a position it was on the understanding that he obtained such qualification within a given period and he was held on probation only until the time granted. If he succeeded at his examination by the Sanitary Institute, his appointment was confirmed, if he failed, he was let out.

W. H. MEADOWS

Toronto, Ont., re-elected secretary of the Association of Plumbing and Drain Inspectors of Ontario for 1923-24.

Other examining bodies came into existence, such as the British Institute of Public Health, now known as the Royal Institute; the holders of a certificate from this institute were in demand, as only highly trained and academic men were able to satisfy the examiners; two years of initial training was necessary for sitting at these examinations. The Victoria University of London also opened its colleges for training sanitarians and demanded a two years' attendance before eligibility for examination.

The City and Guilds of London Institute, trained and set apart men for training in special branches of sanitary work, plumbing a specialty.

The Science and Art Department also trained men for certain lines of sanitary work.

As the numbers of inspectors increased in various parts of the United King-

dom, men were set apart for certain branches of the work; some as food inspectors, others, dairy inspectors, some for the inspection of tenements, others for the inspection of buildings, and from which branch the building inspector came into being, others with a knowledge of plumbing to inspect plumbing, and from this last the plumbing inspector, as we know him, has been developed.

The importance of the plumbing inspector's office and work, is demonstrated by the fact that in no organized territory in the Old Country or in the Dominion of Canada, or in fact, in any civilized part of the world is it possible to instal plumbing or in making any substantial additions to old plumbing, except under the supervision of the plumbing inspector.

Special Training

It might be mentioned here that all sanitary inspectors are specially trained in plumbing, and in many localities occupy the dual position of sanitary and plumbing inspector.

The plumbing inspector being a man of many parts, should be acquainted with the principles in their most remote details, underlying plumbing work. He should also be acquainted with the technical points of his work, and be in a position to explain such matters in detail, and to seek after knowledge from all available sources in relation to his work.

He is required to possess some knowledge of the various systems of sewage disposal, and be in a position to pronounce upon any system proposed, or advocated for his district, for sewage disposal arrangements vary widely in type, depending on local geological climates and streams and sea conditions.

The question of sewage disposal of sea coast towns and cities is of comparatively simple solution. Inland towns and riverside cities, as well as lake-side localities have their own peculiar difficulties to face.

Only a few years ago sewage was sent into rivers, streams and lakes, without ever a thought of purification before discharge. This practice is now frowned upon by all modern sanitary authorities, and few if any civic authority, unless possibly the most antiquated of our civic fathers, would tolerate the pollution of

(Continued on page 38)

Does Active Spring Business in Rural and Summer Resort Districts With Sanitary and Heating Equipment

SINCE the plumbing firm of Ecclestone & Bates, Limited, of Bracebridge, Ont., was incorporated in 1911, this company has made wonderful progress in the development of business in plumbing and heating equipment, tinsmithing, installation of water systems, electric light plants, etc. The district in which this thriving plumbing concern is located is strictly a rural one, sewers being an unknown quantity. It is the centre of a large summer tourist trade as well. It is a fairly well settled rural district where farmers have by hard work and intelligent planning built up a fairly

comfortable livelihood. It remained, however, for an aggressive plumbing concern to considerably alter the standards of living of the rural population by placing before them in a pleasing yet forceful manner the great advantages of modern sanitation equipment, the great saving of time and reduction of heavy labor in the work of the farm, and the fact that these people could with comparatively small expenditure have all the comfort and convenience provided by modern sanitary and heating installations such as are found in the homes of their city friends. Working on this plan,

and following out some other useful ideas which the members of this firm conceived, a very successful trade has been developed in rural equipment.

The progress of this company has been in face of an uphill battle all the way, for dwellers in the rural districts who are more or less content to get along with the antiquated equipment which their forefathers have passed on to them, are not easily stirred up to adopt new methods. The firm attribute much of their success to following strictly the motto "Selling Service and Satisfaction."

Discussing the best methods for devel-

OUR MOTTO "SERVICE"

BRACEBRIDGE, ONT.,19....

Copy of the letterhead used by the firm of Ecclestone & Bates, Ltd., sanitary engineers of Bracebridge, Ont., whose methods are outlined in this article. The letterhead is quite distinctive, showing an attractive layout for a bathroom, and driving home the motto of "Service" and showing the various lines of work which are handled.

oping rural trade with Sanitary Engineer, the management pointed out that keeping in close touch with the field and watching closely for prospects was the first step. Selling the prospect on the firm itself and its ability to satisfactorily handle any available work was the next step to make sure of. When this is accomplished the next step was the interesting of the prospect in certain plumbing or heating equipment according to his requirements. The firm find that advertising brings goods results and is money well spent, but it has been their experience that irrespective of the amount of advertising done the prospect must be followed up very closely and continuously and constantly changing appeals made to his imagination. He must be shown as nearly as possible what the equipment will look like when installed in his home or his other premises; what it will do in providing more convenience for himself and his family, and last but very important in these times, how such equipment will pay for itself over a period.

Reduced Buying Power

In view of the reduced buying power of the farmer through lower prices for his crops it is found doubly necessary to show the farmer how the shipment can be made to earn dividends. This can be accomplished in reducing time now spent on manual labor, by increased efficiency, by better care of both human beings and animals.

A number of varied arguments are raised by prospects from time to time. It may be that the customer has no room

for that bath room or heating plant; or perhaps he cannot lay out the house to provide for such installations. In such cases the firm do everything in their power to help the prospect out of his troubles. They go over the plans of the building and give him real practical advice which often leads to sales of better fixtures and accessories than the customer had first thought of.

Or it may be that the customer is financially embarrassed for the time. In such cases the firm endeavor to help the prospect as far as possible, providing he is responsible. It is realized that satisfactory installations of plumbing and heating equipment provide the best advertisement which can be secured for other sales, and a special endeavor is made to introduce an installation in a new district. It is found that even if special credit terms must be offered for this first installation it is worth while because other farmers see it, and the favored farmer is unlikely to tell everyone that he is paying for it on terms. Thus no bad precedent is established.

"Where possible we help such customers out either by carrying them for a few months or by getting their paper discounted at the bank. This all helps to swell the sum total of our business and brings us business which otherwise would wait for years," said the manager.

Service is the big factor with this firm and every endeavor is made to satisfy customers on this score. Only the best of mechanics are secured, those who are willing to give their best services to repairs as well as to new work. This high class service costs no more

than the other kind, and it is found that one good job brings another where a poor job may drive many other customers away.

The show window of the shop is kept neatly dressed with seasonable goods at all times of the year. This is found to help sales very greatly. At Christmas the firm makes an extra effort to show the public a full assortment of bathroom accessories. Such sales have always brought splendid results. Last Christmas the window display idea, using the Xmas tree as suggested in Sanitary Engineer, was used to good advantage by this firm.

In the shop interior a model bath room is always on display, as illustrated herewith. It is kept neatly painted and set up showing the average lay out. Attractive showcards are used to draw the attention of the passer-by. At various times other displays include kitchen equipments, laundry outfits, electric lighting plants, engines and several makes of hot air furnaces. The public are encouraged through the firm's newspaper advertisements, to visit the showroom and inspect the stock.

Summer Resort Trade

The firm's business is by no means local. As a matter of fact it is significant that the bulk of the business is done with tourists who spend their summer months on the beautiful Muskoka Lakes, their summer cottages being equipped with the latest and best sanitary equipment available. This is the best possible indication of the great opportunities which lie before plumbers in various rural districts throughout Canada, particularly those districts located near summer resorts. An aggressive educational campaign among summer tourists would be well worth while in many parts of Canada.

Of the active members of the company, President A. S. Bates is a master plumber, Vice-president A. E. Ecclestone is an expert sheet metal worker and Sec. Treas. Geo. Fenn is the bookkeeper and accountant. This is a triple combination which by the employment of efficient and aggressive methods has built up a splendid business in a very few years and which has planned to further revolutionize the living standards of the community before it is satisfied.

TO VOTE ON WATER PLAN

Sydney, C. B.—All that is necessary to put City Engineer Rannie MacKinnon's scheme for the purifying of the city water supply into operation is the vote of the ratepayers of the city.

The plans and survey of the reservoir area, which provide for the construction of a 2 inch main from Middle Lake to the reservoir, have just been completed by John Carlin, assistant city engineer.

The proposed scheme provides for the installation of 8,000 feet of 24 inch water main, carrying the pure water from the lake direct to the reservoir head.

Showing a complete bathroom installation in the shop interior is one of the means used by Ecclestone & Bates, Ltd., Braccbridge, to interest customers. This arrangement is varied from time to time as outlined in the article.

Bathroom specialties are arranged in very attractive window displays by Ecclestone & Bates, Ltd., Bracebridge, at various times of the year. This display used at Christmas was very effective and bears repeating at other times in the year.

Central Heating Plant for a Whole City

Estimated That the Present Plant in Use by the Government at Ottawa Would Warm Homes for Population of 17,500

OTTAWA, Ont.—The efficacy of a central heating plant in cities is advocated in a recent edition of a Toronto newspaper, and the moral is pointed from Ottawa and the Government central heating plants here which, the article states is sufficient to heat a city of 17,500 population. Or, in another way, six plants like the government one would heat the entire city of Ottawa. The article in part states:

"Those who doubt either the efficiency or the practicability of central heating for our centres of population should visit Ottawa and there view the system by which the government buildings are served. The government's central heating plant at Ottawa takes care of twelve million cubic feet, which is about equal to three thousand five hundred moderate sized dwelling houses, or to it another way, reckoning five to a house, a single plant of sufficient size to take care of the houses of a population of 17,500 individuals.

Little Heat Lost

"The government plant is located over a mile from the most remote building that it heats, the city postoffice; and even in this case it is quite as effective as an individual heating plant would be. This service gives both steam and hot water heating. For instance, the House of Commons and the Senate are heated by steam, while hot water is utilized in some six hundred other apart-

ments. The hot water is supplied by what is known as the forced circulation system, that is to say it is pumped under pressure from the power house through the miles of pipes and back again. And the interesting part of it is that the heat loss on this long journey through the pipes and radiators to and from the power house, is less than thirteen degrees.

"The government has been able with

this system to save a very substantial sum in its annual heating bill, as compared with the numerous plants that were operated in the old days. A conclusive proof that central heating is a commercial success.

"With a combination of steam and hot water, one or the other, or both, as at Ottawa, a very large proportion of any community could be served without making any changes whatever in the existing plants. It would only be necessary to couple up the service with the existing individual heating systems, eliminate your own furnaces, and boilers, and turn on the heat tap as you do your water, or your gas. No dirty coal going in, and no dirtier ashes coming out."

Trip Through Big Empire Brass Co. Plant

Delegates to Convention of Ontario Association of Plumbing and Drainage Inspectors Much Interested in Processes Described in London, Ont., Plant.

LONDON, Ont.—One of the pleasing features of the convention of the Ontario Association of Plumbing and Drainage Inspectors was the courtesy of a trip through the big plant of the Empire Brass Mfg. Co. The officers of the company using a fleet of motor cars took the delegates to the big plant on Dundas Street, east, where the various processes of manufacture were demonstrated and explained. One of the most interesting features of the trip through the plant was an examination of the huge electric furnaces of which there are few in Canada. Details of this type of furnace were illustrated and explained in an article in Sanitary Engineer some months ago.

Delegates were greatly impressed by the extreme care taken in testing products in the various stages of production and the general feeling seemed to be that in handling brass valves or other such products, the plumber or heating engineer was frequently liable to forget the number of operations through which the article passed in process of manufacture.

The trip through the plant was not only entertaining but of great educational value and the appreciation of the association was expressed to Messrs. Stevens, Ivey, Darling, and other officers of the Empire Brass Co., for the kindness in providing what proved to be one of the most pleasing features of the convention.

"I Wish't I Was Back in Baseball and Sum-Body Else Thaughing Out Pipes and Radyaters"

Jerry Begins to Long for His Old Stamping Grounds as the Baseball Teams Commence Practice in the South—Shows Why People Who Live in Celluloid Houses Shouldn't Light Matches

With apologies to Ring Lardner. Written for Sanitary Engineer by MAJOR L. L. ANTHERS, Managing Director Anthes Foundry Co., Ltd., Toronto.

Tarrabonne, March 31, 1923.

Dear Friend Al:

I BEAN readin all abt. the boys down around Tampa and other aqnatorical parts loosening up on the old diamond befoar beginning there shedule fur the season. It sure make me grean with envie. Hear we are up hear in Tarraboom still blowin on our fingers and climbin over snow-drifts. Winter is sure playin a long post season serious. Bizness is tide up titeren beezwacks, and wile we done a lot of figgerin away back in Feb. we are still waitin fur things 2 loosen up. The weather probs has so fooled the gen. public with a few days of sonshine followed up by a frosty encore that we bean runnin a repare shop insted doin enny contractin werk. Theirs bean more radyaters friz & pipes bust than in the histry of the berg. The hole gang has bean kept goin like dockters dureing a floo eypdemyc. Of coarse evryboddy hollers like stuck pigs that theys bean robbed, but bleeve you me we hardly make the mens wages on this amergency stuff. Its a reglar hart braker & nobody gets no sleep.

This is time of the yeer that I wisht I was back in baseball & sum-body else thaughing out other peeples pipse & radyaters & etc. up in this hear end of the world.

I guess its the long winter that maiks us peevich as evryboddy arnd. hear is like bares with a soar hed. Even Vilet is as snappie as a wulf-trap & wont stand no kiddin from noboddy.

& then the floo! Weave all had it & then onct agen fer good mesher. I see bye the paipers that the meddicle men is discoverin somethin new evry day to cure somethin or other but Ime still waitin fur the guy to come along hoo can take a fall outo the allusive floo germ. Talkin abt. floo I see theyve discovered a knew cure fer phenomia by alicktrycitee witch is the saim as we use fer thaughin out pipse.

I allwers clamed that if dockters new

moar abt. plumbing the helth of the communitie wldnt. suffer so much as it is. The hole trubble is they got started rong & begin to copy the barbers who was the dockters befoar they was enny dockters. I spose they had to begin sumwhear & as they see barbers cuttin foax up with raizers that give them the h'nt & theyve bean cutt-ups ever since ha! ha! (that old joak of mine always terns up). A barber may no all abt. shaveing a pig as it sez in the old testmint or sum whares but a live plumber nose moar abt. jints elboze swettin & cerclulation & etc. than enny barber what has shaved a pig or enny other branch of the human speeshies.

Sum cheep goof thot heed pulled offa hot 1 wen he sed that plumbers is also expertz on skin-grafting. Selp me Al I never new a plumber skin ennyone yet but what sum slick worker grafted it offa him. Peeples what lives in celuloyd houses shuddent lite matches & a lot of

"A live plumber nose moar about jints, elboze, swettin and cerclulation, etc., than enny barber what has shaved a pig"—Jerry.

them smart Alicks what is tryeing to make the plumber apeer to the gen. public as robbers & boobs is just trying to hide there own trax.

"Fresh" Manoor hoo. runs the livry stable hear thot he had a side-buster.

"Say Jerry," he sez 2 me when he was rollin the bones in his back offis last Tues., "Why is a plumber?"

"Why is a what?" I came back not knowin wat he was tockin abt.

"Itz a new riddel," he sez, "jest why is a plumber?"

I coulda come back with a dirty 1 but that aint my stile, so I sez in my most sang fraud manor, "2 keep the rest of the world strate."

You see I had mi plum lion in mind.

"Nope," he retortured, winkin at "Sugar" Sand the grocer. "Give up?"

"A plumber usually has to give up," I side as he rolled a 7 & took in my dime.

"Well becaws he swings the led, haw, haw, haw!" and that hole bunch of small town topiks laffed like it was Al Jolson lettin loose a joak facktry.

That sort of stuff gets me soar. But I was redder fer him.

"Why is a livry stable?" I perpounds.

"Because it is," he smilz bak.

"Naw. Give up?"

"Yep."

"Sure you dont no?" I sez.

"Nope."

"Well thats a horse on you," I shot out, "fer if you dont no noboddy else doz either."

Thats wat I calls a slick cumback.

Sum fokes seems to think that a plumber is Adams funny bone & that they gotta laff evry time they hears the name.

That libel abt. the plumbers have 2 go bak afir his tools is as old a 2 Tank Hammond himself. Sum old dame calls you up and sez you gotta come up at onct theirs watter leakin throo the seal-in.

"Wheres it cum from?" you asts.

"O I dont no but hurry up & cum quik."

You dont no weather its a crackt hole or a bust tank or a split pipe but they expecks you to arrive on the job in 10 mins. with jest the rite toolz as if you shld. no jest wat is wanted.

How abt. the bricklayer? If your chimibly bloze down & you get xcited & call up a contractor doz. he cum hustling up with a lode of brix & mortar & all that nessery to give you instanous job? You bet yr. life he doant.

& then if part of your roof bloze off doz. he cum along with a cuppla bundel of shingals and shingal nales? No agen.

If the cook pores cole-oil in the stoave 2 help a lazy fire along & blows the top off & sum timze her own top as well doz. sumboddy cum along the 1st alarm with a new top all reddy to fit & the toolz fer the job? Negativly not.

If the old watch yer grandfather left you goze on strike doz. the jooler shoot up to the hous to maik it rite? Onct agen no!

Finley if you tripp on the seller stares wile your goin after a bucket of soft cole & slait that has bean scent you by sum honnest cole-deeler & you bust yr. laig in abt. 6 placis & a few ribs & prapes yr. nek doz. the Dr. arrive on the $\frac{1}{4}$ hr. with jest the rite buck-saws & operating taible & Annie Setiks & etc. to make a compleat no cum back job? You bet yr. sweet life he dont.

my chest an I may have pueumonia & have 2 b thaughted out myself. But wen you here a irrisponcible nocking the plumbing trade jest reminde him theirs a lot of things he done no abt. plumbing & etc. & that its the old faible of give

a dog a bad naime & hang him kicking before and after.

With theeze chearful remks. I will ajourn.

Yours in despare,
JERRY.

SAVING OF GAS FROM COVERING HOT-WATER TANK

"What number of cubic feet of natural gas should be saved per hour from covering a steel hot-water tank with $1\frac{1}{2}$ in. thick asbestos block? The area of tank surface to be covered is 66 sq. ft. The tank is kept filled with water at the temperature of 210 deg. Fahr. and is supplied at the rate of 250 gal. of water per hour through a copper-coil, gas-heated water heater which receives the water at the temperature of 60 deg. Fahr."

This question, submitted to the editor of Power, was answered as follows:

"Assuming that the atmosphere surrounding the tank is at the temperature of 70 deg. Fahr., the temperature difference is $210 - 70 = 140$ deg. Fahr. With this difference the loss of heat by

radiation to the surrounding air could be about 2.1 B.t.u. per degree difference of temperature per square foot of bare surface per hour; that is, without covering, the loss would be

$$140 \times 2.1 \times 66 = 19,404 \text{ B.t.u. per hour}$$

"Average natural gas has a heat value of about 1,000 B.t.u. per cubic foot, and allowing 50 per cent. efficiency for the heater, the radiation of heat from the bare water tank would require combustion of about

$$19,404 \div (1000 \times 0.5) = 38.8 \text{ cu. ft. of gas per hour.}$$

"The efficiency of $1\frac{1}{2}$ in. asbestos block covering would be about 75 per cent., and the actual saving would be approximately 75 per cent. of $38.8 = 29.1$ cu. ft. of natural gas per hour, or about 0.44 cu. ft. of gas per hour per square foot of the covering."

Layouts and Copy Suggestions Which Have Proved Effective for Other Plumbers

"A SPRING CLEAN UP. A good time to carry out that idea of replacing the ill-smelling sink in the corner of the kitchen with a nice white roll rim sink with a high white back and white enamelled iron drain board on the end to drain the dishes and vegetables. Now is a good time to discard that foul-smelling closet with a modern closet at a reasonable price. See us for your plumbing requirements." T. J. Minnes, Brantford, Ont.

Sewage Disposal Plan in Rural Home

An Actual Installation Under Difficult Conditions—Cesspool Nearly Washed Out Embankment—Menace to Health—Waste of Money Creates Financial Hardship

Written for Sanitary Engineer by EDWIN NEWSOME, Consulting Sanitary and Heating Engineer

THERE are many reasons why a sewage disposal system should be properly installed at first, more so than any other kind of construction. It is quite in order to install apparatus of one kind or another in a temporary manner because of the person not being in a position to pay the higher price for an A. 1. job. But where an installation has to do with safeguarding the health of the person having the work done or that of the health of other people living in the vicinity, no temporary installation should be made and the very best is none too good. It would be far better to leave such an undertaking in abeyance until the cost can be borne.

We have here a case in point. A house was built on the edge of an embankment. A cesspool built. The house was occupied for a number of years. It is fitted with complete bathroom and other city conveniences and is situated about eight or ten miles from the City of Toronto. The location appears to be ideal and everything seems lovely. There is a change of ownership made and the new owners have all they

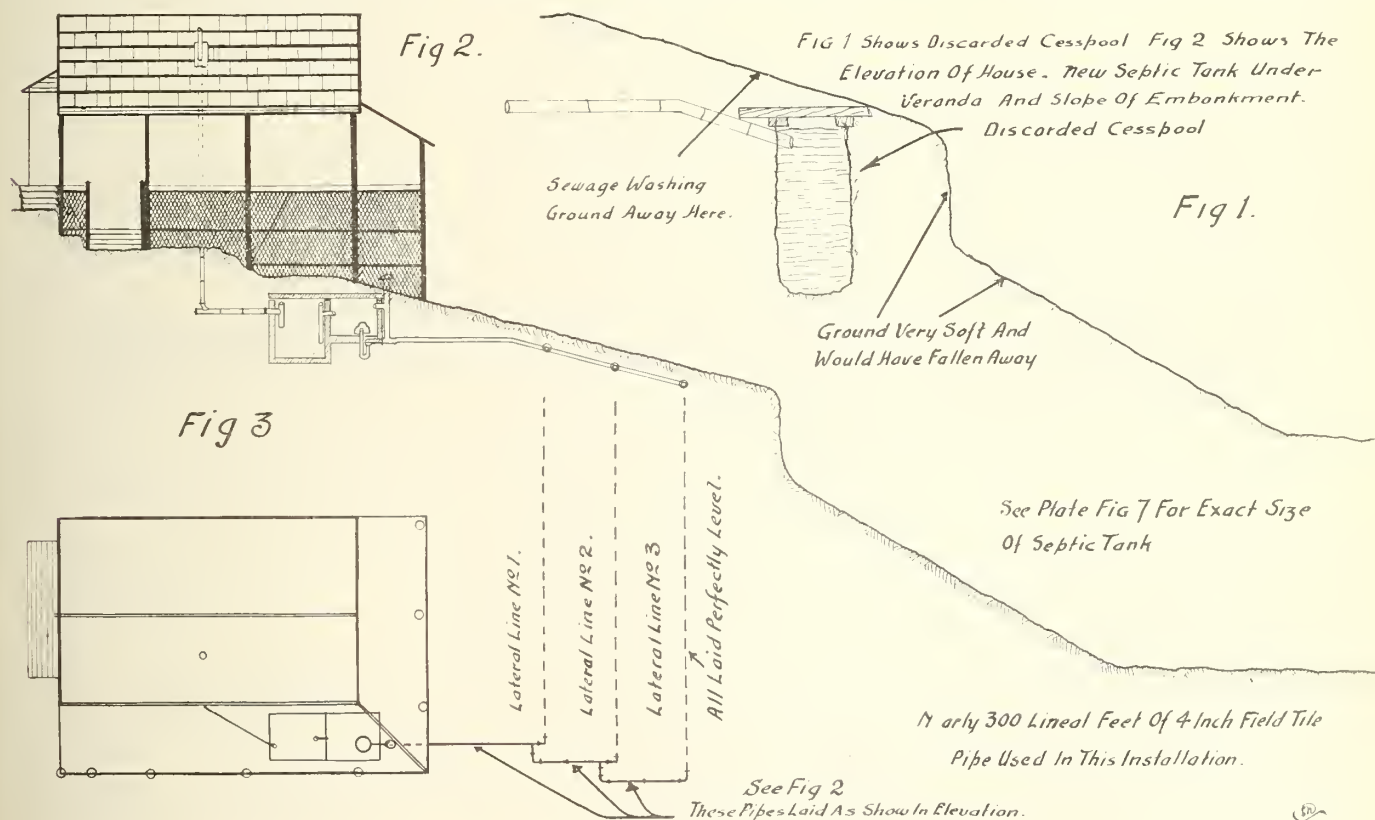

can do to make ends meet. They have only occupied the house a short time when foul odors begin to find their way into the house. A thorough investigation is made, resulting in it being found that a cesspool is causing the trouble.

Not only are the odors bad enough but it transpires that the liquid has saturated the ground on the side of the hill. (See fig. 1) That there was a danger of the whole side of the embankment collapsing. Both dangerous and a menace to the health of the occupants. And here, the new owners have to begin to spend a lot of money having the whole contraption put out of use, incurring a terrible expense which the new owners can ill afford. There are hundreds of conditions similar all over this Dominion. Conditions that work a hardship on innocent people, and no temporary remedy, much as one would like to suggest such. The house would have been rendered unfit for human habitation.

However after going over the ground it was found advisable to reinforce with stones and sods that portion of the

embankment most likely to fall away. This was done and a modern septic tank installed. There was also another difficulty to overcome, the fact of the house being situated close to the lot line of a neighbor. This meant that the disposal field tile would be required to be laid so that no sewage could flow on to another person's lot. Furthermore the land available has a very steep pitch, as will be noted in Fig. 2. Here we find that a septic tank fitted with syphon and standard septic tank fittings, has been constructed, and the field tile laid in rather novel manner. No fear of the sewage washing the ground away, first because the field tile pipe is close to the top of the ground and the sewage is quickly discharged into ample sized field tile pipe. Then again the pipes are all laid level, even though they do not all fill up at once, and the syphon discharges at the rate of from 80 to 90 gallons per minute. Yet the installation is working splendidly.

In this case the amount of field tile was increased about 20 per cent, because of the fact that a large area of ground

was available on the one hand and also because of the fact that the sewage has a greater likelihood of being evaporated seeing that the piping is laid in a bank of earth, the ground also being rather sandy.

Three Lines of Laterals

The size of the septic tank is shown in Fig. 7. But the disposal field tile pipe is laid out in a very different manner. There only being three long lines of laterals, all laid level, even though the main pipes have to follow the contour of the ground.

If our reader noted the method of laying the pipe shown in a previous issue it will be found that the principle followed in this installation is the same. It will be seen, however, that instead of the sewage discharging first on one side of the glazed drain tile and then on the other that the sewage fills up laterals number one. Then rises up to the branch fitted into the main line and down to lateral line number two, up again through the branch in the main line and down to lateral line number three. It is impossible for any sewage to enter the lower pipes until the one situated on the higher plane is filled first.

The Difference

The only difference between the way the effluent flows in this installation is that in the former one referred to the sewage is pumped up from the dosing chamber by an electric pump into a distributing chamber and down into the hillside disposal area. Whereas the action is the effluent is discharged through a three inch syphon direct into the field tile and distributes the effluent into three lines of laterals, all laid in one direction as shown.

The drain tile pipe with hubs were

six inches in diameter, the branches 6 x 4. So that the four inch field tile pipe fitted direct into the branches. The field tile pipe was covered with rough stones, etc., and laid one quarter of one inch apart.

There is one important feature, too, in this installation and that is the fact that the water supply is safe from pollution, as the pump and well is located on a still higher plane than the disposal system and not likely to become polluted from surface water. An interesting bit of information has been published in one of the bulletins which reads as follows:

Among the samples of agricultural interest sent to the Division of Chemistry of the Dominion Experimental Farms for analysis last year were 119 samples of water from farm wells, with a view to securing information as to whether they were pure and wholesome for drinking purposes. Of these 24 per cent. were found to be satisfactory, 18 per cent. were suspicious and probably dangerous, and 35 per cent. seriously polluted. It is found that in the majority of instances that polluted water comes from shallow wells which are improperly located, either in the barnyard or under the stable or barn, or not far from the outhouse. Sooner or later, states the Dominion Chemist in his annual report, a well thus located must become contaminated and its water a menace to health. The well should be located at least fifty yards from any probable source of contamination, while as an additional safeguard the surrounding area should be maintained in sod. It will be found of very considerable value to line the well to a depth of 10 to 12 feet and to a thickness of, say 6 inches, with concrete or puddled clay, continuing this wall or lining for a foot above

ground. A number of other useful suggestions relating to the subject are contained in the report.

If contamination is suspected the following safeguards are recommended:

1. Boiling for ten or fifteen minutes all water required for drinking or culinary use. The water thus boiled can be aerated and freed from insipidity, by cooling in the open air.

2. Chlorination. A level teaspoonful of chloride of lime is rubbed up with a little water to the consistency of cream. This thin paste is diluted and thoroughly mixed with water to the volume of approximately one pint, bottled and securely corked. This stock solution will keep for at least a week. A teaspoonful of this solution should be added with stirring to each two gallons of the water to be treated. After fifteen minutes all disease germs will be destroyed.

The use of chloride of lime as above stated is a splendid remedy. But as sanitary engineers our work should be of a preventative nature, and if the information published in this series of articles regarding location of wells, of septic tanks, and the general layout of piping plans are followed, the probabilities of water pollution are very meagre. Not only so, but with a good disposal field tile area, plenty of piping and well prepared bed, the likelihood of pollution from surface water is rendered almost nil.

(To be Continued)

The Value of Piping on a Farm

How It Can be Used, Protected From Corrosion, Saving of Time, Increasing Safety of Buildings, Cheaper and More Reliable Than Timbers, for Posts, Columns, and Stable Furnishings, a Simple Hot and Cold Water Supply System

By EDWIN NEWSOME, S.E., Lecturer on Farm Mechanics, O.A. Department, Ontario Government, and Consulting Engineer

I HAVE often wondered why so little wrought iron or steel pipe is used on farm. But, after visiting quite a number recently, after talking to a number of farmers, during the last few months, I find that one reason is that very few farmers know just how to use pipe on their farms. Very few know how to use pipe tools, stocks, dies, pipe wrenches and cutters, and to suggest that a plumber or fitter be engaged to do the work would be out of the question. But the use of pipe tools on a farm, would create a great deal more interest in the use of pipe in buildings, such as cow stables, byres, sheds, houses, and so on. One farmer declared that he and his hired men had several times had to repair posts, wooden as well as cement, in some of their buildings, and that piping would have eliminated such extra expense.

Pipe in the Cow Byre

I believe that, if I were going to build a new cow byre, I would first find out what I could buy the pipe and fittings for, that would make the whole framework with pipe and fittings. First, because I could, I know, procure a neater job, I could save room, I could make a stronger building, and one that would last longer, and depreciate in value very little.

If I were a farmer, I would make a rough sketch of the building I proposed

to erect, with the various measurements, width, length and height, and then I would give some consideration to the extra available space, as against a wood constructed building. I would consider the strength and safety factor of such a type of building.

Having decided upon the various necessary details, I would send my sketch to some local plumber and fitter, or hardwareman conducting such a department as could take on such work, ask for an estimate of cost, sizes and the quantity of fittings necessary, and I believe the final result would be in favor of a pipe constructed frame and union supports, as well as stable stalls and other furnishings.

Water Supply for Cattle

There are very few farmers in Canada who realize how great a service water in the byres and barns would be, if such buildings were piped properly. For instance, a concrete cistern, or even a steel tank, could be placed at such a level in a cow byre that would make it possible to water cattle automatically. Piping to each stall, with the supply tank referred to, fitted with a simple ball-cock, would give a constant supply of water.

Another plan would be to run piping underground, below the frost, from a pneumatic water system to the barn, then a simple frost hydrant connected to the pipe, so that the water would not

freeze. Such an installation would soon pay for itself in time and convenience.

Only a few weeks ago, a splendid barn was burned down that could have been saved if such an arrangement had been available. Water on tap, under pressure, cannot be estimated in mere dollars and cents, when buildings can be saved from destruction by fire, all a matter of properly laid piping, very often.

These are only a few ideas that could be worked out by the average energetic member of the plumbing trade. Farmers do need more enlightening into what the plumbing trade could do for them.

Water Supply System For House

The use of a pneumatic water system on a farm is not yet taken into as serious consideration as might be. The farmer hires help to carry water, when 99 times out of 100, a few hundred feet of pipe would save hundreds, if not thousands, of hours of time during the year.

Just imagine paying a man, or even expecting one's wife to pump and carry water (even a few yards) these days. The average hired man costs, at least, \$75 a month, salary and keep, and if one man spends one hour a day, seven days per week, carrying and pumping water, and the working day is twelve hours, at seven days per week, the monthly cost for such work would amount to \$6.25, or,

equal to \$75 per year for pumping and carrying water.

Cut down such cost even to half that amount, and one can readily see that a few hundred dollars invested in pumping and piping would save both time and money, and when we begin to consider the wife of a farmer, and the amount of work she has to do, when every drop of water has to be pumped by hand, and carried into the kitchen, the above figures don't even bear a first consideration, and the best figures available prove that not 15 per cent. of farms have water piped to the kitchen. This is very strange when pressure systems can be procured at so low a cost.

Hot and Cold Water at Sink

Even where there is a soft water cistern in the basement, and a kitchen pump in use, a few feet of pipe connected to a standard kitchen range boiler would give the occupants of a farm house hot and cold water at the tap. The sketch shown herewith gives one an idea how such a service could be procured very easily. Then why such a scarcity of hot water? Why the unnecessary steps for the farm household help? Then again, such an installation as described in sketch could be enlarged upon, or added to. For example, the pipe connected to the pump could be attached to a pneumatic water system at a later date, the hot and cold water pipes to a bathroom could be connected without any tearing down, so that even such a simple system of piping in a kitchen would be a splendid convenience and result in a big saving of time.

Prolonging Life of Piping

Speaking to a number of farmers recently, the question of having to replace piping laid under ground came in for some discussion. It was stated that, when ground has been disturbed, water would soak into trenches where pipe is laid, and result in corrosion of the pipes in a very short time, particularly where a line of pipe was connected to a wind mill pump, and the pipe subject to a certain amount of vibration. I can never forget how I was taught to do all in my power to prolong the life of piping, no matter for what purpose it was used. That was in the old country.

First, the trenches would be dug, lined up for our levels, and then, a V shaped wooden trough, or gutter, made. The size depending upon the size of pipe. For a one-inch pipe, we used $\frac{7}{8}$ in. lumber, as rough as possible, one side 2 inch, the other 3 inch, making a V 2 inches both sides. In this V, we laid the pipe, and, after testing our piping, a covering of hot pitch, tar or asphalt, was applied to the pipe, and never do I remember having to remove such a line of piping, except when larger pipe had to be installed or alterations made.

I started out at the commencement of this article to tell what I would do if I were going to build a barn, the room I could save, the safety factor, and so on,

and I would ask the reader to compare the carrying capacity of a column made of pipe filled with concrete, and column made of H beam steel, wood, or unsightly brick piers. The accompanying sketch just shows the relative sizes of the various kinds of columns.

The wood column takes four times more space. The brick more, by many times, than even wood. The H steel beam about the same as pipe, but not as strong, by any means, if the building were subject to a fire.

A pipe column filled with concrete is as near fireproof as it is possible to get one, and many a barn could have been saved, if only the columns had held up.

Capacity of Piping

I remember well, many years ago, being asked to repair a deep well pump, to which over 360 feet of $\frac{3}{4}$ inch pipe was fitted and used to convey the water from the pump to an attic tank (I don't like attic tanks, they are unsanitary as storage tanks) but that would form the basis of another story. I found that for several years the pump had caused trouble.

Every time the windmill operated the pump, the pounding noise in the pipes could be heard all over the house.

The suction line was $1\frac{1}{2}$ inches in diameter, and here was a 3-inch brass lined pump, attached to a $1\frac{1}{2}$ -inch suction pipe, trying to force its full capacity through 350 lineal feet of $\frac{3}{4}$ inch pipe, and worse than that, when the $\frac{3}{4}$ inch pipe reached the house, the size was reduced to $\frac{1}{2}$ inch. No wonder the pump caused trouble, and no wonder the noise could be heard all over the house every time the pump was working.

I put a $1\frac{1}{4}$ inch delivery pipe right up to the attic tank, and nearly 15 years after, I learned that the job had never caused one minute of trouble, and no noise. At the same time I do not approve of the use of attic tanks, but this would form the basis of another story.

If I had my own way, I would advocate the use of not less than $\frac{3}{4}$ -inch pipe for all water piping in a farm home. Far too much $\frac{1}{2}$ inch pipe is used than should be, the cost is very little more, and capacity is nearly twice that of $\frac{1}{2}$ inch. Our readers will note that I have specified $\frac{3}{4}$ -inch pipe for the kitchen installation referred to, so as to reduce the hard work of pumping by hand.

It is very seldom possible to use too large a pipe in a water system, or even a heating system, because, as a rule, the apparatus to be fitted up are tapped to receive the proper size of piping.

Letters To The Editor

The Editor, Sanitary Engineer and Steamfitter:

Sir: I noticed an article in your issue of the 15th inst. re Central Heating Plant for the City of Winnipeg, in which it is stated that it is proposed to generate the steam by electric current. Permit me to ask, would it not be more economical to instal by-product coke-ovens in connection with such plant, the coke to be sold as a substitute for anthracite? As from 3,000—3,500 cubic feet of gas can be got from each ton of coal coked it is obvious that such oven plant would not require to be very large to supply gas enough for the firing of heating plant boilers. The electrical current could be used for hauling the coal and coke cars around the ovens. Such would not only help to conserve our coal resources, but supply the people with a clean, smokeless fuel for domestic use, if passed through a crusher to the usual sizes of domestic anthracite. Many by-products could of course be extracted, but only at the expense or loss in heat and burning values of the coke. To my mind, this is the only logical manner in which our coal should be burned in all our cities.

(Signed.) J. S. KINGSTON.
Ottawa.

108 Miles of Pipe Necessary for Plumbing and Heating of Brass Mill

This Piping Includes Heating and Sprinkler Systems, Cast Iron Pipe, High Pressure Air Lines, Steam Lines, Sewer and Oil Pipes, etc.—Some Interesting Phases of This Installation

DETAILS which have been secured by Sanitary Engineer concerning the broad use of piping in connection with a modern brass mill are outlined as follows, together with some details of the installation of plumbing and heating equipment: More and more nowadays are modern plants and buildings becoming veined and threaded with the pipes and wires necessary for their maintenance. When a modern hotel has two thousand bed rooms with two thousand baths in connection, it is easy to imagine the amount of piping necessary to bring hot and cold water to each of these rooms, and the plumbing problem in connection with the electric wiring problem makes our modern buildings skeletons run by these nerves and arteries of electricity and water.

In the same way the modern plant of to-day is threaded and interlaced with pipe lines, wire and conduits which run it; machinery, light its lights, work its cranes and heat its furnaces.

It takes 108 miles of pipe to run a certain good sized brass mill which will be dealt with, and the water and air and steam and oil that run through these pipes do all manner of useful work. The pipes can be divided up into the following classifications:

To connect all these lines there are 6,223 valves, and to keep these lines in repair, men are working day and night on inspection and repair work.

A brief sketch of what these pipe lines are used for will be interesting to the plumbing engineer to show what a tremendous amount of plumbing equipment is necessary to keep a good sized brass mill in up-to-date shape.

Heating Systems

The maintenance of the heating systems commences at the condensers and separate heaters in the power plant and follows the heating pipe and coils to the farthest end of the plant. It keeps two men busy through the winter months to look after about 410,000 feet of pipe. Their work is to pack valves, expansion joints and pumps, to throttle valves so that the water will not by-pass on the feed and return pipes nearest the power house, and so cutting off other coils a half a mile or more away from circulating which would leave the rooms cold. These men also see to it that the radiators and coils do not become air bound, they inspect the pipe hangers on overhead coils to see that the threads on the nuts and bolts are safe to carry the re-

turn pipes in the conduits underneath the floors and to see that they are perfectly tight. They inspect the 3,000 valves necessary to keep up this system, and the 30 expansion joints and booster pumps and deal with pipe from 1 to 8 inches in size.

Sprinkler Systems

The sprinkler systems require 19,881 ft. of pipe, 16 fire hydrants, 12 indicator posts, 6 dry pipe valves, and 1,841

108 MILES OF PIPE

In this mill the piping is divided as follows:

Heating System	409,625 ft.
Sprinkler System	19,881 ft.
Cast Iron Pipe	7,197 ft.
High Pressure Steam Lines .	21,541 ft.
Low Pressure Air Lines	4,025 ft.
High Pressure Air Lines .	21,541 ft.
River and Filtered Water ...	19,650 ft.
Hot Water Lines	8,980 ft.
5,000 lb. Sprinkler Lines	5,225 ft.
500 lb. Sprinkler Lines	5,863 ft.
Drinking Water Lines	15,030 ft.
Sewer Pipe	36,120 ft.
Oil Pipes	5,000 ft.

Total 568,452 ft.

108 Miles of Pipe.

sprinkler heads. During the warm weather city water pressure is constantly kept on this system through what is called the by-pass pipe, but during the cold weather this by-pass pipe is closed and the water drawn from the system to prevent the pipe from freezing. The check inside the dry-pipe is sealed with water and the system is filled with high-pressure air at 30 to 40 pounds pressure. This keeps the buildings under protection, for when a sprinkler head goes off and releases air the check in the dry pipe valve opens and allows the city water to pass through. These sprinkler systems are inspected every day to see that the valves, indicator posts and hydrants are in working order, and that the air in the dry pipe valves is at the required pressure.

High Pressure Air Lines

11,315 ft. of high pressure air pipe varies from 1/4 of an inch to 8 inches in size. These air lines do all manner of interesting jobs. They run the automatic blockers which roll up sheet metal in back of the rolls; they run the hoists

that take the metal out of the pickling tubs; they run the air pushers that push billets into containers; they work the grip jaws of the hydraulic rams of the big hydraulic presses; they help run the piercing machines, the tube testers and the scalping machines; they blow out the sand which formed the core in a newly cast tube; they clean molds in the casting shops and chip out the furnaces and are among the most important of the mill piping system. They are constantly inspected as they are connected to practically every press and machine in the mill, but the repair work is done only on Saturday afternoon and Sundays as it is impossible to repair the hose connections, pack the air hoists and valves, and do other necessary work without shutting down the cranes and machines.

Low Pressure Air Lines

The 4,025 feet of low pressure air pipe ranges from 3 to 36 inches in size. These air lines run from large blowers set overhead in the mill to the mufflers and billet heaters, and supply 7,000 cubic feet of air per minute. Their main use is to blow the oil on the oil heating mufflers, and they are also used with our electric casting furnaces on the transformers under the furnace to keep the electric coils cool. All the blowers are inspected and oiled twice each day.

High Pressure Steam Lines

The high pressure steam lines have 21,541 feet of pipe of 1/2 to 6 inches in size which supply steam to the pickle tubs, the hot water tubs, the billet heaters and coal mufflers, the draw benches, steam pumps and steam ejectors and drying-out machines and for baking the cores with which our tubing is made. These lines run from high pressure headers overhead in the mill and in conduits to other buildings. High steam pressure is carried and so there is necessarily a great deal of repairing and renewals to be made in such places, for instance, where the pipe enters the highly destructive pickling solution and in other places. The main lines overhead can only be repaired when the mill is shut down Saturday afternoons and Sundays. Their expansions and contractions are taken care of by special contraction joints.

The high pressure steam is also used in the restaurant for cooking purposes, for washing dishes and in the steam tables to keep the food warm.

There are two systems of water sup-

ply for manufacturing purposes. The filtered water system, having 6,000 feet of pipe from $\frac{1}{2}$ to 8 inches in size, is connected to two filters in the boiler house and one large well in the No. 700 building. Several pumps pump this water through the mill at about 60 pounds pressure. The water is used to cool bearings on sheet rolls, for water tubs to wash the metal, for the drying-out machines, hydraulic pumps, boiler feed water and for washing purposes at all wash bowls and shower baths.

The river water system has 13,650 feet of pipe from 1 to 12 inches in size and is used for cooling molds in the casting shop, cooling brass in the mill when it comes from the casting shop and muffles and in the large water tubs to wash the acid from metal when it comes from the pickle tubs.

Around the pickle and water tubs brass pipe is used as it lasts much longer than iron pipe. The repairs are taken care of on Saturday afternoons and Sundays, as are other important pipe lines.

Hot Water Lines

The hot water system, which supplies the hot water tubs, the wash basins and shower baths throughout the plant, contains 8,980 ft. of $\frac{1}{2}$ to 3 inch pipe. The water is heated by exhaust steam which passes through a heater in the boiler house and runs throughout the plant. This system is, of course, composed of brass pipe and receives the same attention as the high pressure steam lines.

Drinking Water Lines

15,030 feet of pipe from $\frac{1}{2}$ to 2 inches in size carries our drinking water from a 38 in. main into the plant, the water being metered in the manhole as it enters the yard. Brass pipe is used exclusively inside the plant for this drinking water which supplies 81 drinking fountains. This system is inspected, tested and the meter read weekly to see that no water is wasted by underground leaks.

Sewer and Dirty Water Pipes

38,120 feet of tile pipe from 4 to 36 inches in size are run underground to take care of all sewer, pickle water, surface water, and water from the roofs.

These are the pipes that are necessary to keep a brass mill in running order.

BROADENING THE SCOPE OF THE PLUMBING AND DRAINAGE INSPECTOR'S DUTIES

(Continued from page 26)

our rivers and lakes with untreated sewage.

The method of treatment varies according to local conditions. In large cities and towns, where there is no danger of polluting the domestic water supply, the treatment depends on clarifying sewage, in sedimentation tanks alone or simply the removal of visible solids; this system is most unsatisfactory from many points of view.

In other districts clarification and

sedimentation is followed by a treatment with various chemicals and by chlorination. When this treatment is carefully and scientifically applied, the non-settling substance such as dissolved organic matter, and the objectionable and dangerous matter, including those of intestinal origin are destroyed.

Building for Future

Locality and conditions are factors that should be considered in selecting a sewage disposal system; the plant and sewage works for construction should always be dealt with at the present, but always with the possible growth of the city in view. Build in the present but think of the needs of the future.

In conclusion, it might be stated, that substantial accomplishments have been effected in our statutes as plumbing inspectors. We at one time worked out plans by a rule of thumb method; we now consider our work from a more scientific viewpoint.

While we consider the advisability of the provisions of the most up-to-date sanitary fittings, and while we consider that drains and sewers must be laid with water-tight joints at a proper and uniform gradient, we must also know that much of the efficiency of these fittings and fixtures will be negated if the apartments containing the fixtures are not provided with the means for the admission of plenty of sunlight and a liberal supply of fresh air.

We have also kept in view the fact that leaks in drains and sewers may constitute a serious danger to health, particularly when these defects exist inside the dwelling, or in the vicinity of a well or other water supply.

Soiled closet seats and dirty closet basins are a source of danger to the person using these fixtures, for it is possible that a person, apparently well and hearty, might be a carrier of the specific organism of typhoid fever. He may use a sanitary fixture, and a thoroughly healthy person follow him. On account of carelessness the latter might become infected with typhoid fever. It might be protested that surely such subjects as these are for the consideration of the sanitary inspector or medical officer of health, and entirely outside the province of the plumbing inspector. But I will say that it is our right and duty to know of these things, and when we see conditions that, although not connected with new work might be likely in our opinion be dangerous or likely to become dangerous to health, it is our duty not to look idly on and pass by the other side, but if the matter is one we hesitate to deal with ourselves, it is our duty as public servants to report the matter to the proper official.

DECIDE TO EXPEND \$100,000 ON BELLEVILLE WATER WORKS

Belleville, Ont.—At a meeting of the city council a report was presented and adopted that a new intake pipe, 30 inches

in diameter, complete with suction wells for a filter system, together with the necessary buildings for housing wells and pumps, and one highlift gasoline drive pump, be installed and constructed as nearly as possible for the water works plant. The cost will be about \$100,000.

Following items reproduced from the MacLean Publishing Company's trade paper files of March 1903:

"Lyons & Marks, dealers in plumbers' supplies, have removed from 52 Adelaide St. West, to 124 Bay St."

"Weber, Sehl & Wolfhard have bought out Philip Gies, dealer in plumbers' supplies, Berlin, Ont."

"Ed. Cavanagh, a practical plumber, has been engaged by Montreal to form a part of board of examiners which will grant licenses to plumbers in that city."

"The electrical workers employed by the firm at the King Edward Hotel have struck because the Steamfitters' Union has infringed on a branch of the electrical trade. It was in connection with the installation of conduits for electric wires."

"Ezra McDougall, who for seven years has represented James Smart Co., Brockville, in the territory from Toronto to Sherbrooke, has joined the staff of the Gurney Foundry Co., Toronto, whom he will represent in Ontario from Niagara Falls to Windsor."

"A special committee of the Ottawa city council in company with John McKinley, of the Master Plumbers' Association, Joseph Hurtubise, representing journeymen plumbers, and others are revising the Ottawa plumbing by-law. The by-law as enacted some time ago was found too sweeping in character and will be simplified."

"The Journeymen Plumbers' and Steamfitters' Union of Montreal gave a successful banquet. Wm. Merrick, of Chicago, general president of the association, was the guest. About 400 members besides the 60 presidents of the labor bodies of the city were present. P. Howard, local president, occupied the chair."

"At the regular meeting of the Toronto Master Plumbers' Association with President Robert Ross in the chair, Secretary Wm. Adams introduced to the 60 members present five new candidates for membership: Messrs. Parmenter, Gibbs and Phillips, Queen Street East; Earl, Queen West; Campbell, Danforth Road. It was decided to hold a banquet at McConkey's when the supply houses, architects and other friends of the craft will be invited to unite with the members of the association. Fred Armstrong is chairman of the committee, Wm. Mansell is secretary and James Wilson is treasurer. The following is to be the toast list: The King; 'Canada, Our Home,' by W. H. Meredith; 'Sister Associations'; 'The Architects,' by James Wilson; 'The Manufacturers,' by Wm. Maxwell; 'The Journeymen,' by Fred Maxwell; 'The Ladies,' by Geo. Clapperton, and 'The Press.'"

Making Copper Coil Pipe

Written for Sanitary Engineer by O. W. Kothe, Principal, St. Louis Technical Institute, St. Louis

THE bending of copper pipe is very simple when undertaken by the right methods.

Many of the larger shops have regular bending machines, in which most any shape of the curve can be easily produced, so it is round and still holds the pipe uniform.

Small pipes are best bent by filling with rosin. The rosin is heated and one end of the pipe is stopped up and the pipe is filled full of rosin and permitted to cool.

When set the pipe may be bent wherever desired. After being bent, the pipe is heated gradually from the top end, toward the further end and in this way gradually melts out the rosin.

However, in general practice sand is commonly used as a filler for bending copper tubing.

At A we show a sketch of filling a pipe with sand. The sand should be quite fine, and should be set and compact well in the pipe.

This is done by tapping the pipe with a mallet as the sand is being filled in.

When filled the top end is corked and

the bend can be made similar as at B in figure 10 in an ordinary shop.

Lead jaws are cast of a similar radius to the diameter of pipe as at C and these are set in the vise for holding the pipe secure.

Then by means of the band iron link, or a piece of rope, and a block of wood, with a bar, set in the position shown, the bend is made gradually.

On larger pipes a torch is placed in the position where the bend is to be made as at D.

This helps make the metal more flexible, and by tapping it lightly, as the bend is being made, no trouble will be met with.

The making of coils, as in figure 11, where we have a cylindrical coil as at H, a sort of grooved block as at E and F may be used for making the bends in coil.

In this way as many revolutions are made as are required and afterward the space between the revolutions are averaged up and adjusted so a uniform rise and curvature is maintained.

Where coils are to be made to suit a

spiral as at G, figure 11, then the spiral is designed from the center either by means of a triangle, or square or hexagon as in this case.

By using the various corners of the hexagon a, the spiral is described making as many revolutions as desired. After this the copper tubing is bent either with a bending block as at E or in a vise as at figure 10.

As the pipe is being worked it is occasionally fitted to the working drawing G so the lines will be followed. Where a rectangular coil, as in sketch I is met with, then the bends are made to a 90-degree angle and the pipe is pulled apart to give it the coil effect.

All this requires practice and when a person once understands give and take in metal, especially copper, all this is very easy.

It is commonly reported, and that by many coppersmiths, that the main thing about coppersmithing is hard work and in that we agree because after the knack of working the metal has been acquired the rest is just labor. It is, however, a sort of labor that carries skill with it.

Need for Quick Action

THERE is need for some definite steps to be taken in connection with solving the apprenticeship problem in the plumbing and heating industry of Canada. As in other countries there has been a noticeable drifting of young men to the "white collar" jobs in recent years, and the Adolescent Act which makes it compulsory for young persons to stay at school until they are past the age when the plumbing apprentice of years past was making his start, has made it more necessary to make the trade appealing.

Mr. Broomfield of Brantford, drove home a distinct note of warning concerning the dangers of neglecting this subject, and asked boldly what the plumbing trade were doing to justify the attention of apprentices.

The tendency for young men to drift away to more lucrative fields of endeavor such as auto mechanics or office work is an indication of a gradual raising of standards. If the plumbing trade as a whole was keeping up the same progress the apprenticeship problem would not be as acute as it is to-day. Many sanitary engineers are making progress, but unfortunately the craft is largely judged by the inefficient ones whose shortcomings bring them into bolder relief than the advances made by the progressive plumbers. It is to the improvement of this class that attention must be given.

* * * *

Central Heating

H. W. WOOD, the president of the Canadian Council of Agriculture, is reported as being somewhat of a pessimist because he says that present methods of doing business on the competition basis are ruinous.

The average reader is likely to ask the question as to where the connecting link is between such a statement and central heating. There are many links connecting such matters. For example, the gas fired boiler and its manufacturers are looked upon as competitors of the coal fired boiler. The hot air furnace is the enemy of the boiler and radiator manufacturer. The central heating plant would cut down the demand for warm air furnaces as well as the individual house heating boiler. Millions of tons of coal would probably be saved by the wholesale adoption of central heating plants. All along the line any real progress in heating would be a menace to some one or other selfish industry. But we are to have a

chance to see what central heating can do for a long suffering public if a despatch from Ottawa is to be taken seriously as the following goes to show:

"Upon the recommendation of the Dominion Fuel Board the federal government has decided to proceed immediately with investigations into the possible development of central heating plants."

There can be no doubt as to the result at least if a fair chance is given. Many heating engineers the world over are convinced that at some day or other central heating will be the order of the day.

In Battleford the utility commission have a splendid plant, one that is actually saving fuel and money too, and the tonnage of coal used per heating service based upon the B.T.U. furnished is very satisfactory.

Central heating is just one type of co-operation between neighbors. A community gets together and decides to establish a plant, or a city becomes interested in central heating and finds out what the public sentiment is regarding such an undertaking. This is not competition, because there would be no competition. Coal would be bought on a large scale, used on a large scale. No ashes to carry out, no smoke, no dirt and dust around the houses, all because the citizens have become imbued with the spirit of co-operation, and co-operation is the first basic sign of the heralding in of the true spirit of the brotherhood of man.

* * * *

Instruction for Plumbers

AN interesting move toward a solution of the apprenticeship question is that made by the Y.M.C.A. in the city of New York. Recognizing the need for workers in the building trades and observing the discontent of many men in "blind alley" office jobs, the Y.M.C.A. of New York has taken steps to provide courses of instruction. Instruction is now to be had in plumbing, contracting, plan reading, etc.

Such action was taken because of the fact that fifteen billion dollars worth of new construction was known to be awaiting workers. There was a shortage of labor in these industries partly because of the restriction of immigration. The remarks of Edward L. Wertheim, education director of the Y.M.C.A., are very interesting, in this connection. He says: "Parents are largely responsible for the surplus of white collar men. They want their boys to be in what they consider socially correct professions. And many of the young men are not fitted for office work. They chafe under the restrictions and confinement. Strong and active, they ought to get out and stretch their muscles. They are misfits in an office. Then, too, the matter of wages is a big consideration. From a meagre salary on an inside job, a well equipped mechanic can step out any day and get good wages. We are getting more applicants for the building trades than we can take care of in our limited quarters."

In offering this course the Y.M.C.A. prefers to take men under 35 who have had mechanical experience, preferably in the building trades, or men of mechanical aptitude.

The day classes call for a period of 100 hours of instruction over a period of 5 weeks—5 days a week from 1 to 5 p.m. There are evening classes from 7 to 10 o'clock three evenings a week. These extend over a 12-week period, to make up the 100 hours of instruction. In addition to these class hours it is possible for men taking the course to practice tile-setting from 9 to 12 in the morning if they so desire, without instruction.

There are some good pointers here for those contemplating the establishing of courses in Canada.

MINUTE MESSAGE

Written for Sanitary Engineer by FRANK STOCKDALE
(General Selling Series)

Advertising—the Artillery of Business

NO MODERN nation would think of waging war without artillery and machine-guns. Or without aeroplanes, entrenchments and bombs. An army that went into battle with all the equipment but the artillery would be under a tremendous handicap.

There are many plumbers, however, who battle against competitors who advertise and never seriously consider using advertising as an effective weapon for themselves.

In the world war, aeroplane was met with aeroplane; bayonet with bayonet and artillery with artillery. The law of conflict prescribes and demands that no modern weapon be omitted from the army's equipment, and this law applies to business as well.

Plumbers who are losing trade to other forms of competition, or to aggressive local advertisers, should use a like weapon—ADVERTISING—if they expect to meet that competition and build their business.

Is the "artillery" of your competitor dropping shell after shell within your "battle line?" Is it taking heavy toll against your business? Can you hold out against this "barrage" with your present "equipment?"

The only effective way you can defeat the enemy is by using advertising, good advertising, persistent advertising.

Advertising is the Artillery of your business—SHOOT!

THINK IT OVER—APPLY IT IN YOUR BUSINESS

News Notes From Coast to Coast

Doings in the Plumbing and Heating Industry

BUSINESS CHANGES

Kenora, Ont.—A. Cotter, plumber, has been succeeded by Thos. J. Cotter.

Vermilion, Alta.—Northern Hardware Co., Ltd., have added tinsmithing, plumbing and heating to their business, under the direction of L. M. Hunt.

NEW FIRMS

Belleville, Ont.—Howe & Hagerman have commenced a new plumbing and heating business at 191 Front St., Belleville, Ont.

CHANGE NAME OF FIRM

Guelph, Ont.—The Albert W. Smith Co. Ltd., has changed its name to Guelph Plumbing and Heating Co. Ltd.

MOVES TO NEW PREMISES

Ingersoll, Ont.—D. N. Flander, plumbing, stoves, tinware, etc., has moved to new premises lately vacated by Booth Bros.

OBITUARY

David Robb, for many years employed with the Bennett & Wright Company, Toronto, in the steamfitting department, died at his residence.

Wesley Knight, vice-president of the Dominion Sanitary Pottery Co., St. Johns, Que., died at his home in that city. Mr. Knight was 71 years of age, and had been a resident of St. Johns for a number of years engaged in the pottery business.

Oshawa.—William E. Bramhall, 51 years of age, a prominent local plumbing contractor, dropped dead while at work in his store on King Street west. He had been in good health since recovering from an attack of influenza several weeks ago. Mr. Bramhall was born in Drayton, and for many years was a resident of Toronto. He had been in business in Oshawa for the past ten years.

MAY BE \$12 A DAY PLUMBER IN FUTURE

Vancouver.—Talking to one of the leading plumbing contractors here this week, it was pointed out to Sanitary Engineer, that the active 1923 development will be seen in the downtown areas, whereas last year it was confined largely to the outskirts and the municipality of Point Grey. This season larger works are under way and projected along the waterfront.

He referred to the ever-advancing tendency of prices and expressed the opinion that a twelve-dollar-a-day plumber would be common in the near future.

This condition will be made necessary, he said, on account of the departure of skilled artisans to the United States where building was improving rapidly in California; coupled with the fact that plumbers' apprentices have been a scarcity during the last few years. During the last week brass taps were advanced 35 cents each and water bowls \$2.60 each. Other articles in the stock of a plumbing store have been advancing similarly, particularly brass and copper and in some instances, financing has become difficult.

VANCOUVER PLUMBING BY-LAW APPROVED

Vancouver, B. C.—Amendments to be incorporated in the plumbing by-law, which is undergoing revision, were approved by the civic health and building committee. Under the new regulations the use of lead waste pipes will be permitted; to safeguard the sewers from danger of explosion traps or sumps, approved by the city engineer will have to be installed where obnoxious trade waste, including gasoline is used; a special trap must be used when fatty substances are used; there will be special requirements for dental waste and for photographic and engraving establishments.

RECOMMEND SEWERS FOR CAMPBELLFORD, ONT.

Campbellford, Ont.—According to the report, recently filed with the Town Council, of the investigation of the wells and other sources of water supply in Campbellford, which was made by officials of the Provincial Board of Health last November, samples of water were taken for analysis from 263 wells.

Of these, three of the bottles containing samples were broken in transit. Thirty-seven of the samples showed no contamination, these in nearly every case being from wells that were drilled and piped. One hundred and sixteen showed slight pollution and 107 showed pollution of 20 B. coli or over per 100 c.c.

The recommendation made by the Provincial Board for the improvement of sanitary conditions in town included:

"That the municipality install a liquid chlorination apparatus.

"That the municipality have plans prepared for a comprehensive scheme of sewers and sewage disposal which can be installed a little at a time as the need arises and which will ultimately give the town a complete system."

WILL MANUFACTURE HEATING DEVICE

Swift Current, Sask.—One of Swift Current's popular and successful young business men in the person of Frank A. Hutchinson, of the plumbing and heating firm of Hutchinson & Morrison, has taken his departure for Toronto where he will embark in the manufacture of a heating device of his own invention, the Hutchinson gas-tite furnace.

For the past year or so the new furnace has been manufactured at the Hutchinson & Morrison plant through the organization of a local company. The local field has been found too confined for manufacturing on the large scale that is contemplated.

PRESIDENT OF PORT HOPE SANITARY MFG CO SPEAKS OF OUTLOOK

Discussing conditions and prospects, President L. M. Wood, of Port Hope Sanitary Mfg. Co., made the following statement at the company's annual meeting: "The outlook for 1923 is encouraging and indicates a continued demand for enamelware. The prices of raw materials show a tendency to rise. If prices generally remain within reasonable bounds, the prospects are that 1923 will be a good building year."

Officers and directors for the ensuing year are as follows: L. M. Wood, president; F. Armstrong, vice-president and general manager; W. D. Ross, Robert Fleming, M. L. Davies, R. J. Cluff and W. J. Cluff, directors.

SUGGESTS CENTRAL HEATING FOR ORILLIA

Orillia, Ont.—At the Board of Trade meeting F. H. Horne introduced the question of a central heating system for the business section of the town. The question had impressed him very forcibly, and he had little doubt of its feasibility, and was satisfied if properly installed it would mean economy for all who were fortunate enough to be connected up to it.

Briefly outlined the project would be to build a station as near centre of business section as possible, where the heat would be generated in steam boilers, and hot water sent out through large mains at a temperature of 140 degrees. Each place of business taking the heating service would require to be properly piped and fitted with radiators, and connected with the main. The amount of heat sold to each consumer would be on a meter basis.

Mr. Horne believed there would be great economy, the present cost of heating probably being reduced one-half.

Manitoba Sanitary Inspectors Meet

City Will Have to Do More in the Matter of Sewage Disposal and Better Houses Must be Built

WINNIPEG, Man.—The Manitoba branch of the Sanitary Inspectors' Association of Canada held their fourth annual social evening in the Hotel Majestic, when they were addressed by Prof. R. C. Wallace on the subject of state medical aid. E. W. J. Hague, chief sanitary inspector of Winnipeg, and president of the association, asserted that Winnipeg would have to do more in the future than it was doing in the matter of sewage disposal, and that better houses should be built with better specifications regarding warmth and sanitation.

There were about 40 guests present. Ald. W. B. Simpson presided, being supported by Mayor S. J. Farmer, Dr. A. J. Douglas, Dr. M. Finkelstein and others.

In replying to the toast of the city of Winnipeg, proposed by J. W. Richardson, of Transcona, the mayor said poverty was one of the big problems they had to settle. If they could apply

to that problem the same principles that governed the sanitary inspectors of the health department, he thought the problem would quickly be solved and radicalism would very largely disappear. It was only by becoming radicals in the true sense of the word that they more quickly solved the problems facing them, and a sanitary inspector was a real radical as he sought to get to the root of things. It was the duty of any elected body to look after the requirements of the mass and not the wants of a few persons, and although they did not always agree on the methods to be adopted, the city council members were working toward that ideal.

Other toasts included the Sanitary Inspectors' Association of Canada and The Guests and during the evening songs and readings were given by A. Officer, J. McHardy, H. G. Trigg, B. C. Brough and G. Hanby.

CHANGE IN MUNICIPAL BYLAW ADDS \$1,700 TO COST OF PLUMBING

Windsor, Ont.—A change in the plumbing bylaws of the city of Windsor, which had not been generally known at the time the plans for the Wyandotte school addition were prepared, will cost the Board of Education an extra \$1,700, unless the Windsor council can be prevailed upon to forego enforcement of the bylaw.

The new bylaw, which had been on the books since a year ago, without anybody but the plumbing inspector knowing about it, requires the use of iron pipe underneath the building, for carrying away storm water from the roof, instead of the vitrified clay pipe that is generally used for this purpose.

PLUMBERS SEEK INCREASE

Winnipeg.—International union plumbers and steamfitters in Winnipeg are awaiting overtures to resume wage negotiations from the Builders' Exchange, according to R. C. Neil, business agent of Local 254. He intimated that the union members had submitted their proposals to the master plumbers some time ago and added that the men were firm in their demand for \$1.25 an hour. This rate, Mr. Neil declared, had already been established in Chicago and other cities across the border which precluded union here from accepting a lower wage. The membership in Winnipeg, he said, had been materially depleted due to a continued movement to other points where wages were more favorable. To offset any further exodus it was essential that wages be established equal to that of these competing centres, Mr. Neil said.

VANCOUVER WILL BUILD CONVENIENCES

Vancouver, B. C.—Three underground sanitary conveniences will be constructed in the business district of the city shortly, according to a recommendation of the civic health and building committee. One will be in the centre of Georgia Street, near Granville Street, another in the centre of Hastings Street at the post office west of Granville Street, and the third near the corner of Main and Hastings Streets the exact location to be determined later.

WILL HEAD PLUMBERS' BASEBALL TEAM

Windsor, Ont.—Gordon Finney, star flinger of the I. O. O. F. team of last year and this year with the Temples, will handle the destinies of the Plumbers' and Steamfitters' team in the Border Cities Industrial League. Finney, besides being a pitcher of the first order, has probably played more baseball than any manager in the Industrial loop and there is every reason to believe that the Plumbers will be a big factor in the race this year if the material is available, and it appears to be at present.

The club will hold an important meeting at the Plumbers' Hall, 61 Pitt Street, when plans for the approaching season will be discussed. All interested in the plumbing and steamfitting business are invited to attend this meeting.

O. W. Fuller, 332 King St., London, Ont., wants prices on hot air heating, plumbing and electrical equipment for new \$6,000 residence.

Western Ontario News

John Hayman & Sons, 432 Wellington St., London, Ont., want prices on steam heating, plumbing and electrical work for new \$100,000 apartment suite.

Dr. Taylor, Wallaceburg, Ont., is interested in prices of heating, plumbing, and electrical equipment for new \$10,000 residence.

Work on a new chlorinating system in connection with the waterworks at Goderich, Ont., is expected to proceed shortly.

L. Rosenblood, 372 Ottawa St. N., Hamilton, Ont., wants prices on hot water heating, plumbing and electrical work for new \$15,000 store and apartment to be build in the spring.

Eggett & Company, of London, Ont., have been awarded the plumbing and heating contracts for the new \$50,000 auto show rooms being erected for Middlesex Motors, Limited.

Arch. Wm. G. Murray, Dominion Savings Bldg., London, Ont., is preparing plans for new \$50,000 addition to school at Hanover, Ont., and will shortly want prices on heating and plumbing.

Dr. U. B. Shantz, 39 King St. W., Kitchener, Ont., contemplates erection of ten residences to cost \$50,000. Interested in prices heating, plumbing and electrical equipment.

Work is proceeding rapidly at Kitchener, Ont., on a new plumbing shop and show rooms for W. Battler on College St., close to the main business section.

Architect L. G. Bridgeman is preparing plans for a new \$8,000 residence for Hugh Roland, Dufferin Ave., London, Ont. Prices wanted on hot air heating, plumbing and electrical work.

A. M. Piper, City Hall, London, Ont., wants prices on steam heating, plumbing and electrical work for new \$50,000 registry office on which work is to be started shortly.

Perfect Knit Knitting Mills, Listowel, Ont., M. K. Becker, manager, is preparing plans for \$100,000 addition to its plant and will want prices on heating, plumbing and electrical equipment.

Ben Noble, of the firm of Noble and Rich, has been elected chairman of the Finance Committee of the Public Library Board, at London, Ont., and the board's representative to the Western Fair Committee.

Plans are being prepared for two new stores and apartments to cost \$25,000 for G. A. Brickenden, London Loan Building, London, Ont. Prices will be wanted on heating, plumbing and electrical equipment.

Questions and Answers Regarding Plumbing and Heating Practice

Interesting Queries re Steam Boilers

Editor Sanitary Engineer:

In your opinion what is the best and most suitable steam boiler for heating purposes?

1st. To overcome soda water.

2nd. To overcome water lifting out of boiler.

3rd. And any other advantages. We do not expect you to specify one particular boiler and get you in wrong.

4th. Should all steam mains be covered with asbestos covering?

5th. What is the general cause of water lifting in steam boilers? If the plant has lots of head room?

Porteous Hardware Co., Ltd.
Grand Prairie, Alta.

Answer.—As to our opinion as to what boiler is best for steam heating. There is very little to choose from any standard boilers on the market. But, if our opinion had been asked, giving certain conditions, for example: For residences, we would state that any cast iron round or square boiler with liberal steam space would be o. k. For schools, office or factory buildings twin sectional cast iron boilers, piped in such a way as to be able to use one boiler at once or the two. Steel tubular, firebox, or smokeless down draft boilers are alright.

It is seldom that boilers of themselves are faulty, the trouble, as a rule, is either with the chimneys or the system of piping. 1st. As regards the overcoming of "soda water," we assume that this question is meant to refer to lime depositing. This condition, too, has nothing to do with the boiler. When water is highly charged with lime, a water softening compound should be used and all condensation be returned to the boiler. No waste should be permitted. Once water has been boiled, and turned into steam, only one charge of lime can be formed in the boiler. If soft water is at all available it should be used for the purpose of using in the steam heating boiler.

As stated above, most boilers now on the market are reliable, and frankly there is very little to choose between one or another, with possibly one or two exceptions, viz.: Fire box and self feeding boilers, or those in which some special construction is embodied.

Answering query 4, we would strongly advise that all mains or returns be covered, and the boiler, too, should also be covered. Just to illustrate what percentage of heat is lost by not cover-

ing pipes the accompanying table will be of value. By way of explanation it should be noted that when a certain per cent. of heat is transmitted from piping, radiator or boiler, and such heat does not require to be thus transmitted, the heat is looked upon as "heat loss." Therefore, the table which, is the result of very careful tests by Prof. Carpenter, is looked upon as being very reliable.

It will also be noted that to paint radiators with white paint a loss of 5 per cent. is incurred, while by painting radiators or pipes with black asphaltum the radiating power is acutally increased by 5½ per cent., while painting radiators or piping with drab lead paint the efficiency of a radiator is increased over eight and one-half per cent.

5th. The lifting of water from a steam boiler is due to faulty piping as a rule, or, in a two-pipe job a steam supply valve has been closed, leaving a return valve open. Then a partial vacuum is set up which draws the water from some other return line. Faulty installations, twin boilers without equalizing pipes, pockets in piping, stoppage in return lines, all will have a bearing upon the trouble referred to.

Kind of covering	Relative Amount of Heat transmitted	
Naked pipe	100	p. c.
Two layers asbestos paper		
1 inch hair felt and canvas cover	15.2	p. c.
Two layers asbestos paper 1 inch hair felt	17.0	p. c.

Fossil meal, moulded ¾ inch thick	29.7	p. c.
Painted with black asphaltum	105.5	p. c.
Painted with light drab lead paint	108.7	p. c.
Glossy white paint	95.0	p. c.

PEDAL ACTION VALVES

Kindly give us your opinion on the following. We have just installed a basin fitted with pedal action valves which, of course, have in their make up a spring and when the operator releases the pressure from the pedal the valve closes with a buck and often when there is very little pressure on the pedal there is considerable vibration causing a rattling noise. Would air cushions remedy the above?—Ontario Subscriber.

AGREES TO LOAN PLUMBING INSPECTOR

Ottawa, Ont.—A few persuasive and tactful remarks by R. Blackwell, of the architect firm of William and W. R. L. Blackwell, of Peterborough, induced Ottawa's Board of Control to break an established rule.

Mr. Blackwell appeared before the Board to back up a letter from his firm which solicited the "loan" of Ottawa's plumbing inspector, Mr. Stephen Daughtry, to conduct a smoke test on the fine new building erected in Brockville, of which Mr. Blackwell's firm were the architects. His request was granted by the Board, but not before Mr. Blackwell made out a very nice case for the application.

"It's a bad precedent for Ottawa to allow its plumbing inspector to go running around the country making smoke tests for private firms," remarked one controller when the letter was read.

Alderman T. H. Brewer: "I think it reflects credit on our inspector's ability."

TORONTO SUBURBS TO HAVE SEWERS

Marking the progress of the district surrounding Humber Bay is the installation of the sewers and water mains throughout the entire section. This work has been under way for the last three or four months but up to the last month little headway had been made.

Since then, however, a new contractor has taken over the work and with warm weather drawing near and the frost rapidly leaving the ground it is expected that there will be no more serious interruptions. The district through which this water system is being run is one of the least heard of and fastest growing suburbs of Toronto. In the last year hundreds of little homes have sprung up in the section between Humber River and Mimico Creek. Most streets in this district already have electric lights

A Trade Extension Service Heating Engineers Through *Plumber and Steamfitter*

WHAT THIS SERVICE HAS FOR YOU

"COPY" FOR EFFECTIVE ADVERTISING

Copy suggestions to increase the effectiveness of the sanitary and heating engineer's advertising is an important help.

ELECTROS OF ILLUSTRATIONS AT COST

Attractive illustrations to drive home the messages contained in the suggested advertisements will brighten the ads at little expense. Electros of these illustrations will be provided readers of Sanitary Engineer at cost.

TIMELY WINDOW DISPLAYS

Supplementing the illustrated articles on various plumbers' businesses as appearing in each issue, Sanitary Engineer will reproduce, in connection with this new service, suggested window displays to link up with "Bath in every home" or other such campaigns. These will be accompanied by full description of material used and preparation.

COLLECTION LETTERS

From time to time some suggested forms of collection letters will be given, and special assistance will be extended to any particular reader on special application.

Developing Prospects

These Big New Features Added To
Regular Departments Starting With

April 15 Issue "Sanitary Engineer"

CASH IN ON THE

to Canadian Plumbers and gh "Sanitary Engineer, tter of Canada"

A NUMBER of unsuccessful attempts have been made to start a Trade Extension Bureau Service in Canada on a somewhat similar scale to that which has been so helpful to sanitary and heating engineers in the United States.

NEGOTIATIONS have been going on for some time between Sanitary Engineer, Plumber and Steamfitter of Canada and the National Trade Extension Bureau of the United States and an arrangement has just been completed whereby many of the helpful features of this Bureau will be extended to the Canadian plumbing trade, through the medium of Sanitary Engineer.

WHILE Sanitary Engineer has for many years been giving to the Canadian plumbing trade a great many of the features provided in the Trade Extension Service, there are important new features which will be introduced to readers of Sanitary Engineer commencing with April 15 issue.

MANY Canadian plumbers have endeavored individually to link up with this service in the past but the National Trade Extension Bureau had made no plans for entering Canada with their many services and up until now this service has not been available to the Canadian trade.

What The Trade Extension Bureau is

THE National Trade Extension Bureau is an organization for providing sanitary and heating engineers of the United States with all possible help for the developing of business and placing of individual businesses on a better basis.

The directors of the Bureau are mostly men experienced in the plumbing trade and Wm. J. Woolley, secretary, manager of the Bureau, has a large plumbing and heating business under his name. Mr. Woolley was the chief speaker at the banquet of the Ontario Society D.S. & H.E. convention three years ago and his explanation of the work of the Bureau brought scores of requests from Canadian plumbers for the extension of this service into Canada.

Until now this service has not been available to Canadian plumbing and heating engineers.

Practically all phases of plumbing and heating work are dealt with from the standpoint of management, technical problems, office routine, publicity matter, development of trade, etc.

Your Chance To Get \$10,000 Worth of Service For \$2.00

IF any plumbing or heating concern in Canada set out to duplicate the art work and engravings, or secure the selling and administration ideas and helps given in this service alone it would cost them over \$10,000.

ALL this service is available to YOU in addition to the big regular service now extended through each issue of Sanitary Engineer.

WE can show you where scores of plumbers have made hundreds of dollars by using this service at \$2.00 per year.

All of this service will be available to Canadian plumbers through Sanitary Engineer in addition to all the other big regular features.

BIG DOUBLE-HEADER ISSUES START WITH APRIL 15TH SANITARY ENGINEER

TEAR THIS OFF AND SIGN—or sign the enclosed return card and share with a thousand other plumbers this helpful service for the next year at a cost to you of less than 9 cents an issue.

Sanitary Engineer
143 University Ave., Toronto

_____ 1923

Sirs:

Send me Sanitary Engineer and be sure to begin with the April 15th issue. I don't want to miss it.

I am enclosing \$2.00 for one year or \$5.00 for 3 years subscription, or you can bill me for one subscription price.

Market Conditions and Tendencies

Price Trend on Sanitary and Heating Supplies

Markets at a Glance

PPRICE changes in all branches of the heating and plumbing trade have been fairly numerous within the last three months. The adjustments of the week, however, have surpassed in importance those of most of the preceding weeks. Prices on boilers and radiators are in a general revision to higher levels and the advance is from 7 to 15 per cent. Mechanical rubber goods have followed the lead of other rubber products and an advance of 10 per cent. is in effect. Zinc sheets have also recorded a gain in price amounting to 1½¢ per lb., and some grades of solder are quoted at slightly higher levels.

Plumbers' brass goods are quoted at slightly higher levels from those formerly in effect as are also dart unions, stove and tire bolts. Galvanized sheets, corrugated sheets, black and blue annealed sheets have all reflected the firm trend recently noted in primary sources and have advanced in price from 10 to 15 cents per cwt.; an advance of from 1 to 3 cents per lb. has also taken place in quotations on cotton waste. Lower discounts on fittings have been put into effect advancing quotations on plugs, bushings and unions by about 5 per cent.

Montreal Markets

MONTREAL, March 29.—Higher levels still continue to be the case wherever price revisions are reported during the past two weeks. From present indications in primary metal market, recent advances in which have been largely responsible for the increased prices on various products, further advances upon the new quotations are unlikely, the primary metal markets having assumed a more stable tone, with a slight tendency towards easier prices during the past week.

One important change noted this week is the revised discount on radiation goods. On radiators, both hot water and steam, there has been a considerable cut in the discount, while on boilers the reduction in discount reaches about 12 per cent. on all lines. Malleable and iron fittings discounts have been altered in a similar manner, the change here varying from three to five per cent. while in compression goods, discounts on bath cocks, waste cocks and traps have been revised in the same direction.

Closet combinations are about \$1 higher on most lines under new quotations but no change has been made in the price of tanks, seats or bowls separately. In keeping with a general upward revision in the cotton products market, all lines of cotton wastes have advanced, the new prices being from one-half to three cents higher than those previously in force.

TRADING IN ENAMELLED WARE IS STILL LIGHT

Montreal.

Trading remains light in enamelled ware this week, with prices unchanged. They remain as revised early in the month, at the following levels:

ENAMELED WARE—

Sinks, roll rim—			
18 x 30		\$23 00	
Sinks, flat rim—	1 only	2 only	3 only
16 x 24	\$ 7 50	\$ 7 40	\$ 7 30
18 x 30	8 70	8 60	8 50
20 x 30	9 90	9 80	9 70
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide			51 40
Bath tubs, 5½ feet.			57 10
Lavatories—			
17x19 in. Apron F139 or P4045.....			15 30
18x24 in. Apron F164 or P3845 or P3847			23 60
18x21 in. Apron F169 or P4205.....			17 60
17x19 in. Roll rim. F241 or P4345.....			12 60
Less 30 per cent.			

CORRUGATED SHEET MARKET IS REPORTED FIRM

Montreal.

A satisfactory condition in the corrugated sheet market is reported this week, trading on spring deliveries being good with some business being placed for later shipment. The prices are firm at the levels which came into effect some weeks ago. Local quotations are as follows:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	7 00
No. 26 gauge	7 50
No. 24 gauge	10 00
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	19 00
Less 10 per cent.	
Lighter than 24 gauge and wider than 27 ins., 75 cents per square extra.	

CLOSET COMBINATIONS MAKE UPWARD MOVE

Montreal.

Several advanced prices are noted in this week's quotations on closet combinations, the average increase being \$1.00. Practically all lines are advanced. There is no change in prices on bowls, seats or tanks separately. Trading is fairly light at the following quotations:

CLOSET COMBINATIONS—

Low Down Outfits,	each
Closet, standard outfit, oak.....	24 00
Do., post hinge seat	25 00
Do., oak vitro or Pussyfoot.....	24 50
Do., post hinge seat	25 50
Do., mahogany vitro or Pussyfoot, post hinge seat and cover	28 00
Do., vitreous china, oak post hinge seat and cover	29 00
Do., vitreous china, mahogany post hinge seat and cover	30 00
Do., white vitro or Pussyfoot, mahogany post hinge seat and cover	30 00
Do., enamelled iron tank, oak post hinge seat and cover	29 50
Do., enamelled iron tank, mahogany post hinge seat and cover	29 50
Add for ¾" valve on supply pipe.....	1 25

CLOSET TANKS—

Low down, oak vitro or Pussyfoot with fittings less seat	13 20
White vitro or Pussyfoot with fittings, flush elbow and supply.....	15 65
Vitreous china tank with fittings, flush elbow and supply	18 00
Enamelled iron with fittings, flush elbow and supply	18 00

FITTINGS DISCOUNTS SUBJECTED TO REDUCTION

Montreal.

As foreseen in the last issue, new higher quotations have been announced on pipe fittings, the revision taking the form of a reduction of discounts. On malleable fittings the discount is three

per cent. less than formerly, while on cast iron fittings, plugs, bushings and unions the cut is five per cent. This brings the discounts to the following levels, at which trading is said to be very firm locally:

PIPE FITTINGS—	
Cast iron fittings	17½%
Plugs, cast iron	17½%
Do., solid	17½%
Do., countersunk	17½%
Bushings, cast	20%
Do., malleable	20%
Unions	35%
Flanged unions	17½%
Flanged fittings	27½%
Dart unions, black, ½ to 2 in.	33½%
Do., ½ in., 2½ in., and larger	23%
Do., galv. add to black	30%
Nipples, ½ to 4", close and short	50%
Do., long	55%
Do., 4½ to 8", close and short	40%
Do., long	45%
Couplings, 4" and under	25%
Do., 4½" and larger	5%
Malleable Fittings—	
Piece list effective June 1st, 1922. Discount 65 per cent.	

SOME ADVANCES RECORDED IN COMPRESSION GOODS

Montreal. Several lines of compression goods have undergone revisions this week, the change in each case being by a reduction of discount. Bath cocks have been altered from 41 per cent. to 38 and 40 per cent. and waste cocks from 56 per cent. to 54 and 42 per cent. The only other change is in N. P. "O" and "S" traps where the discount is changed from 40 per cent. to 34 per cent. The following are quotations in force locally:

VALVES AND BIBES—	
Compression work, standard	45%
Fuller work, standard	30%
Quick opening, compression bibbs	43%
Bath cocks, quick opening	38%
Bath cocks, compression	40%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, standard	54%
Roundway stop and waste cocks, std.	42%
Brass steam cocks, standard, ¼ in.	50%
Radiator valves, standard	55/25%
Do., removable discs	55/25%
Globe, angle and check valves, std.	25%
Gate or straightway	25%
Emco globe valves	33%
Emco check valves	33%
Jenkins globe, angle, check and swing check	5%
Jenkins gate or straightway	16%
Jenkins iron body, globe and angle	15%
Jenkins iron body, gate	25%
N. P. "O" and "S" traps	34%

SPRING TRADING NOTICEABLE IN EAVES AND CONDUCTORS

Montreal. Business is reported on the up-grade in the eavestrough and conductor pipe market this week, the advent of spring giving a boost to this and other building lines. The market remains firm at prices which have been in effect for several weeks past. They follow:

EAVESTROUGH—	
O. G. round and half round, per 100 ft. 3 in., \$16.90; 10 in., \$18.70; 12 in., \$22.20; 15 in., \$35.50; 18 in., \$45.00.	
O. G. Square bead, per 100 ft: 8 in., \$15.90; 10 in., \$17.70; 12 in., \$21.20; 15 in., \$34.50; 18 in., \$44.00.	
Discount 65 and 5 per cent.	
CONDUCTOR PIPE—Round, Plain and Corrugated, per 100 ft.: 2 in., \$18.40; 3 in., \$22.30; 4 in., \$29.60; 5 in., \$48.00; 6 in., \$58.80.	
Discount 65 and 5 per cent.	
CONDUCTOR ELBOWS—	
Plain or corrugated, price per doz 2 in., \$5.25; 3 in., \$6.00; 4 in., \$10.50; 5 in., \$24.00; 6 in., \$29.00.	
Discount 55 and 5 per cent.	

NEW HIGHER QUOTATIONS GIVEN ON COTTON WASTES

Montreal. During the past week there has been a general upward revision in all cotton products, every line of cotton wastes being affected by from one-half to three cents per pound. The following are the new quotations:

COTTON WASTES—		Per lb.
Cream polishing		0 24
White, XXX extra		0 20
White, XX grand		0 18½
White, XLCR		0 17
X Empire		0 15½

Anvil		0 17
Dominion W pers—		
White cotton		0 20
Colored cotton		0 13½

BAR PRODUCT MARKET STEADY WITH TRADING GOOD

Montreal. Spring trading in bar products is reported as active this week, dealers being busy filling orders booked early for spring delivery. There is no change in prices, the market remaining firm at recent advances. The following prices are quoted locally, although there is some indication that another slight increase may take place in the near future:

IRON AND STEEL—	
Common bar iron, 100 lbs.	3 65
Refined iron	5 15
Irish finish machinery steel	3 70
Mild steel	3 65
Single reeled machinery steel	5 00
Band steel	4 15
Sleighshoe steel	3 65
Spring steel	6 00
Tire steel	3 85
Harrow tooth steel	3 80
Toe caulk steel	4 55
Mining tool steel, per lb.	0 19
Black Diamond tool and cast steel, per lb.	0 19

NOTE.—Refined iron is approximately \$1.50 per cwt. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.
Iron and steel 3-16 in. and thinner, 50c per 100 lbs. extra.

SCRAP METAL TRADING FIRM AT FORMER PRICES

Montreal. Business in the scrap metal market is reported to be quite firm this week with no changes in prices from those quoted earlier. The following are average prices being quoted by local dealers:

SCRAP MATERIALS—	
Automobile tires	0 50
Rubber shoes	0 03
Yellow brass	0 05½ to 0 06
Red brass	0 09
Light brass	0 04½
Scrap zinc	0 04½
Lead, heavy	0 05
Lead, tea	0 03
Light copper	0 08½ to 0 09
Heavy copper	0 11½
Wrought iron, R. Rd., No. 1, per gr. ton ..	12 00
Malleable scrap (ton)	10 00
Pipe scrap (ton)	7 00
Heavy melting steel	9 00
No. 2 busheling	3 00
Boiler plate	3 00 to 9 00
No. 1 machinery cast	20 00 to 22 00

SPRING TRADING IN ASBESTOS LATER THIS YEAR

Montreal. Trading in asbestos products is reported seasonable, the effects of the approach of spring being noticed, although local distributors state that the business is opening up later this year than has been the case for the past few years. There has been no change in prices, the quotations now in force having been quoted since the revision made late last autumn. They are as follows:

ASBESTOS PRODUCTS—		Off list prices
2 ply pipe covering		57½%
3 ply pipe covering		55%
4 ply pipe covering		50%
85% magnesia		40%
		Per bag
Boiler covering		\$1 50
		Per 100 lbs.
Asbestos sheathing		7 75

SHEET AND PLATE MARKETS REMAIN UNCHANGED

Montreal. There has been practically no change in the prices of sheets and plates during the past week. Owing to the purchase of stocks at varying prices there is still a fairly wide range of prices being quoted by local distributors and trading is reported to be firm. The following are the quotations being followed:

BLACK SHEETS—			
10 gauge, base	4 75	5 00	
12 gauge	4 85	5 00	
14 gauge	4 85	5 10

Galvanized 60s		8 50

REDUCTION OF DISCOUNTS ON RADIATORS AND BOILERS

Montreal. A general upward revision in radiators and boilers is announced this week. The discount on hot water radiators drops from 51 per cent. to 44 per cent. and on

steam radiators from 52 per cent. to 45 per cent., while on wall radiators the discount is changed from 48 per cent. to 41 per cent. The revised discount on boilers is a cut of 12 per cent. on all lines but sizes 0 to 10 where it is 8 per cent. The market is firm at the new quotations which are as follows:

RADIATORS AND BOILERS—

Radiator list prices are for 1, 2, 3, 4 and 5 column radiators, per sq. ft.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount 44 per cent for hot water, and 45 per cent. for steam.

Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05; Discount 41 per cent.

Boilers—Round water boilers, sizes from 0 to 10, 52 per cent. off list. Square or sectional hot water or steam boilers, 15 in., 3 per cent. with Ontario Government trimmings, list. Square or sectional water boilers, 19 in. to 36 in., 8 per cent. Square or sectional steam boilers, 19 in. to 26 in., 5 per cent. Ontario Government trimmings, list plus 7 per cent. Square or sectional water or steam boilers, 48 in., list plus 10 per cent. With Ontario Government trimmings, list plus 13 per cent.

Round steam boilers, standard trimmings, 16 per cent. Ontario Government trimmings, 13 per cent.

F.o.b. Montreal, Toronto, Guelph.

SPRING SALES ARE GOOD IN CEMENT MARKET

Montreal.

Cement prices show no change from quotations given recently. Spring sales are reported to be good, reflecting in this respect the large amount of building which is to be done this summer. The prices now in force are as follows:

CEMENT—

Car load lots, per bag, F.o.b. steam cars 0 86
Per Bag, delivered 0 94
Less car lots, per bag, F.o.b. yard..... 0 94
Per bag, delivered 1 04
Less 5 per cent 1 04
Rebate of 20 cents for empty bags.

NO CHANGE IN BOILER TUBES; TRADING IMPROVING

Montreal.

There is only moderate activity reported in boiler tubes at the present time, though trading continues to improve slowly. There is a strong market, although prices remain unchanged, as follows:

BOILER TUBES—

	Seamless	Lapweld
1 inch	20 00
1¼ inch	22 00
1½ inch	21 00
1¾ inch	24 50	24 00
2 inch	21 50	20 00
2¼ inch	24 50	23 00
3 inch	29 00	24 50
3½ inch	34 00	31 00
4 inch	39 50	36 50
4 inch	50 00	45 00

Prices, per 100 ft., f.o.b. Montreal.

BOILER RANGE PRICES SHOW NO CHANGES

Montreal.

There is little activity recorded in the range boiler market, although trading continues satisfactory. Prices remain at the following levels:

RANGE BOILERS:—

5 Gallon	\$13.50

CORRUGATED SHEETS SLIGHTLY HIGHER

Toronto.

A slight adjustment in price is in effect on some weights of corrugated sheets, 18, 20, 22 and 24 gauges being quoted at slightly higher levels than those of recent reports. The list showing present quotations is given below.

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	7 00
No. 26 gauge	7 50
No. 24 gauge	10 00

No. 18 gauge	19 00
Less 10 per cent.	
Lighter than 24 gauge and wider than 27 ins.,	
75 cents per square extra.	

QUOTATIONS ON COTTON WASTE CHANGE

Toronto.

Confirming recent reports of higher quotations in cotton basic markets, a slight change is in effect on cotton waste. The change is not so great as was expected that there is little variation in evidence in local quotations.

STOVE AND FURNACE PRICES MAY BE HIGHER

Toronto.

Quotations on stoves and furnaces for the fall are likely to be higher according to local information. The prices on these lines, it was pointed out, have been higher in American markets than were those of the Canadian manufacturers and the continually advancing costs of steel and iron products will be reflected in quotations on these lines as soon as present stocks are exhausted.

GENERAL ADVANCE IN PLUMBERS' BRASS GOODS

Toronto.

The advance noted in a recent issue in some lines of brass and nickel plated goods, has become general. The fol-

Toronto Markets

TORONTO, March 29.—Local market reports contain changes in many lines. Heavy trading continues to feature reports from primary sources and for the present at least little hope is held out for a reduction of any proportions to take place.

The more important changes noted in the local market development for some time past have centered around the steel and iron products with an occasional advance in other commodities. Recent developments however, have included lead, cotton, brass, copper and rubber goods which in turn have been reflected in prices on allied lines. Among the lines which have moved to higher levels during the week are dart unions, mechanical rubber goods, pig iron, boilers and radiators, force cups, stove and sink bolts and boxwood rules. There is also a substantial advance in effect on some lines of brass and copper goods. The popular advance has been about 10 per cent but in the case of radiators and boilers, the difference has been somewhat greater.

Generally speaking trade is well out in front of a year ago but the continued cold weather has had the effect of slowing up some branches of business and the building trade is feeling the need of warmer weather.

STOVE AND TIRE BOLT PRICES SHOW SLIGHT INCREASE

Toronto.

A slight increase is in effect on tire and stove bolts. The discount formerly quoted on tire bolts was 50 per cent. whereas now it is 42½ per cent. Stove bolt discounts which were 65 and 5 per cent. are now 62½ and 5 per cent. Sink

bolts are also subject to the discount governing stove bolts.

LEAD AND ZINC SLIGHTLY HIGHER

Toronto.

A slight adjustment is in effect in quotations on some lines of lead and zinc goods. Zinc sheets are higher in price by 1½c per pound and some grades

lowing list of changes now in effect shows the general nature of the advance.

SCRAP MATERIAL MARKET REFLECTS FIRM TREND**Toronto.**

Some higher prices are noted in quotations on scrap materials locally. Copper scrap is still creeping up and 14c per lb. is being offered for most available stocks. Brass, lead and some lines of rubber scrap are also quoted at higher levels.

Iron and steel scrap markets are still strong and firm and prices will, in all probability, advance further. Quotations locally have not reached the levels quoted in Buffalo, and shipments will continue to be made to that point as long as this difference is in effect. The fol-

lowing are average dealers' buying prices for large quantities f.o.b. Toronto.

SCRAP MATERIALS—		f.o.b. Toronto	
Scrap Iron

SHEETS ALL TAKE HIGHER PRICE LEVELS

Toronto.
As predicted in a recent issue of Sanitary Engineer, sheet metals have shown a general advance in price. The list now in effect follows:

GALVANIZED SHEETS—			
	Premier and Apollo		
10½ oz.	6 90	7 40	
U. S. 28 base	6 50	6 90	
U. S. 26 base	6 30	6 60	
22 and 24	6 05	6 45	
18 and 20	6 05	6 30	
16	5 90	6 15	
12 and 14	5 75	6 00	
Queen's Head			
28 gauge, base	7 25	7 50	
26	6 85	7 10	
24	6 55	6 80	
22	6 40	6 65	
Fleur de Lis			
28 gauge base	7 25	7 50	
26	6 85	7 10	
24	6 55	6 80	
22	6 40	6 65	

An extra 40c per 100 lbs. is charged for Key stone and Premier brands copper-bearing sheets. An extra is now charged on galvanized sheets. 10½ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown in 20c. per 100 pounds.

TANK STEEL PLATES—			
¼-in. and heavier, base	3 60		
3-16 in.	3 95		

BLUE ANNEALED SHEETS—			
10 gauge, base	4 50	4 60

14 gauge	4 60	4 70	
16 gauge	4 65	4 75	

BLACK SHEETS—			
18-20 gauge	5 25	5 35	
22-24 gauge	5 30	5 40	
26 gauge	5 35	5 45	
28 gauge	5 50	5 60	
A charge of 25c per 100 lbs. is made for less than case lots. An extra 10c. per 100 lbs. is also charged on sheets 26 in. wide.			

PORTLAND CEMENT STILL INACTIVE

Toronto.
Weather conditions continue to hold business in cement to moderate proportions. The prices quoted have shown no change.

CEMENT—			
Carload lots, per barrel	3 45		
Less carload lots, per barrel, f.o.b. yard	4 35		
Per barrel, delivered	4 55		
Single bags, \$1.15 each; 4 bags to barrel.			
Extra charge of \$1.50 per load on less than 24 bag lots.			
Rebate of 20 cents each for empty bags.			

IRON PIPE QUOTATIONS STEADY AT RECENT LIST

Toronto.
No further changes have been noted in quotations on iron pipe since list No. 58 came into effect in February. Spring activity has not affected trade in this line as yet.

¾ inch, 6 ply	18 00
1 inch, corrugated	14 00
1½ inch, corrugated	15 50
2 inch, corrugated	17 50

MAY BE SOME FURTHER CHANGES IN PLUMBING GOODS PRICES

As we go to press, Sanitary Engineer is informed that there is likely to be an important development in prices on lines affecting the plumbing trade. No definite figures are as yet available, nor have the different lines which will come under the new quotations, been announced, but this information will be available in time for an early issue of Sanitary Engineer.

Winnipeg Markets

WINNIPEG, March 29.—The upward tendency of the market is reflected in price revisions on several lines. Galvanized sheets, black and Canadian blue have advanced and American mills have advised the trade that they will not execute orders on this line for at least another four or five months, therefore it is well for merchants to purchase their necessary requirements as quickly as possible. Soil pipe and fittings as well as eavestrough and conductor pipe continues to rule steady. Due to the strong tone of the primary lead market an advance of 45 cents per hundred pounds has been recorded on lead pipe and lead pipe waste. Candle wick packing has moved upwards. Revised discounts are in effect on steam and compression goods. A few lines of closet tanks of the oak and white vitro variety show a slight advance.

SHEETS AND PLATES CONTINUE UPWARD TREND

WINNIPEG. — Galvanized sheets, black sheets and Canada plate blued has shown an advance of 50 cents. American mills have advised that they will not execute orders on this line for at least another four or five months and it is to the trade's advantage to purchase their requirements immediately. The following prices are in effect:

CANADA PLATE—Blued—	
Size 18x21, per box	7 25
Size 18x24, per box	7 25
Size 20x28, per box	7 25

IRON—Galvanized—	
16 Gauge, per 100 lbs.	7 60
18 Gauge, per 100 lbs.	7 75
20 Gauge, per 100 lbs.	7 75
22 Gauge, per 100 lbs.	7 90
24 Gauge, per 100 lbs.	7 90
26 Gauge, per 100 lbs.	8 05
28x30, per 100 lbs.	8 35
28x36, per 100 lbs.	6 5
10 3/4 oz. x 30, per 100 lbs.	8 75
10 3/4 oz. x 36, per 100 lbs.	9 05

STEEL SHEETS—Black—	
10 Gauge, per 100 lbs.	5 80
12 Gauge, per 100 lbs.	5 85
14 Gauge, per 100 lbs.	6 00
16 Gauge, per 100 lbs.	6 05
18 Gauge, per 100 lbs.	6 55
20 Gauge, per 100 lbs.	6 65
22 Gauge, per 100 lbs.	6 70
23 Gauge, per 100 lbs.	6 70
26 Gauge, per 100 lbs.	6 75

SOIL PIPE AND FITTINGS CONTINUE STEADY

WINNIPEG.—A firm undertone continues to feature the local market in soil pipe and fittings. While spring trade has not yet opened up to any degree an improvement is looked forward to within a short while. Prices are fully maintained.

EAVESTROUGH AND CONDUCTOR PIPE STEADY

WINNIPEG.—There is no change in quotations on eavestrough or conductor pipe. The market is ruling steady and as spring advances an improvement in the demand is expected.

HIGHER QUOTATIONS ON LEAD PIPE

WINNIPEG.—Due to the strong tone of primary markets an advance of 45 cents per 100 pounds has been recorded on lead pipe and lead waste pipe. Latest

quotations on lead pipe are \$13.86 per 100 pounds and \$14.76 per 100 pounds for lead waste pipe.

HIGHER PRICES ON CANDLE WICK PACKING

WINNIPEG.—An advance of 5 cents per pound has been recorded on cotton candlewick packing making present quotations 70 cents per pound.

CLOSET TANKS SHOW AN ADVANCE

WINNIPEG.—A slight advance has been recorded on oak and white vitro closet tanks and quotations on oak are \$14.50 and white \$17.00 less supply pipe elbow and coupling nut.

STEEL BATHS AT LOWER PRICES

WINNIPEG.—Steel baths of galvanized steel finished with white enamel show a reduction in price. Steel baths 5 feet in length are quoted at \$12.25 and 5 1/2 feet at \$13.50.

REVISION IN DISCOUNT ON PENBERTHY VALVES

WINNIPEG.—There is an upward revision on Penberthy valves and globe, angle and horizontal check are quoted at list price less 15 per cent. The gate style of valve is quoted at 22 1/2 per cent. and swing check at 7 1/2 per cent.

CLOSET SEAT HINGES AT LOWER PRICE

WINNIPEG.—Nickel plated closet seat hinges show slight decline and today's quotations are \$1 per pair.

INJECTORS QUOTED AT HIGHER LEVELS

WINNIPEG. — Penberthy injectors show higher price levels. Regular style suction is quoted at list price less 55 and 7 1/2 per cent. Brass injectors are quoted at 65 and 2 1/2 per cent. Penberthy injector repairs are list price plus 12 1/2 per cent.

DECLINE IN PRICE ON DESOLVO

WINNIPEG.—Desolvo, a chemical compound used for removing obstructions in drains, waste and straw pipes has shown a decline of 20c. per dozen and latest quotations are \$4.80.

REVISED DISCOUNTS ON STEAM AND COMPRESSION COCKS

WINNIPEG.—There is a revision in discount on steam, gauge and compression cocks. Steam quoted at list prices less 30 per cent. and compression at the same price.

NEW GOODS OF INTEREST TO THE PLUMBING TRADE

Tandem Pump

Canada Foundries and Forgings, Ltd. of Brockville, Ont., have placed on the market a new double acting pump which will be known as the "Tandem."

These pumps are said to be characterized by several new features including leather to metal wearing parts which can be renewed readily, it has special equipment for priming, a patented anti-freezing feature and its leathers being impregnated with a special fluid per-

mits the pump to be used for oils or gasoline without impairing the suction.

The manufacturers also state that the pump is capable of drawing water 27 ft. and of forcing it 80 ft. The pump is made in two sizes only, the small one taking 1 in. pipe and is said to have a capacity of 7 gallons per minute and the larger one takes 1 1/4 in. pipe with a capacity of 18 gals. per minute.

Tangent Tool

The Tangent Tool Engineering Co. Ltd., of 22 St. Mary Axe, London, E. C. 3, are offering to the trade a new cutting tool known as the Tangent shearing tool.

This tool is designed for cutting sheet metal either flat or corrugated and is made in two sizes, namely, type C. C. A. to deal with sheets up to 20 G., and type C. C. B., for gauges up to and including 18 G.

It is claimed that the outstanding feature of this tool is that it will cut corrugated sheets in any direction.

JENKINS Brass Swing Check Valve

Fig. 475.
(Sectional View)

A strong, handsome and durable valve with the Jenkins Renewable Disc feature.

The angle of the seat is such that it opens readily at low pressure and the shock of closing under high pressure in the most severe service is absorbed in the line piping.

This Jenkins model is adapted for use in either horizontal or vertical position.

Fig. 475 illustrated here is the Standard pattern for 150 pounds working pressure. Made in extra heavy patterns (Fig. 260) suitable for 300 lbs. working pressure.

The complete Jenkins line is pictured and described in Catalog No. 9—free on request.

Fig. 475.

Jenkins Valves

SINCE 1864

Have You a Plumbing or Furnace Department ?

YOU need SANITARY ENGINEER, PLUMBER AND STEAMFITTER, the recognized authority in plumbing, steamfitting and furnace work.

For definite market information, for new ways of building business—new solutions for old problems, and up-to-date methods, SANITARY ENGINEER will help you to make more money in your business. Two features alone, in SANITARY ENGINEER, bring ten times more money than the enrolment price for a year's reading.

Practical sheet metal work is a practical series of articles which is worth a good deal more to you than the price of a year's subscription. *Sewage disposals for small communities* will assist you in installing systems and make money out of their installation. In addition SANITARY ENGINEER contains feature articles on advertising, on window display, on follow-up letters, articles on figuring costs, how to make up daily or monthly cost estimates, how to figure costs where both hand and machine work are employed. How to find cost by job, by contract, etc., how to check incoming and outgoing material, how to keep a perpetual inventory. How to find selling costs, how to charge expenses, advertising, how to handle general expenses, how to standardize costs records, how to devise schemes for going after new business.

Please remember SANITARY ENGINEER is not designed to entertain or amuse, but to show you how to get after business more effectively, to prove the accuracy of your costs, and by reducing expenses to make more money and added profits out of your business. Will you fill in the card to-day and prove for yourself what value this bi-monthly reading can be to you in your plumbing business?

Toronto, Ontario

Are You Affected by Price Cutting?

If so you would have been interested in an article written by a plumber who knew how to meet this problem, as appearing in February 15 issue of Sanitary Engineer.

That was only one of eleven splendid articles in that issue showing how plumbers were merchandising goods, solving technical and other problems of the trade.

SOME HEADINGS OF OTHER ARTICLES IN THE SAME ISSUE WERE:—

"Had to re-order many lines of bathroom fittings for special sale"—Band & Cole, Ottawa, Ont.

"Sold additional equipment worth \$400 from \$200 water plant installation."

How St. John plumber does profitable trade in filters.

The problem of too much price cutting in plumbing.

How to clean shop-soiled valves.

Use of generator on hot water systems.

} **QUESTION BOX**

Details of plans for septic tank for use of 12 persons.

Plumber launches a prodigious Publicity Campaign.

Rating of furnaces based on register temperature as well as leader pipe area.

Tinsmith's patterns for a smoke pipe branch.

Winnipeg heating engineer gives public demonstration of furnaces.

IN ADDITION, there were the regular departments covering news of the trade from Coast to Coast—Market Reports showing current prices on plumbing and heating equipment—Minute Message by Frank Stockdale, a merchandising authority on business problems.

—ON THE WAY

For Future Issues

A splendid series of articles on hot water, steam and vapor heating will appear.

The series on Rural Sewage Disposal will be developed into giving detail of actual installations.

Arrangements have been made for the introduction into Canada through Sanitary Engineer exclusively of a number of the features of the Trade Extension Bureau of the United States. This will give Canadian plumbers a service which has done more than any other one thing to put many U.S. plumbers on their feet.

The Question Box Dept. is constantly at your service with the best advice on your problems.

YOU WILL FIND MUCH BRIGHT AND HELPFUL READING IN EVERY ISSUE.

"At 9 Cents an Issue it is the Best Buy of the Year."

This is what hundreds of the best plumbers in Canada are now saying of every issue of Sanitary Engineer, and the additional service of answering enquiries which goes with a subscription.

A SUGGESTION:—

Sign the Form now—Mail it with \$2 to cover year's subscription of 24 issues and spread the expense at the rate of 9 cents an issue over the year on your books.

Seven Points of "REX" Union Superiority

- 1 "Rex" Unions are tested and guaranteed to stand 250 lbs. working pressure.
- 2 The counterbored ends prevent the first thread becoming battered and permits an easy entrance of the pipe.
- 3 They will not corrode and will withstand vibration, expansion, contraction, fluctuating pressures and other severe conditions.
- 4 The bronze to iron seat, as used in "Rex" Unions, is recognized as the best known combination of metals to be used for permanent joints and where frequent disconnecting is necessary.
- 5 The octagonal shape of the three parts permits of connections being made with an ordinary monkey wrench.
- 6 The uniform diameter of the waterway insures an unobstructed flow and thorough drainage.
- 7 "Rex" Unions can be supplied threaded to either Briggs or Whitworth Standard and can therefore be used for your export trade.

A Proof of "Rex" Union Superiority

Canadian Car & Foundry Company, Limited
Montreal, Que.

FITTINGS LIMITED, Oshawa, Ont.

Dear Sirs:—Confirming our conversation with regard to Rex Unions: as you are aware, we have recently purchased from your Company a large quantity of Rex Unions, and have found them satisfactory in every respect. They appear to have more metal in them than other Unions, and we also find them interchangeable; in fact we are very well pleased with them and intend specifying your Unions on our orders where we can consistently do so.

Yours very truly,

When Answering Advertisements Mention
SANITARY ENGINEER

Long Fire Travel and Short Coal Bills

The less up chimney heat there is, the more boiler heat there is going to be.

"Up chimney" heat means coal waste.

In the illustration you will see that the Burnham Boiler fire travel is three times back and forth on both sides of the boiler.

This means that the bulk of the heat is out of the gases before they enter the flue.

Price \$250.00. 18 in. deep, 2 ft. 6 in. wide, 4 ft. 5 in. high, fitted with steel compartment. Price \$200.00. Apply Box No. 701, Sanitary Engineer, Toronto.

The Difference in Advertising Is the Difference in Men

Of itself, advertising is little. And the differences in it are the differences which exist in men.

Just as some men are strong and virile and interesting, so is some advertising. And just as some men are ineffectual and weak and boring, so is some other advertising.

"Does it pay to advertise?" It pays those men who are keen enough students of the public to make it pay them. It pays those men who are truthful, sincere, interesting and believable.

It pays the men whose product deserves the payment, whose brains are keen enough to organize for success and judge enough of the human mind to know how to tell their story with sincerity and interest.

So when you judge advertising, judge it by how it is used and by whom—not of itself and of itself alone.

Remember, an ugly man looks just as ugly in a mirror.

SANITARY ENGINEER'S

unique circulation as proven by the A.B.C. Audit is due to our honest effort to give the retail trade the best possible service.

The Advantages

IN USING Dart unions, the unions of quality with solid Bronze to Bronze ground ball joint, is that you save energy and you increase efficiency—factors well worth while, but here are others that directly concern you.

You have no trouble or bother connecting them whether pipes are in or out of line. You will never need to think of the joint, for it will stay tight until deliberately loosened. Reconnecting is as simple as connecting the new union, for the faces of the joint cannot rust or corrode—You are guaranteed with Dart unions (see that they have our trade mark, the name "Dart" cast on them)—If you ever get a Dart that is not right send it to us and we will replace it two for one.

Vibration, contraction, expansion or corrosion will not affect them. Dart unions are made in all convenient forms.

Your jobber has them.

Dart Union Co. Ltd., Toronto

THE Royal Automatic Gas Water Heaters

The word "Service" does not mean a thing to the plumber who installs a Royal Heater.

Once this compact heater and storage tank is erected, it will carry on for years without any call for your services to adjust or repair it.

The Royal Automatic Gas Water Heater and Boiler combined gives the kind of satisfaction that prevents complaints, makes friends, builds business and puts money in the bank.

Sold only through or by plumbers.
Write for full information.

Stability

Beauty of line and the white, gleaming beauty of Vitro finish are for all to see.

But this beauty is merely incidental:—when we had made the finest tank we knew how, had given it strength, efficiency and permanence, to round out our product and make it perfect we added beauty.

Stability is the dominating characteristic of the Vitro tank. Years after the date of its installation is forgotten it will function as perfectly and shine with as white a splendor as on the day it left our factory.

It is the best selling tank on the Canadian market.

Your Jobber has them.

"Water by Wire!"

Are You Making a Bid For the Farm Trade?

Have you noticed how farmers are improving their farms?

The convenience of Hydro Power is taken advantage of in many rural districts. Farmers are using electricity to operate every type of labor-saving device. They are in the market for the Empire-Duro Water System—the compact, simple, electric pumping system that provides running water for every purpose on the farm.

The Empire sales organization is co-operating with the dealer by an intensive direct-mail campaign in the rural districts. Write to-day for full particulars of our sales plan.

Empire Brass Mfg. Co., Ltd.

London and Toronto, Canada

Empire-Duro Gasoline Engines provide power where it is not otherwise available.

We will circularize all your prospects.

As Durable as the Pyramids

THE "PUSSYFOOT"

CLOSET TANK

SUPPLIED IN THREE COLOURS

OAK
WHITE
MAHOGANY

"Pussyfoots" do best what multitudes of tanks do well

NOTE—If old King Tut were to come to life to-day and should see a "Pussyfoot" he would surely remark "What a vast improvement in closet tanks, and my! it is as silent as my tomb."

Specify "Pussyfoot" to your Jobber.

THE CANADA METAL COMPANY
LIMITED

Montreal Hamilton TORONTO Winnipeg Vancouver

You can profitably use the "A-1" On 90% of your installations

FULLY 90% of all Sanitary installations call for the ordinary washdown combination—simply because it is about the most inexpensive type of closet outfit available.

But if your client exercises economy in choosing a closet combination of relatively low price, surely you can only serve his best interests by furnishing only the best his money can buy—the "A-1" Closet and "Bellemeade Junior" Tank.

CANADIAN Solid Vitreous Ware stands pre-eminently superior as a truly sanitary material in the construction of both closet bowls and tanks. Its fine-grained, all-clay hard-burned vitreous body ensures a lifetime of unchanging service while its lustrous white surface adds beauty to any toilet room and is as easily kept clean as a china plate.

On the basis of present prices this combination affords a realization of value which cannot be challenged.

Don't Experiment

BE SURE!

Sell a Water System with a Reputation

"DAYTON" Water Supply Systems have a record of fifteen years of field service. Placed on the market when running water outside of cities was more of a dream than a reality, the "DAYTON" has had the opportunity of developing this important field of human progress.

The sale of a water system can lead to further profitable business in plumbing fixtures and supplies or it can be the source of untold "grief." The "DAYTON" is built on a design that has proven its worth in service. It has no "trick" features. It is a solid, substantial machine, built to do a certain job—and it does it, year after year. It does not have a price appeal but it costs little more than just any kind. It makes satisfied users. There is a model for every need.

Is that the kind of a water system you want to handle?

Every sale of a "DAYTON" opens up possibilities for the sale of other equipment. We have a selling plan that stimulates interest in the "DAYTON" without expense to you. Send the coupon for details and get into this profitable business.

A Generation Without Repairs

In initial cost the difference between tile pipe and that good soil pipe marked with Anthes name is but a trifle.

The Anthes Siphon is the Heart of the Disposal System

Yet too often sanitary engineers fail to advise their customers that it is criminally extravagant to lay tile pipe where soil pipe should be used; they meekly submit to the customer's clamor to save a few immediate dollars.

Anthes Soil Pipe, properly laid, will last for a generation without repairs. It is, by far, the cheapest pipe.

Anthes Foundry Limited

Toronto and Winnipeg

Manufacturers of Cast Iron Soil Pipe and Fittings

You Can Sell More Marvels

Because:

The Marvel has actually more appeals to a customer's thrift, his desire for cheap operation and the comforting side of his nature than any other heater.

The Marvel is different; it is a tank and heater combined; it is compact; it will deliver a gallon of hot water per minute; it won't get out of order—it can be had in any size.

Marvel heaters leave with the dealer a very generous profit.

Sold only by or through plumbers.

Write for all particulars.

What about those Heating Jobs?

During the past long cold winter some of your customers were not satisfied with their heating system. They suffered the intense cold through poor heating and the coal shortage.

Some of them are in the market for a new system, and will want installation this summer or fall. Sell them a hot water system which will save them coal and give them sufficient heat.

Sell them a "Daisy" boiler and "Viking" radiators, which will give you liberal profits.

Warden King, Ltd.
Montreal

Branch Office: 136 Simcoe Street, TORONTO

Put Your Tank Heater Business on a Profit-Paying Basis

The cost of merchandising RUUD Tank Water Heaters is low because installation and maintenance expense is reduced right in our factory when the heaters are built.

The RUUD is easily installed on account of the reversible detachable union manifolds. Both connections are on a straight line. Time saved on the installation means a greater net profit.

Quick inspection and repair is possible because all parts are instantly accessible and removable. Simplified construction eliminates all unnecessary parts—there are no cotter pins or set screws.

The RUUD Sells. All the forces which for over a quarter of a century have been building RUUD prestige are levers that increase your sales, your turnover and your profit.

Banner Pipeless Furnace

Costs One Quarter The Price of a Steam or Hot Water Job

There is true economy in the installation of a Banner Pipe or Pipeless Furnace.

In farm districts, particularly, this economy is regarded as a very desirable thing.

Farmers everywhere who will not even consider a steam or hot water installation are getting rid of stoves and putting in Banner Pipe or Pipeless Furnaces.

Every stove heated house in your territory is a real, live prospect for these better built furnaces that require no "service" or repairs.

Write to-day for attractive agency proposition.

Novel Series of Meetings Big Help to Plumbers of Hamilton, Ont.

Series of Five Dinners Conducted This Winter Addressed by Speakers on Topics of Current Interest—Idea Being Copied by Other Cities—Speaker at Last Meeting Makes Strong Plea for Service Among Plumbers

By Staff Representative Sanitary Engineer

AN INNOVATION which has proved very helpful to the plumbing and heating craft in the city of Hamilton, Ont., has been the conduct of a series of dinners every two or three weeks throughout the mid-winter season. The idea was originated and has been pushed to a successful development by the combined effort of a group of men including C. F. Rogers, local manager Standard Sanitary Mfg. Co., Percy A. Moore, President of the Hamilton Master Plumbers' Association; C. G. Stewart, Secretary of the association, and Wm. Newell.

The meetings have been highly successful and are not only original in form but also in the fact that they are conducted independently of any local association of any kind. The gatherings are attended by an average of approximately fifty local plumbers, this being a very high percentage of the number of plumbers located in the city. Dinner is commenced at 6 p.m. during which interest is maintained by the singing of songs and the contribution of various numbers by both local and outside talent. One chief speaker is secured for each dinner, the idea being to have an entertaining and educational talk on some subject of interest to the trade. This address is limited to conform to the schedule which is strictly adhered to throughout. The only other speakers to be heard are brief remarks from any visitors or announcements by the chairman of the results of bowling or other activities in which those present are interested. The meetings are brought to a close sharp at 8 p.m. so that any evening engagements may be kept.

Five Meetings

The series has consisted of five meetings this winter, the fourth of which was attended by Sanitary Engineer on the evening of April 11. The fifth and concluding meeting for this season will be held on May 2, when H. E. Rooke, Page Hersey, Ltd., will be the speaker. The meetings this winter to date were addressed by the following men:—

February 28—M. J. Quinn, National Equipment Co.; March 14—K. B. Allison; March 28—Messrs. Burleigh and Twaits, Mueller Mfg. Co.; April 11—Capt. Macdonald, of London, Ont. (in place of E. H. Gurney, Gurney Foundry Co.).

The tickets for the meetings were sold in series for \$5.00, being \$1.00 for each night. Next winter it is planned to elaborate on the idea with a more extended list of meetings, for it has been felt that much good has resulted from the social standpoint as well as the educational. It is expected that from sixty to seventy-five plumbers will attend the regular meetings next winter.

Mr. Rogers stated to Sanitary Engineer that the plan has been developed with the idea of social intercourse, educational betterment and in general to raise the respect for the plumbing industry in the eyes of the craft themselves and through them to influence the public. Some plans were also said to be under way for linking up with such educational effort the apprentices now undergoing a course of instruction in the city, with the idea of giving them a better appreciation of the industry with which they are identified and show them that the merchant plumbers are really interested in their welfare. It is planned to extend the functions of the organization next year through the medium of service committees which will have certain duties to perform.

Good Representation

At the meeting held on Wednesday, April 11, in the Arcade, Hamilton, Ont., Mr. Rogers announced that there was only one more meeting of the series. He expressed pleasure with the support which the meetings had been accorded, there having been 43 to 47 plumbers attend each meeting out of a total of from 60 to 65 plumbers in the city. Judging from the success which had attended the series, he thought a more extended series next winter would be justified. Some other cities were said to be much interested in the success of these meetings and it was said to be quite possible that the idea would be copied. Other wholesalers were also said to be showing much interest in the plan. Concerning plans for future gatherings, Mr. Rogers stated that the plumbers would probably be receiving invitations for motor parties to neighboring towns this summer. He was of the opinion that they might be arranged in June this year instead of waiting until midsummer or early fall as in past years.

Gordon Stewart announced the results of the bowling league, prizes to winners to be presented at the meeting on May 2nd. In group bowling P. Robb was highest with a score of 521 and A. Mellen next with 500. In the singles, J. Vickers was shown to be high man. The league standing was in the following order:—Journymen, Standard Sanitary, Master Plumbers No. 1; Crane Ltd.; Master Plumbers, No. 2; Marks Limited.

A splendid dinner was enjoyed, interspersed with many songs and other entertainment, to say nothing of the noble effort at revealing the power of mind of one L. Rogers over the mind and musical abilities of another J. R. Thompson. Captain Macdonald was introduced by L. Rogers, who referred

to the war and business record of the speaker as giving him plenty of material with which to support his address on Service.

"Service is vital to the life of every community," said Capt. Macdonald, pointing to one of the great needs of the plumbing trade in order to eliminate the impression held generally among the public that they are at the mercy of a great giant, the same giant being the plumbing trade.

"Tracing far back in history we find service of the personal kind, the service of the peasant to the overlord and so on up to the king. We can trace the direct line of service from the humble to the high. From that time on the personal aspect of service was succeeded by that which deputized others to do their bidding. A more collective body came to the front. Kings, lords and others swayed the masses. The people were subdued, with the result that different organizations banded together for protection and the advancement of their interests. Towns and countries also banded together.

"To-day we are getting back to the personal responsibility of the people themselves. Parliaments to-day are the masses united in one to express the will of the people and unless the people themselves are educated and unless they know what the needs of the people are then parliament will not be representative of public opinion. In the past many parliaments have got away from the idea of service, and as it is true of parliaments and nations so it is of individuals. Men have in the past ground the workers between the mill stones so that they got the maximum work from them at the minimum of expense, and they lived in luxury. But those conditions are disappearing. We are getting back to the time when personal service is so strong that we cannot sidestep it. Unless we get the attitude of personal service into our business we are not going to succeed. We have got to put it into our business to succeed.

"If we put shady transactions through and are unscrupulous then we may expect the community to pay us back in our own coin, but if we put into business everything that is honorable and just and extract our just reward then can we hope to be successful. We must put honesty into our business and do things in the proper spirit. The nation is merely the reflector of the integrity of its people. It is not what you get, but what you give that counts in the end."

Before the conclusion of the meeting, F. T. Holliday, advertising manager Sanitary Engineer, as one of the visitors, spoke briefly. Mr. Holliday congratulated those present for their foresight in attending such meetings for personal improvement and also the group of men who are responsible for getting the plumbers of the city to-

C. G. STEWART

Secretary of the Hamilton Master Plumbers' Association, who with C. F. Rogers, P. A. Moore and Wm. Newell, has assisted in organizing the series of meetings in Hamilton as outlined herewith.

gether in such meetings. He traced the comparatively brief trend of development in the plumbing industry, showing how recently medical authorities question-

ed the advisability of baths and other plumbing equipment. He pointed out the need for publicity and sound business administration, stating that the plumbing industry had suffered a good deal by insufficient publicity to its commendable features and too much publicity to the other side. He foresaw big possibilities through the extension throughout the country of such gatherings as are held in Hamilton.

Build Factory Addition

The Clayton & Lambert Mfg. Co., Detroit, Mich., makers of gasoline and kerosene fire pots and torches, are building an addition, 60 x 180 ft., to one of their factory buildings which will be completed about April 15th, to take care of the increasing trade.

Severs Connection With Canadian Plumbing Trade

F. C. Dannenberg, for some years calling upon the plumbing trade throughout Canada, with headquarters in Toronto, has gone to Chicago to the position of Western manager for Forged Steel Products Co., N. J.; American Tap & Die Co.; Nichols Bros., and Frank O. Wells Co., of Greenfield, Mass. He has opened branch offices and warehouse for these firms in Chicago.

No Wage Increase for Montreal Plumbers

Master Plumbers' Association of Montreal Would Not Consider Increase of Five Cents an Hour for Plumbers

MONTREAL working plumbers will receive the same wages this year as last, following the decision reached recently at a special executive meeting of the Master Plumbers' Association that they would not entertain the proposition of the working plumbers for an increase of five cents an hour for the coming season. This is true also of working conditions, especially with regard to the proposal for a separation between the work of steamfitters and plumbers.

A report was presented to the meeting by J. E. Walsh, chairman of the labor committee. This report recommended that the agreement as to wages and conditions which had been submitted to the Catholic and National Union last year should be continued during the present season, the time not being considered opportune for the increasing of building costs in any way.

The meeting, presided over by the president, George Delaney, agreed with regard to wages that the same scale which prevailed last year should continue this year, despite the desire of the men for a five-cent an hour general increase. This means a maximum rate

of 70 cents an hour for grade A men, 65 cents for grade B men, and 60 cents for grade C.

With regard to the control of apprentices learning the plumbing and steamfitting trades it was unanimously decided that this should not be a matter to be controlled by any labor union, but should be handled by the individual members of the association, as seemed to be the best interests of the industry.

An intimation had been made by one of the plumbers' unions that the plumbing and steamfitting trade should be kept entirely separate, so that plumbers could not work at steamfitting, nor steamfitters at plumbing. The master plumbers considered that the two trades were co-related, that there were plenty of handymen who do both, and that it would be a hardship to them and an additional expense to the public if any union regulations demanded two men to work on a job that could easily and properly be done by one. It was, therefore, decided that this matter should be left to the discretion of individual employers, rather than to any association ruling.

Direct Enquiries for Rural Sanitary Equipment From the Window Displays

Helps Create Favorable Impression on Mind of the Prospect, Especially Women, to See Equipment as it Appears Installed—Much Business Installing Pumps and Connecting Up Water Supply Systems for Stock Barns

I NTERESTING comments on the best methods of going after business in a small town and rural field were made to Sanitary Engineer by W. J. Boyce of Wingham, Ontario. He gave it as his opinion that his store window is by far the most effective means he has of advertising. It was he stated far more important to him than advertising in the paper which covered his immediate vicinity.

"In my opinion," said Mr. Boyce, "the display windows of any business man, especially those located in small towns, are most important and the very best means of advertising they have. I aim to keep my windows filled attractively with lines of merchandise in which the people of Wingham and district are interested. I figure that as far as my trade is concerned, that is the plumbing and heating business, every home owner or prospective home owner in either the town or the surrounding country is in-

terested in plumbing goods or fixtures that will make his home better or more attractive. Such lines as toilets, baths, pumps, pressure systems, and bath room fixtures while they do not offer a wide range from a display standpoint, may be shown continually and changed around so that the window will frequently present an entirely different appearance, and hold interest. I find that I can trace immediate inquiries and direct business to various displays that have been put in. A straight bath room display will bring in inquiries from parties whose homes are without a bath, a display of bath room fixtures will bring immediate sales of these lines and so on. I aim to keep all merchandise that is on display, either in the windows or store in the best possible condition. If it is nickel plated goods it is clean and shining. If it is bathtubs or similar lines of enamelled goods they are carefully dusted. This is not only a help in making

sales but it is a distinct factor in helping to create in the minds of prospective buyers, especially women buyers a favorable impression of my shop and service."

An Important Point

Mr. Boyce stated that his many years of experience in the plumbing and heating business have proven beyond any question of doubt that women are really the originators of the majority of requests for improvements in their homes. They have to do their work in the homes and they want running water and all the conveniences that come within the field of sanitary and heating engineers. While they have to take the matter up with their husbands, and propose what shall be done and see the matter through, and in short plan and carry out practically the whole project, they are not always, says Mr. Boyce, given the attention and consideration they really de-

(Continued on page 18)

Showing small bathroom accessories and the larger kitchen and bathroom equipment as it appears installed, is one of the important factors used by W. J. Boyce, sanitary engineer of Wingham, Ont., to influence prospects. This is particularly effective with women customers, he states.

Jerry Learns That Overhead Expense is Not a Liability Which Makes it Hard to Meet Competitors' Prices

Jerry Makes Many Excuses to a Contractor for Not Meeting Competitor's Price But Vilet Teaches Him Something About Overhead

With apologies to Ring Lardner. Written for Sanitary Engineer by MAJOR L. L. ANTHERS, Managing Director Anthes Foundry Co., Ltd., Toronto.

Tarrabonne, April 13, 1923.

Dear Friend Al:

THE flours that bloom in the spring tra la have overlooked this burg so far. But the snow is beginnin to disapeer like eye-scream at a gardin party & the eye-sickles are startin to thin out.

Takin awl in awl sines of beeaautiful spring is in the offering.

Do you remember the pome Al what ust to run like this, "In Spring a young mans fancy litely turns to love?" Well that's how I feal but I havent bin getting a hole lot of incurragement laitely.

I found another weigh in witch baseball vs. plumbing differ. You know in baseball compitition is the life of the bizness. If there aint no competing teams their aint nothing dooing & you might as well hang up yr. bats & etc. fir want of oppisition.

But in the plumbing game compitition is sumthin diferent—you mite call it by a little word that begins with h & has an e in the middle of it and ends with 2 els. You may bee floteing along on the wings of persperity & suddinly a low down compettiter creaps in and upsets the hole appel-kart. I bumped up agenst it last weak in a meen weigh & of coarse got in rong with Vilet at the saim time.

Jim Powers is a big bilder and contractor in these partz & weeve done a wraft of werk fer him. He was allus satisfide to give us our price & we allus give him a good job so their was no comebak on either side.

1 day he drifted into the offis & sez, "Sea hear Jerry did you fergit to sharp-en yr. pensil on that last job you dun fer me?"

"Wots bitin you Jim," I risponds, "wasnt it all right?"

"O theirs no kik abt. the job but you musta got yr. prises outta a airy plain."

"Wot maiks you think that?" I in-quirde not jist sure wat his gaim was.

"Well I spose you no you got a compettiter in town."

"O you meen Jack Spuds hooze opened up a woodshed behinde his hous." You

see Jack Spuds is a jernyman hoo drifted into town a couppla months ago & hoo had bin doin a few odd jobs but nothin 2 matter much. Heed bin kept busy like ourself on "blow-outs" or freeze-ups & his presents had bin moar of a help than a obstickle.

"Yep," says Jim. "Spuds tells me he coulda slised neerly a 100 off that last job you done. He wants a chanet to figger on the next job & if he can save me 100 Ime 100 in, see?"

Jim was lookin at me reeprocheful like & tho I node we hadent stung him I felt I otta say somethin.

"Howd he no he cudda saved you a 100?" I asked nonchently.

"He lookt the job over and give me his opinion of the cost."

"Well he cuddent do it fer 1 plunk less than we done it if he had hour over-hed to carry. We gotta big show-room on

the mane st. with a lotta xpensif fixtrs. into it & we have a truck & hev to keap a bookeeper & etc. to say nothin of the management & incedentials. You cant do that on wind. Bill Spuds works from his woodshed & works hisself with a cuppla helpers & hasnt no overhed 2 keep up. You dont think wee can meat compettitin like that do you?"

I expected my aruymnet woulda shone him the lite of reezon. But it dident.

"Well thats yr. funeral Jerry," he sez as he goze out the dore.

I had hardely time 2 get my 2nd wind wen a laidys voice witch I well knew, caim from the box-offis.

"You big prune," she sez, "why dont you hire a pleeceman to chace peeoples away from the stoar?"

"Why wot hev I dun now Vilet?" I sez in an inered voyce.

"The lion a tock you jest handed Jim Powers will kill this bizness quickern ennythin else. Wot do you no abt. over-hed?"

"Seein as I pays fer it I aught 2 no a little," I come back with dignerty.

"O indead," she replize with a frosty air. "Praps if I resine thattle cut down sum of yr. overhead & you can meat compitticn better. You seam 2 think yr. overhed is a liarbility."

"Now Vilet dont get ruff. I had to tell Jim Powers somethin."

"O yes I no. You had 2 tell him somethin so you told him the 1st fool stuff that cum into yer nut."

"Oh Vilet lay off," I retortured with ageny. "What would you hev dun?"

"Id a told him the truth."

"Well dident I?"

"No you dident."

"Well wot is the truth? Ime from Missouri & willin to lern!"

"In the 1st plaice," begins Vilet, "when Jim powers sez that Spuds jest lookt at the job & give his apinion that he could do it for a 100 less Powers knowed as well as ennyboddy else hooze got enny hoarse scents that reel contrackters hoo nose there bizness dont figger that weigh. He was jist givin you a rize

"The flours that blooms in the spring, tra la, have overlooked this burg so far," says Jerry.

& you start at onct to blab abt. overhed."

"Well dont overhed amt. to ennythin?"

"Of coarse it doz. Powers nose that as well as you do. But insted of capitelizing yr. chanct you begins at onct to maik baby xcuses."

"Well what wood you hev done?" I sez hoapin to corner her.

"First Ida let Mr. Powers say all he hadda say & then ida tocked 2 him like 1 bizness man 2 an-nuther. Ida told him that his own commin scents wld. tell him that bizness is not dun at cost but at a fare prophet. That heed never had no cumbak on the werk that we had dun & that he node if enny-thing went rong weed maik it rite. Powers aint the only contractr. in theeze parts & he aint the cheep-est 1 either. You no that. Wen hee puts up a bilding he puts it up rite & he charges fer dooing it rite. Wen peeples want a supstanchial bldg. they goze 2 Powers not beecaws heez cheep but beecaws they get what they pay for. Wat hev wee got a show rume for tell me that?"

"Why to let peeples no wot weeve got 2 cell," I ancens wonderin wot she was gettin at.

"Doo you think that weed do as much bizness without a show rume?"

"We shure wood knot," I sez. "That show rume hez pade fer itself thrice over—itz a regular silent sailsman."

"Good," she retortz. "Then it dont owe us nothin."

"It sure doz not," I retalyates.

"Why do we have a combination type-riter & book keeper, meanin miself—do you think Ime heer jest to look perty?"

"You can shure do that Vilet," I smiles thinkin ide change the subjek.

"Can that stuff," she snortz back. "I aint lookin fer complements. Im askin you a question. Do I hev much time to lofe?"

"You shure do not," I answers truthfully & fealin a little hert. "I no yer bizzy all the tyme makin out bills & keepin the accts. strate & watchin the collectin & the time sheats & all that."

"Wot keeps me bizzy?" she contin-yers.

gowge the publik & weeve got a repy-tation fer speed & qualitie. We can cleen up a job in a weak that ud take Spuds a month 2 doo. Even with his woodshed fasilities he cudent beet hour prises unless he wanted 2 werk fer fun. It wont taik him long to get moar fun than hee wants if he taiks on a few jobs at cost + minus."

"Well wots overhed ennyweigh?" I asts.

"Wots overhed? Why the weigh you let loose on Jim Pow-ers you aught 2 B an authority. Why do you ast a ignerent yung wooman like me?"

"Aw Vilet pull in the hooks. Youve got me plum loco. I no I aint no wizzerd at stutisticks like Blab-some & Ime willin 2 lern."

"Well overhed is nessery & incontrollable xpenditchers," she started off cam-min down a bitt. "Overhed to a bizness is just as natcheral as a roof on a hous. But if a man wants a lot of fancie tyle and gingur-bred & wether cox in plaice of honest-to-goodness ev-ery day shinguls why hes spreadin his overhed & gettin into on-nessery xpenditchers. Of course itz not

xackly the saim as a bizness but it surves as an exampel. A bizness has to pay the tacksus the investment on the showrume the incydentials of manaig-ment & etc. jewdishus advritizing & gen. servus & etc. which is rite & Propar. But wen the mgr. trize 2 put on the dogg with a car biggern the biz, cann efford & lodes up with a lot of stock & fikturs. & etc. wat he cant get rid of then heez startin on the rode to useless xpend-itchers & xtravaganzas wottl finel leed him to bankrupture rune & finel dis-sallusion."

"Well, that's your funeral, Jerry," he says as he goze out the dore.

"Why on acct. the weigh the bizness has groan."

"Verry well why do you hev to grouce abt. yer overhed?"

"I aint groucin," I pleeds, "I aint sayin a werd."

"But you did to Jim Powers. Yer like the old dame in the Pine St. castel whats alwys complainin wot a respon-sabilitie it is 2 hev so much money & wot a disadventaige it is 2 B rich. Why the size of hour bizness has cut down the overhead 2 a minimum. Wee bye in quantitys & wee bye rite. We dont

"Hot stuff Vilet," I commence as I likes 2 here her cut loose on reel dictinary verds.

"An ettractif plaice of bizness with the frills cutt off were peeples gets there moneys werth & humane treetment is allus an assit. Sure theris allus someone lookin fer something cheep & turns you down & they uzully gets somethin cheep & finds out laiter on that theys pade fer wat theys got & theys got wot theys pade fer. Prompt & perlite servus & honnest deeling never yet put nobody outta bizness so long as he had a hed fer bizness & didnt loose it wen somebody trize to pull a bluff on him. The propr kind of overhed maiks fer stabelity & good reppytation wile the rong kind leeds to suspishion & losses. The man hoo startz in a woodshed to evoid overhed & staiz in a woodshed fer the saim perpus uzully dize in a woodshed. Men ny a good man hoo hez a big & respeckable bizness to-day started in a woodshed but that was onlie threw fource of cicumstances. But that sort of feller maid up hiz mind to get outta the woodshed as soon as he cld. efford it. And this is the kernel of the hole argyment—the man hoo startz in the woodshed & had the ambit. & hoarse scents to get sumwhairs aint the man hoos goin arnd. & doin a job jist fer his waiges. You doant ½ to werk in a woodshed 2 B a prise-cutter & you doant hev 2 B a prise-cutter 2 werk in a woodshed."

I guess my ize as well as my tung was hangin out fer Vilet beegins smilin at me.

"Gee Vilet," I commence in admerashun, "were jew get all that?"

"By keepin my ize open & readin common scents insted of trash."

"You shure puts new lites on the sub-jek," I retortz.

"Thats why you dont hev 2 stall wen fellers like Jim Powers trize 2 taike a rize outta you. He nose as well as I do that Spuds is a woodshed plumber with a woodshed outlook. That kind of a feller cums & goze & they uzelly goze as oftin as they cums. If Spuds hed gone 2 Powers & jist sez give me a chanct 2 figger on yr. next job without nockin hour ferm at the saim time & then puts in a figger thats reezonible then heed B werth recognizen as a compettyter. But its the feller hoo goze arnd. tellin peeples theys bin stung on a job that never doz theihselves enny good nor the traid neeth-er. The man hoo is allus yellin 'shark' is uzually a sucker hisself."

"Vilet," I sez sereusly, "you hev giv mee mutch fude fer reflectn. Yer ded rite. You allus are."

Vilet smild agen.

I tell you Al. Vilets awl rite.

Yrs. till ferther,

JERRY.

DIRECT ENQUIRY

(Continued from page 15)

serve. He finds it excellent business to make suggestions and explain the reasons why certain installations should be

made when women bring their husbands to his shop to talk over improvements. Almost invariably he says the women back him up in every way and are a big factor in finally closing up the contract which needs hubby's O. K.

A Big Field

There is a big field Mr. Boyce believes for every sanitary and heating engineer in talking about and demonstrating on every possible occasion the importance of installing proper heating and proper sanitary conveniences in the home. That it is a profitable field he is proving constantly. One of the main things is to know your territory, he says, who to approach and how to approach them. Once a party gets started making improvements in his home and sees how satisfactory they are, it is usually easy to "sell" him on other things he needs. Carefully planned follow up work in such cases brings big and profitable results.

A BUSINESS OPPORTUNITY FOR PLUMBERS

A neat, white, bubbling drinking fountain has been installed in the waiting room of the G. T. R. station at Acton, Ont. New plumbing and toilet fixtures have replaced the former sets in both the ladies' and gentlemen's toilets. Further improvements will be made shortly. How about the other railway stations where poor facilities now exist?

Indirectly it brings other business, for the satisfied home owner is not slow to tell others in his neighborhood how well pleased he is with his new furnace, or his new bath room. Here also the women again play an important part. They are more proud of their homes than ever when modern conveniences are installed and urge other women to improve their homes also.

Believes in Co-operation

Mr. Boyce is a thorough believer in co-operation, not only among the men in the sanitary and heating business but among all business men in a community. What helps one helps all, he says, and what hurts one hurts all. In accordance with these views he invariably co-operates in such movements as the annual Dollar Day, doing his share in the special advertising that is done and dressing his window and store for the occasion. If the merchants are planning anything special and call a meeting to discuss the matter, Mr. Boyce is always in attendance and takes an active part. In doing this he believes he is

not only helping himself but the entire community.

Collections Important

Under present day business conditions he regards collections as a most important matter. In most of the small towns and in centers where a considerable portion of the trade is done with farmers it is difficult to avoid granting a certain amount of credit. As a result of these conditions it is extremely important to see to it that money required in the business is gotten in in good time. By sending out regular statements and following these up carefully but tactfully he says he gets through with little trouble and practically no losses. Sometimes extreme care is necessary to avoid giving offence to a good customer but it can always be managed, Mr. Boyce says.

In addition to the big field open in providing improvements in the homes, Mr. Boyce says there is a great deal of profitable business to be had in installing pumps and connecting up water supply systems for stock barns. In many cases the farmer will purchase a gasoline engine to furnish power and then call on Mr. Boyce to look after the piping to the stables, etc. Contracts of this kind run into hundreds of dollars worth of work each season.

In connection with the sale of bath-room fixtures, Mr. Boyce finds it pays well to have a continuous display in his store. Right up near the front door he has placed a large show case of modern design and very attractive. In it are shown bath room fixtures of all kinds and prices. The display case has paid for itself many times over in sales, Mr. Boyce states, not to mention the time saved in keeping the merchandise dust free. He finds it very profitable to include bath room fixtures as often as possible in his window displays. Invariably he says some inquiries result and if what is wanted does not happen to be shown in the window he can always supply it from the display case.

NEW WATER SUPPLY SYSTEM FOR BELLEVILLE

Belleville, Ont.—A special committee appointed to consider the report of Gore, Nasmith and Storey on the proposed improvement to present water works system beg to offer the following resolution which was unanimously adopted:

"That a new intake pipe, 30 inches in diameter, complete with suction wells for a filter system together with the necessary buildings for housing wells and pumps and one high lift gasoline driver pump be installed and constructed as early as possible and that Messrs. Gore, Nasmith and Storey be engaged to prepare plans, specifications in this connection with the above mentioned work."

In answer to an enquiry, Ald. H. Thompson said the expense would be in the vicinity of \$100,000.

Steam, Vapor and Water Heating

Motive Power First Necessary—What is a B.T.U.?—How is it Measured—Why Do We Have to Burn, or Consume Fuel?—Where Do We Lose Fuel Energy?

Written specially for Sanitary Engineer by EDWIN NEWSOME, Consulting Engineer
(Second Article of Series)

IN A former instalment of the above named subject the readers were told in story form of some of the great strides made in the service of heating; only the high spots were touched upon. And a little of the history in connection with the measuring of heat by the Fahrenheit thermometer, was referred to. The readers will now be given some ideas as to what heat is in such forms as relate to the heating of buildings.

To make this subject, the science of heating, a little more interesting, one requires to be shown a few simple, yet highly scientific experiments, which, in themselves do not appear to have much relationship to the heating of buildings. For example, to know how low temperatures are procured is just as necessary to the sanitary and heating engineer as to know how high temperatures are produced.

The writer conducted just a few of these simple experiments in his early days and found one in particular of value in actual practice many times soon after reaching this country. For instance, a number of returns to a steam heating system had frozen. To keep those frozen that had not burst, meant that several of these returns could be repaired without shutting down the plant. The art of creating frost by the use of snow and salt, and packing same around the part to be kept closed off, is very simple. Placing snow and salt in a cup, standing the cup in a saucer, placing the two on a stove not too hot, mixing the snow and salt, would freeze the water in the saucer in spite of the heat of the stove.

Freezing the Pipe

Then again, another example, using snow and salt as ingredients, supposing a water service is frozen beyond the stop cock and a new stop cock must be wiped on, by freezing the pipe in the

manner described, the work can be done in case the water service cannot be closed off.

And, just as extreme cold is a form of energy, so is heat. Heat causes every substance to expand, just as cold, extreme cold, causes substances to contract up to a point, then even cold causes, say, water to expand into ice. This action, whether expansion or contraction, is power-motive, active power. To prove this, water expanded by heat will form steam, and the pressure generated will operate engines, or will burst boilers or other containers.

Extreme cold will freeze water, and thus frozen if confined will burst the article in which the water is frozen. Some time after the civil war in the U. S. A. a great number of bombs (unexploded) had to be destroyed. A story is told that no one would buy them because of the danger from explosion likely to occur in destroying them. The story goes on to tell how a negro bought them, took out the fuse plug, filled the bombs with water, saturating the powder, plugged up the opening, and just waited for a frosty day. The frosty day came along and destroyed the bombs.

What Heat Loss

Now, when a heating engineer takes upon himself to instal a heating system in a building, there are a few things he must know, even before he can take the first step. He must know what heat loss is to be arranged for, by knowing what heat loss certain constructions will have to be allowed for.

For example, a brick veneered house, well built with tight air spaces, with double windows, well-fitted windows, and few, if any, openings not controllable will have one heat loss; a poorly erected building of the same kind

would require a greater amount of heating than the former.

A solid brick house without air spaces would not be as warm a house as one with air-tight air spaces, and so on all along the line. And it is the amount of heat lost which determines the size of a heating system. The climate conditions too, have to be given a lot of consideration, as well as the height above sea level.

Water boils at 212 deg. Fahr. at sea level, but if a building was situated several thousands of feet above sea level, and the climate was cold, a very much different size of boiler and amount of square feet of radiation would be needed.

As a matter of fact, when a building is erected, what has been done? Why simply so much atmospheric space has been enclosed. Very well; the lowest temperature, say, is zero, then, according to the type, style, wall space, glass surface and other conditions, a certain heat loss would have to be provided for plus the required temperature in the building above zero to, say, 70 deg. Fahr. The question now is, how can we arrive at the heat loss of a building? We must have some basis upon which to arrive at this loss.

Heat Loss From Buildings

Thousands of experiments have been made to arrive at a decision as to the heat loss through the walls of buildings, and, according to the material used in the various kinds of structure, depends largely what the heat loss will be. All walls are to a certain extent porous, the most tight walls being those constructed with as nearly an air-tight space between the inner and outer wall, the air acting as an insulator.

It is stated that even in the very best,

It Requires One Inch Of Water To Make One Foot Of Steam, Atmospheric Pressure Both 212° Fahr.

The Candle Will Soon Cease To Burn There Being No Fresh Air Supply To Assist Combustion

By Inserting Piece Of Card As Shown Above, The Candle Will Continue To Burn Brightly

Illustrating How Application Of Heat To Water Creates Circulation.

or shall we say, the most air tight wall, the air in a building will change once every hour when all doors and windows are kept closed. But to better understand the heat loss in buildings, one should study the conditions set up by the laws of cooling.

Three Ways of Transmission

For example, a body is cooled by heat being transmitted from one substance to another in three different ways, viz:—

1. By Conduction. 2. By Radiation. 3. By Convection.

1. Conduction.—If one end of an iron bar is placed in a bright red fire and left there for a short time, when it comes to be removed, the other end of the iron bar furthest from the fire also feels warm. This is caused by the heat being transferred from one particle to another, while the particles themselves still retain the same position. This is called "heating by conduction." Most metals conduct heat rapidly, but such heating takes place very slowly through liquids and gases. That is why the science of conduction is not applied to heating of buildings.

2. Radiation.—If the iron bar is now withdrawn from the fire and is held a few inches from the hand, the red hot bar will cause a sensation of heat to be felt; this is called "radiation," and is produced by the heat being transferred, or passing from the iron through the air to the hand. The heat sensation felt when passing by a radiator, or a fire or any other heated body is called radiation. Another example of radiation is that warmth experienced from the rays of the sun.

3. Convection is the method applied heating liquid or gases. If heat is applied to the bottom of a flask containing fluid, the bottom layers of the fluid expand, and therefore become lighter and are forced to the top of the vessel by the heavier particles from the top descending. In this manner continuous currents are caused in the liquid contained in the flask, and the heat is transferred from the lighter particles of fluid as they rise through the colder portions to the top of the flask. Convection does not occur in solids, as their particles are stationary.

Radiation as Applied to Heating Buildings

The fact that radiation is often referred to by heating engineers as some form of radiators would not, however, mislead a practical man. We are often heard to say "What kind of radiation is going into the building?" This query referred to the type of radiators. Now, what is meant, or rather, what constitutes one square foot of radiation? In figuring radiation, one is apt to say, "Well, I will allow 7 per cent. radiation in this building," and then when the figures, we will say, are 9,000, what does this 9,000 mean—9,000 what? because before arriving at the final amount of square feet of radiation, this 9,000 must be divided by 3, viz:—3,000,

which would be 3,000 square feet of radiation.

If 3,000 square feet of radiation is required to heat a building and 7 per cent. is the allowance, then the size of the building, or rather, the area to be heated, would be 128,572 feet. But why divide the 9,000 by three? Simply because all heating surface is first based upon one inch pipe and the 9,000 figures would mean 9,000 lineal feet of 1 inch pipe, and three lineal feet of 1 inch pipe equals one square foot of heating surface. This is further explained in this manner:

If we were to take three lineal feet of one web pipe and open it out flat at the weld, we would have a piece of sheet iron three feet long by four inches wide, viz:—one square foot of metal. This being so, if we had this same surface in the shape of a pipe and either hot water or steam therein, the pipe could be said to be one square foot of hot water or steam heating surface.

The amount of heat given off any heating surface largely depends upon the difference in temperature of the substances or bodies, such as metal or space through which the heat must pass. Suppose for example that the temperature outside a building is 59 degrees F., and inside it is 60 degrees, and let us assume that a radiator is filled with water at 60 degrees. Very little heat will pass from the radiator. But, if there is say, a difference of 25 to 30 degrees between the outside and inside, outside being the lowest, the radiator will soon cool off.

Therefore, when figuring the amount of radiation required to heat a building, the heat loss must be arrived at by finding out first the cubical contents of the building, the kind of walls, the difference between the maximum temperature required inside, the minimum temperature outside, also the area of glass, exposed walls, and number of doors.

Humidity

Few heating engineers to date are paying sufficient attention to making provisions for furnishing moist air in our buildings, particularly residences. Large buildings, it is true, when heated by a fan system may be furnished with air that is not real dry, because of the fact that many fan, or what is better known as indirect systems, are equipped with air washing devices, and the air thus washed is somewhat saturated with moisture.

The writer has given many years of study to the question of humidity in the homes, and as a result of two years' actual test can assert quite clearly that a house heated to 62 degrees is quite comfortable when the wet bulb is registering 56, which is a common condition when a proper vaporizer is provided, which was the case in the home of the writer.

It is hard to realize that in an ordinary eight-roomed home, as high as 8

gallons of water should be vaporized in 24 hours when the temperature outside stands at about zero, when such a quantity is vaporized, and the dry bulb registers 62, with wet bulb at 56, the air feels far more invigorating as well as comfortable than dry air at 70 to 72 degrees, and it would be safe to say that if the health authorities of the various provinces would lend their assistance in bringing into force a heating, ventilating and humidifying law, that tuberculosis would soon be a disease of the past, coughs, colds and many lung troubles are directly caused by improperly heated and ventilated homes.

A Few Simple Experiments

If it were convenient to place one cubic inch of water in a container and evaporate it in an open vessel one cubic foot square, a visible illustration would be procured that would show just how much steam is required to make one cubic inch of condensation, or in other words, one cubic inch of water being evaporated to steam, will make one cubic foot of steam at atmospheric pressure. Such steam would be known as saturated steam. The fact that both the water and the steam is 212 degrees illustrates the presence of latent heat in the water. The readers will easily realize the importance of having all condensation return back to the boiler, no matter for what purpose the steam is used. Because of the fact that the hotter water can be returned to the boiler, the less quantity of fuel is required to turn the condensation back to steam. The action taking place, viz:—of steam turning back to water is "Radiation." See Fig 1.

If the reader wishes to conduct a few simple, as well as convincing experiments, some of them referred to in this series of articles will not only prove interesting, but valuable as well. Fig. 2, while more of an experiment relative to combustion, still has a little bearing upon our studies. For example, no matter how well a system of piping is laid out, and installed, the air must have free access to the open, so that (in hot water heating) perfect circulation is assured. The same with steam heating systems, all air must be eliminated.

While Fig. 3 is very similar to Fig. 2, except that a card being inserted into the top of the lamp glass, a division is made, and strange to say, the air will actually pass in a downward direction on one side of the card, and in an upward direction on the other side of the card. This novel experiment, however, illustrates what has been the experience of the writer several times.

Faulty Chimneys

Buildings have been remodelled, two chimneys broken open at the foot and a larger smoke pipe put into the double chimney, and no matter what was done, one opening would draw slightly while an actual down draft was found in the

Questions and Answers Regarding Plumbing and Heating Practice

Natural Gas Heater and Kitchen Range on Range Boiler

Editor, The Sanitary Engineer,—

In a recent issue of your paper, you described a very simple way to connect a force and lift pump to a range boiler in the kitchen of a farm home. This is one of the most useful little suggestions I have seen for some time. I am firmly convinced that if once a farmer got this convenience in the kitchen, it would mean a forerunner of the complete bathroom. Where I find it rather hard to sell a whole equipment I am certainly going to sell as a starter the outfit you described.

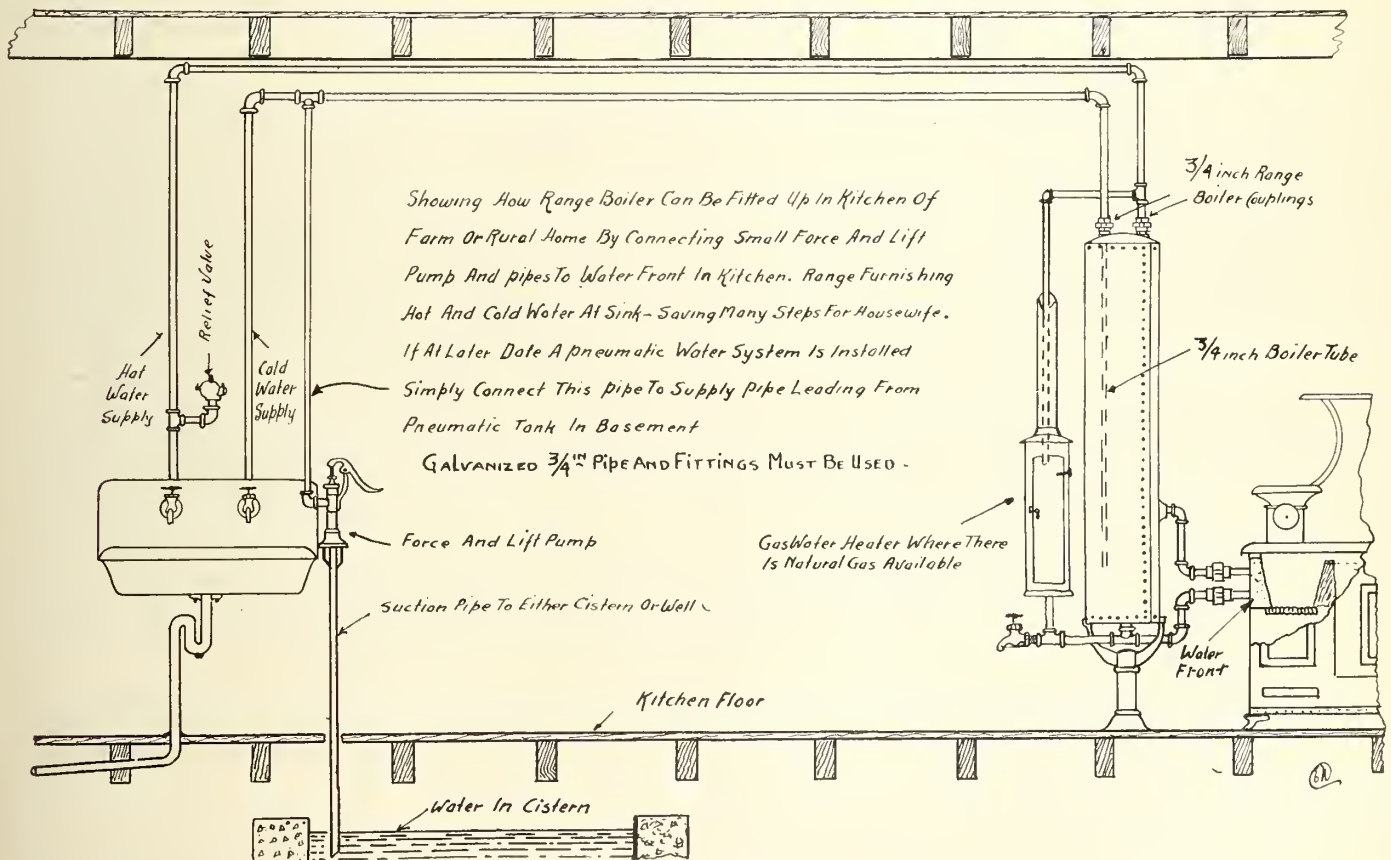

In our district almost every house in the village has natural gas. We have no water works, or sewage disposal systems. What I would like to know is, can a gas water heater be connected up along side of the range boiler as well as have the kitchen range fitted as shown in your previous article? If it can and it is not asking too much I would like to see how it is done. I am

one of your new subscribers and so far find the Sanitary Engineer both valuable as well as interesting.—A.N.S., Toronto.

Answer.—In the first place we are pleased to find that New Subscriber is finding the paper valuable. Next to answering the question. Where there is a supply of natural gas available, the usual gas connections of course, have to be made, and in addition to those, the water connections to the range boiler can be made as shown in the accompanying drawing. If however, there is lots of room between the kitchen range and the range boiler, the bottom pipe from the gas water heater may be connected in to the bottom pipe leading from the kitchen range to the boiler, and the top pipe from the gas water heater connected to the top hot water supply as shown, and as close to the boiler as possible.

When making this connection it is just as well to use a tee $1 \times \frac{3}{4} \times \frac{3}{4}$, with a one-inch close nipple into the boiler, then use a union coupling at the top of the tee. All, or at least all reliable gas water heaters have union couplings fitted to them and these can be used in place of extra unions. There is one care to be taken and that is that the piping must be perfectly in line when using the gas water heater couplings in the way suggested.

In installing gas water heaters, no matter whether natural or artificial gas is used, a well fitting flue and set of pipes must always be connected up to a good flue. It is quite in order to have a key or damper in the pipe, so as not to permit the chimney to draw too much of the heat away. Most of these small check dampers have a couple of holes in same, so that the flue pipe cannot be entirely cut off. A great deal of heat can be saved if the range boiler is covered with a regular asbestos jacket. These can be procured from the regular supply houses.

Patterns for Cornice Miters of Different Angles

Written for Sanitary Engineer by O. W. Kothe, Principal, St. Louis
Technical Institute, St. Louis, Missouri

THE making of cornice miters and gutter miters is much the same as elbow angles. Our sketch in this case shows a cornice running around the top of a building which has 45 degree miters and also a square miter, with a bay window construction containing considerable metal work below it. At "W" we show the method of treating an angle which we will say is M-N-O. Set dividers to M as center and any radius, strike arcs as at a and b. Then reset to another radius, preferably greater, and using a and b as centers, strike and cross arcs in point X. Then through N draw a line at X-N, extending it, which makes a true miter line for both parts of the angle.

At our working drawing elevation we have the profile of cornice which we may say represents the bay window crown mould. Draw the design as shown and divide all curves in any number of equal parts, numbering points and bends as shown. Now in plan the angle is B-D-E and where D-C is the miter which is established the same as is explained at "W." Observe the wall line E-F produces a butt miter. So from each point in the profile of elevation, drop lines into plan to the miter C-B and from here extend them to the wall line E-F.

To set out the pattern for front "A" pick the girth from elevation as from 1 to 13 and set as 1-13 in pattern. From each point drop stretchout lines and then from each point in miter C-D extend lines over to intersect those of corresponding numbers and that will give you the miter cut as shown in pattern "A." The miter cut for the angle in pattern "B" is the same and can be marked direct from the pattern "A." So pick the girth from the elevation detail and set off as 1-13 in pattern "B" and develop as shown, which will give the miters desired.

Observe the elevation has an altitude of 2-13, while it only has a projection of A-B in plan, and by working it in this way we make returns. The pattern for the roof of window is comparatively simple, as it can be usually made in several pieces and measured direct from the roof and needs hardly any development.

STEAM, VAPOR AND WATER HEATING

(Continued from page 20)

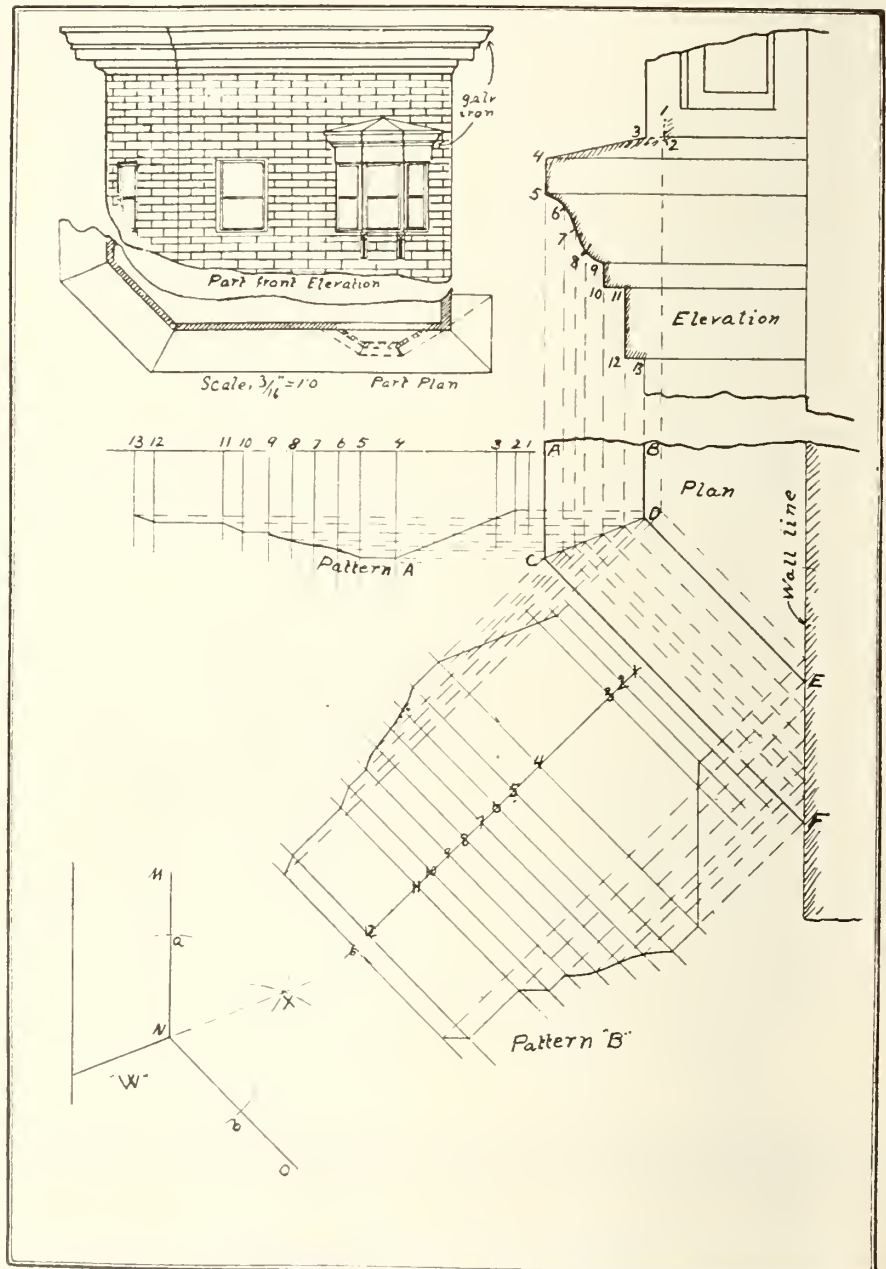

other. When such a condition arises, there is no other remedy but to cut out the division between the two and make one large chimney. The trouble caused by the troublesome division is clearly explained by the illustration, Fig. 3.

The basis of all hot water heating is that heat is first applied in some way or other to a body of water, and in all cases such water must be enclosed in pipes and fittings all in true circuit with the heater furnace or boiler, or whatever medium used that will transmit heat to said water.

Before water will circulate it must be made lighter by heating, (see Fig. 4), lighter meaning that that portion of water in the furnace must be lighter or of a higher specific gravity than cold water. The action of heating water, therefore, is the transferring of a portion of the products of combustion to

water, thus creating action, energy in the water, and let it be stated that much fuel is consumed before any apparent heating result is procured, and, when a body of water has been heated, water being a poor conductor of heat, it retains the heat for a considerable period of time. Such a condition which is quite natural, makes hot water heating sometimes very undesirable, yet at the same time, when a constant heat is required, and a hot water heating system has been gotten thoroughly under way, the building is not likely to cool off if the fire goes down.

Helps of National Trade Extension Bureau Reproduced in Sanitary Engineer by Special Permission and Arrangement

THIS will introduce to the Canadian plumbing and heating industry, the helps of the National Trade Extension Bureau which are thus made available in Canada through a special arrangement concluded by Sanitary Engineer, Plumber and Steamfitter of Canada. The details of this unique arrangement were outlined fully in the last issue, and the service makes its bow in the succeeding pages.

THIS important service will include suggestions for window displays of plumbing and heating equipment, with full details given by which any handy man can complete them. These window display suggestions do not involve any expensive material and can be arranged in a short time by following the directions given.

THESE window displays will treat with a variety of subjects, each carrying a direct seasonable appeal and linking up with "Bath a Day," "Heat by Radiators," "A Bath in Every Home," and other such campaigns which are conducted throughout Canada and the United States during the year.

ANOTHER important branch of the service is the advertising copy suggestions as appearing on the following pages. Each of these is illustrated with attractive cuts and these may be secured from Sanitary Engineer at low cost as quoted in catalog. It is the intention of this department to help raise the standard of advertising done by plumbers and heating engineers and thus make such advertising more effective. Send to Sanitary Engineer, 143 University Ave., Toronto, for catalog illustrating electros available with prices.

A BIG list of other illustrations are on hand with electros ready to be forwarded to you. The illustrations shown on these pages are but samples of the extensive service available.

COLLECTION letters, articles on office and shop administration, training of apprentices, etc., will also appear on this section from time to time.

WATCH for this section in each issue of Sanitary Engineer. You will find many timely helps for all branches of your business.

Advertising Suggestions for April

Protect health

by having a modern, sanitary bathroom in your home. Bodily cleanliness is essential to health. Every member of the family is benefited when there are adequate bathing and toilet facilities in the home.

Frequent bathing

is a safe, reliable tonic. It strengthens the body against disease. It is difficult for sickness to attack a body protected by cleanliness.

Comfort, convenience and economy are assured when we install the plumbing fixtures. Property value is increased by far more than the cost! Visit our store; see our display.

Address

HOW TO ORDER advertising material

Advertisements in each issue will form a complete month to month advertising campaign for your use.

These are only a few of the electros available in this service. Complete catalog of all illustrations available to date will be mailed on request.

The catalog gives serial numbers on each illustration and the price is quoted. Prices range from 30 cents to \$1.00 for electros according to size.

In ordering from catalog write plainly the serial number of the illustration and send remittance to cover the order in order to save cost by avoiding book-keeping expense.

Teaching healthy habits

Children-

quickly learn lasting health-habits in the home provided with proper sanitary plumbing.

Cleanliness protects health, lengthens life and increases bodily vigor. There should be a bath in every home; large households need two or more. See our display of modern bathroom fixtures.

See our display of modern bathroom fixtures; ask for booklet.

YOUR NAME HERE

Two Timely Window Displays

WINDOW display on the left is an offering of the conventional bathroom display with a humanizing touch contributed to it.

Place in your window a high grade three-piece bathroom outfit in a manner to display the fixtures to the best possible advantage. Be sure to include a built-in shower and a shower curtain.

Borrow from some of your merchant neighbors, the negligee robe, hose and slippers, also the bath mat, which are

shown in our picture. Make use of these in a manner similar to the one shown in the photograph.

By leaving the shower curtain drawn, and exhibiting these articles of intimate feminine apparel in this way, a great deal of what would otherwise be a very stiff appearance, is removed. This little touch in this window carries suggestion of actual human occupancy to relieve the severity of a mere exhibit of fixtures.

It would be well to use only one dis-

play card in this window directing attention to the idea that there should be a bath in every home and quoting a price on the fixtures exhibited.

Window display on the right is one that will excite a great deal of attention and serve to advertise your store very effectively as a place where the bath in every home question can be easily solved.

For this display, a false floor should be built in your window commencing

Claims Loss of at Least \$80,000,000 to Manufacturers, Wholesalers and Retailers From Government's Levy on Sales

President of the National Drug and Chemical Co. Declares Sales Tax Has Not Been Passed On As Intended—Suggests Another Plan of Applying Tax—Suggestion Submitted to Finance Minister

Address delivered before the Executive Council of the Canadian Manufacturers' Association by CHARLES W. TINLING, President and General Manager of the National Drug & Chemical Company of Canada, Limited.

Editor's Note:—The question of the sales tax and its application is one of the liveliest subjects before Canadian business men to-day. Interest in the subject is not confined to any one branch of the trade. Manufacturers, wholesalers and retailers are equally interested in the sales tax. Many deputations have visited Ottawa in an endeavor to have changes made in the mode of operation, and it is rumored that some changes at least will be announced in the budget of the Finance Minister, which will be brought down in the near future.

The accompanying article is an address delivered before the Canadian Manufacturers' Association by Charles W. Tinling, President and General Manager of the National Drug and Chemical Co. of Canada. The address is reproduced in full, because many manufacturers attending the meeting stated that they would like to secure printed copies in order to give close study to this important subject. The article will prove of great interest to all branches of the trade and Sanitary Engineer will welcome further suggestions or contributions on the subject.

MR. TINLING'S address follows:

This address shows:

(1) That contrary to the intention of the government and to the wording of the Sales Tax Act, all the Sales Tax paid on an article cannot be and is not passed on to be paid by the public who are the ultimate consumers.

(2) That because of the wording and the operating of the Act some manufacturers and the majority of the wholesale and retail trade have been forced to absorb the greater part and in many instances the whole of the Sales Tax which has entailed losses aggregating, it is estimated, to about \$80,000,000 for these three branches of the trade.

(3) Details of the suggestion submitted to the Honourable Minister of Finance whereby the three branches of the trade would be put in a position to pass on the Sales Tax to the public or ultimate consumer, thus avoiding further loss for the trade, and likewise producing additional Income Tax for the government.

(4) Showing that the proposed plan, while not increasing the price of the goods to the public, will yet provide the government with many millions additional revenue.

Unable to Pass on the Tax

The intention of the government when the Sales Tax Act was passed in 1920 and in the amendments, was beyond question that the total sales taxes should be passed on and paid by the public, who are the ultimate consumers, as evidenced by the following words in Section 19 BBB:

"But such a tax must not be included in the manufac-

turers', producers' or wholesalers' costs on which profit is calculated."

These words can only mean that the government expected and intended that the price at which goods would be sold by each seller would include all previous sales tax paid on such goods.

The operation of the Sales Tax, however, has in the majority of instances, resulted in certain handlers of the goods being unable to pass on the tax, with the result that such section became losers by the tax they could not pass on, and consequently were having to pay an unjust taxation.

At the present time the three classes of trade, viz., the manufacturers, the wholesalers and the retailers, may be divided into camps. One camp consisting of those manufacturers who are passing on the entire tax to the next buyer, and those wholesalers who have been able to get the manufacturers to make an allowance equal to the sales tax that has to be charged on the invoice, and those few retailers who have been able to raise the retail selling price of the goods and thus collect the sales tax from the public. The number in this camp is small as compared to the number in the other camp.

The other camp consists of those manufacturers who are absorbing part or the whole of the sales tax instead of charging it forward, those wholesalers who are unable to pass on the whole or part of the sales taxes they are paying, and those retailers who are unable to pass on the sales tax but have to sell their goods at prices which do not include the Sales Tax. The number in this second camp is very large.

The following table shows the rate of sales tax in force in the years 1920, 1921 and 1922:

	1920	1921	1922	Increase
Tax on Sales by manufacturers or producers to wholesalers or jobbers...	1%	1½%	2¼%	125%
Tax on Sales by manufacturers or producers to retailers or consumers...	2%	3%	4½%	125%
Sales Tax on importations by manufacturers, wholesalers or jobbers.....	1%	2½%	3¾%	275%
Sales Tax on importations by Retailers or Consumers	2%	4%	6%	200%

Revenue From the Sales Tax

While the above rates of taxation may individually appear low yet the pyramiding of the tax on the same goods passing through various handlers means that by the time the goods reach the public a revenue has been paid to the government of not less than 12%, as shown on Table No. 2, on the value of the raw material. In many instances if the goods pass through more than three hands then the rate becomes higher.

The revenue collected by the government from sales tax was:

In the period ended 31st March, 1921.....38 million dollars
In the fiscal year ended 31st March, 1922....61 million dollars
Est. in the period ended 31st March, 1923..90 million dollars

The number who have been unable to pass on or absorb the tax has not decreased but as a consequence of the taxation the burden has been getting steadily heavier until it has reached a point that is really unbearable.

Of the 189 million dollars (\$189,000,000) collected from the sales tax a liberal estimate is that 40 million dollars has been

paid by the manufacturers as sales tax on their purchases. Only a small proportion of this forty millions has not been passed on by the manufacturers in the price of their products. This leaves 149 million dollars that has been paid to the government by way of sales tax by the wholesale and retail trade of this country. The question is: What part of this 149 million dollars has been lost to the wholesale and retail trade because they have been unable through the wording of the Act and the force of conditions to pass on to the public as intended by the government?

It is not known how many wholesalers of every kind are carrying on business in Canada but the number is quite large. An official letter from the Retail Merchants' Association of Canada states that their lists show that there are 180,000 of all classes of retail merchants in Canada. The question is: What is the average loss per retail store through absorption of the sales tax?

Investigation by thirty-four retail drug stores situated in Montreal, Toronto, Hamilton and London, show that the sales tax cost each of these stores in the year 1922 an average of \$816.73 per store. If you put the average loss made by each retail store in Canada in 1922 at the absurdly low rate of \$125 per store that means that in the year 1922 the retail trade of Canada lost, because they were unable to pass on the sales tax, a sum of at least 22½ million dollars.

It is known that several wholesalers in the year 1922 lost by forced absorption of sales tax in one instance over \$45,000, and in the other instance over \$75,000. Some idea therefore can be formed of what the present sales tax is losing to the wholesale trade of Canada.

It is safe to say that of the remaining 149 millions collected by the government since the 1st May, '20, that from 60 to 70 million dollars has been absorbed and lost to the wholesale and retail trade of all kinds in Canada and to this must be added the amount that has been absorbed by some manufacturers and consequently lost to them.

How the Tax Has Worked Out

It is therefore fair to say that because of the wording of the Act and business conditions that certain manufacturers and the wholesale and retail trade have lost by way of taxation at least 80 million dollars while other manufacturers and certain wholesalers have been getting off scot-free of sales tax because the character of the merchandise they sell enabled them to pass on the tax.

Estimated division of sales tax collected:

Estimated collected from manufacturers...	40 million dollars
Estimated collected from wholesale and retail trade	149 million dollars
Total tax collected	189 million dollars

Estimated loss made by certain manufacturers because of impossibility to pass on the sales tax	10 million dollars
--	--------------------

Estimated loss made by wholesale and retail trade because of impossibility to pass on tax	70 million dollars
---	--------------------

Estimated loss to the three trades	80 million dollars
Estimated loss to government through loss of income tax on this amount.....	\$8,400,000

The foregoing shows:

1st. The present Sales Tax Act has resulted in what it was never intended to be, viz., class legislation, and is not doing justice to a large portion of the trade.

2nd. The result of the Sales Tax Act is that a very large section of the retail and wholesale trade is being weakened financially through the taxation.

3rd. Because of the loss incurred through the Sales Tax Act by the retail and wholesale trade and part of the manufacturers, their net profits have been reduced by the amount of the taxes they have been forced to pay and consequently the government has lost the income tax that it would have derived had the retail and wholesale trade and some manufacturers been able to pass on the sales tax.

In view of the fact that a very large proportion of the government's revenue of all kinds is collected through the man-

ufacturers, the wholesalers and the retailers, it is clearly to the interest of the government and the country that these three sections of the trade should be kept in the strongest financial position.

Everyone recognizes that the government must have revenue and everyone is prepared to pay his share of taxation and it is therefore but a matter of justice that the levying and collecting of the sales tax should be so arranged that it will be passed on to the public or ultimate consumer and the present class legislation removed.

The matter has therefore reached the point where certain manufacturers, the majority of wholesalers and the retail trade are taking active steps to try and get a change made so the original intention of the government can be carried out, viz., that the sales taxes should be paid by the ultimate consumer, viz., the public, but on the other hand there are certain manufacturers and wholesalers who are willing to see the present conditions continue because they suffer no injury from the present system.

It has therefore been suggested to the Honourable Minister of Finance that the sales tax should be abolished and in its place a special excise tax collected at the "fountain head," viz., at the customs on importations by all others than licensed manufacturers and on the sales of all manufacturers other than those to licensed manufacturers. Thus licensed manufacturers are to have the privilege of getting all their raw material free of sales tax whether imported or purchased from other manufacturers in Canada and in return the manufacturers will pay the government an excise tax on all their sales other than those sales to licensed manufacturers or on exports.

It has been recommended that the manufacturers should be compelled to absorb in their selling price this special excise tax in the same way that they absorb customs duties or freight and should not be permitted to make a separate charge on their invoices for this excise tax.

The natural question is:

1st. What rate of excise tax should the government impose?

2nd. What revenue would the government be likely to derive from this Excise Tax as compared with what it is now receiving?

The answer can be arrived at by the study of the following tables which show the operation of the present Act and the operation of the proposal made to the government based on a similar rate of taxation to what the government is now getting.

What Dominion Figures Show

In order to get some idea of what the manufacturers' selling values of their products are, the cost of the raw material in such products, the value added in manufacture, which includes salaries, wages, etc., and what the percentage advance on the value of the raw material to give the selling value of the products, the following table is given:

Table No. 1

The following figures are official and are the latest as they are supplied by the Dominion Bureau of Statistics:

	1917	1918	1919	1920
No. of manufacturing establishments	34,392	35,797	38,344	42,406
Cost of materials..	\$1,605,730,640	\$1,900,252,314	\$1,875,615,877	\$2,189,227,028
Value added in manufacture which includes salaries, wages, etc.,	\$1,409,847,300	\$1,557,784,661	\$1,645,115,712	\$1,830,144,841
or percentage advance on value of material..	87.8%	82%	87.7%	83.6%
or an average advance of 85.3% on cost of materials.				
Value of products..	\$3,015,577,940	\$3,458,036,975	\$3,520,731,589	\$4,019,371,869

The above table shows that the difference between the cost of the raw materials and the manufacturers' selling value represents on an average over four years an advance of 85.3% on the cost of the materials.

The following Tables No. 2 and 3 show the respective selling value to the public of one million dollars of raw material. These values include the salaries and wages of all manufacturing costs as well as the profit to the manufacturers, the advance of 25% on cost to make the wholesale values, and the advance of 50% to make the values at which the retailers should sell the goods to the public.

Table No. 2 is figured with a profit being put on the sales tax by the wholesalers or retailers, while Table No. 3 is figured without a profit being put on the tax.

Table No. 2		Table No. 3	
Materials	\$1,000,000	Materials	\$1,000,000
Sales Tax $2\frac{1}{4}\%$	22,500	Sales Tax $2\frac{1}{4}\%$	22,500
Cost of Materials ...	1,022,500	Cost of Materials ...	1,022,500
Add 85.3%	872,192	Add 85.3%	872,192
Manufacturers' selling value	1,894,692	Manufacturers' selling value	1,894,692
Add $2\frac{1}{4}\%$ Tax	42,629	Add $2\frac{1}{4}\%$ Tax	42,629
Cost to wholesalers..	1,937,321	Cost to wholesalers..	1,937,321
Add 25%	484,330	Add 25% on goods only	473,673
Wholesalers' selling value (if they were able to pass on the whole tax)	2,421,651	Wholesalers' selling value (if they were able to pass on the whole tax)	2,410,994
Add $2\frac{1}{4}\%$ Sales Tax.	54,487	Add $2\frac{1}{4}\%$ Tax	54,246
Cost to retailers	2,476,138	Cost to retailers	2,465,240
Add 50%	1,238,069	Add 50% on goods only	1,205,497
Price to public (if retailers were able to pass on the whole tax)	3,714,207	Price to public (if retailers were able to pass on the whole tax)	3,670,737
Sales Taxes derived by the Government on foregoing transactions would be:—		Sales Taxes derived by the Government on foregoing transactions would be:—	
	\$22,500		\$22,500
	42,629		42,629
	54,487		54,246
Total Sales Tax.....	\$119,616	Total Sales Tax.....	\$119,375

In explanation of the above tables under the present Act if a manufacturer bought raw material in Canada to the value of one million dollars he would pay a sales tax of \$22,500, thus making the material cost him \$1,022,500.

In Table 1 it is shown that the difference between the manufacturers' costs of raw materials and the selling values of their products is 85.3% advance on the raw materials, this being the average during the four years 1917 to 1920. By adding this percentage to the cost of the raw material we get the manufacturers' selling value of the finished product, viz., \$1,894,692 and this becomes the price to the wholesale trade.

Three Sales Taxes to Government

When these goods resell to the wholesale trade a sales tax of $2\frac{1}{4}\%$ or \$42,629 is charged and has to be paid by the wholesaler, thus making the cost of the goods to the wholesaler \$1,937,321.

In selling these goods the wholesalers are entitled to a profit of not less than 25% advance on cost, so that the wholesalers' selling value would be \$2,421,651.

When these goods are sold to the retailers a further sales tax of $2\frac{1}{4}\%$ or \$54,487 has to be charged and paid over to the government, thus making the goods cost the retailer \$2,476,138.

The least profit the retailer is entitled to ask is an advance of 50% on the cost so that the public should pay for the goods \$3,714,202.

It will thus be seen that out of the above selling value of \$3,714,202 to the public the government would derive three sales taxes, viz., \$22,500, \$42,629, and \$54,487, or a total of \$119,616, which is equivalent to nearly 12% on the one million dollars of raw materials.

Table No. 3 shows that when no profit is put on the sales tax that the selling value to the public of the one million dol-

lars of raw materials is \$3,670,737 and the government would get under this figuring three sales taxes of \$22,500, \$42,629 and \$54,246, or a total sales tax of \$119,375.

The following Table No. 4 shows the working out under the plan proposed to the government:

Table No. 4	
Materials	\$1,000,000
Add 85.3%	853,000
	1,853,000
Add .064%	118,592
Manufacturers' selling price to wholesalers.....	1,971,592
Add 25%	492,898
Wholesalers' selling price to retailers.....	2,464,490
Add 50%	1,232,245
Retailers' selling price to public.....	3,696,735
6% tax on \$1,971,592 =	118,295

Under the plan proposed, if the manufacturer got his raw material free of sales tax but was taxed 6% on his output, then the \$1,000,000 of raw material plus the advance 85.3% would make a value of \$1,853,000 but this will have to be increased by .064% so that when the manufacturers pay the 6% on their output in the form of sales tax to the government then there will be left to the manufacturers the \$1,853,000, consequently the selling value to the wholesalers would have to be fixed at \$1,971,592. 6% on this amount would give the government a sales tax of \$118,295 as against what they are realizing to-day on a similar amount of raw material, namely \$119,616.

When these goods are sold by the wholesalers they have to put on their profit, so that if an advance of 25% is put on then, the wholesalers' selling value would be \$2,464,490, and to this cost value to the retailers there will have to be added 50% in order to get the retailers' selling value to the public, or \$3,696,735.

A comparison of the selling value to the public as shown by Tables 2, 3 and 4 shows that on the basis of \$1,000,000 of raw materials to the manufacturer that under the suggested plan of taxing at the source or on the manufacturers' output, the public would pay a little less for the finished goods than they are paying to-day under the present system of sales taxation if the tax was in every instance passed on to the public as intended by the existing Act.

Advantages of the Plan Proposed

Of course, if the manufacturer imported the \$1,000,000 of raw material and paid the sales tax to the customs of $3\frac{1}{4}\%$ as the present Act requires it would vary the figures in Tables 2 and 3.

Having shown that the 6% tax on the manufacturers' selling value will produce quite as much revenue as the existing tax does on a like amount of raw material it would be well to endeavor to ascertain the amount of revenue that the government would derive by a 6% tax on the manufacturers' taxable sales.

Under the plan proposed a manufacturer would get all of his raw materials free of sales tax or of a special excise taxation which would necessarily lower the cost of his finished product. Likewise the selling value of it would be less than it would be if he had to pay a sales tax on his raw material as the existing Act requires.

If the manufacturer sold the whole of his products to licensed manufacturers then the prices he would charge would realize for him on the basis of the \$1,853,000 as shown in Table No. 4 but if he sold all his output to others than licensed manufacturers then he would include in his prices the amount that he would be called upon to pay the government by way of special excise and he would have to charge on the basis of \$1,971,592 for his output. Out of this the government would get a tax of 6% or \$118,295 on each \$1,000,000 of raw material as compared with what it is estimated that they are getting under the existing operation of the Act, \$119,616 per million dollars of raw material.

Because of the sales tax being included by the manufacturer in his sales price the same as customs duties or freight are, there would be no further tax to be paid by either the wholesaler or retailer, consequently these two classes of the

trade could fix their own selling prices, but if the manufacturer names the resale price for either the wholesaler or retailer then it will be up to the manufacturer to so fix his resale prices that the wholesalers and retailers will be put in position to realize a selling price that would give them their proper rate of profit.

The above plan has the great advantage of enabling the manufacturers, the wholesalers and the retailers to pass on the taxation to the consuming public while it has the added advantage to the manufacturer of not being called upon to pay any taxation until he had made his sales as compared with his having to pay the sales tax to-day on all his purchases of raw materials at the time of the purchase or when passing the goods through the customs.

A Materially Increased Revenue

The proposed plan has the great advantage to the government of providing a materially increased revenue, which statement is based on the following:

The latest government statistics pertaining to manufacturing that are obtainable from the Dominion Bureau of Statistics are for the year 1920 and show that the selling value of the manufacturers' product of that year were \$4,019,371,869. It is doubtful whether the selling value of the products manufactured in either 1921 or 1922 would have reached the above selling value, therefore to be on the safe side it would be well to estimate on the basis that the manufacturers' selling values totalled \$2,000,000,000 less than in 1920 and \$1,000,000,000 less than in 1917. If therefore you apply a 6% tax on \$2,015,577,940, there would be a revenue for the government of \$120,934,676, as against the \$90,000,000 it is estimated will be derived in the current fiscal year.

In fixing the taxable value at \$2,015,577,940 it would seem that ample provision has been provided for any shrinkage in the selling value of the manufacturers' products as well as such portion of sales not subject to tax which would become other manufacturers' raw material.

The foregoing has shown the selling value to the public of a million dollars of raw material whether calculated on the existing basis or under the proposed plan is about the same, and that the government would get about the same revenue under the proposed plan as under the old.

The \$90,000,000 it is estimated the government will realize from Sales Tax in the twelve months ended the 31st March, 1922, would on a 6% tax represent taxable sales of manufacturers to others than licensed manufacturers, of \$1,500,000,000.

This amount of sales would represent in raw material about \$800,000,000, as based on the Dominion Bureau of Statistics, shown on Table No. 1. A moment's thought will show that this must be a small proportion of the raw material used by the Canadian manufacturers in 1922 and that the government can get a largely increased revenue by the adoption of the plan proposed and not lay any burden of taxation on either the manufacturers, the wholesalers or the retailers.

Where the Government Loses Out

While it is true that under the proposed plan a manufacturer would not be called upon to pay a special excise tax on his finished products sold to a second manufacturer as his raw material, yet the government eventually gets the tax on those particular goods because the cost of them, or the first manufacturer's selling price, is included in the final selling value of the finished product on which the special excise tax will be paid by the final manufacturer. In other words each manufacturer that puts the goods through a process is increasing the final taxable value by labor, overhead and profit.

With the above in mind one naturally is led to the conclu-

sion that there must be a large amount of business that should be paying a sales tax that is not and the government is out revenue.

If, instead of adopting the taxation of 6% on the manufacturers' output it be made at the rate of 7½% then, as will be shown by the following Table No. 5, the manufacturers' selling value of the \$1,000,000 of raw material would have to be increased to \$2,003,093, because an advance would have to be added to the \$1,853,000 or .081% in order to leave the manufacturers, after paying taxes of 7½%, the realizable value of \$1,853,000:

Table No. 5

Material	\$1,000,000
Add 85.3%	853,000
	1,853,000
Add .081%	130,093
Manufacturers' selling value to wholesalers.....	2,003,093
Add 25% advance	500,773
	2,503,866
Wholesalers' selling value to retailers.....	2,503,866
Add 50% advance	1,251,933
	3,755,799
Selling price to public	3,755,799

Tax 7½% on \$2,003,093 = \$ 150,232
7½% Tax on \$2,015,577,940 = \$151,168,345

Such a change would produce a revenue to the government of \$150,232 for each \$1,000,000 of raw material as against \$118,295 on a taxable basis of 6% as shown in Table No. 4 and as against \$119,616 as shown in Table No. 2. It will be noticed that if the 7½% be adopted the total selling value to the public would be on \$1,000,000 of raw material, \$3,755,799 as against \$3,696,735 in Table No. 4, and \$3,714,207 in Table No. 2. Thus the increase to the public under the 7½% tax would be very slight as compared with what the public is supposed to be paying under the present Act as shown in Table No. 2, but a 7½% tax on manufacturers' output of \$2,015,577,940 would represent a revenue to the government of \$151,168,345 as against the \$90,000,000 it is likely to get in this fiscal year.

Reduction in Cost of Collecting

It will be thus seen that the suggested plan of giving the manufacturer his raw materials free of sales tax but taxing him on his output either 6% or 7½% and not allowing him to charge forward any tax separately has the following advantages:

First (a) MATERIAL INCREASE IN REVENUE TO THE GOVERNMENT.

(b) NO INCREASE IN COST TO THE PUBLIC.

(c) On a 7½% basis the increase in cost to the public would be trivial.

Second—It would at once remove the existing injustice to some manufacturers, the wholesale and retail trade by freeing them of the immense taxation they are now labouring under through having to absorb part of the sales tax.

Third—There would be a further increase in revenue to the government because the profits of the wholesale and retail trade would be increased due to the belief from the loss that they experienced from the sales tax and thus the government would get an Income Tax on the increase.

Fourth—The cost to the government of collecting and checking up the sales tax as at present would be very materially reduced because of the fact that they would have a very small number to collect the tax from as compared with the present large number.

Guarantees Plumbing Work

A PROGRESSIVE step in advertising is that taken by The Progressive Association of Plumbing Contractors and Dealers of Cleveland. This association is using newspaper space to impress upon the public mind that of all construction and repair work, plumbing is of prime importance to both community and individual. The copy which appears over the cards of a dozen member plumbing firms says:—

"This Association guarantees the work of its members and will adjust without charge any complaint regarding defective workmanship, materials or overcharges. Address all complaints to the association, giving all details. Membership in this association is open to all plumbing contractors and dealers who will conform to its standards of practice."

This co-operative advertising plan has been used to good advantage by plumbers in other cities as well, and it has been found helpful in overcoming the prejudice which still exists in the minds of some people concerning the integrity and business ability of the plumber.

Saving Fuel Waste

THE FUEL situation in Canada and the danger of the possible curtailment of coal shipments into Canada from the United States has given impetus to the discussions concerning central heating. Experiments are being made to bring Alberta coal to the East and also other measures to provide adequate coal supplies but the question of economical operation of heating plants is one of supreme importance. There is no doubt a good deal to be said for central heating in eliminating individual service in attending furnaces, greater possibilities in the way of efficient use of coal and the resultant saving in cost of heating.

It has been argued by experts that the average efficiency of the Canadian house heating equipment does not exceed 50 per cent. owing to the heat value lost in other ways. On the other hand a central plant in charge of expert stokers would probably reach an efficiency of 60 to 70 per cent. after allowing for loss in transmitting the heat to its destination. And if soft coal is to come into greater use in future some steps might be taken for reducing the resultant smoke evil in the case of the central heating plant whereas such would be difficult under the present plan. The use of such coal has also proved dangerous in the hands of inexperienced users whereas stokers in a central plant would be well acquainted with the best procedure for burning such coal.

It is significant that advices coming to Sanitary Engineer from the United States are to the effect that many authori-

ties in that country are commenting on the proposed independence of Canada in the coal market, and are congratulating Canada on its progressive methods in developing its own coal and in developing the central heating plan.

Of course central heating has its limitations and its operation may only be economical under certain conditions. These are matters to be considered in discussing the matter fully.

Rendering Service

THE PROGRESS being made in organization by plumbers in various parts of the country is a splendid achievement. When a group of business men feel it necessary to get together for their common good, realizing their shortcomings, it is the first sign that progress will be made. These organizations are taking various forms. In one city the plumbers hold a series of meetings about three weeks apart throughout the winter. These take the form of dinners commencing at 6 p.m. and everything is run strictly to schedule, ending at 8 p.m. A good dinner is served, there is some entertainment, and one speaker on a subject of current interest. The gatherings have proved very educational.

In connection with such organizations in Canada there may be some good hints from the experience of brother craftsmen in other fields. For instance the Master Plumbers Association of Buffalo sends out a little folder to encourage members to come to the meetings. Each folder has some message such as the following: "Let's come together and get down to brass tacks. Don't let the officers do it. Your success depends on your efforts and what competition will allow you. Why not use the high speed clutch and have your competitor release the brake? Come across and let us know whether you are for expansion or whether you prefer to remain dormant?"

This association has membership signs to be hung in the shop of members and steps are taken to have these signs recognized as marks of efficiency, service and safety to the public and a guarantee of modern methods of sanitary installation. There is no doubt that such steps will help distinguish the industry and benefit both the industry and the merchant plumber. A Credit Bureau is operated so that members will not be taking any chances on customers. A Labor Bureau is also conducted to assist merchant plumbers to secure sewer laborers and plumbers when required. A Collection Bureau, Mutual Insurance and a department for selling surplus plumbing and heating equipment to others in the trade, are also features of this association's service.

The foregoing services are characteristic of an organization working in the best interests of merchant plumbers and it is only when such organizations make themselves so valuable to the trade that they can have any justification for existence. Fortunately the trend is toward more associations of this kind, anxious to render real service.

THE Combines Investigation Act, recently introduced in the House of Commons by Premier King, is causing a great deal of concern and arousing no little criticism among business interests. The measure, with its varied proposals, is not as yet sufficiently understood by all, to enable a wide discussion of its merits and demerits, but many organizations have already placed themselves on record as in opposition.

That the Government is going out of its way to interfere with business; that it is providing loopholes whereby disgruntled persons may cause no end of trouble and confusion for business; that the Government is going on the assumption that all trade combinations are bad and should be stopped, are some of the contentions set up in representations that have been made to Ottawa.

MINUTE MESSAGE

Written for Sanitary Engineer by FRANK STOCKDALE

(Co-operation Series)

The Fly Paper Stage of Business Has Passed

New conditions demand new methods. In no field of activity is this fact demonstrated more clearly and forcibly than in the field of business at the present time.

The automobile has taken the place of the horse and buggy. A network of railroads and electric lines cover the country. Thousands of miles of concrete highway have made travel not only convenient but inviting.

As a result, the old time "cross road" general store is fast disappearing. Its place is being taken by specialized stores, each one pulling in its portion of the trade which formerly was centered around the counters of the "general store at the cross roads."

Customers now go from store to store, from town to town, and from city to city seeking the kind of goods and service which please their fancy and their pocketbooks.

Canada's mail goes everywhere and publicity advertising pays its own way.

The business goes to the plumber who knows how to attract his customers and to keep them.

The successful plumber, the one whose shop is well patronized, always strives to keep a **good** assortment of stock at the **right** price and give the kind of service which brings his customer back.

Location still has some bearing, but ability to serve counts for more. Because—"The Fly Paper Stage of Business Has Passed."

News Notes From Coast to Coast

Doings in the Plumbing and Heating Industry

NEW FIRMS

Broadview, Sask.—P. T. Wells is commencing a tinsmith business here.

BUSINESS CHANGES

Swift Current, Sask.—Hutchinson & Morrison, plumbers, have dissolved partnership.

FIRE LOSS

Winnipeg, Man.—E. Chapat, plumber, suffered fire loss.

LECTURES ON SANITARY PLUMBING

St. John, N.B.—Mrs. Emmeline Pankhurst will address audiences through the maritime provinces on the evils of communicable diseases, and necessity of sanitary plumbing. Mrs. Pankhurst is the former London suffragist.

OBITUARY

St. John, N. B.—Fred C. Owens, of St. John, a dealer in plumbing supplies as well as hardware, died suddenly in the East St. John County Hospital. Mr. Owens was manager of the Barry Supply Company of St. John. He sold plumbing supplies to a number of plumbing contractors in New Brunswick and Prince Edward Island.

ENDORSE SANITATION POLICY

St. John, N. B.—R. E. Fitzgerald, a plumbing and heating contractor of St. John, N. B. who was recently elected president of the Contractors and Builders Association of St. John, is an enthusiastic supporter of the sanitation policy of the New Brunswick department of health.

247 PLUMBING DEFECTS IN 2,567 INSPECTIONS

Hamilton, Ont.—The monthly report for February, 1923, giving in detail the work of the medical officers, was presented at the regular meeting of the board of health. The methods of the city of Hamilton regarding the laying of water mains were severely criticized by an officer of the provincial health department. The difficulty arose over a letter from a resident of Dunsmuir avenue to the provincial board, who complained that he could not get water mains on his premises because the city could not be guaranteed its 10 per cent.

The provincial health officer held that this attitude was far from ideal.

The question was referred to the

works committee, after the correspondence was read. The total number of notices served by the sanitary inspector was 715. The total number of inspections made by the officer was 2,567, who discovered 247 defects in plumbing.

CONTRACTS AWARDED

Montreal.—D. A. Bethune, Ltd., has contract for \$39,477 covering heating and ventilation of new Rosemount school.

F. C. PALMER RESIGNS

Oshawa.—No less than 135 applications have been received for the position of sanitary inspector for the town of Oshawa, but up to the present no selection has been made to fill the vacancy created by the resignation of F. C. Palmer. It has been announced that Mr. Palmer has agreed to continue to act until the end of the present month in order to allow the board to consider the applications and if possible to make a selection.

F. C. PALMER

Sanitary inspector of Oshawa, Ont., and President of the Association of Plumbing and Drainage Inspectors of Ontario, who has resigned his position in Oshawa. It is not known definitely yet what Mr. Palmer's future movements will be, but the fact that he accepted re-election as President of the Ontario Association would indicate that he is intending to continue in this line of work.

PERSONAL

Mr. Waldon, of Spencer Heater Co., Toronto, is absent from his office due to sickness.

NEW HEATING APPARATUS

Ottawa.—The question of new heating apparatus and better laundry accommodation for the Isolation Hospital was also discussed. Plumbing Inspector S. Daughtry is making a report on these matters, and no action will be taken until this is forthcoming.

APPOINTED WATERWORKS SUPERINTENDENT

Ronald Harrison, Kingston road, Birchcliff, was appointed from about 50 applicants to fill the position of waterworks superintendent for Scarborough at a salary of \$175 a month by the Utilities Commissioners.

Born in Toronto 26 years ago, he moved to Birchcliff with his parents at the age of 14. Later he attended high school and finally graduated at Toronto University, carrying high honors at the School of Science as a civil engineer.

OUTLOOK FOR PLUMBING APPRENTICES

London, Ont.—R. H. Avey, discussing the apprentice problem from the plumbers' standpoint, is rather pessimistic on the outlook in general. "There are no boys learning plumbing now," he said. "I have had quite a number of them, but they all wanted to know more than I did about the business. They were not content to learn slowly and thoroughly as I had to do. The ground work of the business did not appeal to them, and I find it more profitable to pay for a helper whenever I want one, than to have a boy with me all the time.

"What few boys are still coming into the business are coming here from the outside towns," he remarked, "and there are not many of these in any case. When I was a boy learning my trade I got \$2.50 per week, and there were five years of that, and the last two years as an improver."

Mr. Avey was inclined to think that in a few years there would be very few properly qualified plumbers in the city. "They are certainly not coming into the trade as boys now, so I don't see how there can be many thoroughly experienced plumbers in the years to come."

WILL BUILD CENTRAL HEATING PLANT

Woodstock, Ont.—F. E. Sharpe, superintendent of the Woodstock hospital, advises Sanitary Engineer that the heating boiler for the hospital is a John Inglis, Toronto, horizontal 54 inches by 12 ft., 64 tubes, low pressure 20 lbs., tested to 75 lbs., hand fed, water return by gravity type. The new wing is to have an individual two way pipe and a pump. It is the intention of the board to heat the new wing off the present equipment for a short time, as they require a new central heating plant which will be built as a separate unit at a later date.

TO IMPROVE BELLEVILLE WATERWORKS

Belleville, Ont.—The following communications regarding the proposed filtration scheme for the City are self explanatory:

To John W. S. McCullough, Esq., M. D., chief officer of Health, Toronto: Our Council have under consideration the matter of certain improvements to our water works system in the city.

At a public meeting the advisability and feasibility of the establishing of inter-filtration beds at Zwick's Island were discussed.

Before going any further into this question, His Worship, Mayor Bennett has requested that I get the opinion of your Board on such a scheme being undertaken. No doubt you have data at your office in connection with such matters and it has been estimated that your Board at one time gave their opinion as to the establishing of these beds in the above named island.

An early reply to the above will be greatly appreciated. Yours truly,

W. J. Holmes.

BUILDING IN FIRST QUARTER IN CANADA

The course of construction operations points to a period of expansion. For the first quarter of 1923, the value of construction contracts awarded throughout Canada was \$43,107,400, compared with \$32,575,900 in the same period, 1922.

In January, building contracts awarded totalled \$9,840,800, in February \$13,311,800, and in March \$19,954,800.

Business and industrial building in the first quarter of 1923 totalled \$25,545,500, compared with \$20,679,900 in the same period in 1922.

During March, 1923, construction contracts awarded in Canada totalled \$19,954,800, compared with \$13,465,500 in March, 1922, of which 30 per cent. was residential building, 37 per cent. business building, industrial building 19 per cent. and public works and utilities 12 per cent.

Ontario leads the provinces.

ONTARIO SOCIETY CONVENTION MAY 10 and 11

As we go to press word is received that the 12th annual convention of the Ontario Society Domestic Sanitary and Heating Engineers will be held in Toronto on Thursday and Friday, May 10 and 11. Sessions will be held in the Foresters' Building, College St., Toronto. Further details of program planned will be given in the May 1 issue of Sanitary Engineer.

Appointed Advertising Manager of "Sanitary Engineer"

FRED T. HOLLIDAY

Who, as mentioned in a recent issue, has been appointed Advertising Manager of Sanitary Engineer, Plumber and Steamfitter of Canada. Mr. Holliday has had considerable experience in the trade paper publishing field in Canada both in regard to editorial and advertising work and is already known to many in the plumbing and heating industry in Canada.

PLUMBING AND HEATING COURSES THIS SUMMER

COURSES to interest nearly anyone in need of technical training will be given this summer at Carnegie Institute of Technology, at Pittsburgh, according to a preliminary announcement. The Carnegie Summer School will open June 25th and continue for eight weeks until August 17th. Six weeks' courses will be conducted from July 2nd to August 10th. Dormitory accommodations will be available for out-of-town

students. Of special interest to readers of this paper are the courses to be given by the Department of Heating and Ventilation, in the College of Industries. Several courses of lectures and shop work are offered in plumbing, heating and ventilating, and oxy-acetylene and electric arc welding.

WESTERN ONTARIO NEWS

R. E. Young, R. R. 1, York, Ont., wants prices on heating equipment for new school that is to be erected.

James Holden, of Simcoe, Ont., is now occupying new and larger quarters on Peel St.

Sutter & Perdue of Clinton, Ont., have plumbing and heating contracts for the new Clinton Hospital.

James McMillan, Acton, Ont., is interested in prices of heating, plumbing and electrical work for new \$4,000 dwelling.

Prof. McLennan, Ontario Agricultural College, Guelph, wants prices on hot air heating, plumbing and electrical work for new \$8,000 bungalow.

Walter Lamb, Acton, Ont., is preparing plans for new dwelling to cost \$3800 and wants prices on heating, plumbing and electrical equipment.

S. S. Ross and W. Dellar, of Norwich, Ont., have formed a partnership and are taking over the Beckett Plumbing and Heating shop.

Frank Brown, Essex, Ont., is preparing plans for new \$3,500 residence and wants prices on heating, plumbing and electrical equipment.

S. Murch, 14 Charles St., Stratford, Ont., is preparing plans for new bungalow and wants prices on heating, plumbing and electrical equipment.

Ray Morningstar, Watford, Ont., is preparing plans for bungalow and is interested in prices of heating, plumbing and electrical equipment.

George Nelson, 637 Dundas St., London, Ont., wants prices on hot water heating, plumbing and electrical equipment for new \$10,000 dwelling.

Stephen Dunn, 25 Byron Ave., London, Ont., has been awarded the plumbing and heating contracts for new factory for London Shipping Containers.

G. W. Langford, 125 Mamalon St., London, Ont., wants prices on hot air heating, plumbing and electrical work for new \$5,000 residence.

Captain Fletcher, 982 Oxford St., London, Ont., wants prices on heating, plumbing and electrical equipment for new \$7,000 dwelling for which plans are being prepared.

Architect W. G. Murray, Dominion Savings Building, London, Ont., is preparing plans for a new \$25,000 Sunday school for the St. John's Anglican Church at Sarnia, Ont. Prices wanted on hot air heating, plumbing and electrical equipment.

Market Conditions and Tendencies

Price Trend on Sanitary and Heating Supplies

Markets at a Glance

CHANGES in price have occurred with some rapidity in plumbing and heating goods for the first three months of the year. Most of the changes have been in an upward direction, although reductions have been noticeable in quotations on a few lines, in almost every report. This week, however, every market change reported to Sanitary Engineer has been an advance.

Range boilers are now quoted on a net list a little over 5 per cent. higher than formerly. Range boiler stands are also quoted on a net list. Canadian pattern Stillson wrenches have reached higher

levels through a lowering of the discounts from 55 to 50 per cent. Stanley braces and mitre boxes have been moved up slightly by local jobbers, one cent per pound is the advance in quotations on soldering coppers, and iron rivets and burrs, discount is now 42½ per cent., replacing the former one of 47½ per cent.

Other markets are uniformly firm, reflecting the strong tendencies displayed at primary sources. Second quarter buying has appeared to assure a continuance of the firmness in all markets.

Montreal Markets

MONTREAL, April 13.—There have been few changes in the markets since last issue but it is of interest to note that what there have been have all followed the tendency of the times and have been in an upward direction. The discount on soil pipe has been reduced slightly, the cut being from 35 per cent to 33½ per cent. and there has been a slight advance in the price of copper and brass sheets, rods and tubing. Asbestos products have made their first price change in some months, there being a cut of 5 per cent. in the discount of magnesia blocks with a like advance probable in other asbestos products. There has been a price re-adjustment on some compression lines.

In the primary metal markets a continued strong tone has had its effect upon the sheet metal market and an advance over present prices is likely by the time this issue appears. Boiler tubes are also expected to advance slightly within the next week or so.

UPWARD REVISION IN DISCOUNT ON SOIL PIPE

Montreal.

This week has seen a slight upward change in the price of soil pipe. Discounts on pipe have been reduced on all sizes but the eight-inch which remains at net list. Other sizes which formerly had a 35 per cent. discount now have it at 33 1-3 per cent. There has been no change in the fittings prices. Current local quotations are as follows:

SOIL PIPE—	
2 and 3 inch	33 1-3%
4 inch	33 1-3%
5 and 6 inch	33 1-3%
8 inch	net
FITTINGS—	
2 to 6 inch	45%
8 inch	net

COMPRESSION QUOTATIONS HAVE BEEN REVISED

Montreal.

The past two weeks have seen price adjustments in a number of lines of compression goods, all in an upward direction by the cutting down of the discounts. In the majority of cases the change has been slight but in some instances has run as high as fifteen per

cent. The quotations given locally by the majority of the distributors are as follows:

VALVES AND BIBBS—

Compression work, standard	45%
Fuller work, standard	30%
Quick opening, compression bibbs	43%
Bath cocks, quick opening	38%
Bath cocks, compression	40%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, standard	54%
Roundway stop and waste cocks, std.	42%
Brass steam cocks, standard, ¼ in.	50%
Radiator valves, standard	55/25%
Do., removable discs	55/25%
Globe, angle and check valves, std.	25%
Gate or straightway	25%
Emco globe valves	33%
Emco check valves	33%
Jenkins globe, angle, check and swing check	net
Jenkins gate or straightway	7½%
Jenkins iron body, globe and angle	net
Jenkins iron body, gate	20%
N. P. "O" and "S" traps	34%

ADVANCED PRICES ARE EXPECTED ON SHEET METALS

Montreal.

The sheet metal market has again assumed a very strong tone and although local distributors have endeavored to hold firm at prevailing prices there is a strong likelihood that higher levels will come into effect before the close of

the present week. Trading is fairly firm although the unsettled state of the market is causing consumers to place only orders that are absolutely necessary. There is a sizeable variation in local quotations which is covered in the following list:

GALVANIZED SHEETS—

	Queen's Head	Fleur de Lis
18—20 gauge	6 65	6 90
26 gauge	7 25	7 50
24 gauge	6 95	7 20
22 gauge	6 90	7 15
28 gauge	7 50	7 75

Other Brands—

10½ oz.	7 25	7 50
28 U. S. base	7 00	7 25
26 U. S. base	6 60	6 85
24—22 gauge	6 35	6 60
20—18 gauge	6 15	6 25
16 gauge	6 00	6 10

Above prices are for ½ ton lots in English iron and 1000 lb. lots in American iron with an extra charge of 25c. for less quantities. Extra for sheets 3 ft. wide, 28 gauge and 10½ oz., 25c. per 100 lbs.

Further extra for sheets 4 ft. wide according to gauge.

TIN PLATE—

20 x 28 x 100 lbs. basis	15 50
20 x 28 IC, 112s	16 00
20 x 28 IX, 112s	13 00
20 x 28 IXX, 56s	11 00
20 x 28 IXXX, 56s	12 00

TERNE PLATE—

20 x 28 IC, 112s, 200 lb.	14 50
20 x 28 IC, 112s, 214 lb.	15 00

CANADA PLATE—

Half bright 52s	5 50
Half bright 60s	5 60
Blued 52s	5 90
Blued 60s	6 00
Welsh, polished, 60s	7 35
Welsh, polished, 52s	7 10
Galvanized, 52s	8 00
Galvanized 60s	8 50

METAL LATH QUOTATIONS ARE WITHOUT CHANGE

Montreal.

There have been no recent changes in the price of metal lath at this point. Trading is reported to be fairly good, but like the building lines in general in this district will not reach its best until the opening of navigation. The quotations now in force locally are as follows:

METAL LATH—	per sq. yd.
Painted—	
26 gauge	23c.
24 gauge	25c.
32 gauge	32c.
Galvanized. 10c. per sq. yd. extra.	

VERY FIRM TONE TO MARKET IN BOILER TUBES

Montreal.

There is a decidedly firm tone to the market in boiler tubes and a slight change in price in an upward direction would not come as a surprise, although distributors are making a strong attempt to maintain present levels. Trading is firm at the following quotations which have been in force locally for some weeks:

BOILER TUBES—

	Seamless Lapweld
1 inch	20 00
1¼ inch	22 00
1½ inch	21 00
1¾ inch	24 50 24 00
2 inch	21 50 20 00
2¼ inch	24 50 23 00
2½ inch	29 00 24 50
3 inch	34 00 31 00
3½ inch	39 50 35 50
4 inch	50 00 45 00

Prices, per 100 ft., f.o.b. Montreal.

CORRUGATED SHEETS HOLD FIRM AT FORMER LEVELS

Montreal.

The corrugated sheet market remains firm locally, trading being fairly brisk with prospects for a steady improvement in the near future. Quotations remain at levels established some weeks ago when these products underwent a general advance. The prices in force at the present time are as follows:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	7 00
No. 26 gauge	7 50
No. 24 gauge	10 00
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	19 00
Less 10 per cent.	
Lighter than 24 gauge and wider than 27 ins.,	
75 cents per square extra.	

NEW HIGHER QUOTATIONS FOR ASBESTOS PRODUCTS

Montreal.

The first price change in asbestos goods to be noted in several months was announced this week when a cut of five per cent. was made in the discount on the magnesia block, bringing the local quotations to thirty-five per cent. off list. It is also stated that advices from primary sources would indicate that a price revision of a similar proportion will be necessary on other lines in the very near future. Trading is reported as fair with the season much later than other years. The local quotations are as follows:

ASBESTOS PRODUCTS—	Off list prices
2 ply pipe covering	57½%
3 ply pipe covering	55%
4 ply pipe covering	50%
85 per cent. magnesia	35%
Boiler covering	Per 100 lbs. \$1 50
Asbestos sheathing	Per 100 lbs.

EAVES AND CONDUCTOR PIPE TRADING IS GOOD

Montreal.

There have been no recent price changes in the local quotations on eaves, conductor pipe and elbows. Trading is reported to be fairly good and on the up-grade, prospects being for an unusually good season in this district, owing to the large amount of building

planned for this summer. The local quotations are as follows:

EAVESTROUGH—

O. G. round and half round, per 100 ft. 3 in., \$16.90; 10 in., \$18.70; 12 in., \$22.20; 15 in., \$35.50; 18 in., \$45.00.

O. G. Square bead, per 100 ft.; 8 in., \$15.90; 10 in., \$17.70; 12 in., \$21.20; 15 in., \$34.50; 18 in., \$44.00.

Discount 65 and 5 per cent.

CONDUCTOR PIPE—Round, Plain and Corrugated, per 100 ft.; 2 in., \$18.40; 3 in., \$22.30; 4 in., \$29.60; 5 in., \$48.00; 6 in., \$58.80.

Discount 65 and 5 per cent.

CONDUCTOR ELBOWS—

Plain or corrugated, price per doz 2 in., \$5.25; 3 in., \$6.00; 4 in., \$10.50; 5 in., \$24.00; 6 in., \$29.00.

Discount 55 and 5 per cent.

IRON AND STEEL PRICES FIRM AT RECENT REVISION

Montreal.

Trading in bar products continues firm in the local market. There are no signs of any immediate change in prices from those adopted some weeks ago. Quotations on the local market are as follows:

IRON AND STEEL—

Common bar iron, 100 lbs.....	3 65
Refined iron	5 15
Irish finish machinery steel	3 70
Mild steel	3 65
Single reled machinery steel 5 00	5 25
Band steel	4 15
Sleighshoe steel	3 65
Spring steel	6 00 8 50
Tire steel	3 85
Harrow tooth steel	3 80
Toe caulk steel	4 55
Mining tool steel, per lb.	0 19
Black Diamond tool and cast steel,	
per lb.	0 19

NOTE.—Refined iron is approximately \$1.50 per cwt. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

Iron and steel 3-16 in. and thinner, 50c per 100 lbs. extra.

FIRM MARKET IS FEATURE OF SCRAP METALS

Montreal.

A firm market with trading well on the increase features the scrap metal market this week. Prices are firm at the levels which have been in force for several weeks now although there is a tendency towards some slight moves upward shortly. Quotations which may be taken as a fair average locally are as follows:

SCRAP MATERIALS—

Automobile tires	0 50
Rubber shoes	0 03
Yellow brass	0 05½ to 0 06
Red brass	0 09
Light brass	0 04½
Scrap zinc	0 04¾
Lead, heavy	0 05
Lead, tea	0 03
Light copper	0 08½ to 0 09
Heavy copper	0 11¼
Wrought iron, R. Rd., No. 1, per gr. ton ..	12 00
Malleable scrap (ton)	9 00 to 10 00
Pipe scrap (ton)	7 90
Heavy melting steel	9 00 9 50
No. 2 busheling	3 00
Boiler plate	3 00 to 9 00
No. 1 machinery cast	20 00 to 22 00

TRADING REPORTED STRONG IN CEMENT MARKETS

Montreal.

Cement prices have shown no variation locally for some time. Spring trading is reported strong. Local quotations are as follows:

CEMENT—

Car load lots, per bag, F.o.b. steam cars ..	0 86
Per Bag, delivered	0 94
Less car lots, per bag, F.o.b. yard.....	0 94
Per bag, delivered	1 04
Less 5 per cent	1 04
Rebate of 20 cents for empty bags.	

TRADING GOOD WITH PRICES UNCHANGED IN COTTON WASTES

Montreal.

Cotton wastes have shown no tendency towards a further price change since the general advance of the cotton products market a few weeks ago. Trading is fairly good locally, with a big improvement anticipated upon the opening of navigation. The local quotations are as follows:

COTTON WASTES—	Per lb.
Cream polishing	0 24
White, XXX extra	0 20
White, XX grand	0 18½
White, XLGR	0 17
X Empire	0 15½
X Press	0 14
Colored—	
Fancy	0 15½
Lion	0 14
Standard	0 12½
Popular	0 10½
Keen	0 08½
Wool Packing—	
Arrow	0 25
Axle	0 21
Anvil	0 17

Dominion Wpers—

White cotton	0 20
Colored cotton	0 13½

COPPER AND BRASS SHEETS AT HIGHER LEVELS

Montreal.

Recent advances in the primary markets have had their effect upon brass and copper products, sheets, rods and tubing having made an advance recently, the new base prices being quoted locally at present as follows:

BRASS—	Base
Sheets, base	0 27
Rods, base, ½ to 1 in., round.....	0 24
Tubing, seamless, base.....	0 32
F.o.b.	
COPPER—	
Rods, ½ to 2 in.	0 30
Soft sheets, plain, 16 oz. and heavier..	0 33
Plain tinned, 16 oz. and heavier.....	0 40
Polished, and tinned, 16 oz. and heavier, lb.	0 44
Tubing, lb.	0 34
Above prices are full sheets and bars. Cut sheets and bars are 5c. per lb. higher.	

LEAD AND ZINC PRODUCTS ARE FIRM LOCALLY

Montreal.

The recent price increase in zinc sheets has been maintained during the past two weeks without further change, nor has there been any other price change in the list of lead and zinc products, the prices in force being as follows:

LEAD AND ZINC PRODUCTS—

Lead pipe, per 100 lbs., up to 2".....	14 50
Do., 2" to 8".....	15 50
Do., 8" and over	16 50
Lead waste, per 100 lbs.	15 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	15%
Lead wool, lb.	0 14½
Lead sheets, 2½ lbs., sq. ft. lb.....	0 12
Lead sheets, 3 to 3½ lbs., sq. ft. lb.....	0 11¼
Do., 4 to 8 lbs., sq. ft. lb.....	0 11
to size, ¾ c. lb. extra.	
Solder, guaranteed, lb.	0 34
Do., strictly, lb.	0 31
Cut sheets, ¼ c. lb. extra and cut sheets	
Do., commercial	0 30
Do., wiping, lb.	0 30
Do., wire, lb.	0 44½
Zinc, sheets, casks	0 11
Do., broken lots	0 12

TRADING IS REPORTED LIGHT IN RADIATION GOODS

Montreal.

Since the upward revision late in March there has been little activity in radiation goods. Trading is light and

prices remain unchanged locally at the following quotations:

RADIATORS AND BOILERS—

Radiator list prices are for 1, 2, 3, 4 and 5 column radiators, per sq. ft.
45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount 44 per cent for hot water, and 45 per cent. for steam.

Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05; Discount 41 per cent.

Boilers—Round water boilers, sizes from 0 to 10, 52 per cent. off list. Square or sectional hot water or steam boilers, 15 in., 3 per cent. with Ontario Government trimmings, list. Square or sectional water boilers, 19 in. to 36 in., 8 per cent. Square or sectional steam boilers, 19 in. to 26 in., 5 per cent. Ontario Government trimmings, list plus 7 per cent. Square or sectional water or steam boilers, 48 in., list plus 10 per cent. With Ontario Government trimmings, list plus 18 per cent.

Round steam boilers, standard trimmings, 16 per cent. Ontario Government trimmings, 13 per cent.

F.o.b. Montreal, Toronto, Guelph.

FITTINGS MARKET UNCHANGED; TRADING IMPROVES

Montreal.

Recent revisions in fittings have been maintained without further price changes during the past week. Trading, while good, has not opened up to any degree as yet and will improve steadily as the season progresses. Discounts being quoted locally are as follows:

PIPE FITTINGS—

Cast iron fittings	17½%
Plugs, cast iron	17½%
Do., solid	17½%
Do., countersunk	17½%
Bushings, cast	20%

White vitro or Pussyfoot with fittings, flush elbow and supply	15 65
Vitreous china tank with fittings, flush elbow and supply	18 00
Enamelled iron with fittings, flush elbow and supply	18 00

PRICES SOMEWHAT UNSETTLED IN INGOT METAL MARKET

Montreal.

The metal market has been somewhat irregular during this week with sudden declines in some lines and prices being more or less unsettled. This is not surprising and the reaction at this stage is welcome as any attempt to push prices higher up would only result in trouble later on.

TIN.—This metal has been marking time this week with the fluctuation very slight. Buyers in the U. S. A. are pretty well covered over the next few

months and until they come into the market again there is not likely to be any pronounced movement. At the same time the situation is firm and there is no indication of lower prices. The local market is quiet at 53 cents per pound.

COPPER.—This has developed an easier tone both in New York and London and there is a disposition to shade published prices. There are sellers over the next few months of electro at below seventeen cents refinery and until the export situation improves there is not much likelihood of an advance. Buyers in the U. S. A. are well covered and there is no demand at the moment for spot copper. The local market is quiet at 20 cents for casting and 20½ cents for electro.

LEAD.—There are no special features in this metal but prices are slightly easier. Spanish lead is being offered in New York and despite the heavy consumption in the U. S. A. it is probable that prices will go gradually lower, although there is no evidence of weakness. The local market is slightly easier at 8½ cents a pound.

SPELTER.—This metal had a sharp decline this week both in London and East St. Louis but a recovery promptly took place and the market is now firm. It is only natural that present prices should mean increased production and it would not be surprising to see a further decline in the near future. The local market is quiet at 10½ cents per pound.

ANTIMONY.—This metal is dull with prices unchanged and there is little enquiry at the moment. The local market prices are 8¾ cents for high-grade English and 8¼ cents for Chinese.

ALUMINUM.—There are no new features in this metal and the market is quiet but firm at 25 cents per pound

Toronto Markets

TORONTO, April 13th.—As indicated in a recent issue of Sanitary Engineer, there have been some changes in price on lines affecting the plumbing and heating trade. Among the important changes noted is the advance in price on range boilers and stands. The price now in effect on boilers has taken the form of a net list instead of a list price with a discount. The new prices on stands are also shown on the basis of a net list. Changes have been made in discounts on other lines, including Canadian pattern Stillson wrenches, iron rivets and burrs, Stanley braces and mitre boxes and soldering coppers. Most of the advances are small, being generally around 5 per cent. but they have affected some lines which contain a large number of sizes and have therefore covered a considerable area.

SOME STANLEY TOOLS REPORTED HIGHER

Toronto.

Local jobbers are quoting higher prices on some lines of Stanley tools. The advance is about 5 per cent. and the items affected are braces and mitre boxes.

IRON RIVETS AND BURRS FIGURE IN ADVANCE

Toronto.

A revision has taken place in discounts on iron rivets and burrs. The new discount being 42½ per cent., the former one being 47½ per cent.

STILLSON WRENCHES DISCOUNTS REDUCED

Toronto.

New discounts are in effect on Canadian pattern Stillson wrenches. The new discount is 50 per cent. off, instead of 55 per cent. as formerly. The list and discounts being quoted on the different sizes and qualities are shown below.

STILLSON WRENCHES— Each
6 inch \$2.00; 8 inch \$2.25; 10 inch \$2.50; 14 in. \$3.50; 18 inch \$5.00; 24 inch \$7.25; 36 in. \$13.50; Canadian pattern 50 per cent. off. Genuine, 45 per cent. off.

RANGE BOILERS TAKE HIGHER PRICE LEVELS

Toronto.

As predicted in a recent issue of Sanitary Engineer, some changes have taken place in quotations on various lines of plumbing goods. Among the more important is the new net prices which are in effect on range boilers. The new list is not as high as was anticipated, the advance being well under 10 per cent. Quotations locally are now as follows:

RANGE BOILERS—	St'nd'r'd	Ex. He'vy
5 gallon	8 77
10 to 15 gallon	9 10
18 gallon	9 75
25 gallon	10 70
30 gallon	11 35	13 13
35 gallon	13 30	15 38
40 gallon	14 80	17 06
52 gallon	24 70	28 50
66 gallon	39 50	45 56
82 gallon	48 10	55 50
100 gallon	66 95	77 25
120 gallon	76 05	87 75
144 gallon	122 50
166 gallon	140 25
192 gallon	157 50
EXTRAS—	Add	
For horizontal tapping	1 15	
1" Special for gas heater	1 00	
Each extra 2" tapping	1 75	
Each extra 3" tapping	3 00	

NEW PRICES ON RANGE BOILER STANDS

Toronto.

New net lists are in effect on range boiler stands. The new prices given below are those in effect on the local market and are slightly higher than former quotations.

BOILER STANDS—

Each—5 gal. \$1.50; 12 gal. \$1.50; 18 gal. \$1.50; 25 gal. \$1.50; 30 gal. \$1.50; 35 gal. \$1.65; 40 gal. \$1.90; 52 gal. \$2.10; 66 gal. \$2.35; 82 gal. \$2.50; 100 gal. \$3.80; 120 gal. \$4.00; 144 gal. \$4.00; 166 gal. \$4.00; 192 gal. \$4.00; Adjustable Stands 12 to 14 inch 60c.

IRON AND STEEL PRICES SHOW NO CHANGES

Toronto.

No changes have occurred in quotations on iron and steel during the week's trading. Primary market reports indicate that this market will remain strong for some time, although the heavy buying, which has characterized these lines in recent months, has subsided to some extent. Average quotations locally are as follows:

IRON AND STEEL—

Mild steel bars and small shapes	\$3 60	\$3 75
Mild steel bands, 3-16 in. base	4 00	4 25
Bar iron, base	3 75	
Horse shoe steel	4 25	
Tire steel	3 60	3 95
Spring Steel	10 50	
Sleigh shoe steel	3 50	3 75
Cold drawn steel	4 60	4 75
Hoop steel, heavier than 1"x20G	4 75	5 00
Do., Lighter than 1"x20G	5 35	5 75
Norway iron	12 50	
Truc caulk iron	4 20	
Croable cast sheet steel	28 00	
Mining drill steel	18 50	
Cast tool steel, high grade	30 00	

SOIL PIPE PRICES REMAIN UNCHANGED

Toronto.

Reports from primary sources have been showing a tendency toward higher price levels in the soil pipe market. Some reports were to the effect that new lists were about to be issued this week, but no confirmation of this has been obtained from local jobbers. The following discounts are being quoted to the trade:

SOIL PIPE AND FITTINGS—		
2 inch	Less 33	1-3%
3 inch	Less 33	1-3%
4 inch	Less 32	1-3%
5 and 6 inch	Less 33	1-3%
8 inch		net
FITTINGS—		
8 inch fittings		net.
2 to 6 inch	Less 45	per cent.

CLOSET COMBINATIONS HOLDING FIRM IN PRICE

Toronto.

There is no change noted in quotations on closet combinations from the prices which have been in effect for some time. Market reports continue to show considerable strength but there has been no move toward price adjustments locally.

CLOSET COMBINATIONS—	Each
Oak, Wood Tank, Oak W. S. Seat and Cover	24 00
Oak Vitro Tank, Oak W.S. Seat and Cover	24 00
Oak Pussyfoot Tank, Oak W.S. Seat and Cover	24 00

Oak Woodstrip Seat less Cover with bolts	2 90
Oak Post Hinge Seat and Cover	3 85
Mahog. Fin. Post Hinge Seat and Cover	4 75

SOLDERING COPPERS REPORTED SLIGHTLY HIGHER

Toronto.

Some local jobbers have again advanced quotations on soldering coppers. The new prices being 1c. per lb. higher than former levels.

PLUMBERS' BRASS GOODS PRICES AT RECENT REVISION

Toronto.

The figures quoted in our last issue on plumbers' brass goods have remained unchanged. Reports show a lively trade in practically all lines of plumbing goods and indications are that 1923 will be exceptionally good in these lines. Quotations on the principal items are as follows:

BRASS GOODS—

No. 3825 Compression, complete with tails	3 75
No. 4 Std. Comp. Double Bath. No. 3829 F	4 46

CEMENT MARKET REPORTED DULL

Toronto.

Reports show little activity noted in the sales of portland cement. No change in price has occurred for some time, this market being uneventful, with quotations as shown below:

CEMENT—

Carload lots, per barrel	3 45
Less carload lots, per barrel, f.o.b. yard	4 35
Per barrel, delivered	4 55
Single bags, \$1.15 each; 4 bags to barrel. Extra charge of \$1.50 per load on less than 24 bag lots.	
Rebate of 20 cents each for empty bags.	

ASBESTOS PRODUCTS SHOW SIGNS OF AN ADVANCE

Toronto.

Asbestos goods are practically unchanged on the local market, but the continued strength of the raw material is having a tendency toward higher quotations in other centres. Local distributors have made no move in this direction but higher quotations on some lines would cause no surprise. Following are current prices on the usual lines of pipe covering and sleathing:

ASBESTOS PRODUCTS—

Pipe Covering—	
Air cell, 4 ply	50 per cent. off list.
Air cell, 3 ply	55 per cent. off list.
Air cell, 2 ply	57½ per cent. off list.
Boiler Covering	\$1.50 — \$2.00 per bag.
Asbestos Sheathing	\$8.25 \$9.00
Magnesia pipe covering	less 40 per cent.
Magnesia pipe covering, small lots, less	35 per cent.

VALVES AND BIBBS MAINTAIN STEADY LEVEL

Toronto.

No changes have occurred in quotations on valves and bibbs recently on the local market. The following prices have been generally uniform in quotations by local distributors:

VALVES AND BIBBS—

Compression work, standard	45%
Fuller work, standard	30%
Quick opening compression bibbs	45%
Batt. cocks, compression	41%
Jenkins iron body, gate	25%
Bath cocks, quick opening	41%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, std.	54%
Roundway stop and waste cocks, standard	54%
Brass steam cocks, standard	50%
Radiator valves, standard	55/25%
Do., removable discs	55/25%
Globe, a angle and check valves, standard.	25%
Gate or straightway	25%
Emco Globe valves	33%
Emco check valves	33%

SLIGHT CHANGE IN LEAD AND ZINC PRICES

Toronto.

Lead and zinc products have remained stationary in price since the report of April 1st, with the exception of a slight variation in quotations on zinc sheets. The following prices are being quoted on the local market:

LEAD AND ZINC GOODS—

Lead pipe, per 100 lbs., up to 2"	14 50
Do., 2" to 8"	15 50
Do., 8" and over	16 50
Lead waste, per 100 lbs.	15 50

Note—Lead pipe is subject to a discount of 10 per cent.

Lead traps and bends	15%
Lead wool, lb.	0 14½
Lead sheets, 2½ lbs. sq. ft. per lb.	0 12½
Lead sheets, 3 to 3½ lbs.	0 11¾
Do., 4 to 8 lbs., sq. ft. lb.	0 11½
Solder, guaranteed, lb.	0 33½
Do., strictly, lb.	0 31½
Do., commercial,	0 29
Do., wiping,	0 31
Do., wire,	0 37
Zinc sheets, casks, lb.	0 11¾
Do., do., less, lb.	0 12¼

CANADA PLATES AND TIN PLATES FIRM

Toronto.

Following the recent revision in the price of all plates, Canada plates and tin plates have been steadily maintained on the local market. In these products there is noted a slight range in prices, which is said to be due more to a variation in qualities than to a weakness in

the market. Prices given below are those generally in effect in Toronto:

PLATES, CANADA—		Per box
Ordinary, 52 sheets	5 45	5 50
Do., 60 sheets	5 50	5 60
Blue and oiled, boxes 52's.	5 80	5 90
Do., boxes, 60's	5 90	6 00
WELSH CANADA PLATES—

1 in. locknut, R. & L.	0 15	0 23
Discount, Less 65 per cent.		

COTTON WASTE PRICES FIRM AND UNCHANGED

Toronto.

Quotations on cotton waste have remained firm since the recent revision but no further change is reported for the present. Basic cotton markets continue to hold the firm note with no reaction having been experienced from the high levels reached recently. Quotations locally are fairly uniform at the following list:

COTTON WASTES—

COTTON WASTES—	
Cream, polishing	0 24
White, XXX	0 21
XX	0 18
X	0 17
XC	0 15½
XXX extra	0 20

Lion	0 14
Standard	0 12½
Popular	0 10½
Keen	0 08½
Above lines subject to trade discount for quantity.	

SHEETS AND PLATES ARE FIRM IN PRICE

Toronto.

Following the recent advances which have occurred in quotations on almost the full line of sheets and plates, no further adjustments have been announced. Reports continue to stress the firmness at primary sources, however, and higher values are still among the possibilities. Heavy buying by automobile manufacturers is a feature of recent reports, this having a tendency to add strength to an already strong market. Quotations locally show a variation in most lines. Average quotations are as follows:

GALVANIZED SHEETS—

	Premier	Apollo
10¾ oz.	6 90	7 40
U. S. 28 base	6 50	6 90
U. S. 26 base	6 30	6 60
22 and 24	6 05	6 45
18 and 20	6 05	6 30
16	5 90	6 15
12 and 14	5 75	6 00

	Queen's Head
28 gauge, base	7 25
26	6 85
24	6 55
22	6 40

	Fleur de Lis
28 gauge base	7 25
26	6 85
24	6 55
22	6 40

An extra 40c per 100 lbs. is charged for Key stone and Premier brands copper-bearing sheets. An extra is now charged on galvanized sheets. 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown in 20c. per 100 pounds.

TANK STEEL PLATES—

¼-in. and heavier, base	3 60
3-16 in.	3 95

BLUE ANNEALED SHEETS—

10 gauge, base	4 50	4 60
12 gauge	4 55	4 65
14 gauge	4 60	4 70
16 gauge	4 65	4 75

BLACK SHEETS—

18-20 gauge	5 25	5 35
22-24 gauge	5 30	5 40
26 gauge	5 35	5 45
28 gauge	5 50	5 60

A charge of 25c per 100 lbs. is made for less than case lots. An extra 10c. per 100 lbs. is also charged on sheets 26 in. wide.

RADIATORS AND BOILERS UNCHANGED IN PRICE

Toronto.

The revision in the quotations on boilers and radiators which took effect recently continues to govern prices on this line. Little activity is reported for the week, trading having become somewhat quieter than formerly. To-day's quotations are as follows:

RADIATORS AND BOILERS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.	
--	--

Discount on 2, 3, 4 and 5 column standard sizes, 44 per cent. for water and 45 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 35 per cent. for water and 37 per cent. for steam.

Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 41 per cent.

BOILERS—

Water:

Round 52 per cent. off list. Square 8 per cent. off list.

Steam:

Round, 13 per cent. off list; Square, list plus 7 per cent.

STRENGTH EVIDENT IN BOILER TUBE MARKET

Toronto.

Primary tube quotations are gradually becoming firmer with the improvement in trading in this line, as a result of the opening of spring. Local values have so far not been affected by this firmness, but a strong undertone characterizes this market and higher prices would not be surprising in the near future.

BOILER TUBES—

Size	Seamless.	Lap-weld
3/4 inch	\$19 00	\$....
1 inch	20 00
1 1/4 inch	22 00
1 1/2 inch	24 00
1 3/4 inch	24 00	23 00
2 inch	22 00	19 00
2 1/4 inch	24 00	21 50
2 1/2 inch	27 00	23 50
3 inch	34 00	28 50
3 1/4 inch	36 00	33 00
3 1/2 inch	38 00	33 00
4 inch	50 00	42 00

ENAMELED WARE BECOMING ACTIVE IN SALES

Toronto.

Early trading was reported somewhat light in enameled ware but recent developments have uncovered some good orders for immediate shipment and the outlook is considered bright for business in this line during the balance of the season. Quotations on the various lines locally are as follows:

ENAMELED WARE—

Enameled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5 1/2 ft.	57 10
Lavatories—	
17x10" Apron F139 or P4045	15 30

18x30	8 50 8 60 8 70
20x30	9 70 9 80 9 90
List less 30 per cent.	

CORRUGATED SHEET PRICES SHOW NO CHANGE

Toronto.

Quotations on corrugated sheets remain at the levels reached early in the

month. There is a feeling in local distributing centres that the present prices will be maintained for some time. Basic market reports indicate a firm undertone in this product. Average prices on the local market follow:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	7 00
No. 26 gauge	7 50
No. 24 gauge	10 00
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	19 00
Less 10 per cent.	

Lighter than 24 gauge and wider than 27 ins., 75 cents per square extra.

IRON PIPE PRICES HOLD FIRM AND UNCHANGED

Toronto.

There is no change in quotations on iron pipe since the revision of February. This market has been somewhat dull for some time but good sales are reported this week. Price list No. 58 which follows governs quotations locally:

SILL, WASTE COCKS AND COM- PRESSION STOPS AT REVISED LEVELS

Winnipeg.

Sill cocks with rough body and wheel handle are quoted at list price less 47 per cent. Wash tray bibbs with bent spout are quoted at 46 per cent. Boiler drain cocks are quoted at 84 cents each. Compression stops with tee handle are quoted at list price less 42 per cent. Lavatory compression stops with wheel handle at list price \$22.20 less 37 per cent. for 3/8 inch and \$26.40 for 1/2 inch less 37 per cent. Angle lavatory compression stops nickel plated 3/8 inch are quoted at \$22.20 less 37 per cent. and 1/2 inch at \$26.40 less 37 per cent. Reversible handle, patent cap, stop and waste cocks are quoted at list price less 30 per cent. and rough body with wheel handle at 62 per cent.

COMPRESSION BIBBS AT REVISED QUOTATIONS

Winnipeg.

Compression bibbs of all variety show a revision in discount. Plain compression bibbs with outside thread and shoulder for iron pipe with plain spout are quoted at list price less 42 per cent. Self-closing bibbs are quoted at 37 per cent. Compression hose bibbs at 42 per cent. Compression flange bibb and hexagon shoulder with adjustable set screw flange plain spout and tee handle at 42 per cent., and the same variety with a brass index handle at the same discount. Rapidac with hexagon shoulder, adjustable set screw flange, plain spout and china lever handle at 40 per cent. Extra self-closing bibbs at 37 per cent. Solid flange plain compression bibbs at 42 per cent. and rough compression bibbs for tanks at 40 and 5 per cent.

NEW PRICES IN EFFECT ON COM- PRESSION BATH COCKS

Winnipeg.

New quotations are in effect on all lines of compression bath cocks and the latest prices are as follows:

COMPRESSION BATH COCKS—

No. 817, index cross handles, nickel plated, each	\$6 80 less 37%
No. 818, Plain cross handles, nickel plated, each	8 20 less 37%
No. 817A Brass handles, nickel plated, each	3 00
No. 818A Index cross handles, nickel plated, each	5 80 less 35%
No. 818B Index cross handles, nickel plated, each	7 20 less 35%
No. 819 Quick pression index handle, each	9 50 less 47%
No. 819A Quick pression index handle	10 90 less 47%
No. 819 1/2 Rapidac bath cocks, nickel plated, each	9 50 less 47%
No. 819 1/2A Rapidac bath cocks, nickel plated, each	10 90 less 47%

HIGHER QUOTATIONS ON BASIN COCKS

Winnipeg.

Higher prices are in effect on basin cocks. Compression basin cocks with 4 arm brass index handle nickel plated are quoted at list price less 28 per cent. Rapidac basin cocks with china index and side lever handle nickel plated at 45 per cent., and the same pattern with

Winnipeg Markets

WINNIPEG, April 13.—Important price changes are again in evidence in local market reports, with the majority of adjustments towards higher levels. Sill, waste cocks and compression stops have advanced. Compression bibbs show revisions in quotations. Basin cocks have moved upwards. Steam and water radiators show an upward revision. Royal square boilers are quoted at higher levels. Another advance has been recorded on copper rivets and burrs. Bath and lavatory supply pipes have moved upwards. Cast iron check valves show slight decline.

BATH SUPPLY PIPES AT HIGHER LEVELS

Winnipeg.

Higher prices are in effect on bath supply pipes also lavatory supply pipes. Bath pipes are quoted at \$2.75 per pair and lavatory pipes range from \$2.50 to \$4.00.

SOIL PIPE AND FITTINGS CONTINUE

Winnipeg.

A firm undertone continues to feature the market locally in soil pipe and fittings. There is a fair demand and as the spring opens up an improvement is expected. Prices show no change.

brass index at 40 per cent. Self-closing basin cocks and pantry cocks are quoted at list price less 37 per cent. and 29 per cent.

CLOSET TANKS AT UNCHANGED PRICES

Winnipeg.

Quotations on closet tanks finished in dark oak vitro and white vitro are quoted as follows: Dark oak vitro complete with fittings, elbow and supply pipes are quoted at \$16, less supply pipe elbow and coupling at \$14.50. White vitro complete is quoted at \$18.50 and \$17 less supply pipe elbow and coupling.

REVISION IN QUOTATIONS ON STEAM AND WATER RADIATORS

Winnipeg.

Two, three, four and five column steam and water radiators show an upward revision in discounts. Steam is quoted at 39 per cent. and water at 38 per cent. Hospital radiators and wall radiators also show new discount. Steam hospital radiators are quoted at 31 per cent. and water at 30 per cent. with wall radiators at 35 per cent.

ROYAL SQUARE BOILERS AT HIGHER LEVELS

Winnipeg.

There has been a revision in discounts on series 48 inch water and steam royal square sectional boilers. Water is list price plus 17 per cent. and steam at 24 per cent. 36, 25 and 19 inch series are quoted at water 2 per cent. and steam plus 13 per cent. Round hot water boilers show a revision as well and discount is 48 per cent. Round steam boilers are list price less 7 per cent.

ADVANCE IN COPPER RIVETS AND BURRS

Winnipeg.

Another advance in price is in effect on the false floor, at one side of your are given below:

COPPER RIVETS—

No. 8, per lb.	0 52 1/2
No. 10, per lb.	0 56 3/4
No. 12, per lb.	0 61

COPPER BURRS—

No. 8, per lb.	0 72 1/2
No. 9, per lb.	0 74 1/2
No. 10, per lb.	0 76 3/4
No. 12, per lb.	0 61

RIVETS AND BURRS ASSORTED—

No. 8, per lb.	0 58 3/4
No. 9, per lb.	0 61
No. 10, per lb.	0 63

SLIGHT DECLINE IN CAST IRON CHECK VALVES

Winnipeg.

Check valves have shown a slight decline and 3/4 inch is quoted at \$1.70 each, one inch at \$2.00 and 1 1/4 inch at \$2.25.

NEW GOODS OF INTEREST TO THE PLUMBING TRADE

Riddell Conductor Elbows

John E. Riddell & Son Ltd., Hamilton, Ont., are now manufacturing for Canada the "Riddell" conductor elbow, in the pattern which was formerly obtainable only in the imported article. The manufacturers state that special attention has

been paid to the construction of these elbows and that the results are perfect fit, correct angle, full length and a per-

fectly smooth surface inside. They also point out that by crimping the new elbows on the outside instead of the inside, no cavities are left to fill with moisture or dirt. Another feature said to characterize this product is the special process of galvanizing which is done electrically and is said to produce a bright lasting finish. The new elbows are made in all standard sizes, plain and corrugated.

Carborundum Grinder

The Carborundum Co. of Niagara Falls, N. Y., are introducing an improved Carborundum Niagara Grinder. Some radical changes are said to characterize the construction of this new grinder, for instance the main casting and the base are cast in one, and the clamp is

a separate piece entirely. It is claimed that this will prevent breaking the base casting when the clamp is tightened. Another change noted is the slotting of the base casting for screws or bolts with which to permanently fasten the grinder to a bench. The makers also point out that each machine is equipped with a genuine Carborundum grinding wheel and a specially constructed adjustable tool grinding guide for use in sharpening edge tools at any angle. The improved grinder is being made in three sizes and are numbered 1, 2 and 3.

Buys Site for Industry

Collingwood, Ont.—Cap't. F. A. Bassett, President of the Postel Lock-Nut Company, announces the purchase of very desirable manufacturing property with easy access to railway sidings and lake connection. Plans for operation of a factory and the marketing of the company's product are being rushed.

Oil Burner Plant in Stratford

Stratford, Ont.—A deal has been closed whereby the Imperial Burners Ltd., manufacturers of fuel oil heaters, takes over the Bridge and Iron Works plant. This company with branches at Welland, Hamilton and Toronto will establish the local plant for assembling.

TWO TIMELY WINDOW DISPLAYS

(Continued from page 25)

about one foot back from the glass; about 8 inches above the regular floor of the window. Between the glass and the front edge of the false floor there should be a sloping front built. This sloping front should be covered with window decorator's artificial grass or fine cut excelsior dyed green; or in some other way, grass sod should be represented. Back of this, as indicated in the picture, place on the false floor, at one side of your window, a little pasteboard model of a house; at the other side of the window a little pasteboard model of a plumbing store. These should be painted in water colors to give the proper appearance.

Indicate a roadway between the house and store by using sand or fine gravel. Place in the center of the window, on the roadway, a toy automobile truck loaded with miniature fixtures whittled out of soft wood and finished in white enamel paint. The appearance of lengths of pipe can be very readily produced by using small brass or steel rods.

Back of the roadway and truck, etc., the rest of the false floor should also be covered with substance representing grass. In the rear of the window, a background made of beaver board, cut out in the center and decorated as shown by the pictures, should be erected with two wings extending toward the front of the window. In the cut-out section of the background, a cut-out, of a large question mark, should be suspended with very fine black wire.

A card with the word "Solved" should be placed directly under the question mark; and the words, "A Bath in Every Home" should be properly lettered in place as indicated by the picture.

A few inches still further to the rear of the window, the cut-out section of this background should be backed up with a sheet of beaver board, painted vertically with black and white stripes about one inch in diameter.

With the addition of cards as shown at the front and sides of the window, you will then have a very effective "Bath in Every Home" display.

A-5260
MUELLER
Bronze Body
Reducing & Regulating Valve

Special sensitive, wear-resistant composition diaphragm to insure accuracy—full seat opening to pass a large volume of water—simple in construction to permit of easy access to working parts—made from MUELLER Bronze and therefore non-corrosive—these features combine to place this valve in a class by itself. And these are the points we bore in mind in designing this Regulator, since careful investigation proved them absolutely necessary to provide a satisfactory valve for the regulation of pressure on cold water lines.

This Valve will fill your requirements for cold water pressure regulation—let us know your problem.

GEM NO. 4 AUTOMATIC AIR VALVE.

This automatic air valve is made of the best brass obtainable and is equipped with high grade carbon. The mechanism is perfect, every valve being guaranteed by us. Ask for a catalog of Steam Specialties. We manufacture many of interest to Canadian Plumbers and Steam Fitters.

You can have as complete a finished piece of work as is possible if you insist on using reliable floor and ceiling plates. They hide all bored places in the ceiling. Are coming more in vogue all the time.

The No. 10A Narrow Flange Plate is Steel Hinged. Flanges 3-4 ins. wide. Highly finished. Especially designed for Twin Connection. "Narrow" can be attached to mains and risers at the very last.

Are These The Opportunities You're Looking For?

Fan Heating and Ventilating Engineering is the pinnacle of all other forms of heating, and of all branches of steam fitting and sheet metal work. It prepares you for:

1. For Employers it enlarges their business opportunities 100%.
2. Employees it raises to Foremanship of a large shop.
3. Or as Designing Engineer of some large Heating Contractor.
4. As an intelligent Salesman of Heating Appliances.
5. As Chief Engineer with a Heating or Furnace Manufacturing Co.
6. Later a Consulting Engineer to Architects and Building Contractors, etc.

Which of These Are You Working for?

Full Information Free.

☐ Fan Heating and Ventilating Engineering. ☐ Sheet Metal Design and Pattern Drafting.

☐ Business Management, for office folks.

The Difference in Advertising Is the Difference in Men

Of itself, advertising is little. And the differences in it are the differences which exist in men.

Just as some men are strong and virile and interesting, so is some advertising. And just as some men are ineffectual and weak and boring, so is some other advertising.

"Does it pay to advertise?" It pays those men who are keen enough students of the public to make it pay them. It pays those men who are truthful, sincere, interesting and believable.

It pays the men whose product deserves the payment, whose brains are keen enough to organize for success and judge enough of the human mind to know how to tell their story with sincerity and interest.

So when you judge advertising, judge it by how it is used and by whom—not of itself and of itself alone.

Remember, an ugly man looks just as ugly in a mirror.

SANITARY ENGINEER'S

unique circulation as proven by the A.B.C. Audit is due to our honest effort to give the retail trade the best possible service.

WHAT IS YOUR ADVERTISING DOLLAR BUYING?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

PNEUMATIC WATER SUPPLY SYSTEM

Gives country residents all the advantages of a city water system without the excessive cost

The wide-awake dealer will make big profits out of this system among customers who now have difficulty with their water supply. It is so simple to operate and costs practically nothing for upkeep.

The outfit consists of an air-tight steel tank which can be placed in the basement, and a "Myers" famous guaranteed pump (hand or power), suitable for pumping air or water, together with pipes and fittings. Any plumber or gas fitter can easily install it. Every outfit guaranteed to do the work for which it is designed. For small or large dwellings.

Write us for Water System Catalogue and prices. Now is the time to interest your customers.

DART

UNIONS

Union Pipe Couplings

are practically indestructible because they are made of Heavy Malleable Castings, and the joint being Bronze against Bronze, gives the strongest kind of guarantee that the Dart will stay as tight as it is first made when screwed to a pipe line.

The Dart's reputation is based on the opinion of others; ask anyone who has had experience with Dart Unions, regarding their efficiency.

ORDER FROM YOUR JOBBER. There's a variety of styles to fill all requirements.

MANUFACTURED BY

DART UNION CO., LIMITED
TORONTO, ONTARIO

Type No. 140—Made in all Patterns
The interchangeable parts shown below are of selected, time-tested materials that insure long life. Ultimate renewals may be made at a minimum of cost and inconvenience.

Dunham Packless Radiator Valves

With Wheel-Type Handle and Interchangeable Parts

This is constructed with built up bellows just like the Dunham-Lever Handle Valve and can be fully opened or closed with approximately one turn of the handle. It is particularly popular with heating contractors because of its effectiveness on steam or hot water type radiators and its convenience for either top or bottom connection. Sturdy, good looking and absolutely leak proof.

Write to us for additional information or consult our nearest branch office.

The Trap That Cleans Easily

Waste pipes cannot become sluggish or foul if the "Emco" A-1829 Centrifugal Trap is installed under the fixture. As the name implies, the action of this trap is centrifugal. It has an adjustable sink connection and the elbow swings to facilitate easy installation on sinks. The cleanout at bottom is an important feature.

Use this "Emco" Trap in your business.

Do You Prefer A "Square Base" Closet?

No. 132

THE straighter lines of the so-called "Square Base" type of foot on the ordinary washdown closet finds favor with many customers.

To meet the demand for this particular type of closet, our No. 132 has been designed.

THIS closet is uniform with all other articles which we manufacture—solid vitreous through and through.

Installed with a "Bellemeade Junior" solid vitreous lowdown tank, the combination is ideal for any toilet room; particularly where economy is a consideration.

Are Plumbers Robbers?

In the minds of the average man the Plumber is worse than a highwayman, his charges are exorbitant and he is rolling in wealth, but this is not borne out by facts, for very few Sanitary Engineers have even made a moderate fortune.

Why This Reputation?

The reason for this unfair attitude on the part of the public has been that the average Sanitary Engineer has never had any business-like method of making his charges, and because there has been too much variation in quoting on jobs. In other words up until the arrival of The Henderson Pricing System it has been a case of guesswork.

Investigate this System Now—To-day

"MADE IN CANADA"

Advertising to Build Up Business

A valuable service is being rendered plumbers and builders by the strong advertising campaign for "Standard" Plumbing Fixtures now running in Canada's newspapers and magazines.

The cut here used is a sample of this advertising.

The Marvel

Heater and Tank Combined

Can't Wear Out, Burn Out, nor Rust Out

The Marvel is free from coils, disks, or other parts that ordinarily wear out, burn out, rust out or break. Because of the constant circulation of the water it will not lime up nor become clogged. The Marvel—compact, simple, low priced and efficient—will give your customers long years of smooth service.

Entirely different both in heating principle and in design, the Marvel offers more and better service for a fraction of the cost of an old style heater.

BASTIAN-MORLEY LIMITED

125 Hanson St., TORONTO

Seven Points of "REX" Union Superiority

- 1 "Rex" Unions are tested and guaranteed to stand 250 lbs. working pressure.
- 2 The counterbored ends prevent the first thread becoming battered and permits an easy entrance of the pipe.
- 3 They will not corrode and will withstand vibration, expansion, contraction, fluctuating pressures and other severe conditions.
- 4 The bronze to iron seat, as used in "Rex" Unions, is recognized as the best known combination of metals to be used for permanent joints and where frequent disconnecting is necessary.
- 5 The octagonal shape of the three parts permits of connections being made with an ordinary monkey wrench.
- 6 The uniform diameter of the waterway insures an unobstructed flow and thorough drainage.
- 7 "Rex" Unions can be supplied threaded to either Briggs or Whitworth Standard and can therefore be used for your export trade.

A Proof of "REX" Union Superiority

Canadian Car & Foundry Company, Limited
Montreal, Que.

FITTINGS, LIMITED, Oshawa, Ont.

Dears Sirs:—Confirming our conversation with regard to Rex Unions; as you are aware, we have recently purchased from your Company a large quantity of Rex Unions, and have found them satisfactory in every respect. They appear to have more metal in them than other Unions, and we also find them interchangeable; in fact we are very well pleased with them and intend specifying your Unions on our orders where we can consistently do so.

Yours very truly,

Sell a Salesman

First—a "Dayton" Water System

Type 60 "DAYTON" Deep Well System
Either flexible chain drive or direct geared.
Deep Well Units in 4", 6", 8" and 12"
stroke.

It has been proven from carefully kept records that the sale of a \$200.00 water supply system results in the further sale of an average of \$400.00 worth of plumbing fixtures and supplies. The average plumbing dealer is in a better position to realize the full value from the sale of a water system than any other class of business. There is an enormous market in small towns and country districts waiting to be developed and the local plumbing dealer is the one who will do it.

To get this attractive business, you must handle a water system that will make satisfied users and a line from which you can always select the size and type of outfit to suit the job you have on hand. In addition, a modern, up-to-date selling plan that will stimulate business without expense to you is important.

The "DAYTON" line of Water Supply Systems offers these things to you. Send the coupon and get the details of how we will help you cash in on this profitable business.

Dunham Radiator Traps Insure Service that is Noiseless—Sure—Lasting

No. 1

No. 2

No. 3

No. 4

No. 5

The Dunham Two-Part Radiator Trap

Made in five sizes as shown. The Nos. 1, 2 and 3 Traps are regularly furnished nickel-plated and with union nut and nipple, threaded right hand. They may be supplied in angle, straightway, right hand, or left hand pattern. The body and cover are made of red brass.

The Nos. 4 and 5 Traps are painted battleship gray and furnished in either angle or straightway patterns with female right hand threaded connections, both inlet and outlet. The body and cover are made of the best gray cast iron.

Maximum operating pressure ten (10) pounds gauge.

Dunham Radiator Traps were the first thermostatic disc traps. After 20 years of unparalleled service they are still the last word in radiator trap efficiency. To the heating contractor who has experienced the annoyances of other types we recommend the Dunham Trap as a certain means to personal satisfaction and better pleased customers.

The Dunham Radiator Trap automatically releases all air and condensate and retains the steam within the radiator. Its construction is simplicity itself. Write for detailed technical information to-day.

Outlines Big Growth in Rural Sanitation Throughout Canada

Only 200 Septic Tank Syphons in Canada From 1914 to 1917
Whereas 1,000 Installed in Ontario in One Year Now—Problems
of the Septic Tank in Rural Districts Near Cities and in Villages
and Towns

MAJOR L. L. ANTHERS, Managing Director Anthes Foundry Co., Ltd., Toronto, spoke on the subject of Rural Sanitation at the last meeting of the York Township Master Plumbers' Association and answered many enquiries on this subject which were raised by the various members. He addressed the meeting as follows:

"Canada covers a very large area and unfortunately the population per square mile is small. In this area we have every conceivable formation, including rivers, mountains, clay belts, etc. In United States the physical conditions are very similar to the southern belt of Canada but when you get one hundred miles north of here you get an entirely different country where the difficulties become more involved. There the engineers have very great problems, particularly regarding water supply. These areas will fill up in time but for some little time they will not be able to lay out the big trunk systems such as we know. Water supply is a big problem and the question of sewage disposal is also a very great problem. Take the town of Cochrane. There are now 600 out of a population of 2,700 suffering from typhoid fever. They followed the line of least resistance thinking the filtration of raw sewage through the soil would not affect the drinking water, but it has done so.

Farmer Slow to Move

"When we talk of rural sanitation one thinks of the farmer, but the farmer is very slow to move. Some have money but many of them have not, and it is hard to get money from the farmer. It is largely a matter of education. The same condition applies to small towns, of populations of from 1,500 to 2,000.

"I have a letter from a farmer in Vegreville, Alta., which shows how big this problem is. He says there are 1,700 people in the town and there are 44 water connections, of which five are large buildings. The sewage is deposited in a creek, causing great annoyance. He asks if it would be possible to put in one or two septic tanks to take care of the sewage.

"When we went into this problem of rural sewage disposal just after the war, I tried to establish how we could stimulate sanitation in these districts. I came to the conclusion that the septic tank was probably the best solution. There is nothing new about it. The syphon was invented long before its time but the people were not educated to the advantages of the system. It was hard to convince people that the sun, air, etc., had a lot to do with the action on the effluent of septic tanks. Many engineers said it was dangerous to have the effluent

taken care of by superficial disposal. In this connection I would point out that we are all aware that in the evening people turn gallons of water on the lawn and it absorbs all of it. The same thing applies to sewage disposal. Much of the moisture is dried by the sun and wind. If it was taken far below the surface this action would not take place. In cess-pools the water becomes contaminated because there are not the proper natural conditions and it becomes clogged and the liquid seeps through the lower soil.

Handle Through Jobbers

"We want to see sanitation taken seriously because we have tried many ways to put these ideas across. We have had many enquiries over a period of years but many of them we have been forced to handle through jobbers and they were not interested enough to go fully into the subject.

"We have a by-law in the city of Toronto saying that fixtures have to be installed, but in the rural communities you have not a salesman like this by-law to work for you."

At this stage Major Anthes endorsed the movement of the members to co-operate with the Ontario Society, pointing out that the plumbing trade is highly competitive and that many master plumbers do not know their costs of doing business.

Returning to his subject Major Anthes continued, "Another big difficulty is that plumbers do not think the laying out of the disposal fields is within the plumbers' sphere. Most of this work is done by drain contractors. You in the township have city people building rural homes and wanting city conveniences. This question is solved for you in such cases, but in the villages they have not got this stimulus and it is hard to put the propaganda over in such places.

Growth of Rural Sanitation

"As an indication of the growth of rural sanitation I would point out that from 1914 to 1917 there were only 200 syphons in Canada compared with the recent installation of 1,000 syphons in Ontario in one year. There is no reason why every rural community should not have such facilities."

Referring to the importance of the trade reading trade journals, Major Anthes stated: "I believe an honest effort is being made by many of such journals to put across to the trade the very latest ideas in sanitation. Read your trade journals because a number of authorities are, through that medium, spending much time to assist you in your work. There is much sound sense in these papers and they are doing all they can to improve trade.

"The manufacturers are also doing all they can to give

service and good quality goods, and if we don't give this we want to hear your kicks. If you get pipe with a thin side the manufacturer wants to know about it. Or if you get pipe with sand holes in it let the manufacturer know. We should try and get the manufacturers and wholesalers into an organization too, and try to help things along by co-operation."

Splendid Work

Major Anthes referred in complimentary terms to the splendid work done by the Ontario Agricultural College in furthering the idea of rural sanitation among the farmers, and suggested that plumbers link up definitely with such effort.

In answer to a request by H. W. Rushby for assistance in framing township

MAJOR L. L. ANTHERS

Managing Director Anthes Foundry Co., Ltd., Toronto, whose address on Rural Sanitation and answers to plumbers' problems, as outlined herewith, contain many helpful pointers.

regulations governing septic tanks, Major Anthes promised to give what help was possible and pointed out in recommending this principle that it had had much success in Britain where they had had long experience.

"There is much difference between raw sewage and effluent," he continued, "and there is no need to take out a septic tank where you put in trunk sewers. You then have effluent instead of raw sewage going into the sewers, involving less work on the central disposal system. The syphon chamber of the septic tank can be connected up with the sewers and this saves the use of expensive equipment for the handling of raw sewage.

"Septic tanks will not discharge until the water in them reaches a certain level and then it goes with a rush. That rush will provide good flushing for the sewers."

Case of Wingham, Ont.

Major Anthes continued on this point by showing that in Wingham, Ont., fungus growths obstructed the sewers be-

cause they did not get sufficient flushing. It was found that a large syphon installed at certain sections on the sewers, and a tank at the end of the mains keeps the sewers clean by constant flushing.

Some question was raised by one of the members concerning the operation of septic tanks in the winter. Major Anthes replied that trouble is sometimes caused by the tank being too cold. It was said to be wise to see that the system was well warmed up before being put into operation. This could be done by pouring heated water into the tank chamber. Putting a few cakes of yeast in warm water into the tank was recommended as a means of aiding fermentation. Sometimes manure placed along the main trunk line of the system helped, preventing freezing in extremely cold climates. It was pointed out that the effluent is really not water and that it will not freeze nearly as readily as will water, due to chemical action.

Another question was, "Where is the

best location for the tank with relation to the house?" Major Anthes answered, "There is no reason why the tank should not be placed right next the foundation of the house, but don't make the foundation wall of the house a wall of the septic tank. The disposal field can be placed twenty to fifty feet away from the house, and should be located in the opposite direction to a well."

WRITE, TELEPHONE OR CALL

There are many ways in which to get business, and all the ways are good ways. But some are better than others. The best way is to employ all of them, by doing this you are on the sure and safe road.

The other day a successful business man said, "If I want 20 per cent. of the business I ought to get, I write; If I want 30 per cent. I telephone; but if I want 100 per cent., I write, telephone, advertise and then go and see my prospect." That is the sure way.

York Plumbers Discuss Joining With Ontario Society

Labor Bureau to be Established for Convenience of Members—Will Give Good Send-Off to New Plumbing Inspector for the Township

AT THE last regular meeting of the York Township Master Plumbers' Association a number of current developments in the township were dealt with. The resignation of Chief Inspector Hughes and efforts being made to make a new appointment, came in for some consideration. It was felt that Mr. Hughes had had the support of the members of the plumbers' association despite reports to the contrary. President McDonald, who presided, had been of the opinion that Mr. Hughes had been making good progress with his work.

H. W. Rushby pointed out that the association's Credit Bureau was now functioning and suggested the formation of a Labor Bureau. He stated that there were not too many journeymen in the city but they were ill divided. An employing plumber might need a man for a short time only and should have facili-

ties for securing him. Mr. Sleep agreed to act as director of the Labor Bureau, devoting an hour at mid-day to getting a record of available men and meeting the requirements of members.

Mr. Rushby brought to the attention of the meeting the forthcoming convention of the Ontario Society on May 10 and 11 and suggested that steps be taken to be represented at that convention. It was decided to hold the next meeting of the association during the week of the Ontario convention and to have a speaker from the latter association to address the members on the advantages of affiliation with the provincial body.

Major L. L. Anthes, Managing Director, Anthes Foundry Co., Toronto, was the chief speaker of the evening and addressed the gathering as outlined elsewhere.

"Sanitary Engineer" in Port Arthur and Fort William

EXPRESSIONS of satisfaction have already been received by SANITARY ENGINEER from a number of sanitary and heating engineers in the twin cities of Port Arthur and Fort William over the appointment of a special representative who will work in close co-operation with the craft in those cities.

Theodore B. Allen, well-known locally, will serve the craft in those cities in connection with the various services of SANITARY ENGINEER and there is no doubt the co-operation of the craft with Mr. Allen will be very beneficial.

Ontario Government Sends Out Lecturer With Demonstration Truck

Bathroom Fixtures, Kitchen Sink With Running Water, Pneumatic Water System, Hand and Power Driven, All Fixtures in Full Operation—The Women's Institute of Ontario Will Arrange Complete Course of Lectures

Written specially for Sanitary Engineer by EDWIN NEWSOME, Consulting Sanitary and Heating Engineer.

TO CONVINCE, and to show rural residents, farmers, and farmers' wives that sanitation in the home is very necessary, is going to be the objective of lecturers during the coming summer months. The Women's Institute of Ontario has arranged to have practical lectures conducted throughout Ontario, and a fully equipped truck will be used.

The truck has a division wall down the middle to represent on one side the wall of a bathroom and the other side of the wall will play the part of a portion of a kitchen wall. The body of the truck will be 9 feet long, and 6 feet wide. On the sides will be hinged a wing or swinging side, which can be fixed so as to add floor space to both the kitchen and the bathroom.

This will give a floor space of a little over 11 feet. Two sets of steps will be fitted to each side to enable those attending the lectures to thoroughly examine and inspect the goods.

The piping will all be concealed in the

wall, which will be 9 feet long and 6 feet high and painted or otherwise finished, one side to represent a tiled bathroom wall, the other side to look like a well finished kitchen wall. The material will all be real. No models excepting a working model septic tank, will be used.

The water closet will be set up and provided with water, and in connection with all the fixtures a large tank will be placed on the ground under the truck to receive water from the various fixtures as they are demonstrated. The same applies to the taps on the sink, bathtub and wash basin.

A full sized 250-gallon per hour electrically driven pneumatic water pressure system will furnish water to the fixtures, and a range boiler will form part of the outfit. An electric washer and an electric vacuum cleaner are included in the equipment. So as to be able to properly explain the advantages of the various fixtures in localities where there is no electric current available, a hand-driven pneumatic pump will be fixed up

in such a way as to make use of the large pressure tank. As a matter of fact every possible detail has been worked out that will not only be of interest to those attending the lectures, but make the lectures as practical and valuable as possible.

The lectures will be given all over the province, particularly where there is electric current and good roads, so that as large a portion of the time as possible will be devoted to demonstrative work and lecturing and as little time spent as possible in travelling. A complete list of places and regular route is being arranged, and many of the country and small town fairs are very likely to be visited.

There will be a lighting system of some kind furnished so that evening lectures can be conducted. Blackboard sketches and discussions will form part of an educational campaign such as has never before been conducted in Canada, or in fact, on this big continent.

The officials of the Women's Institute

Fittings on the truck to be used in connection with the lecture tour outlined in this article are illustrated herewith. It shows a bathroom with all fixtures and small bathroom accessories in place.

Portion of modern kitchen with fixtures working and all normal size on the truck to be used.

will endeavor to have these lectures conducted on premises where ample water is available. A flexible hose will be dropped down into the well, the pump put into operation and then when the pressure tank is filled up to an operating level, it will be so fitted as to work automatically. As the fixtures will waste into the small tank referred to, situated under the truck, the suction pipe will pump any further supply from it into the pressure tank again.

The lecturer will give blackboard talks and answer questions put to him

by his audience. When possible he will conduct lantern lectures, showing every phase of his subjects which will in the main comprise sanitation on the farm; the principle of water supply systems, and how they operate; the possible troubles; ordinary every-day ailments or possible troubles in a plumbing system, and remedies; how to install a proper sanitary sewage disposal system; the why and wherefore of one, and the dangers of having a cesspool. Last, but by no means least, the probable cost in dollars

and cents and the value to life and health of a sewage disposal system.

A Word to Sanitary Engineers

Now for a few words to the plumbing trade. This work being conducted by the Agricultural Department should prove of inestimable value to the whole industry. There never was such a campaign conducted that will be of such value to one industry as this is going to be to the plumbing and heating trade. Every one connected with this move-

(Continued on page 38)

Bring the Other Fellow to the Ontario Convention May 10-11

days' reunion will be enjoyed by all attending the convention.

AS BRIEFLY announced in the last issue of Sanitary Engineer the 12th annual convention of the Ontario Society Domestic Sanitary and Heating Engineers will be held in Toronto on Thursday and Friday, May 10 and 11. Sessions will be held in the Foresters' Building, College Street, Toronto.

Preliminary plans for the convention being made by Secretary Garrett Frankland indicate that a helpful and sociable two

Make your plans now to attend. There is greater need for co-operation to-day than ever before and every sanitary and heating engineer owes it to himself to benefit as much as possible from these get together sessions.

Patterns for Automobile Fender

Written for Sanitary Engineer by O. W. Kothe, Principal, St. Louis Technical Institute, St. Louis, Missouri

AUTOMOBILE sheet metal is just giving another slam too much to the other sheet metal work with which we are so familiar.

There are a great many workmen who let some of the beautiful curves and high polish of the modern sheet steel buggy mystify them.

In reality, they are very simple and after a period of study a person is surprised at the extremely few designs that require complicated laying out.

In this drawing we have a fender that has a splash guard, a mud filler, and a visor or lip attached.

From the front elevation, we see the general outline of fender, and the side view shows us the curvature of the top and the shape of the splash guard, while the front elevation shows the mud filler section.

Now the top fender is just merely a flat strip of metal with a bead run around.

Divide the top line of side elevation as 1-8 in any number of equal parts and project them into the front elevation.

Then pick this girth from side elevation and set it off on a line A-B.

Draw stretchout lines and then from the center line A-B of front elevation, pick the widths and set them off on this line in pattern.

This gives the widths and curvature as shown.

This process is also continued for the mud filler guard by dividing the section in front elevation in any number of equal parts and projecting those lines into side elevation.

Then pick the spaces as 8-14 and set them off in pattern from 8-14 on line A-B. After this pick the widths from front elevation and set them in pattern, which permits drawing the outline for pattern as shown.

To set out the splash guard, pick the girth from front elevation as a-7"-6"-5", etc., and set off on a line as a-y below side elevation as shown.

Draw stretchout lines through these points and then from each point in elevation drop lines until they cross those in stretchout of similar number.

This enables tracing the outline for the miters of pattern.

The mud filler is set out in the same way by picking the girth from the section as a-b-9-10-11, etc., of front elevation and set off below side elevation as a-14.

Draw stretchout lines through these points and then from each point in elevation as 8-9-10, etc., drop lines to cross those of stretchout of similar number. Sketch a line through these intersections and the pattern is finished.

To set out the lip the parallel line method can be used by placing a plan of the lip below side elevation and dividing the curves in equal spaces and running up the points into the elevation.

From each of these points in elevation project lines over into front elevation.

Then, by means of a paper strip x, pick the spread of spaces and set it as in paper strip x' and drop lines into those that were projected from side

(Continued on page 29)

The splendid bright showroom of A. R. Wilson, Ltd., Sherbrooke, Que., showing kitchen, laundry and bathroom equipment well arranged, and showing some rural equipment in the centre. Pipeless furnaces, etc., are shown toward the rear and the office is at the back. A model bathroom is shown in the enclosure. This firm have found the use of a showroom to be a big stimulus to business.

appear in any home, and with a flower pot on each corner post makes a very attractive display. The chief feature of the whole showing is keeping it spotlessly clean. From the front window to the rear the wood-work and floors are varnished and polished and the fixtures are dusted each morning.

After Farm Trade

Not only is it the intention to attract the townspeople, but it is expected that rural trade will become more and more interested in the showing of wares of this nature. Speaking of developing this class of business Mr. Wilson said that up to the present very few bathroom or kitchen outfits had been sold in their locality, but there were indications that more would be sold to farmers in future. They were planning on entering a campaign for this trade, and intended shortly to advertise in the local paper along these lines. They were also seriously considering fitting up another automobile truck with fixtures to call on bright prospects along the country roads.

"Farmers are buying cars, and we think that if they can be shown the advantages of running water in their homes and barns, a modern bathroom and kitchen, they can be induced to buy.

Some of them should be persuaded to modernize their homes rather than putting their money in automobiles for pleasure outside the home. The thing for us to do is to show them that even more pleasure and convenience can be given by installations of our wares than by the purchase of a car which only gives pleasure during certain months of the year. A certain percentage of farmers are able to afford both, and many of these are good prospects for us, as few of them have modern household conveniences. However, farmers

and their wives will not come to us about this matter and it is up to us to go to them."

Keeping Track of Goods Used by Workmen

A rather unique accounting system was described to Sanitary Engineer by Mr. Wilson. They adopted the system some few months ago and find that it works to great advantage in the carrying on of their business. It at least eliminates to a great extent leakages through material being used on jobs by the men in the shop without any proper check.

When the order is received in the office a numbered order blank is made out giving every particular of the work to be done, the name of the party, his address, and by whom ordered. This is handed to the foreman who assigns the job to one of the workmen, enters the workman's name on the order blank, and the name of the helper also sent. Each man in the shop carries a pad of blank "material wanted" slips, and on this he enters the material he will require, or has used, after he has looked over the job, or completed it. On this slip is a number corresponding with the number of the order received from the

A. R. WILSON Ltd.

Job No..... Date.....

MATERIAL WANTED

Head of the slip 3½ in. wide by 5½ in. deep covering Material Wanted as outlined in the article. It is numbered to correspond with the Workman's Return Slip.

(Continued on page 38)

This is the Age of Gas—Why?

Waste, in No Matter What Form, Helps to Swell Cost of Doing Business—Gas is Wasted, Coal is Wasted, Time is Wasted—Sanitary Engineers Can Help Reduce Cost of Living and Make Money by So Doing

Written specially for Sanitary Engineer by EDWIN NEWSOME, Consulting Sanitary and Heating Engineer.

Say, Fellows!

IN CHAPTER I, I told you a little about the history of gas. I'm going to give you a little bit more, and with it I'm going to tell you what some of our fellow craftsmen over the line are doing. But before I do let me tell you a "bit crack" as the Scotchman calls a story, about some of my own experience with gas. And mind you, what my experience was can be yours if you so wish it.

Away up in Scotland, in a little town not far from Glasgow, I had a little job on to put a couple of gas stoves into a couple of houses. The Glasgow Gas Co. used to loan out stoves in those days for so much a month and if I remember right the more gas you used the less you paid for the loan of the stove.

However, I put in those two stoves and next door to one of the houses lived a hard working couple and the wife was the mother of a lot of little "nippers" and she dropped into the next door to see the new gas stove. Well, it fairly made me sad to see the longing eyes of that "poor body" look over that stove. And she says, "My, my, but wad I no' like to be the owner o' yen a they stoves?" She said she had an old "Bonnybridge" and the inside of were like the inside of the new stove. So out of sympathy I went in to look over the "Bonny-

bridge" and I found it to be very like our Canadian coal ranges.

So I took a bit of 3-8 in. pipe, drilled it full of small holes, bent it, put a bunsen to it, made a couple of holes in the top of the oven door, and the poor soul had a gas oven for practically a few cents.

Now why have I told you this story? Because that job got me one of the biggest plumbing jobs I ever did. That poor woman began to boast about what "Newsome" had done for her, and a lady for whom she worked wanted an "Honest plumber," etc., etc.

But listen, there's another reason why I am writing these gas articles. It is because I can see some big business for my fellow-craftsmen in the gas business. If you men had the chance to follow the development of the gas industry, you'd be astounded. You read in Chapter I how gas used to cost over \$15.00 a thousand and despite that fact, there is more gas sold to-day per capita than ever in the history of civilization. And you, my fellow-worker, can get the business of installing thousands of feet of pipe if you will only go the right way about it, and then, what is more, you can sell the gas appliances. Just read on and let's see how, and what other fellows are doing along this line.

THE concluding paragraphs in the previous chapter under the above heading dealt with the heating power of gas and other forms of fuel, and statements were made to the effect that at no far distant date, all fuels would be classified and consumed in our heating furnaces in some form of gas. This statement and many more cannot be refuted, at least by those men whose "ear is to the ground."

But, when this day comes, and it is coming, there is another problem we men must not overlook, that of conservation of fuel, (gas). This spirit of conservation is in need of much cultivation. Conservation is a twin sister to co-operation, while competition, the most pernicious of all systems, is the enemy of man and has been ever since the days of the pre-historic cave man, when he fought for his meat like the beast of the jungle. Competition creates waste; competition as at present practised is the death of trade. And it is this waste, only in another form than competition, that we must eliminate.

Take for example the heat loss from even an ordinary gas water heater, and a range boiler. I had an experience in

Ottawa some years ago which proves my point. We had a little tot, just beginning to walk. She tried to rise to her feet by clinging to the gas water heater, which was in the kitchen, and her little fingers got burned. I made a covering of Johns-Manville air-cell asbestos, both for the heater and the range boiler. Previous to that, my monthly gas bill amounted to about six dollars. out after that my bill dropped down to the neighborhood of \$4.25 to \$4.50, thus making a saving of at least \$18.00 a year. Now what is \$18.00 per year? It is a sum of money that would pay the interest on a loan of \$300.00 at 6 per cent. for one year, which means that one could afford to invest that amount of money and get by saving, 6 per cent. on the investment. It is just that kind of reasoning which results in millions of dollars being invested in huge enterprises.

We find that in England a great deal of research work is being conducted along these lines by the British Government, because, if there is one movement more than another that will wipe out the war debt of the British people it is conservation. The following extract—

taken from a report by Mr. Newton Booth of the Woolwich Arsenal and read before a body of heating engineers—will give our readers an idea of what can be accomplished by insulation of heat, or in other words, retaining all the heat units for the actual purpose for which such heat is needed.

Mr. Booth estimated that approximately 3 B.t.u. per sq. ft. of exposed surface was lost to the surrounding quiescent air per degree difference in temperature. More accurately this is the loss at 250 deg. Fahr. temperature of the surface; at 100 deg. it would be about 2.2 B.t.u. and at 500 deg. about 5 B.t.u. Moisture and rapid air circulation would increase these figures very much. The effectiveness of insulation depends upon the volume of air confined in minute spaces and often varies inversely with the weight per cubic foot. Thus cork, wood sawdust, porous bricks, wool, felt, asbestos, diatomaceous earth, etc., are considered good insulators. Air weighs 0.0081 lb. per cu. ft.; slag wool weighs 15 lb. per cu. ft., porous bricks 28 lb. and firebrick 120 lb.

The author said that one of the latest insulators was magnesia carbonate mix-

ed with 15 per cent. of asbestos fibre and some adhesive substance. Taking the conductivity of air as 0.000055 (c.g.s.) that of 85 per cent. plastic magnesia would be 0.00017 or about one-third the insulating effect. Comparing this with a conductivity of 0.002 for firebrick gives an idea of its relative value as an insulator. He added that the high cost of gas fuel "will show the importance of proper lagging of such gas-consuming appliances as cookers, laundry water heaters and water-heating installations in general, if consumers' interests are to be studied and we are to meet the competition of other forms of heat supply." It is important that water be kept out of such insulation. The price of this plastic magnesia was 1s 3d. (about 29 cents) per sq. ft., although the loss from a bare steam pipe per year would be three times this amount. An air jacket for an appliance like a gas oven was not much benefit in comparison with proper insulation.

Some may argue that the heat lost between useful heating operations, or that going out with the waste gases were more important than insulation which may be justified, but those problems are not so simply nor permanently solved. If 10 per cent. of the heat generated is lost by radiation and half of this can be saved by insulation, it means less gas or other fuel will be needed for heating and more uniform inside temperature. Mr. Booth took up a subject in which we all should be interested, especially in its application to steam or water pipes in apparatus fired by gas.

Now, let the sanitary heating engineers of Canada take more interest in the conservation of fuel; let them take a greater interest in gas appliance sales and the service such appliances will render, and the public will no doubt begin to have a greater degree of confidence in our craft. It is this lack of public interest, lack of true salesmanship, which keeps us from securing the confidence so very necessary to our own as well as the public's welfare.

For instance, when a new gas appliance or any other appliance such as we sanitary engineers instal, is put on the market, we should conduct searching inquiries about it and let the public know that we are doing so. We know full well that steel pipe for years has been used as waste pipe in certain systems of plumbing. What did the plumbing trade do to put a ban on its use? Nothing. When the Fuller tap came into being the public paid the price and the trade got the black eye. The patent waste and overflow is another fool idea, unsanitary from every viewpoint. But sanitary engineers have done nothing. Why? That's a question.

But here we are, with an opportunity to let the public know something about true conservation and the use of gas appliances and what is more we could get all the sales if we went the right way about it.

Nearly every plumber or sanitary engineer in Canada is on bad terms with his local gas company, and why? Be-

Says Spring Number Was Very Live Issue

Sanitary Engineer, Toronto.

We are to-day in receipt of our copy of your April 1 issue. We wish to offer our congratulations upon this number and can frankly say it is the liveliest issue of your publication that it has been our pleasure to see for some time.

We were particularly interested in the announcement regarding the Trade Extension Bureau service which you are instituting. We feel this is a service which has been greatly needed by the trade in times past and know that it will be of far greater benefit to the plumbing industry than any other step which has been introduced for quite some time. We are quite familiar with the workings of this bureau and if there is anything we can do or any way in which we can help this work you can count on our support.

Wishing you every measure of success,

H. Mueller Mfg. Co., Ltd., Sarnia, Ont.

(Signed, O. G. McMann, Advertising Manager)

cause he, in the first place, just neglected the possible sales of gas appliances, and thus the local gas company lost gas business. The gas company is only doing what the tobacconist does when he sells tobacco and pipes. If the tobacconist had to depend upon some other merchant to sell pipes, the tobacco sales would all be cigars.

Six Years or so Ago

Much has been said and written about the way sanitary engineers and gas companies conduct themselves with relation to each other's business. I know of quite a number of Canadian towns and cities where gas, both natural and artificial, is available. Yet in those very towns I have found that the plumber has gone out of his way to oppose the gas company and taken up the sale of electric goods.

A few years ago it was my privilege to condemn the electric steam radiator, a contrivance which, with just a little of the usual fake boosting, would have come to stay as a unit in connection with heating systems, but as electricity is fundamentally a power energy, and unsuited for heating, all such propositions are sooner or later found to fail. But we as sanitary and heating engineers, should be the forerunners in honest criticism of such fakes.

Gas as a fuel and lighting element was almost the very foundation of our business in its early days, and now to-day, what do we find? Across the line the sanitary and heating engineers are actually working hand in hand with gas companies.

In Portland, Maine, an educational association has been formed known as "The Gas Institute." Master plumbers, architects and gas company men are eligible for membership.

The gas company there realized that it was not getting the co-operation of the plumber because the plumber was getting nothing out of the sale of gas appliances and the piping business.

The contending parties got together

and educational meetings were held from time to time with the result that to-day plumbers are getting this kind of business, and architects, plumbers and gas companies are "a happy family" in Portland.

At a meeting held in Boston a couple of months ago, master plumbers from all over the United States were in attendance under the auspices of the New England Gas Sales Association, and several were asked to take part in the discussions.

Jas. Cassidy, past president of the National Association of Master Plumbers, remarked that the spirit of true co-operation between gas companies and the plumbing trade was really splendid. He stated that the success of the whole movement of co-operation between gas companies and the plumbers was largely due to the efforts of Mr. E. S. Stack, of Stack gas water heater fame. Mr. Cassidy said:

"There is altogether too much unworthy prejudice existing between gas companies and plumbers. You cannot work with a man or an industry you don't like. But it is very encouraging to note the change that is taking place, and the improved attitude in general, one toward another, in several of the States." He quoted Mr. Archie Maddox as having expressed the opinion that plumbers all over the U. S. A. would soon be selling most of the gas appliances, and if that was so, the 10,000 members of the National Association of Master Plumbers would fall in line and become salesmen for the various gas companies.

At the same meeting Governor Woodhead referred to the fact that in 1921 the plumbers in Arlington formed a committee of eight, (five plumbers and three gas men), to see if some plan could not be agreed upon whereby the bad feeling and lack of co-operation could be overcome. To-day there are no serious disagreements and to prove the good feeling now existing he stated that

Advertising Suggestions for May

HOW TO ORDER

advertising material

Advertisements in each issue will form a complete month to month advertising campaign for your use.

These are only a few of the electros available in this service. Complete catalog of all illustrations available to date will be mailed on request.

The catalog gives serial numbers on each illustration and the price is quoted. Prices range from 30 cents to \$1.00 for electros according to size.

In ordering from catalog write plainly the serial number of the illustration and send remittance to cover the order in order to save cost by avoiding book-keeping expense.

WHEN a (.....) Farm Water System is unloaded at your door, it means the end of useless waste of time and labor.

The greatest advantage city residents enjoy is running water!

With the (.....) Farm Water System on your farm, no city dweller has any better water supply.

Running water in the farmer's kitchen, for cooking, washing, drinking; running water to fill the troughs, and for every need on the farm!

Water—under sufficient pressure—for protecting your property against fire!

Water—in any quantity—fresh, cool and clean! That's what it means to you!

For deep or shallow wells, there's a (.....) Farm Water System here for you. (Time payment if you want it.)

YOUR NAME HERE

Phone No. Address

Cheaper and Better Than an Extra Hired Man

Figure it out for yourself: somebody must pump and carry every drop of water you use, at great loss of time and labor.

By stopping this loss you can do with one less hired hand—or gain an equal increase in productive work.

Running water on the farm will pay its cost, many times over, by merely saving time! Then, there's the protection of humans and livestock against disease.

A (.....) Farm Water System, for either deep or shallow well, is a paying investment.

Toronto, Ont.

Effective Water Heater Window Displays

WINDOW Display No. 113 gives you a suggestion, of a very effective way of getting attention for the fact that you supply hot water service equipment, of a kind suited to every need.

In our window, the background is formed entirely by gray ramie cloth, draped in natural folds from ceiling to floor.

On one side of the window, a coal tank heater is shown, connected up to a range boiler; and on the other side of the window a gas tank heater is shown in a similar way. Between these two, in the center, toward the front of the window, an automatic gas water heater is shown.

The stiffness and flatness of the floor of the window is relieved by draping a few folds of ramie cloth, of contrasting shade, across the front and in the rear of the window, as photograph.

You may desire to show in your win-

dow, appliances different from those shown in this photograph. That should be very easily done, using this photograph as a suggestion for the grouping of your display.

Window Display No. 114 makes effective use of the modern kitchen sink, as a background for the display of an automatic water heater and combination range boiler and water heater.

This window is easily put together by constructing background and side walls suitable to represent the walls of a modern sanitary kitchen. In the center of the back wall place a modern kitchen sink, set at a proper height and equipped with faucets, etc., presenting it to view as if permanently in place.

At one side of the window, midway between the sink and the glass of the window, place your automatic gas water heater, and on the other side, your combination range boiler and water heater. The big central display card is placed

in the center of the window on an easel, a few inches in front of the front line of the sink. The whole idea of this window is expressed by the big display card. It will drive home to your public the thought that modern hot water service truly is, "As essential to the modern kitchen as a sanitary sink."

Here again, drapery of soft cloth is used to relieve the flatness of the floor.

The same idea can be made use of in your window to exhibit other forms of water heating equipment, in keeping with your own ideas as to what you wish to exhibit.

In this window is shown a ventilating device. This is in the nature of an adjustable panel fitted to suit the top of any window, and carrying a 16 inch ventilating fan which operates on ordinary household current. This device should prove to be a very satisfactory "cash and carry" side line for the plumbing dealer or heating contractor.

An Important Series

THE plan of the Ontario Government for conducting a series of lectures throughout various rural districts of the province during this summer, as outlined fully in this issue, is a very progressive step and one which should mean much to the sanitary and heating engineer. There are two ways in which the craft can cash in on this effort, viz., by attending the lectures personally where possible, and by following up the effort of these lectures upon those who attend them.

In selecting Edwin Newsome, contributing editor of *Sanitary Engineer*, to handle these lectures throughout the province, the government shows appreciation of the work which Mr. Newsome did in his series of lectures last fall, which were fully reported in *Sanitary Engineer*.

Mr. Newsome has laid full plans for the extended course of lectures this summer and full details of this campaign will appear in *Sanitary Engineer*, as well as complete reports after each lecture is completed.

A Very Serious Move

MRS. McNAUGHTON, who has been the promoter and leader of many movements to improve social conditions on the farms of Western Canada, gave some very interesting evidence at Ottawa a few days ago. In a survey of over three hundred farms in Manitoba she found that nearly 60 per cent. had no water laid to the kitchens and only about 10 per cent. had bathrooms. Twenty-five per cent. of the women did the chores of the farm.

It is idle to say that the grandparents of these women, the pioneers of the country, had to go to the well for their water, knew nothing of hospitals, and took their full share of the farm work. The forbears of the city housewives did not have electric light and power, bathrooms were rare, there were no movies, no telephones and grocery stores were a long distance away with no street cars to lighten the journey. The comparison that is fair and full of meaning is not between the prairie housewife and the women who faced the unknown in the prairie schooner, but between Mrs. Brown, who lives on the homestead fifty miles from a hospital in Northern Alberta, and her sister, Mrs. Smith, who resides in a comfortable, steam-heated flat in the town or city.

Judged by this standard, the farmer is getting the worst of the deal and in sheer desperation he and his brothers are abandoning their farms, not singly, but in battalions. It is the most serious thing that is happening in Canada to-day, and unless it is checked it will mock our schemes for immigration and sap the very springs of Confederation.

Come to Toronto May 10 and 11

THE 12th annual convention of the Ontario Society, Domestic Sanitary and Heating Engineers, is to be held in Toronto on May 10 and 11, as outlined elsewhere in this issue. Every sanitary and heating engineer in Ontario should make it a point to be present at this convention for there never was a time when the co-operation of the various members of the craft was as much needed as to-day. Problems beset this industry to-day as a result of the development which is taking place and these problems must be discussed. The trend of industry is taking many young men into other fields of work. They are not going to the "white collared" jobs exclusively by any means. This has been the cry for some years but lately wages in many mechanical lines of work have been such as to attract many of them to such work. It shows they are willing to tackle it if the prospects are sufficiently good.

This raised the apprenticeship problem and the need for some basis on which to work so that new men will be constantly coming along to fill the shoes of those who are constantly passing on or developing into employers. Should there be a big revival of building and plumbing and heating business boom as result, there would quite likely be a shortage of mechanics in this industry.

Progress is also being made in respect to improved by-laws governing installation and operation of sanitary equipment. Many new features have been introduced in by-laws recently adopted in various municipalities and there are points to be learned from a discussion of these. In all branches of the industry progress is being made and nowhere has the plumber or heating engineer any better opportunity of seeing it and feeling it than at a convention where he rubs shoulders with his fellow craftsmen from other parts. The influence of such exchange of ideas and social intercourse is broadening. Make a point to be in Toronto on May 10 and 11.

Better Hotel Convenience

VARIOUS movements are commenced from time to time which sanitary and heating engineers can turn to good advantage. These include such popular movements as the trend towards central heating, the efforts of the Ontario Government in rural districts, etc. Another one of these movements just noted is that concerning the improvement in hotel conditions throughout the province which is being urged by the Commercial Travellers Ass'n. of Canada.

This week a deputation of this association obtained a promise from Premier Drury and Hon. W. E. Raney of Ontario, that a bill based upon the recommendations of the Special Hotel Committee will be introduced in the Legislature immediately. This deputation represented 20,000 commercial travellers and its recommendations carried some weight. Members of the special committee pointed out that many people who did not travel around the province had no idea of the unsatisfactory conditions now prevailing in many hotels. It was agreed that given the improved hotel accommodation now proposed, the volume of tourist trade would be enormously increased. The Premier stated that he had travelled enough to appreciate that something should be done to provide clean, decent accommodation for homeless travellers, and a suitable place where people in different communities could meet.

The foregoing outlines a popular public move which is of much importance to sanitary and heating engineers. Much of the comfort and convenience of hotels depends upon the sanitary and heating equipment. The hotel owner can be shown where it means business to him from regular callers and by encouraging transient tourists, to have attractive and convenient surroundings for them.

Management Series

Hustle Is In the Head—Not In the Feet

THE "Power Plant of Yesterday" as shown in the cartoon above brings home the fact that we live in a "whirl" of ever changing conditions.

The Plumbing Shop and its manager have not escaped being swept into this tide of progress—a tide so swift and relentless that the merchant of today must throw every ounce of his mental energy into the management of his business if he would successfully battle against the waves of keen competition and prevent disaster upon the breakers ahead.

You are in direct competition with the men whose headwork controls and directs the units of very successful organizations.

To meet such competition requires headwork on your part—headwork of the highest order, directed into many channels of your business where it will not lack for an opportunity to exercise. There will be plenty to do to keep your mental energy continually on the job.

It will take management, better management and still better management if you would combat those irresistible forces of competition and progress which are so apt to push the unwatchful plumber into the background and carry the watchful one forward to success.

Do you know your competitor's weakness? Do you know your own?

Does your sales force need more training?

What about your expenses, your stock, your prices, and your service? Your successful competitor knows the details of each in his store. Do you in yours?

If not—just hand the broom over to George. Let him do the sweeping. That's his job. Yours is managing.

"Hustle is in the head—Not in the feet."

THINK IT OVER—APPLY IT IN YOUR BUSINESS

Questions and Answers Regarding Plumbing and Heating Practice

Sweating of Closet Tanks, Chimneys, Etc.

Editor, Sanitary Engineer,—

Will you please advise:

1. What makes a cast iron enameled closet tank sweat in a bathroom? The door in the bathroom is always open except when in use and there is also a window 18 in. x 20 in. open all the time. The sweating occurs only in very warm weather.

2. How can you prevent the tank from sweating?

3. What are the causes of a wet chimney? There being only one 7 in. stove pipe into it and it gets so wet that the water runs back through the pipes on to the floor.

4. Should the area of cold air pipes on a hot air furnace be the same area as the hot air pipes?

5. Does cold air expand when heated and if so how much?

6. What are the results when there are too many cold air pipes on a hot air furnace?

7. What kind of pipe do you recommend for coils in furnace, black or galvanized?—G. D., Belleville, Ont.

Answers.—1. The reason why a cast iron enamelled closet tank sweats is because the supply valve is leaking slightly, or else the W.C. is used very often, and the difference in the temperature of the water is very great.

2. To prevent such tanks sweating, find out first if the supply valve is, or is not leaking and have it fixed. If it is difficult to find out this, take a dry cloth, wipe all the moisture off the W.C. bowl just above the flushing ring and take some blotting paper and see if the water is leaking down the flushing bend into the W.C. flushing ring.

If that is not the trouble then the water is as above stated too cold, and the trouble can not be overcome in any way but by placing an asbestos curcled casing into the tank and a copper lining inside of that. Then see that all the openings in the air-celled asbestos are closed up by planing over the upper edge of the copper.

3. A wet chimney is as a rule a cold one. Cold air is being drawn out of the building in some way through the 7 in. pipes and causes soot and unconsumed material to accumulate in the pipes. Then when the cold air strikes this "Black Stuff" it condenses, and leaks through the point.

To overcome this trouble always install the smoke pipes in the opposite way to the general rule. Give the horizontal smoke pipes as much pitch to the chimney as possible. If there is a cleanout door in the front of the chimney, make a few balls of newspapers, light them and warm the chimney up a little before lighting the furnace.

4. No, there should be a less area of cold air pipes than hot air pipes. Air expands but to tell amount of expansion, depends upon whether the air is taken in from out of doors or simply re-circulated. However, the best authorities on this subject advise that to determine quantity of cold air to a furnace

through cold air ducts the following method should be carried out. Take the combined area of all the warm air pipes, and allow 25 per cent. less cold air duct area. For example, a furnace is fitted with five warm air pipes of the following size: one 8 in., two 9 in., one 10 in. and one 12 in. Combined, these have a total area as per table:

One—8 in. Diam.	50,265 Sq. in.
Two—9 in. " 63,617 each	127,234 " "
One—10 in. " "	78,540 " "
One—12 in. " "	113,097 " "

Total 369,136 Sq. in.

Therefore, at least two cold air ducts, each about 138,426 square inches, or rather, about two 10 x 14 cold air registers.—Editor.

To Remove Soot From Furnaces, etc.

Editor, Sanitary Engineer:—

I have been called upon from time to time recently to clean out furnaces that have become extremely dirty as the result of burning soft coal. Is there any way to overcome this trouble. Can soot be loosened up in some way from time to time and then easily cleaned out? It is bad enough to have to burn soft coal, but to know that soot is a great insulator of heat and not know how soot can be removed makes the situation very serious. Then again in reading over the newspapers I have noticed that fires have been started from soot accumulating in the flues, chimneys, smoke pipes, etc. Can you, Mr. Editor give any dope on this question?

A REGULAR READER

Answer:—The above is no doubt a very timely question. Large numbers of shingle roofs and defective flues fires are reported due to the increasing use of soft coal. The efficiency particularly of warm air furnaces has been greatly reduced and of course the accumulations of soot on heating surfaces reduces the heating value of fuels no matter what kind of a heating system is used. Not only so but soot frequently clogs the flues and starts fires.

While the writer was in Clinton, Ontario, one corner of the Town Hall was burned seriously as the result of the flues setting fire; soft coal was blamed for the fire. But there is a remedy and one which every old countryman will no

doubt remember, because it is a common thing to see the housewife adopt it when wishing to clean the chimney without having it swept. Here is the remedy:

Build up a good deep white hot fire, take some common salt which must first be thoroughly dried, throw or sprinkle the salt onto the hot fire in a quantity depending upon the size of the furnace or area of the fire.

In the case of a house heating furnace, about one pound at a time is ample. In the case of a large heating system such as would be in operation in schools, apartment houses or office buildings, factories, etc., four or five scoops full in quantity of about two or three shovels full would be enough and the salt should be spread over the whole surface.

The dampers should all be kept full open so as to maintain the furnace temperature and the salt is allowed to remain until the fumes have entirely disappeared. It will be noted that upon charging the salt, the furnace becomes filled with dense white fumes which may require as long as half an hour to disappear. If results are not secured on the first application, it should be repeated as many times as necessary.

Once the heating surface is thoroughly cleaned a small application every few days is all that will be needed to keep the system clean.

It is a simple remedy but is without a doubt the best and is used as stated before by all housewives in the British Isles.—Ed.

News Notes From Coast to Coast

NEW FIRMS

Regina, Sask.—Clarke & Wagner, tinsmiths, have commenced business here.

BUSINESS CHANGES

Hutchinson & Morrison, plumbers, Yorkton, Sask., are discontinuing.

Sarnia, Ont.—Nelson & Sing, plumbers, have sold out.

OBITUARY

J. B. de Cazes, tinsmith, Lauzon, Que., is dead.

Augustus P. Barry, a well-known engineer, and for more than 30 years an employee in the plumbing and sanitation branch of the Toronto health department, died at his residence, 2380 Queen street, east. He was suffering from heart trouble. Mr. Barry came to Toronto from Ireland more than 50 years ago, and was president of the Engineers' Club in 1909. He was also a member of the Engineering Institute of Canada. Although he had been in poor health for nearly a year he was able to continue at business until a few weeks ago.

PERSONAL

G. T. Pepall of Samuel and Benjamin, Limited, Metals, (Toronto) who, with Mrs. Pepall is travelling in Europe at the present time, writes from Florence, Italy, to say they are having a very delightful time in that historic city.

PLUMBER SEVERELY BURNED

Fire caused by the exploding of a tank of gasoline being used by the plumbers in repair work on a residence at 198 St. Louis Street, Montreal, resulted in one of the men sustaining severe burns about the face and arms, a fireman injured and a woman overcome with smoke. When the tank exploded, E. Ranger, one of the plumbers on the job, had his clothing set on fire. He rushed from the house in flames and fellow workmen, rolling him in a puddle of water, were able to extinguish the burning clothing before he had been fatally burned.

SEEKS DAMAGES FROM PLUMBER

A water tank which toppled over on its side and flooded the premises of Harry Mack, Toronto, is the cause of an action before Judge Denton. The tank was placed in the plaintiff's office by Shannon the Plumber, Limited, during July, 1922. The plaintiff alleges it was the fault of the plumbing concern that the tank collapsed. He seeks \$1,000 damages. The defendant declares there was no contract, and that there was no negligence on his part.

Doings in the Plumbing and Heating Industry

APPOINTED PLUMBING INSPECTOR

The appointment of E. Knott, Birchcliffe, Ont., as inspector of buildings and plumbing was approved.

PLUMBER IS HURT

William Saunders, plumber, 1247 Woodbine avenue, Toronto, suffered bruises and a severe shaking up when he fell from the roof of a house under construction at Frater and Woodmount avenues, yesterday afternoon.

NEW SEWERAGE SYSTEM FOR HAMILTON

Hamilton.—Plans for the construction of intercepting sewers and disposal works, involving a total expenditure of about two million dollars were laid before members of the city council. Messrs. Gore, Nasmith and Storries were present, and submitted their report E. R. Gray, formerly city engineer, read the report dealing with the sewer engineering side of the question which had been compiled with his advice and direction.

AUGUSTUS P. BARRY

For 30 years an employee of the Plumbing Department of the City of Toronto, and well known to many of the old established plumbers of Ontario, whose death is announced.

NORTH BAY TOLD TO INSTALL A CHLORINATING PLANT

North Bay, Ont.—As an indirect result of the epidemic of typhoid at Cochrane, North Bay municipality has been peremptorily ordered by the Provincial Board of Health to install a chlorinating plant for its water supply. A number of other municipalities equally far removed from the epidemic, are said to have received similar orders.

PLUMBING BY-LAW SUBMITTED TO COUNCIL

Birch Cliff.—Drafts of the Plumbing & Building By-law, were submitted at a special meeting of the council Monday.

H. J. Duffort, convenor of the Plumbing By-law Committee, submitted proposals which were accepted by the council.

The appointment of B. Knott, builder and contractor, as inspector of building and plumbing, was recommended, but his appointment was held over for discussion at the next regular meeting of council.

43 MEN ARE INDICTED IN THE BATHTUB TRUST

Twenty individuals and twenty-three corporations were found guilty by a Federal Court jury in New York of violating the criminal provisions of the Sherman anti-trust law by conspiring to fix prices and restrict the sale of pottery.

The trial covered a month, during which time hundreds of documents were introduced to provide that the defendants manufacture and sell more than 85 per cent. of the sanitary pottery ware made in the U. S. As members of a combination they were charged with restraint of trade and foreign commerce.

STATES AMUSEMENT PLACES MUST INSTALL PROPER DRINKING BUBBLERS

London, Ont.—Those who conduct billiard parlors, bowling alleys, dance halls, and similar establishments must conform to the provisions of the Public Health Act.

Board of health officials state that they are now undertaking a campaign to insure that proper drinking bubblers are available for the general public in such places of business. Orders to this effect went forward to certain firms with the warning that failure to comply within a reasonable interval will mean prosecution in the city police court.

All were notified last fall, it is further explained, but many have been delinquent.

TWENTY-ONE APPLY FOR PLUMBING INSPECTOR'S POSITION

Twenty-one applications for the position of plumbing inspector for York Township were presented to council. As the full report regarding the plumbing inspection of the past is not yet in, the applications were set aside until a later date.

FOUR NEW SERVICES WILL BE CONSTRUCTED IN CAMPBELLFORD

Campbellford, Ont.—There will be four sewers constructed in Campbellford this year, one on Garry street, on Inkerman, Rear and Second street. Work on the two first mentioned will be started at once, and that on the others as soon as some details are attended to in the way of estimates and engineering service.

TO DISTINGUISH SOIL PIPE WEIGHTS AT A GLANCE

A simple and convenient way to distinguish medium soil pipe from extra heavy is to take note of the hubs. The medium hub has a rounded bead pattern while that of the extra heavy is a flat bead.

CHLORINATE HAMILTON WATER

Hamilton, Ont.—No time should be lost in proceeding with the installation of machinery for the chlorination of Hamilton's water supply, it was stated by members of the board of control.

"I think we should take action in the matter of chlorination without delay," Controller Davis declared.

"The great danger in connection with an epidemic was the fact that the first sign that the city would have that typhoid was likely to occur would be the appearance of the disease itself. It would be then too late to avert the trouble.

"It is evident that the pollution of the water is increasing and we should do our best to guard against an epidemic," the controller added.

CAST IRON REPLACES WOODEN MAIN

Fernie, B. C.—At a special meeting of the Fernie city council, Fred J. Dawson, contractor, of Nelson, B. C., was awarded the contract for the laying of the new water pipe line and the annex sewer. In the latter, the contractor will supply the pipe. The new water pipe line to be laid will be cast iron, running from Victoria avenue to the Fairy Creek bridge and under the bed of the Elk river at that point to connect with the water main from the Fairy Creek dam, replacing wooden water pipe, through the city and the suspension pipe line across the river. The Fernie annex, which has been without sewer connection up to the present time is to be fully equipped in accordance with the by-law recently submitted to the ratepayers; the pipe will be of the vitrified clay salt glazed variety.

TENDERS WANTED

Hanover, Ont.—Separate or combined tenders for the supply of gate valves, relief valves, valve boxes, fire hydrants, centrifugal pumps, brass screens, chlorinator, etc., and for the construction of pump house, concrete reservoir, laying water mains, are invited by the council of the town of Hanover up to 2 p.m. on Thursday, May 10th, 1923.

EJECT RESIDENTS FOR UNSANITARY CONDITIONS

Toronto.—Forty residents of Woodbine Beach, a small peninsula lying between Ashbridge's Bay and Lake Ontario, have been ordered by the department of public health to vacate their homes within 30 days. Lack of water supply and sewerage facilities is the excuse given.

The Works Department reported it would cost about \$117 to install a one-inch water main and tap to provide a common water supply for Woodbine Beach residents, but that if a main had to be laid the whole length of the Beach, the cost would be \$800, which would have to be paid by the residents.

TENDERS FOR YORK WATERWORKS

Tenders for the new water supply system to be installed this year in North York Township were awarded at a special meeting of Council. Altogether 41 tenders were received for the eight contracts in connection with the work. The cost according to the tenders will be \$105,557.05.

The following were the successful bidders for the eight contracts: A. R. Campbell & Co., dam, pumping house and filtration plant, \$39,230; Bawden Machine Co., pumping machinery, \$12,117; International Filtration Co., filter equipment, \$12,050; Horton Steel Co., elevated steel tank; National Iron Pipe Co., cast iron pipe, \$19,000. The hydrants and valves tender, for which the lowest bid was \$367.50, was not let.

POWER SHORTAGE AFFECTS PLUMBING BUSINESS

St. John, N. B.—Some New Brunswick plumbing and heating contractors foresee increased business through the development of water powers into hydro electricity. It is contended that when distribution is effectively arranged, more industries will be built, and there will also be an increase in house building operations. The industries will receive the benefits accruing from cheaper operation, and there will thus be ample encouragement to build. One plumbing and heating contractor of St. John was called on to discuss a contract for installing both heating and plumbing systems in a new factory for which plans have been arranged. But the promoters have now decided to go else-

where because of impossibility to get the current in St. John for another year.

ACTIVE SPRING BUILDING

London, Ont.—Spring building has gotten under way here with a rush that is surprising even the most optimistic predictions and all records for permits are likely to be smashed. Every day sees permits for splendid homes, and architects are busy with plans for many others. Work is under way on many homes that will cost from \$6,000 to \$8,000. Plans are being prepared for several that will run from \$10,000 to \$25,000.

In addition to the rush of home building there are many larger projects under way, including a new \$100,000 factory for the Reid Bros. Stationery Co., a \$150,000 plant for H. J. Jones & Sons, Lithographers, a \$25,000 factory for the Green River Bottlers, \$50,000 alterations and extensions to Knox Presbyterian Church, a \$75,000 monastery for the Redemptorist Fathers, a \$100,000 apartment block for John Hayman & Sons, and about \$5,000,000 worth of new schools.

Plumbers report business as very good.

Catalogs and Booklets

Those interested in any of the catalogs described below can procure a copy of the same by writing direct to these firms. Mention that you noticed this in Sanitary Engineer.

HOW TO CHOOSE A WATER SYSTEM

The Duro Pump & Manufacturing Co., of Dayton, Ohio, have just issued an eight page booklet entitled "How to Choose a Water System." This little book contains some useful hints on rural water systems. Copies may be obtained by writing direct to the company.

HERCULES CHEMICAL CO.

The Hercules Chemical Co., Inc., manufacturers of "Hercules" drain pipe solvent, New York City, has announced that it will imprint plumbers' names on a few hundred circulars describing the product, which are suitable for enclosing with monthly statements and daily letters. Those desiring to receive this literature should communicate with the company.

DE LAVAL STEAM TURBINE COMPANY

Small single-stage centrifugal pumps for motor or belt drive are described in a leaflet and in an instruction manual issued by the De Laval Steam Turbine Company, of Trenton, N.J. These pumps are made in 1½ and 2 in. sizes, and are designed for capacities ranging from 5 gal. per min. against 10 ft. head up to 130 gal. per min. against 150 ft. head. They are said to contain few and simple parts, which are manufactured to limit gages to insure interchangeability. The publications before us give very complete tables and instructions for selecting pumps for different conditions, and explain how to determine the proper speeds and how to select piping, valves, fittings, and driving pulley or motor to secure an efficient and satisfactory installation.

New Goods of Interest to the Plumbing Trade

TUB SHOWER FAUCET

The Tub Shower Faucet, made by the H. Mueller Mfg. Co. Ltd., Sarnia, Ont., combines the features of a shower-bath with the ordinary type of tub and faucet. Five feet of finest quality rubber hose is permanently attached to the faucet and fitted with shower head. The push

button directs the water through spray or spout as desired; hot, cold or tempered. In addition to its use as a shower, the fixture is said to provide excellent means for the enjoyment of a beauty parlour shampoo in the privacy of the home, making it particularly appealing to women.

CARBORUNDUM GRINDER

The Carborundum Co. of Niagara Falls, N. Y., are introducing an improved Carborundum Niagara Grinder. Some radical changes are said to characterize

the construction of this new grinder, for instance, the main casting and the base are cast in one, and the clamp is a separate piece entirely. It is claimed that this will prevent breaking the base

casting when the clamp is tightened. Another change noted is the slotting of the base casting for screws or bolts with which to permanently fasten the grinder to a bench. The makers also point out that each machine is equipped with a genuine Carborundum grinding wheel and a specially constructed adjustable tool grinding guide for use in sharpening edge tools at any angle. The improved grinder is being made in three sizes and are numbered 1, 2 and 3.

RIDDELL CONDUCTOR ELBOWS

John E. Riddell & Son, Ltd., Hamilton, Ont., are now manufacturing for Canada the "Riddell" conductor elbow, in the pattern which was formerly obtainable only in the imported article. The manu-

facturers state that special attention has been paid to the construction of these elbows and that the results are perfect fit, correct angle, full length and a perfectly smooth surface inside. They also point out that by crimping the new elbows on the outside instead of the inside, no cavities are left to fill with moisture or dirt. Another feature said to characterize this product is the special process of galvanizing which is done electrically and is said to produce a bright lasting finish. The new elbows are made in all standard sizes, plain and corrugated.

ELECTRIC HEATING FOR BUILDINGS

Winnipeg.—The city hydro, it is understood, will in the near future report favorably on the possibility of heating some of the city schools, and possibly also the city hall and the public baths, by means of by-product or off-peak electricity now going to waste over the Point du Bois dam.

There isn't enough electricity yet developed in the whole province to heat all the buildings of Winnipeg by elec-

tricity, but it is possible to heat a certain number of them.

The present proposal to heat city schools and public buildings by electricity will not interfere, it is learned, with the use of by-product electricity in connection with a central steam heating plant should the city decide to combine the latter with its standby plant, nor would the granting of a central heating franchise for Fort Rouge interfere with a combined standby and central heating plant.

GOOD ORDER FOR SOMEONE

Some Fort William plumbing concern is going to receive a fat contract in the near future. Recently the Victoria block, a main street structure was destroyed by fire and the owner, James Murphy, will rebuild it. He has sold all the radiators to the wreckers of the building and will install a new, complete heating and plumbing equipment.

COMPEL HAMILTON TO PROTECT

Force will be brought to bear upon the city of Hamilton to protect its water supply.

About a week ago, the city applied for a main on Burlington Street, at a cost of \$144,000. The main was laid last year, but the order was sought so the city might legally issue debentures for the cost of the work without appealing to the people. The board notified Mayor Jutten that it would not grant the city the desired order till the city complied with its wishes by installing a chlorination plant.

PATTERNS FOR AUTO FENDERS

(Continued on page 17)

elevation. This enables drawing the miter lines as shown.

To set out the pattern pick the girth from plan of lip and set it on a line C'-D and square up lines as shown.

Then pick the widths from front elevation and you have the pattern finished.

The balance of the rim of fender can be taken direct from the side elevation only allowing edges for enclosing a wire or just rolling it as desired.

Edges must be allowed on all patterns.

CANADIAN MANUFACTURERS PLANNING VISIT TO JAPAN

In response to an invitation tendered by a number of the prominent organizations of Japanese business men, the Canadian Manufacturers' Association is making tentative plans looking toward the sending of a representative body of Canadian manufacturers to Japan during the months of September and October of this year.

Market Conditions and Tendencies

Price Trend on Sanitary and Heating Supplies

Markets at a Glance

THE changes in quotations for this issue of Sanitary Engineer cover rather a wide area and contain both advances and declines in price. The outstanding advance is that recorded on iron pipe quotations which have been completely revised and list No. 59 replaces list No. 58 and is from 3 to 5 per cent. higher. Wrought nipples discounts are 5 per cent. lower on all sizes and fittings' prices have undergone a change to slightly higher levels. Queen's Head galvanized iron is now quoted at \$8.00 per cwt., for import, and English Canada plates and tin plates are about 10 per cent. higher. Closet combinations with vitreous and cast iron enameled tanks are both at

higher levels, the former being quoted at \$29.00 and the latter at \$31.00. There is also a slight change in cast iron enameled tanks on which the price is now \$18.90. Quotations on iron and steel products are approximately 15c per cwt. higher than the recent levels.

The declines in price are not so numerous as are the advances but they affect some important items including solder which has receded from 1½c to 5c per lb. on the various grades, scrap materials which have shown a tendency toward weakness, a reduction of 2c per gallon on gasoline and drop of 1c per gallon on Royalite oil.

Montreal Markets

MONTREAL, April 28.—Price changes have not been so numerous in the local markets during the past two weeks. One of the most important to be recorded is that on wrought pipe on which an advance of approximately five per cent. has just been announced, a similar advance being made on wrought nipples. A slight discount cut has been noted on pipe fittings and on Jenkins valves there has been an appreciable change.

The only downward move has been in the case of closet tanks where a price readjustment has resulted in lower prices on some styles on tanks. In the scrap market, quotations on rubber shoes are slightly lower this week.

In the asbestos product market where an advance was made on magnesia block two weeks ago, there is an indication that there will be another advance. The situation on the American market as it affects the local situation will make this necessary very shortly, according to local distributors.

There is a dull tone this week in the ingot metal markets, this being a reflection of the unsettled and weaker condition existent in the primary metal markets.

NO FURTHER CHANGES IN PRICE OF SOIL PIPE

Montreal.

A fair amount of trading in soil pipe and fittings is reported locally at the recently revised quotations which are as follows:

SOIL PIPE—

2 and 3 inch	33 1-3%
4 inch	33 1-3%
5 and 6 inch	33 1-3%
8 inch	net

FITTINGS—

2 to 6 inch	45%
8 inch	net

DISCOUNTS ON PIPE FITTINGS HAVE BEEN REDUCED

Montreal.

The past week has seen a revision of discounts on pipe fittings, a cut of 2½ per cent. being made in the discounts on a number of lines, including cast iron

fittings, plugs, bushings and unions. There has been no change in the price of malleable fittings. Trading is reported good at the following quotations:

PIPE FITTINGS—

Cast iron fittings	15%
Plugs, cast iron	15%
Do., solid	15%
Do., countersunk	15%
Bushings, cast	17½%
Do., malleable	17½%
Unions	33 1-3%
Flanged unions	15%
Flanged fittings	27½%
Dart unions, black, ½ to 2 in.	33 1-3%
Do., ½ in., 2½ in., and larger	23%
Do., galv. add to black	30%
Nipples, ½ to 4", close and short	50%
Do., long	55%
Do., 4½ to 8", close and short	40%
Do., long	45%
Couplings, 4" and under	25%
Do., 4½" and larger	5%

Malleable Fittings—

Price list effective June 1st, 1922. Discount 65 per cent.

LEAD AND ZINC PRODUCTS SHOW MODERATE ACTIVITY

Montreal.

Lead and zinc products have remained steady in the local market during the past two weeks, only moderate activity being reported. Since the recent advance in the price of zinc there has been no further change in quotations, the following being those now in effect locally:

LEAD AND ZINC PRODUCTS—

Lead pipe, per 100 lbs., up to 2"	14 50
Do., 2" to 8"	15 50
Do., 8" and over	16 50
Lead waste, per 100 lbs.	15 50
Note—Lead pipe is subject to a discount of 10%	
Lead traps and bends	15%
Lead wool, lb.	0 14½
Lead sheets, 2½ lbs., sq. ft. lb.	0 12
Lead sheets, 3 to 3½ lbs., sq. ft. lb.	0 11½
Do., 4 to 8 lbs., sq. ft. lb.	0 11
to size, ¾c. lb. extra.	
Solder, guaranteed, lb.	0 34
Do., strictly, lb.	0 31
Cut sheets, ¼c. lb. extra and cut sheets	
Do., commercial	0 30
Do., wiping, lb.	0 30
Do., wire, lb.	0 44½
Zinc, sheets, casks	0 11
Do., broken lots	0 12

TRADING IN CEMENT REPORTED STRONG LOCALLY

Montreal.

Much building and contemplated building have given the cement business prospects of an unusually good year. There has been no price change in this product recently, local quotations being on the following basis:

CEMENT—

Car load lots, per bag, F.o.b. steam cars	0 86
Per Bag, delivered	0 94
Less car lots, per bag, F.o.b. yard	0 94
Per bag, delivered	1 04
Less 5 per cent	1 04
Rebate of 20 cents for empty bags.	

ANOTHER ADVANCE IS LIKELY IN ASBESTOS PRODUCTS

Montreal.

While quotations on asbestos products remain as revised two weeks ago when there was an advance in magnesia covering, advice received locally

from primary sources indicate that another advance on this product is very likely at no far distant date. In the meantime, the following quotations remain in force, with business picking up slowly and prospects good:

ASBESTOS PRODUCTS—

	Off list prices
2 ply pipe covering	57½%
3 ply pipe covering	55%
4 ply pipe covering	50%
85 per cent. magnesia	35%
Boiler covering	Per bag \$1 50
Asbestos sheathing	Per 100 lbs. 7 75 8 25

METAL LATH MARKET SHOWS NO SIGNS OF CHANGE**Montreal.**

There is little change in the trading in metal lath recently, business continuing fairly good at the following quotations:

METAL LATH—	per sq. yd.
Painted—	
26 gauge	23c.
24 gauge	28c.
32 gauge	32c.
Galvanized, 10c. per sq. yd. extra.	

CORRUGATED SHEET MARKET IS IMPROVING STEADILY**Montreal.**

A steady improvement continues to feature the week's trading in corrugated sheets locally. This business will undergo a still further improvement when the opening of navigation on the St. Lawrence makes delivery by water possible. Prices remain at the following levels:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	7 00
No. 26 gauge	7 50
No. 24 gauge	10 00
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	19 00
Less 10 per cent.	
Lighter than 24 gauge and wider than 27 ins., 75 cents per square extra.	

NEW DISCOUNTS ARE QUOTED ON JENKINS VALVES**Montreal.**

The past week or so have seen the reduction of the discounts on Jenkins valves by a good degree, other compression goods remaining as when last quoted. Trading is reported to be fairly strong at the following quotations:

VALVES AND BIBES—

Compression work, standard	45%
Fuller work, standard	30%
Quick opening, compression bibbs	43%
Bath cocks, quick opening	38%
Bath cocks, compression	40%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, standard	54%
Roundway stop and waste cocks, std.	42%
Brass steam cocks, standard, ¼ in.	50%
Radiator valves, standard	55/25%
Do., removable discs	55/25%
Globe, angle and check valves, std.	25%
Gate or straightway	25%
Emco globe valves	33%
Emco check valves	33%
Jenkins globe, angle, check and swine check	plus 15%
Jenkins gate or straightway	plus 11%
Jenkins iron body, globe and angle	plus 10%
Jenkins iron body, gate	12%
N. P. "O" and "S" traps	34%

TRADING IS REPORTED LIGHT IN RADIATION GOODS**Montreal.**

Trading in radiation goods, as is to be expected at this particular season of the year, is fairly quiet on the local market. Neither is there any activity

in prices, the following quotations which have been in force for some time past still ruling locally:

RADIATORS AND BOILERS—

Radiator list prices are for 1, 2, 3, 4 and 5 column radiators, per sq. ft.
45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount 44 per cent for hot water, and 45 per cent. for steam.
Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05; Discount 41 per cent.

Boilers—Round hot water boilers, sizes from 0 to 10, 52 per cent. off list. Square or sectional hot water or steam boilers, 15 in., 3 per cent. with Ontario Government trimmings, list. Square or sectional water boilers, 19 in. to 36 in., 8 per cent. Square or sectional steam boilers, 19 in. to 36 in., 5 per cent. Ontario Government trimmings, list plus 7 per cent. Square or sectional water or steam boilers, 48 in., list plus 10 per cent. With Ontario Government trimmings, list plus 18 per cent.

Round steam boilers, standard trimmings, 16 per cent. Ontario Government trimmings, 13 per cent.

F.o.b. Montreal, Toronto, Guelph.

EAVES AND CONDUCTORS SHOW STEADY IMPROVEMENT**Montreal.**

Strong seasonable trading is reported in eaves and conductor pipe by local distributors. Prices have shown no tendencies to deviate from the levels established early in the spring, quotations remaining as follows:

EAVESTROUGH—

O. G. round and half round, per 100 ft. 3 in., \$16.90; 10 in., \$18.70; 12 in., \$22.20; 15 in., \$35.50; 18 in., \$45.00.

O. G. Square bead, per 100 ft; 8 in., \$15.90; 10 in., \$17.70; 12 in., \$21.20; 15 in., \$34.50; 18 in., \$44.00.

Discount 65 and 5 per cent.

CONDUCTOR PIPE—Round, Plain and Corrugated, per 100 ft.; 2 in., \$18.40; 3 in., \$22.30; 4 in., \$29.60; 5 in., \$48.00; 6 in., \$58.80.

Discount 65 and 5 per cent.

CONDUCTOR ELBOWS—

Plain or corrugated, price per doz 2 in., \$5.25; 3 in., \$6.00; 4 in., \$10.50; 5 in., \$24.00; 6 in., \$29.00.

Discount 55 and 5 per cent.

WROUGHT NIPPLES ARE QUOTED AT HIGHER LEVELS**Montreal.**

An upward revision has been made this week in the price of wrought nipples, the old discounts having been lessened by five per cent. The new discounts are: close and short, 4 inch and under, 45 per cent.; 4½ inch and over, 35 per cent.; long, 4 inch and under, 50 per cent.; 4½ inch and longer, 40 per cent.; running thread, 4 inch and under, 25 per cent.

COPPER AND BRASS FIRM AT RECENT ADVANCE**Montreal.**

Brass and copper products remain firm at the advance of two weeks ago, there being no indication that any further change will take place in the immediate future. The market is steady but without any particular feature at this time, the local quotations being as follows:

BRASS—

	Base
Sheets, base	0 27
Rods, base, ½ to 1 in., round	0 24
Tubing, seamless, base	0 32

F.o.b.**COPPER—**

Rods, ½ to 2 in.	0 30
Soft sheets, plain, 16 oz. and heavier ..	0 33
Plain tinned, 16 oz. and heavier	0 40
Polished, and tinned, 16 oz. and heavier, lb.	0 44
Tubing, lb.	0 33
Above prices are full sheets and bars. Cut sheets and bars are 5c. per lb. higher.	

NEW HIGHER QUOTATIONS ON BAR PRODUCTS**Montreal.**

The past week has seen an advance on bar iron of forty cents base, making the new price quoted locally \$3.95. Other products have increased accordingly as will be noted in the following list of quotations:

IRON AND STEEL—

Common bar iron, 100 lbs.	3 95
Refined iron	5 45
Irish finish machinery steel	4 00
Mild steel	3 95
Single reeled machinery steel ..	5 00
Band steel	3 95
Sleighshoe steel	3 95
Spring steel	5 00
Tire steel	4 15
Harrow tooth steel	3 80
Toe caulk steel	4 85
Mining tool steel, per lb.	0 19
Black Diamond tool and cast steel, per lb.	0 19

NOTE.—Refined iron is approximately \$1.50 per cwt. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

Iron and steel 3-16 in. and thinner, 50c per 100 lbs. extra.

RUBBER SHOES QUOTED LOWER IN SCRAP MARKETS**Montreal.**

Trading continues to improve in the scrap metal market here and is reported as good at the present time. Prices remain with little change, the only new quotation noted this week being a decline of half a cent in the price of rubber shoes. The following are the average local quotations:

SCRAP MATERIALS—

Automobile tires	0 50
Rubber Shoes	0 03
Yellow brass	0 05½ to 0 06
Red brass	0 09
Light brass	0 04½
Scrap zinc	0 04¾
Lead, heavy	0 05
Lead, tea	0 03
Light copper	0 08½ to 0 09
Heavy copper	0 11¼
Wrought iron, R. Rd., No. 1, per gr. ton ..	12 00
Malleable scrap (ton)	9 00 to 10 00
Pipe scrap (ton)	7 90
Heavy melting steel	9 00
No. 2 busheling	3 00
Boiler plate	3 00 to 9 00
No. 1 machinery cast	20 00 to 22 00

LITTLE ACTIVITY IN MARKET FOR RANGE BOILERS**Montreal.**

Range boilers remain somewhat inactive on the local market, with prices at the same levels quoted for some time past. The following prices are in force locally:

RANGE BOILERS—

5 Gallon	\$13.50
12 "	14.00
18 "	15.00
25 "	16.50
30 "	17.50
35 "	20.50
40 "	22.75
52 "	38.00
66 "	60.75
82 "	74.00
100 "	103.00
120 "	117.00
144 "	164.00
168 "	187.00
192 "	210.00
Std., less 40 per cent.: Ex. Heavy, 30 per cent.	

SHEET METAL MARKET REMAINS IN FIRM POSITION**Montreal.**

Locally, the sheet and plate market still remains at the levels which have been in force for some time past. The market is said to be good and increasing-

ly firm but there still remains a considerable range in the prices quoted by local distributors. This range is covered in the following list of quotations:

GALVANIZED SHEETS—

	Queen's Head	Fleur de Lis
18—20 gauge	6 65 6 90	6 40 6 65
26 gauge	7 25 7 50	7 00 7 25
24 gauge	6 95 7 20	6 70 7 95
22 gauge	6 90 7 15	6 65 6 90
28 gauge	7 50 7 75	7 25 7 50
Other Brands—		
10% oz.	7 25	7 50
28 U. S. base	7 00	7 25
26 U. S. base	6 60	6 85
24—22 gauge	6 35	6 60
20—18 gauge	6 15	6 25
16 gauge	6 00	6 10

Above prices are for 1/2 ton lots in English iron and 1000 lb. lots in American iron with an extra charge of 25c. for less quantities. Extra for sheets 3 ft. wide, 28 gauge and 10 3/4 oz., 25c. per 100 lbs.

Further extra for sheets 4 ft. wide according to gauge.

TIN PLATE—

20 x 28 x 100 lbs. basis	15 50
20 x 28 IC, 112s	16 00

Half bright 60s	5 60
Blued 52s	5 90
Blued 60s	6 00
Welsh, polished, 60s	7 35
Welsh, polished, 52s	7 10
Galvanized, 52s	8 00
Galvanized 60s	8 50

LOWER PRICES ARE QUOTED ON SOME CLOSET TANKS

Montreal.

The past week has seen a price adjustment on closet tanks, some lines going up slightly and others down. Of the four types quoted in the list which follows, the first is down \$1.00, the second up \$1.00 and the remaining two down \$2.00. Combinations, bowls and seats remain unchanged. A slow season is reported in the local market, little trading having opened up as yet. The following are the quotations in force:

CLOSET COMBINATIONS—

Low Down Outfits, each	
Closet, standard outfit, oak	24 00
Do., post hinge seat	25 00
Do., oak vitro or Pussyfoot	24 50
Do., post hinge seat	25 50
Do., mahogany vitro or Pussyfoot, post hinge seat and cover	28 00
Do., vitreous china, oak post hinge seat and cover	29 00
Do., vitreous china, mahogany post hinge seat and cover	30 00
Do., white vitro or Pussyfoot, mahogany post hinge seat and cover	30 00
Do., enamelled iron tank, oak post hinge seat and cover	29 50
Do., enamelled iron tank, mahogany post hinge seat and cover	29 50
Add for 3/4" valve on supply pipe	1 25
Add for spud	0 60
Add for reverse trap bowl	1 50
Add for syphon jet bowl	7 00
Deduct for supply pipe	0 80
Deduct for floor hinge	0 60

CLOSET BOWLS—

Riche'au bowl	8 00
Washdown bowl with spud	9 50
Reverse trap bowl with spud	9 50
Syphon jet bowl with spud	15 00

CLOSET SEATS—

Oak post hinge seat and cover	3 85
Oak wood strip seat and cover	3 50
Mahogany finish post hinge seat and cover	4 05

CLOSET TANKS—

Low down, oak vitro or Pussyfoot with fittings less seat	12 00
White vitro or Pussyfoot with fittings, flush elbow and supply	16 50
Vitreous china tank with fittings, flush elbow and supply	16 00
Enamelled iron with fittings, flush elbow and supply	16 00

STEADILY IMPROVING MARKET IN COTTON WASTES

Montreal.

Conditions in the local market continue to improve steadily in the cotton waste market and indications point to an exceptionally good season, say local distributors. There has been no recent change in prices, the following being those in force at the present time:

COTTON WASTES—

	Per lb.
Cream polishing	0 24
White, XXX extra	0 20
White, XX grand	0 18 1/2
White, XLCR	0 17
X Empire	0 15 1/2

17x19 in. Roll rim. F241 or P4345	12 60		
Less 30 per cent.			

INGOT MARKET IS IRREGULAR DURING WEEK

Montreal.

The tendency in the ingot metal market is still towards lower prices although there is some irregularity in the trend. Business generally is quiet as buyers are awaiting lower prices and until there is some indication of an upward turn will continue to hold aloof.

TIN.—After last week's decline there was a recovery in London early this week of £10 per ton but New York failed to respond and most of the advance has been lost. Until there is an indication that America is buying it is difficult to see how prices can advance in London. The trend of the market will probably be irregular. The local market is dull and unchanged at 51 cents per pound.

COPPER.—The New York market continues to record lower levels and it is evident that buyers are well covered for the near future. The London market holds fairly well but this is partly owing to the decline in sterling. Should the situation in England improve there is a possibility that export demand may start again, but at the moment this is uncertain. The local market is dull at 20 cents for casting and 20 1/2 cents for electro.

LEAD.—London is slightly lower than last week but appears somewhat more steady than it has been recently. There is no sign, however, of any improvement and it is possible that the market may go lower yet. The American market is again slightly lower and would appear to be bound for lower levels. The decline, however, is very gradual as consumption is still very heavy. The local market is dull at 8 3/4 cents a pound.

SPELTER.—East St. Louis is again lower this week and spot spelter is now quoted at 7 cents which represents a decline of one cent per pound from the high level reached last month. A reaction upwards is overdue and no doubt there is a certain consuming demand awaiting a turn in the market. London still declines and is well below the parity of American prices. The local market is dull at 10 cents per pound.

ANTIMONY.—This metal is quiet and while the situation is fairly firm it is affected by a weaker feeling generally. The local market is fairly firm owing to light stocks available. Quotations are 8 1/2 cents for high-grade English and 8 cents for Chinese.

ALUMINUM.—This market is dull and unchanged at 25 cents per pound.

AMERICAN SHEET MARKET ADVANCING RAPIDLY

Montreal.

Some surprise has been occasioned by the size of the advance put into effect on sheets and tin plates by the American Sheet & Tin Plate Co. The new prices are \$7.00 per ton higher on blue and black sheets, \$8.00 per ton on galvanized sheets and \$11.00 per ton on tin plates.

Toronto Markets

TORONTO, April 28.—Numerous changes have taken place in market quotations on lines of interest to the Sanitary Engineering trade, within the last two weeks. The more important adjustments are again in the upward direction and reflect the firm trend of basic materials. Iron pipe prices have advanced considerably and a complete new list of prices has been issued. This change has followed rapidly a similar development in the American pipe market, which recorded an advance earlier in the month. Nipples are up 5 per cent. in price through a reduction in discounts; fittings discounts are again lowered from 1½ to 5 per cent., making the third revision of a similar character in recent weeks. Some lines of closet combinations take higher levels, practically all lines of English sheet iron are higher in price and quotations on iron and steel bars, bands and plates, have been advanced approximately 15c per cwt.

Solder has reflected the weakness noted in quotations on lead and tin in primary sources and slightly easier prices are being quoted. Gasoline and coal oil have both been reduced in price, the former now being quoted at 27c and the latter at 20c. The scrap material market has also weakened slightly within the last two weeks.

The business outlook in the plumbing and heating trade has shown a steady improvement and a good season's work seems assured in most localities. Building programmes are being carried forward at a satisfactory rate, the improved weather conditions helping materially in opening up opportunities for doing outside work.

IRON AND STEEL QUOTATIONS GO HIGHER

Toronto.

The firm trend noted in primary sources has been reflected to some extent in quotations on iron and steel on the local market. Bars, hoops and bands have all felt the effect of the strong tone in this market as will be noted in the quotations shown below which are now in effect locally.

IRON AND STEEL—

Mild steel bars and small shapes	\$3 60	\$3 75
Mild steel bands, 3-16 in. base	4 00	4 25
Bar iron, base	3 75	3 75
Horse shoe steel	4 25	4 25
Tire steel	3 60	3 95
Spring Steel	10 50	10 50
Sleigh shoe steel	3 50	3 75
Cold drawn steel	4 60	4 75
Hoop steel, heavier than 1"x20G	4 75	5 00
Do., lighter than 1"x20G	5 35	5 50
Norway iron	12 50	12 50
Toe caulk iron	4 20	4 20

SOLDER PRICES SLIGHTLY EASIER

Toronto.

The moderating tone in primary market reports on lead and tin have been reflected to a slight extent in quotations on some grades of solder. There is still quite a range in prices being quoted locally as shown in the list following:

LEAD AND ZINC GOODS—

Lead pipe, per 100 lbs., up to 2".	14 50
Do., 2" to 8"	15 50
Do., 8" and over	16 50
Lead waste, per 100 lbs.	15 50
Note—Lead pipe is subject to a discount of 10 per cent.	
Lead traps and bends	15%
Lead wool, lb.	0 14½
Lead sheets, 2½ lbs. sq. ft. per lb.	0 12½
Lead sheets, 3 to 3½ lbs.	0 11½
Do., 4 to 8 lbs., sq. ft. lb.	0 11½
Solder, guaranteed, lb.	0 32
Do., strictly, lb.	0 30
Do., commercial	0 28¼
Do., wiping	0 30
Do., wire	0 37
Zinc sheets, casks, lb.	0 11¾
Do., do., less, lb.	0 12¼

VALVES AND BIBBS PRACTICALLY UNCHANGED

Toronto.

Quotations on valves and bibbs have remained at the recent levels, with the exception of Emco standard globe valves which are now quoted at 23% off the list and Emco check valves which are now 28% off instead of 33% as formerly. Prices shown below are those quoted by Toronto jobbers.

VALVES AND BIBBS—

Compression work, standard	45%
Fuller work, standard	30%
Quick opening compression bibbs	45%
Bath cocks, compression	41%
Jenkins iron body, gate	12 and 10%
Bath cocks, quick opening	41%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, std.	54%
Roundway stop and waste cocks, standard	54%
Brass steam cocks, standard	50%
Radiator valves, standard	55/25%
Do., removable discs	55/25%
Globe, a angle and check valves, standard	25%
Gate or straightway	25%
Emco Globe valves, standard	23%
Emco check valves	28%

FITTINGS PRICES AGAIN CHANGED IN UPWARD DIRECTION

Toronto.

The fittings market has been the most active in recent weeks. For the third time within a month there has been a revision in prices and each time to higher levels. The new list of discounts shown below are from 1½ to 5 per cent. higher than those noted recently.

PIPE FITTINGS—

Cast iron fittings, standard	15%
Do., do., extra heavy	15%
Plugs, cast iron	15%
Do., solid	15%
Do., countersunk	15%
Bushings, mail	17½%
Bushings, cast	17½%
Unions, ¼ in. to 2 in.	33 1-3%
Unions, ¼ in., 2½ to 4 in.	33 1-3%

Discount, Less 65 per cent.		

SCRAP MATERIAL MARKETS SHOW SLIGHT CHANGES

Toronto.

The scrap material market presents a more or less unsettled condition for the week. Some firmness is noted in quotations on brass and steel scrap, but rubber products have shown a decidedly weak tendency. The following prices are those usually asked for car-lot quantities:

SCRAP MATERIALS—

f.o.b. Toronto

Scrap Iron	
Heavy melting steel	16 00 — 17 00
Scrap pipe	9 00 — 10 00
Steel turnings	12 50 — 13 50
Malleable scrap	14 50 — 15 00
Rails, scrap	14 50 — 15 00
Net tons—	
No. 1 cast	19 00 — 20 00
Stove plate	14 50 — 15 00
Car wheel (std.)	16 00 — 17 00

Scrap Metals

Heavy copper wire	13 00 — 14 00
Light copper	10 50 — 11 00
No. 1 composition	10 50 — 11 50
Red brass turnings	9 00 — 10 00
Light brass	5 00 — 5 50
Heavy yellow brass	7 00 — 8 00
Heavy lead	5 25 — 5 75
Tea lead	3 25 — 3 75
Scrap zinc	5 00 — 5 75

Scrap Rubber

Boots and shoes	3 00 — 3 25
High rubber boots	2 00 — 2 50
Auto tires	0 75 — 0 90
Solid tires	1 00 — 1 25
Inner tubes, mixed	3 50 — 4 00
Peelings, mixed	1 50 — 2 00

CLOSET COMBINATIONS FIRING IN PRICE

Toronto.

A slight adjustment has been made in quotations on closet combinations with vitreous china tanks and cast iron enameled tanks. The new prices are \$2.00 higher than those formerly quoted. There is also a slightly higher figure being quoted on white enamel and vitreous china tanks, the new quotation being \$18.90 instead of \$18.00 as formerly.

The balance of the list remains unchanged as shown below.

CLOSET COMBINATIONS—	Each
Oak, Wood Tank, Oak W. S. Seat and Cover	24 00
Oak Vitro Tank, Oak W.S. Seat and Cover	24 50
Oak Pussyfoot Tank, Oak W.S. Seat and Cover	24 00
Oak Wood Tank, Oak P.H., Seat and Cover	24 50
Oak Vitro Tank, Oak P.H. Seat and Cover	24 50
White Vitro Oak Woodstrip Seat and Cover	24 50
White, Pussyfoot Oak Woodstrip, Seat and Cover	25 50
White Pussyfoot, Woodstrip Seat and Cover	25 50
White Vitro Tank, Mahog., P.H. Seat and Cover	26 50
White Pussyfoot, Mahog., P.H. Seat and Cover	26 50

Oak Post Hinge Seat and Cover	3 85
Mahog. Fin. Post Hinge Seat and Cover	4 75

QUOTATIONS ON GASOLINE AND COAL OIL REDUCED

Toronto.
A satisfactory development has occurred in the gasoline and coal oil market during the week. New prices have been put in effect reducing gasoline by 2c per gallon and oil by 1c per gallon. Quotations now in effect are gasoline, 27c per gallon and Royalite oil, 20c per gallon.

WROUGHT NIPPLES ADVANCE IN PRICE

Toronto.
Wrought nipples are again advanced through a reduction of 5 per cent. in the discounts. The new discounts shown below became effective April 25th.

WROUGHT NIPPLES—
Close and short 4 in. and under 45 per cent.; 4½ in. and larger, 35 per cent.; Long 4 in. and under, 50 per cent.; 4½ in. and larger, 40 per cent.; running thread, 4 in. and under, 25 per cent.; Running thread long nipples, 20 per cent.

ENGLISH GALVANIZED SHEETS SLIGHTLY HIGHER

Toronto.
Quotations locally, on Queen's Head galvanized iron for import, have been slightly advanced. The new prices are about 50c per hundred pounds higher

than formerly and bring the base price up to \$8.00 per cwt. Some importers state that \$8.50 will be paid for this grade of sheets before the end of the year. Below is the list as quoted locally.

GALVANIZED SHEETS—	Premier and	Apollo
10½ oz.	6 90	7 40
U. S. 28 base	6 50	6 90
U. S. 26 base	6 30	6 60
22 and 24	6 05	6 45
18 and 20	6 05	6 30
16	5 90	6 15
12 and 14	5 75	6 00

	Queen's Head	
28 gauge, base	7 50	8 00
26	7 35	7 60
24	7 05	7 30
22	6 90	7 15
	Fleur de Lis	
28 gauge base	7 25	7 50
26	6 85	7 10
24	6 55	6 80
22	6 40	6 65

An extra 40c per 100 lbs. is charged for Key stone and Premier brands copper-bearing sheets. An extra is now charged on galvanized sheets 10½ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown in 20c. per 100 pounds.

TANK STEEL PLATES—	
¼-in. and heavier, base	3 60
3-16 in.	3 95

BLUE ANNEALED SHEETS—	
10 gauge, base	4 50
12 gauge	4 55
14 gauge	4 60
16 gauge	4 65

BLACK SHEETS—	
18-20 gauge	5 25
22-24 gauge	5 30
26 gauge	5 35
28 gauge	5 50

A charge of 25c per 100 lbs. is made for less than case lots. An extra 10c. per 100 lbs. is also charged on sheets 26 in. wide.

CORRUGATED SHEET MARKET STEADY

Toronto.
There is a steady tone noted in the market on corrugated sheets. A gratifying improvement in sales in this line is reported, with the opening of the more seasonable weather. Average quotations locally are as follows:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	7 00
No. 26 gauge	7 50
No. 24 gauge	10 00
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	19 00
Less 10 per cent.	
Lighter than 24 gauge and wider than 27 ins., 75 cents per square extra.	

SOIL PIPE AND FITTINGS REMAIN UNCHANGED

Toronto.
No developments have occurred in the soil pipe and fittings market, although the reports from primary sources have been firm for some time. The discounts shown below are those quoted locally.

SOIL PIPE AND FITTINGS—	
2 inch	Less 33 1-3%
3 inch	Less 33 1-3%
4 inch	Less 33 1-3%
5 and 6 inch	Less 33 1-3%
8 inch	Less 33 1-3%
FITTINGS—	
8 inch fittings	net.
2 to 6 inch	Less 45 per cent.

IRON PIPE PRICES REVISED TO HIGHER LEVELS

Toronto.
A complete new price list is in effect on all lines of iron pipe. Quotations at primary sources have been revised and the higher prices have been reflected on the local market. The new list is No. 59 dated April, 1923, and replaces list

No. 58 of February last. The new quotations are from 3 to 5 per cent. higher than former levels.

WROUGHT PIPE					April 24th, 1923.

Stands 12 to 14 inch 60c.	

Most men prefer shower-baths.

**Give them what they want, and
make them happy!**

***The New MUELLER
Tub Shower Faucet***

gives every plumber something to sell those who already have bath-rooms, as well as to those installing them.

It combines the features of the ordinary bath cock with the advantages of the modern shower-bath. The five-foot hose is permanently attached to the cock. Hot, cold or tempered water can be drawn either from spout or spray, as needed.

It will pay you to install A-2395 on a sample tub and display it in your show window and in your shop. It sells on sight and nets you a handsome profit.

BOILER TUBE PRICES REMAIN FIRM AND UNCHANGED

Toronto.

The boiler tube market continues to hold at the levels shown below. The undertone of this market has been firm for some time and some advances have been made in quotations at primary sources. These, however, have not yet been reflected locally but a revision in

the price of this line would cause no surprise.

BOILER TUBES—

Size	Seamless.	Lapweld

List less 30 per cent.	

RADIATORS AND BOILERS FIRM AT RECENT REVISION

Toronto.

The recent revision in quotations on boilers and radiators is still in effect. There is a slight improvement noted in trading in this line during the week.

RADIATORS AND BOILERS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.	
38 in., \$1: 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.	
Discount on 2, 3, 4 and 5 column standard sizes, 44 per cent. for water and 45 per cent. for steam.	
Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 36 per cent. for water and 37 per cent. for steam.	

Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 41 per cent.

BOILERS—**Water:**

Round 52 per cent. off list. Square 8 per cent. off list.

Steam:

Round, 13 per cent. off list; Square, list plus 7 per cent.

ASBESTOS PRODUCTS MARKET STRONG

Toronto.

While there are no changes in quotations on asbestos products, there is a distinctly firm undertone to the market in primary sources. The following quotations continue in effect on this line:

ASBESTOS PRODUCTS—

Pipe Covering—	
Air cell, 4 ply.....	50 per cent. off list
Air cell, 3 ply.....	55 per cent. off list
Air cell, 2 ply.....	57 1/2 per cent. off list

Winnipeg Markets

WINNIPEG, April 28.—Plumbing and steamfitting lines are moving upward. The feature has been the advance on galvanized range boilers as well as on galvanized sheet iron, blued Canada plate and steel sheets. Conductor pipes and eave troughs have shown an advance also. Brass ferrules, ball cocks and bibb washers show an upward tendency. Rubber diaphragms for steam boilers are quoted at higher levels. A few lines, however, have shown a slight decline, such as tap plugs, trap screw cleanouts, cast iron traps, soldering nipples and unions and also range boiler stands.

BRASS FERRULES AT HIGHER LEVELS

Winnipeg.

Higher quotations are in effect on brass soil pipe ferrules. Straight 2-inch are quoted at 45c, 3-inch at 60c, and 4-inch at 70c. Bent are quoted at \$1 for 3-inch and \$1.30 for 4-inch.

RUBBER DIAPHRAGMS AT HIGHER LEVELS

Winnipeg.

There is a slight advance in quotations on low pressure rubber diaphragms for steam boilers. 6-inch is quoted at 70c, 7-inch at 90c, 8-inch at \$1.10, 9-inch \$1.20, and 10-inch at \$1.40 each.

ANOTHER ADVANCE ON GALVANIZED RANGE BOILERS

Winnipeg.

Due to the advancing tendency of raw materials another advance has been registered on the local market on galvanized range boilers and the following sizes are quoted as follows:

RANGE BOILERS—Galvanized

Each—18 gallons, \$11.00; 30 \$12.50; 35 \$15.00; 40 \$16.30; 52 \$27.20; 66 \$43.50; 82 \$52.90; 100 \$73.65; 120 \$83.60.

Extra Heavy 30 gallon, each \$14.10.

SHEET IRON AND CANADA PLATE AT HIGHER LEVELS

Winnipeg.

The strong tone of primary markets has been reflected in an advance on galvanized sheet iron, Canada blue plate and black steel sheets. Latest quotations are as follows:

SHEET IRON—Galvanized—

16 gauge \$8.10; 18 gauge \$8.25; 20 \$8.25; 22 \$8.40; 24 \$8.40; 26 \$8.55; 28x30 \$8.85; 28x36 \$9.15; 10¾x30 \$9.25; 10¾x36 \$9.55.

CANADA PLATE—Blued—

18 gauge x 21 \$7.50; 18x24 \$7.50; 20x28 \$7.50.

SHEET STEEL—Black—

10 gauge \$6.20; 12 \$6.20; 14 \$6.35; 16 \$6.40; 18 \$7.00; 20 \$7.00; 22 \$7.05; 24 \$7.05; 26 \$7.10; 28 gauge x 30 \$7.20; 28x36 \$7.35.

DECLINE IN TAP PLUGS

Winnipeg.

There is a slight decline in quotations on tap plugs used for repairing leaks in boilers, radiators, iron pipe fittings, etc.

The following sizes are quoted as follows:

TAP PLUGS—Per dozen—

Size ¼ in. \$2.40; 5-16 in. \$2.58; ¾ in. \$2.72; 7-16 in. \$3.10; ½ in. \$3.27; 9-16 in. \$3.85.

LOWER PRICES ON CLEANOUTS

Winnipeg.

Trap screw cleanouts show a slight reduction and 4-inch is quoted at 72c each, 5-inch at \$1.40 and 6-inch at \$1.70.

CAST IRON TRAPS AT LOWER DISCOUNTS

Winnipeg.

There has been a revision in discounts on cast iron traps and fittings. Adjustable bath traps, sink traps, non-siphon traps are quoted at list price less 20 per cent. Cast iron fittings and closet bends are quoted at the same discount.

SLIGHT DECLINE IN NIPPLES AND UNIONS

Winnipeg.

Soldering nipples and unions for lead and iron pipe show a slight decline. Latest quotations are list price less 47 per cent.

RANGE BOILERS STAND SLIGHTLY LOWER

Winnipeg.

Lower prices are recorded on range boiler stands and latest quotations on the following sizes are as follows:

RANGE BOILER STANDS—

Each—Size 12 in. \$1.80; 13 in. \$2.05; 14 in. \$2.25; 16 in. \$2.45; 18 in. \$2.65; 20 in. \$3.74; 22 in. \$4.05; 24 in. \$4.45.

SOIL PIPE TESTING PLUGS AT HIGHER LEVELS

Winnipeg.

Soil pipe testing plugs show a slight advance. Two inch is quoted at \$1.05 each. Three inch at \$1.45, four inch at \$2.00, five inch at \$2.55 and six inch at \$3.00.

THIS IS THE AGE OF GAS

Continued from page 21)

out of 48 operating plumbers in the city of Arlington, 30 were co-operating with the gas company.

Now, fellow craftsmen, if our brothers-in-arms over the line can work out plans that will create bigger and better business for themselves, what is there to hinder us from so doing? As a matter of fact, the first lesson of all to learn is the value of gas as a fuel, the value of gas appliances from a service point of view, and the creating of a "get-together spirit" between all parties concerned.

(To be continued)

ACCOUNTING SYSTEM

(Continued from page 19)

office, and the contents are then entered on the original order by the foreman when the man and helper returns. This is then forwarded to the office for the necessary charge entry. When it reaches the hands of the bookkeeper he enters it on a statement form which is

then filed in a ledger system. The entry calls for the order number, and reference can always be made to the order slip as the number is copied to the statement. If a complaint is at any time made by the customer, details are always obtainable by referring to the order, or further back, to the "material wanted" slip is necessary.

"We have tried various methods in an endeavour to keep track of the continuous passing of material from the store to the customers' hands, but find this system the best and most accurate that we have ever adopted. In a business of this kind it is very hard to keep a close check, and very easy for leaks to occur, because of different men using so many different kinds of material. If a journeyman plumber does not mark down the goods he uses on the spot some of the items are often overlooked, particularly the smaller items, considered less important, but which amount to a good sum week in and week out," concluded Mr. Wilson.

ONTARIO GOVERNMENT

(Continued from page 16)

ment is of the honest opinion that such educational work will be of real value to the farmer and his wife and family. It no doubt will be, but the plumbing trade should realize this too; take advantage of the movement and lend their aid in a practical manner. The craft can group themselves in such a manner as to be able to cater to the farmer and his needs at as low a possible cash cost as possible, because there can be no doubt about it, the goods supplied will be half sold. Selling cost these days plays a very large part in the cost of conducting one's business. Therefore, goods half sold as a result of this big educational campaign should result in lower cost of installation.

The secret of a nation's greatness lies in having a happy, contented and prosperous farming population, and the writer is firmly convinced that taking all in all, our farmer population in Canada have not been rewarded as they deserve. It is up to us, we who live in large towns and cities, to take a little more interest in the welfare, the health, the happiness and prosperity of the farmer, that great big populace who from year end to year end are producing our food and clothing, the very essentials of life. It is the duty of every member of the craft, a duty and an opportunity to make life more comfortable for the farmer and his wife and family, and make a fair profit in the performing of the duty. As stated earlier in this article, no other industry that the writer is aware of has ever had such good work performed for it by this splendid movement which is being carried on so that our rural and farm population shall be taught to realize how very necessary are city conveniences on the farm.

When Does a Paper Really "Reach" You?

1.

Advertisers of the present day are continually having impressed upon them the large number of readers "reached" by this or that medium.

Altogether too much stress is laid upon the number reached; insufficient importance is attached to the manner of reaching them.

As you pass along the street a handbill is thrust upon you. You take it, glance at it, and in all probability immediately throw it away. That advertisement has undoubtedly reached you, but has it reached you in the manner in which you would like your own advertisement to reach the customers you are aiming to get?

It is this question of how people are reached that is really the important one for the advertiser to consider. It is useless "reaching" a large number if you reach them at an unsuitable time and under conditions in which your advertisements will have no effect; everything depends upon the nature of the contact. If this were not so you might as well save the expense of sending out salesmen and send out messenger boys instead. They would "reach" your clients. But you send out a salesman because a salesman is something more than mere flesh and blood. He can do your work more effectively than the messenger boy.

In the same way a publication is more than mere paper and ink. If it is the right kind of publication it is just as far ahead of the handbill or other unsuitable medium for carrying your message as the salesman is ahead of the messenger boy. It will do your work far more effectively.

This is the first of three talks designed to show you how you can satisfy yourself that the medium you choose can not only reach, but reach effectively, and under the most favorable conditions, the man whom you wish to secure as a client.

Look out for No. 2 in our next issue.

PATENTED

A Suggestion

"Medium Weight soil pipe has a round bead pattern at the hub to distinguish it readily from the Extra Heavy weight pipe which has a flat bead pattern.

This is only a matter of design, one being as strong as the other.

We respectfully suggest the advisability of continuing the excellent practice of invariably specifying medium weight pipe in the round bead pattern."

The Greatest Value Obtainable in Ceiling Plate

TOP VIEW No. 10.

Our No. 10 Split Ceiling Plate can be attached to masts and risers at the very last, and is not exposed during completion of a building on the floors, thereby making an attractive finish. Made in all sizes from 1-4 inch to 6 inches inclusive.

The No. 10-A Narrow Flange Plate is a steel lugged plate flange 3-4 inch wide. Highly finished. Especially designed for twin connection "narrow." Made in sizes from 1-2 to 2 inches inclusive. Write for catalogue showing our complete lines of specialties.

GEM NO. 4 AUTOMATIC AIR VALVE
The best brass possible to obtain is used and greatly preserved against corrosion from plating acids because they are nickel plated before being assembled. This valve is simple to adjust and works automatically.

Gem No. 4.

Cut Your Pipe Square

No Burrs
Knives Feed Automatically

The only pipe Cutter made. Cuts pipe square without burrs, quicker and easier than wheel or roller cutters. No. 1 cuts 1/4 to 1"; No. 5 cuts 1/2 to 2". Threading dies start easier and wear longer on a Beaver cut. No files or reamers needed—the pipe is ready when the Beaver is through. Cutting knives give hundreds of cuts on the hardest pipe and are easily resharpened. Also No. 10, 2 1/2 to 4", and No. 15, 2 1/2 to 6"—these are ratchet tools. Write for catalog.

KEEPS DRAIN PIPES CLEAN
DESOLVO
Use A Can Every Month

**You Can Make More
Money Selling**

When a customer wants pipes cleaned or thawed sell a can of Desolvo instead of wasting time doing the job yourself. Then sell your customer on the idea of coming to your place every month for a can—get a big list of customers coming every month and you will make big money—easy! Advertised in Canadian newspapers.

K-K. A companion product to Desolvo. Cleans closet bowls without scrubbing. This makes K-K mighty easy to sell. You can have a steady list of customers every month.

When Answering Advertisements Mention
SANITARY ENGINEER

A PIECE OF TABLE-WARE

may be solid silver without the "sterling" stamp, the accepted "Hall Mark" of quality.

But you don't know.

A Bank might be honest and efficient without Government inspection.

But you don't know.

A business concern may be absolutely responsible without a commercial rating.

But you don't know.

A publication may have the circulation it claims without verification by the Audit Bureau of Circulations.

But you don't know.

Better be sure.

The circulation of Sanitary Engineer, Plumber and Steamfitter of Canada is verified by the A.B.C. Sanitary Engineer, Plumber and Steamfitter of Canada is the only Plumbers' Journal in Canada that will supply an A.B.C. Audit.

Wanted

Rates for Classified Advertising

Advertisements under this heading 3c per word for first insertion; 2c for each subsequent insertion.

Where answers come to Box number in our care to be forwarded, 5 cents extra per insertion must be added to cover postage, etc.

Contractions count as one word, but five figures (as \$1,000), are allowed as one word.

Rates (payable in advance). When panels are desired a charge of \$2.50 is made for a panel 1 inch deep by 2½ inches wide. Minimum charge for any ad. \$1.00.

FOR SALE

ADDRESSING MACHINE FOR SALE—WE have a complete Belknap Addressing Equipment for sale. This equipment is still in use in our Subscription Department and is in excellent working order. We have placed an attractive price on this outfit, and would advise manufacturers or merchants having a mailing list to let us tell you how it will save you money. We will give a guarantee as to the proper working condition of this equipment. The MacLean Publishing Co., Ltd., 143 University Avenue, Toronto.

BROKEN HEALTH COMPELS THIS SACRIFICE—I will sell for spot cash, plumbing business, house and lot, newly painted, several bathroom outfits, truck, hardware, absolute complete outfit of tools, etc., Also outstanding jobs. Store and house located in centre of town "continually building here," an unsurpassable opportunity for a young ambitious man. Having contracted an incurable disease, have been ordered by specialists to retire and move to Denver. See me personally, investigate; you will then realize this excellent offer. My books will prove elegant profits; am still doing rushing business. This offer may seem unreasonable but nevertheless it's true. First applicant gets it. No agents. This is a gift, \$4,000. Address A.B.C., Box 74, Ridgeway, Ont.

TAYLOR SAFES FOR SALE—RARE OPPORTUNITY to secure a safe at small cost. They are in splendid condition. Inside dimensions and prices are as follows: 15 in. deep, 2 ft. 6 in. wide, 3 ft. 11½ in. high, fitted with built-in compartment. Price \$250.00. 18 in. deep, 2 ft. 8 in. wide, 4 ft. 5 in. high, fitted with steel compartment. Price \$200.00. Apply Box No. 701, Sanitary Engineer, Toronto.

FOR SALE—OLD ESTABLISHED PLUMBING, heating and sheet metal business. Side line Hardware. Three hours from city of Vancouver, in one of the best centers of British Columbia. Owner having to give up on account of wife's health. This is a rare opening. \$3,000.00 cash takes it. Address Box 518 Sanitary Engineer.

Good publications furnish A.B.C. reports to their advertisers.
Sanitary Engineer is a member of the Audit Bureau
of Circulations.

FARRFHERN ATMOSPHERIC STEAM HEATING SYSTEMS

Are a simple scientific method of circulation, air elimination, and condensation return.

Following natural laws, this is accomplished with a minimum of mechanical equipment.

There are no traps on radiator returns.

There are no air vents on radiators.

Consequently, the contractor is relieved of needless and expensive responsibilities, which will make his Contracts more profitable.

The Farrfhern is a System that eliminates Troublesome come backs, it will create mutual satisfaction.

Send us the plans for your next prospect and submit a proposal for a Farrfhern System on it.

J. E. FARRELL

Sales Representative, 304 Manning Chambers, Toronto.

BRONZE TO BRONZE

One of The Many Features That Go To
Make For Lasting and Dependable Service

DART UNIONS

Make a joint that is proof against deterioration. A joint that will never loosen up and leak. Their permanent efficiency is due to the non-corrosive Bronze Face and Seat and the Heavy Malleable Iron Pipe Ends and Nut which will not stretch or pull apart under heavy pressure or strain. They ensure a Leak-Proof Service which leaves no loopholes for complaints.

Your Jobber Sells Them

The Test

A higher ideal of comfort, quality and appearance is characteristic of all Vitro tanks.

In the New Design Vitro Tank these ideals are realized to a degree previously unapproached even in our own great organization.

Graceful lines, white, gleaming beauty and No Trouble parts bring this tank to a state of perfection never before reached. Each tank, fittings and all, is sternly tested for three full hours at various pressures and proven structurally and mechanically sound before leaving the factory.

But the final test was still to come.

It is the plumber and the householder who finally determine the value of any bathroom fixture. The actual purchase and repurchase of a certain fixture is the real test of its saleability and worth.

This test the New Design Vitro has also met—triumphantly. More Vitros are being sold to-day than any other tank on the market.

**"Emco" Guaranteed
Closet Tanks.**

We are manufacturers of about 20,000 articles, including valves, pipe fittings and steam specialties.

Something More Than Utility

The life or enduring quality of sanitary fixtures plays the greatest part in the mind of the user. A year from now, to-day's installation is judged on the efficiency with which it is functioning.

The "Emco" white tank will not stain or discolor—and may be cleaned with a damp cloth as easily as a china dish.

The highest quality metals are used in the manufacture of Empire brass goods—the very latest methods and machinery are employed to assure perfection—they are submitted to severe hydraulic tests to satisfy us that they will live up to the guarantee.

See your Jobber, or write direct to us for full particulars.

This 18x20 Solid Vitreous Lavatory Will Give Satisfaction and Service

No. 700—X THE "MOUNT SIMPSON."

"MOUNT SIMPSON" is the latest addition to our already comprehensive "Mount" line of Solid Vitreous Lavatories.

Made in the 18x20 size it is sufficiently small to fit into the modest toilet room and yet is not too small to find favor in the more pretentious installation. This lavatory is of particularly pleasing appearance, its graceful contour, combined with the lustrous sheen of its white impervious surface, presenting an attractiveness which is ably matched by the time-defying strength and service assured by its hard-burned, all-clay, through-and-through vitreous body.

THIS lavatory has the popular "Tuxedo" rim, has the cock-holes placed at 8" centres, which is somewhat closer than in many other small lavatories, and the same punching as for the combination fitting illustrated will take any standard cocks with pop-up waste or cocks and chain stay.

The "Mount Simpson" lavatory installed in the same toilet-room with a "Lakeside" Syphon Jet closet and a "Bellemeade" solid vitreous low-down tank will round out a very happy installation and ensure many years of unchanging service.

Sales handled exclusively through recognized jobbers in plumbing supplies

A SAD CASE

Twenty-five years ago in the City of ———— Ontario, William ———— was a hard working, capable, journeyman plumber. He had finished his trade a few years before and then decided to go in business for himself.

He started up with small capital, but with plenty of energy, mechanical knowledge and an abundance of friends who promised him their patronage.

After renting a small store and putting in what stock he could procure he found that work did not come in as fast as he expected, but that it was necessary to spend about half his time figuring on jobs. The jobbers' salesmen were anxious to co-operate with him. They helped him figure his jobs and of course in those days, as overhead expense was an unheard of thing, most of his quotations were made on a basis of from 10 to 15 per cent. on cost.

Having had no business training, he gave little thought or attention to such matters as volume, bookkeeping, cost accounting and overhead expense. To his mind these things were necessary evils which he would give as little attention to as possible. But he would argue by the hour of the relative advantages of lead and iron, and was proud of his ability to wipe a good joint.

For twenty-five years this man has worked steadily from nine to eleven hours a day, has had no holidays outside of an odd day or two of fishing. Yet today he is in the same city, on the same street, in the same store, and holds the same views, in fact he is in the same position as he was twenty-five years ago, because Dun's and Bradstreet's give him a rating of under a thousand dollars.

Think of the tragedy of the thing—a life time wasted—hopes shattered—family uneducated and not enough laid aside to be able to spend the remaining years of his life in leisure and happiness—all because he did **not know**. He was not taught to realize that underlying all businesses there were fundamentals which, if ignored, would bring disaster. These common everyday rules of business are as clearly defined as the law of gravitation, whether it be a grocery business, a shoe business, an electrical business or a plumbing business. You cannot buy an article at a dollar, have an overhead expense of 20 per cent. and sell it at a dollar and twenty cents and succeed. Mechanical knowledge and hard work are of course necessary, but they are secondary.

The **Sanitary Engineer** referred to above told our Mr. Henderson that if our service had been available twenty-five years ago his life duties would not have been so arduous—his family would have been able to enjoy the finer things of life and today he would be able to take things easy instead of having to work with the tools up to the last.

Unfortunately there are many more like him in this industry and if we could have a quiet talk with those **Sanitary Engineers** who know deep down in their hearts that their business has been a failure, we would convince them that the **Henderson Pricing System** would at least place them on a sound basis from now on. However, our small fees of 10c. per day will not permit us calling on each member of the trade individually, so we urge them earnestly to do this—**TRY THE HENDERSON PRICING SYSTEM FOR ONE YEAR**. Even if it is only 10 per cent. as good as is claimed for it, it will more than pay for itself.

For six years this service has saved other **Sanitary Engineers** time, worry and money. The cost is ridiculously low, the terms are spread out over a year, in fact everything possible is being done by us to induce every **Sanitary Engineer** in the Dominion of Canada to adopt this service.

Don't let another day go by without writing for our booklet **Profit Insurance** and an order form.

The All-Quality Line

RUUD has never cheapened design or sacrificed quality. RUUD to-day builds the only Complete All-Quality Line of Gas Water Heaters.

Every RUUD Instantaneous Automatic Water Heater is equipped with both water flow and water temperature controls, and with two separate independent gas valves.

Every RUUD Automatic Storage System is equipped with a super-weight copper-brazed tank and a perfected fuel control—the RUUD All-Metal Thermostatic Moment Valve.

Every RUUD Tank Heater is equipped with exterior reversible union manifolds—all parts are accessible and removable. Installation and maintenance costs are reduced by the quality of design and construction.

Every type and size RUUD has that in-built quality which results from over thirty-four years' practical experience in the gas water heater field.

RUUD design, RUUD quality, RUUD prestige—these are forces that will help you build a successful water heater business.

Since 1889, RUUD has been the world's water heater standard.

Ruud Manufacturing Company

The New *Little Giant* Pipe Wrench

*I Handed It To The
First Engineer
I Met—*

AND HE SAID:

"Why, there are just three parts!
You think of a pipe wrench with
springs and rivets and things, but
this is the simplest I have ever seen
—nothing that could break on it.
Where can I get one?"

It takes only a glance for any man
familiar with tools to recognize the
great advantage in "Little Giant"
Simplicity.

The two powerful jaws are drop-
forged, heat-treated and practically
indestructible. Two sets of teeth on
the smaller "Little Giant" and four
sets on the larger ones, double or
quadruple its useful life.

Mechanically correct proportioning
of metal gives the strength which
enables it to stand up under the
added leverage given by the extra
length handle and to easily turn
pipes, rods, nuts, etc., which others
fail to budge.

Every "Little Giant" Pipe Wrench is
sold with our positive guarantee.
Send for our interesting circular No.
300E, fully explaining its advan-
tages, and ask your supply house to
send you a "Little Giant" wrench at
once.

Many Interesting Issues Discussed at 12th Annual Convention Ontario Society

Inspection of Plumbing and Heating Equipment of Union Station—Luncheon at Prince George Hotel—Ontario Boiler Inspector Tells of Offenses of Steamfitters

FROM the social and educational standpoints, the twelfth annual meeting of the Ontario Society of Domestic Sanitary and Heating Engineers, held in Toronto on Thursday and Friday, May 10 and 11, was very successful.

Following the sessions of the Executive Committee, the delegates gathered on Front Street at 11 a.m. for an inspection of the new Union Station. While waiting the members had their pictures taken a number of times by *Sanitary Engineer*, the results being shown in illustrations in this issue. After the healthy contingent from Hamilton drew up in motor cars the inspection began.

Great interest was taken by the delegates in the plumbing and heating equipment of the building. The various public washrooms and toilets and the more private divisions where travellers for a small fee may have the use of a room containing bath, shower, toilet and wash basin, were the centre of much attention, particularly the details of the piping and general layout of the spotless enamelware. The huge kitchen with its up-to-

date equipment and special water supply facilities was much admired and great surprise was evinced when the delegates were taken into the lower portions of the building to see the miles of pipe used to carry the summer and winter supply of steam. Steam is not generated in the building, being brought from a plant on Scott St., nearly half a mile distant. The sump pits and pumps are used to raise the effluent from the lower floor to the level of the street sewer. All were agreed that the station is up-to-date in every respect and the only regret was that it was not yet open to public use.

Boiler Inspections

From here the delegates proceeded to the Prince George Hotel where a very tasty luncheon was enjoyed. A number of prominent supply house and manufacturing representatives were intermingled with the association officers at the head table, in addition to Mr. Medcalfe, of the Ontario Government Boiler Inspection Department, who spoke briefly after lunch. Mr. Medcalfe pointed out

that some steamfitters had offended against the Steam Boiler Act on a number of occasions by putting in high-pressure lines without notifying the department. There had also been trouble with steamfitters installing low-pressure boilers and not seeing that owners had certificates from the department. There had been cases where boilers had been brought in from the U. S. and, where certificates had not been obtained, the owner was frequently put to great expense when trouble arose. It had cost one man \$86 to have his boiler changed to comply with the requirements. It was emphasized that it was unlawful to instal any pressure boiler without a certificate from the department.

Harry Flett, Taylor-Forbes Co., pointed out that the manufacturers were behind the legitimate plumbers and would lend assistance in helping put their business on better foundation. He stated that it was deplorable that some plumbers could not pay their supply houses because they could not collect their outstanding accounts. The supply houses were said to be in position to supply in-

Delegates to the Ontario Society convention photographed just before the start of the inspection of the new Union Station.

formation on the credit standing of consumers and plumbers were urged to take advantage of it.

Major L. L. Anthes, managing director, Anthes Foundry Co., pointed out that the manufacturers have the interests of the industry at heart and are trying to raise it to a dignified plane. He urged plumbers to realize their responsibility in connection with the health of the community. "The federal and provincial governments have not realized the full importance of sanitation," he said in conclusion.

Close Together in Hamilton

C. F. Rogers, Hamilton manager, Standard Sanitary Mfg. Co., stated: "In our city the various plumbing and heating interests are pretty close together. In the past we have considered ourselves too much as separate businesses. Whether consumer, journeyman, master

NORMAN SWANSTON

Toronto, retiring President of the Ontario Society D., S. & H. E.

plumber, wholesaler or manufacturer, we all bear a relative responsibility and good will be done only as we work together. The plumber who puts a 150-lb. pressure valve on a 250-lb. pressure job not only puts his own work into disrepute eventually but the manufacturers' goods are also condemned and everyone is harmed."

Hugh Wallace, hailed as the Dean of the plumbing trade among those present, spoke briefly, expressing his delight at renewing old acquaintances. Having secured an answer in the affirmative when questioning Mr. Medcalfe as to whether air tanks in tire repair shops came under the Boiler Inspection Act, Mr. Wallace pointed out that air tanks were different in regard to pressure than were water tanks.

Some brief remarks from President Norman Swanston concluded the luncheon and the delegates left for the convention hall for the afternoon session.

May Appoint Organizing Secretary to Stimulate Membership

Division of Province Into District Councils Also Suggested—
Members Two Years in Arrears on Dues Will be Struck From
List—Importance of Good Credit Conditions—Association Requested to Help British Plumbers Settle Here

PRESIDENT Norman Swanston opened the first business session of the convention on Friday afternoon, expressing gratification at the representation present. In his annual report, as outlined elsewhere Mr. Swanston emphasized the value of organization work and enthused over the future prospects of the organization.

The Treasurer's Report showed total assets of \$715 though considerable moneys in outstanding dues are still to be collected. Cash in bank amounted to \$272.75.

Coming to the question of committee reports Mr. Swanston stated that no report on Sanitation was available this year, Mr. John Wright being excused in view of the recent sad bereavement of his wife.

E. Cardwell reported that there was no report on the subject of arbitration because of the fact that there had been no developments during the year. P. C. Mansell read his report on legislation as outlined elsewhere in this issue.

Following this G. R. Baker, chairman of the apprenticeship committee, gave a very interesting verbal report on the work of his committee, as outlined elsewhere. Ross Belyea also reported on behalf of the educational committee.

Provincial By-law

In connection with the report of Secretary Frankland it was mentioned that the provincial by-law was all ready

awaiting the signature of the lieutenant-governor. Wm. Newell, Hamilton, took exception to this stating that no schedule was available to be worked on because the proposed bill brought up by the former Conservative government had failed to pass and it was now dead, un-

less brought through committee of the present government.

President Swanston stated in reply: "What we have is a proposed provincial regulation. Unfortunately that regulation has not become law. That is due to the fact that it has not been endorsed by the lieutenant-governor or provincial secretary. While it is not a legal measure the man who rendered assistance has expressed the opinion that if each of the various municipalities throughout the province saw the necessity of adopting any part of the proposed measures, that ultimately the provincial legislature would have no other course but adopt it as a whole."

Mr. Baker suggested that the association work with the Plumbing Inspectors' Association to help get the by-law through. Mr. Swanston replied that the attitude of the plumbers had always been somewhat antagonistic toward the inspectors but that the inspectors had not held such an attitude toward the plumbers who carry on their business right. He was of the opinion that such co-operation might work to good advantage, and announced that he expected it would be but a very short time till the proposed Ontario by-law is in effect.

More Aggressive Campaign

E. Cardwell suggested a more aggressive membership campaign, stating that little progress was evident from year to year. Mr.

C. GORDON STEWART

Hamilton, newly elected President of the Ontario Society D., S. & H. E.

G. R. BAKER

Toronto, elected Vice-President of the Ontario Society D., S. & H. E.

Swanston stated that the question of having an organizing secretary had been in his mind for some time and thought it should be discussed. Thos. E. Arthurs revived the suggestion made by him at the last annual convention to the effect that the province be organized into districts having councils which would meet once every two months, members to pay their own expenses. These councils would refer matters to the executive of the Ontario association. Nothing had been done on the matter as yet.

Harry Mahoney thought that the membership fees of the 150 to 200 members in the association would not enable the carrying on of an organizer's effort, and stated that the matter must be discussed from a financial standpoint. He doubted

if the present Ontario government would pass by proposed by-law because the former government has shown favor for the interests of the rural districts alone.

W. Newell, Hamilton, stated that in his opinion the association did not give enough to its members. Outsiders can get just as much service as an association member. "The manufacturer infringes on our rights when he estimates on our jobs, and if we had a committee to do that work members would lean on us more. Plumbers are only doing about 75 per cent. of their work and the manufacturer is doing the other 25 per cent.

C. G. Stewart, discussing the subject of district councils, pointed out that such a plan would lay the association open as a board of appeal. He thought that if

JOHN WRIGHT

Toronto, former Chairman Sanitary Committee, who was unable to be present at this year's convention due to the death of his wife.

some arrangement could be made so the present secretary would be at the beck and call of outside towns and have time to stir up new members, collect dues, etc., the situation would be met.

P. Cockfield believed it would be possible to have an organizer work on the basis of keeping a certain percentage of the new fees and renewals.

G. R. Baker thought district councils would do much good, but Mr. Stewart maintained that a ruling should be given on controversial points which would be bound to arise. Mr. Arthurs thought the association would be better off for some

The Hamilton delegates to the Ontario Society convention whose arrival injected life into the fellow craftsmen waiting to inspect the Union Station.

A mixed delegation to the Ontario Society convention, including Secretary Frankland, C. G. Stewart, Ross Belyea, Ed. Needham, Wolverine, Ltd.; T. F. Holliday and H. L. Southall of "Sanitary Engineer."

differences of opinion and as a means of getting more life into the proceedings. He believed district councils would function. H. Mahoney's motion that the matter of an organizing secretary be left to the incoming directors and if this plan was not found feasible to have authority to seek other means, was carried. Mr. Arthur's motion that the matter of district councils be taken up was also carried.

The auditors' report recommended that all members two years in arrears be struck from the list. A nominating committee, consisting of Messrs. Mansell,

Mahoney and Arthurs, then retired to consider nominations.

Credits

Mr. Conroy of the United Creditors' Association spoke on the subject of credits and collections, pointing out that good credit is just as vital as new business. He gave some statistics showing the alarming death rate among various businesses due to failure to properly collect book debts, and continued:

"When you go into a man's house to install plumbing you are acting as his banker because you have installed goods which you have to pay for. The supply houses have an association so that when you fall down in payments your source of supply is cut off and you are out of business. The man who has the plumbing installed has the advantage of the use of your money on loan. Many debtors fail to realize that they are under obligation to the man who has done the work." There were two classes of debtors, the dead beat and the one who cannot pay. Mr. Conroy proceeded to outline the plan adopted by his firm for the collection of bad debts.

In reading communications Secretary Frankland told of having received requests from England for help from the association in placing plumbers in business in this country. This was the result of the spread of information abroad that high wages and scarcity of help was being felt here. Messrs. Harrison and Phelps, Welland, were two new members to join the association.

The election of officers was the concluding business of the session, the place of next meeting being left to the executive committee.

Those Present

Among the members noted at the Ontario Convention this week were the following:—Thos. Maxwell, Toronto; H. Mahoney, Guelph; F. Gentle, Toronto; F.

Smith, Guelph; G. R. Baker, H. W. Rushby, P. C. Mansell, N. Swanston, all of Toronto; E. T. Needham, Wolverine Ltd.; A. E. Fletcher, Hamilton; E. Cardwell, Welland; A. Crompton, T. E. Arthur, W. A. Cannon, W. Newell, Mr. Backalake, all of Hamilton; P. Russell,

J. W. BRUCE

International organizer of journeymen, who addressed the delegates at the annual banquet.

T. Shearer, T. A. Williams, Ross Belyea, P. Cockfield, Gordon Belyea, P. A. Cain, Wm. Boxall, all of Toronto; Thos. McKeown, Mt. Dennis; F. H. Shorney, Weston; F. Hogarth, Toronto; T. W. Mason, Wolverine Ltd.; B. G. Goldman, Toronto; T. J. Harrison and Mr. Phelps, Welland; C. G. Stewart, Hamilton; Harry Weinraub, Toronto; W. F. Clifton, Toronto.

All Branches of Trade Renew Acquaintances at the Annual Banquet

Manufacturers and Supply House Representatives Make Big Appeal for Closer Co-operation—Local and Outside Talent Help Make Enjoyable Affair of the Banquet—Plumbing Should Not be Sold on Basis of Lasting a Lifetime

THE annual banquet held on Friday evening at Bingham's was the occasion of much hilarity and right good fun as manufacturers, wholesalers, masters and representatives of journeymen intermingled. A number of the veterans of the industry forgot their years and joined with the rest in a grand round of merriment, taking much enjoyment out of recounting some experiences of former days. There was a goodly representation of all branches of the craft and all enjoyed the splendid banquet.

When the last item on the long menu card had been disposed of there was some entertainment in the form of saxophone solo, etc., but perhaps the most outstanding part of the entertainment was the series of "Gallagher and Shean" verses sung in duet by P. C. Mansell, president, Toronto society, and Garret F. Frankland, the genial secretary. The author of these verses showed great insight into the shortcomings of the various members and the musical rendition left nothing to be desired.

Among those whose presence helped to brighten the proceedings and who are only periodically seen at the association functions were the following: Past-president F. R. Maxwell, W. G. H. Hris, Canada Metal Co.; H. Locke Page Hersey, Ltd.; Hugh Wallace, Toronto Hard-

THOS. E. ARTHURS

Hamilton, Ont., whose suggestion for organization of district councils throughout the province is to be acted upon.

ware Mfg. Co.; Major. L. L. Anthes; F. Armstrong, Port Hope Sanitary Mfg. Co.; Peter McMichael, Dominion Radiator Co.

First President

F. R. Maxwell was the first speaker, being introduced as the first president of the Ontario Society D. S. & H. E. He stated that the association had been formed twelve years ago, and that a few who were at that inaugural meeting were present at this banquet. In most cases the sons of those who founded the organization were now active in it. He was satisfied that the Ontario Association would prosper and that there was no more important branch of business. "We are the health and sinew of the citizens," he said, "but unfortunately we don't take our right place because we don't appreciate our own worth. We are judged as we judge ourselves. The young men coming up in the business are looking further ahead and applying business principles."

The newly-elected president, C. G. Stewart, Hamilton, was introduced to the banquet and pledged his best efforts provided he secured the support of the other new officers.

G. R. Baker, newly-elected vice-president, was introduced and gave one or two recitations in his own inimitable way.

Peter McMichael, Dominion Radiator Co., spoke of his fond recollections of many years spent in close association with the interests represented. The manufacturers of Canada, it was said,

A few of the more select delegates to the Ontario Society convention. Some of the early arrivals.

H. WEINRAUB

Toronto, who has been succeeded in the office of Treasurer of the Ontario Society by C. M. Sparling, Toronto.

held the trade in the very highest esteem and would do all possible to eliminate ground for grievance. He urged more co-operation and more of a spirit of boosting for the industry.

F. Armstrong Speaks

Fred Armstrong, Port Hope Sanitary Mfg. Co., stated that he felt quite at home among the plumbers in view of his early association with the industry. "Once a plumber always a plumber," he said. "I never regret the time I learned this trade. I got information then which helps me to judge the requirements of the trade. I am interested in plumbers and plumbing associations because I feel there is no business that can get along without a properly-formed association. I mean an association such as yours, formed for the benefit of the trade."

He spoke of the items appearing in the press which made the plumber the butt of many unjustified remarks. These and reports of other matters such as the indictment of a number of manufacturers in the U. S. a few days ago, had given the opinion that the plumbing industry was avaricious and that they get too much for their efforts. "On the other hand," continued Mr. Armstrong, "this is not a paying business. I fail to see where you men get enough for your work. I doubt if any business in Canada is more poorly paid than the plumbing trade for the work done. There is only one way to change it and that is to settle a fair price and get it without conveying the impression that you are getting too much for your work."

Shouldn't Last Lifetime

"Some of your efforts convey the impression that plumbing should not only last a lifetime but should be handed down to your successors. When you acquaint people with the fact that plumbing work should be renewed frequently you will make more business for yourself and do them a service. I feel that much of the work you do in installing enamelware is

done at less cost than should be. Our material requires careful handling, and I have come to the conclusion that it is not any wonder we have a quantity of defective ware when I see how some of it is handled. Much of this expense could be avoided. When you find something that is not exactly right don't wait for the traveler to come and tell you good naturedly that 'it's all right, the manufacturer will give you a new piece.' It costs you money for this to be done. Sometimes a piece of ware will be in the warehouse as long as three years before being brought to your attention as defective. You should see that the man who has the work done accepts some responsibility and doesn't get it for nothing. It should be replaced on the same basis as tires. There is no other business in which you can go back and say, 'I want a new piece for a defective article' after a year has elapsed.

"It is the policy of our company to do business through the jobbers. Every one has his sphere of action and we consider this plan the most economical. You are wise to build up a good connection with your jobber." Mr. Armstrong emphasized the value of good jobber connections by a few notes from his early history when Alex. McMichael, a brother of Peter McMichael, who was then with James Robertson Co., gave him much needed assistance which put him on his feet.

Journeymen's Organizer Speaks

John W. Bruce, organizer of the United Journeymen's Association, spoke on the value of organization, pointing out that much of the chaos in the world to-day was due to misunderstanding of our respective places in society. He spoke of his recent visit to Europe while

THOS. MAXWELL

Former President of the Ontario Society D., S. & H. E., who was very much in evidence at the convention just concluded.

attending the sessions of the League of Nations, and was of the opinion that we in this country had made much greater strides in plumbing and heating equipment than had those countries visited. He spoke of the harmonious relations prevailing between employers and journeymen in Canada and stated that his association had endeavored to give the employers a square deal.

Mr. Kennedy, president, Michigan State Plumbing and Heating Dealers' Association, was the chief speaker of the evening, his address being outlined fully elsewhere in this issue.

The Muir Apartments on Algoma street, Port Arthur, is in course of construction and Mr. Muir is now calling for tenders for the full plumbing in four bath rooms.

Trying to settle a ponderous question. Secretary Frankland and Harry Mahoney from Guelph, try to decide whether or not to open the new Union Station.

Speaker Hoped Day Would Soon Come When Plumbers Would Not Do Business for Profit

Anything Charged to Customer Above Actual Cost of Material to the Plumber Should be Legitimate Charge for Service, Not Profit—In Soliciting Members for Associations Don't Tell Them Benefits They Will Receive But What They Can Do for Others

Report of address by N. J. KENNEDY, before twelfth convention Ontario Society D., S. & H. E.

IN INTRODUCING his subject, N. J. Kennedy, president, Michigan State Plumbing and Heating Dealers' Association referred to his early experience in the plumbing business in Toronto several years ago. He had learned the business in a peculiar way, having taken a "white collar" job as a bookkeeper with Mr. Allison. He stated that he had later "unlearned the business under K. B. Allison."

"We must think well of our own industry," said Mr. Kennedy, "and be prepared to defend that industry against attacks, no matter from whence they come. That is a good foundation but we must go further. We must realize the importance of our industry in the advancement of civilization. Consider what the condition of this or any country would be if it were not for sanitation. How would it be possible to have cities such as we have if it were not for sanitation? How

would it be practical to have wonderful schools, offices and other buildings were it not for the fact that the plumber is there to provide the arteries through which refuse is disposed so communities can be kept in such a state that life is safe and pleasant.

"On your efficiency, knowledge and skill depends the wonderful advancement that has been made in those directions. We as plumbers have overlooked the fact that we were called to perform for society a greater service than the medical profession ever could perform, because we do these things that prevent disease. In the face of this realization you have failed to realize the high standard of your calling and to enforce your thought on the rest of the world.

Failed to Sell Yourselves the Idea

"I will accuse you of one more thing and that is, you have failed to sell yourselves the idea of the importance of your

industry. All of us have considered this plumbing business as a simple method of making a living. It has been to us a bread ticket and we have considered it only in terms of dollars and cents. In the majority of cases we have even failed to realize in it the dollars and cents which we presumed were there.

"A man may have one particular method of earning his living, but if he must close his mind to all other things to get there then he will fail. He will fail in the development of himself, which is the bitterest failure of all. Nothing is so despairing as to arrive at the end of life and realize that you have not acquired many elements of knowledge and experience which could have been yours had you been willing to make the necessary mental effort to acquire them. A plumber who is only a plumber is a failure no matter how much money he has piled up. You must acquire ability to reason and knowledge of other things

This group could hardly be enticed away from the Queen's Hotel. Left to right, back row, P. Cockfield, Toronto; T. Sheater, P. Russell, D. Norwich, Ross Belyea, all of Toronto. Front row, C. G. Stewart, Hamilton, and Ed. Needham, Wolverine, Ltd., are shown.

GARRETT F. FRANKLAND

Secretary, Ontario Society D., S. & H. E., whose efforts were largely responsible for the success of the 12th annual convention.

and so learn to sympathize and size things up from a broad viewpoint.

"This industry needs expansion in the mental calibre of the men engaged therein and there are means for acquiring that expansion which we are neglecting or are making little of. What does this association mean to you? As a group it means a gathering that is going to cure all ills and defects and wipe away all the disadvantages of the plumbing business. You sit comfortably while this is being done. Invariably the thing that kills associations is the nonchalance or selfishness of the individuals belonging to it. Never sell an association membership to anyone by pointing out to him the individual advantages he is going to gain by joining, because if you do you start him out with the wrong thought and you will never correct it. No association will live if fundamentally its program is selfish. When you sell a man membership in your association sell to him on the basis that you want him to come into the association for the good he can do to others. He will stick with you to the end.

They Are Selfish

"Some men will say they see nothing in your association. This is because they are selfish. The thing that is the matter with the world to-day is just human selfishness.

"When things are booming, many men have not the time to join an association and when things are flat they ask what is the use? When they are flat they should be in the association devising ways to develop business. It has been pointed

Successful Apprenticeship Plan in Toronto is Outlined

Seventy-Two Boys Under Instruction in Toronto—
Both Boy and Master Plumber Are Morally Bound
—Getting Good Class of Boys

Report of G. R. Baker, Chairman Apprenticeship Committee, before Twelfth Annual Convention, Ontario Society D., S. & H. E.

"TWELVE months ago in Hamilton I presented a written report, but it got a cool reception because my idea was hard to apply in towns. That report was brought back to Toronto and applied and we are making progress. We have perfected the scheme now so that when a boy has completed this course we know what kind of a mechanic he will be.

"We have a card system which is recognized by this society whereby the boy makes application to our secretary for apprenticeship, the secretary sizes him up. We have got so far that we have now 72 boys under instruction. They have cards and they present these to their employers. It appears to be practically impossible in Canada to have the indenture system. Under this plan we expect the boy and the master to be morally bound. The master takes the boy for a probationary period of three months. Then he comes back to the secretary and says he is ready to go ahead. The employer then has to keep that boy for five years. This is quite different from the days when

the employer would take a boy in the busy season and then drop him.

"We are getting a good class of boys and they are paid \$7 per week the first year, \$9 per week the second year, and \$11 the third year. After the third year he presents himself to the secretary for examination. The examining board consists of three men from the union and three from the employers, and an examination is set for him. We pass on a boy who attains a mark of 60 points. Some get as high as 90 and 98 points. After the third year the boy receives 50 cents an hour, and the fifth year he gets 60 cents an hour. At the end of five years he makes application for a license. The final examining committee consists of a member of our organization and of the city health department. After the boy passes and gets his license we know that we have an entirely different type of mechanic than in the past.

"I hope now that we have this plan in working order that the men will make the best use of it and make even more sacrifices next year."

out that if not another building was built in America for 47 years there is enough work remodelling worn systems and renewing old work to keep every journeyman busy for that length of time.

"Furthermore, you want to remember that you do not make any business by

stealing customers from someone else. If you are going to make this business grow you have to create new business instead of figuring how you are going to beat the other fellow's specifications. This is the fundamental thought which should guide you in the conduct of your business. You have a duty to perform in this direction. Do you think it is just you that is interested in the business you run? Are your pride and your conceit the only things worthy of thought in framing your business policies? When in order to gratify some imaginary wrong you go out and take jobs at even less than cost do you think you are just compromising with yourself or has it dawned on you that the wrong you are doing extends further and that you are committing a crime against your family and therefore against society which depends on the family for sustenance? Through your bad judgment you run wild and your family is being done a grave injustice for which you will have to answer.

Hopes Won't Do Business For Profit

"A man said to me the other day, 'I hope the day soon comes when we will not do business for profit.' I found this hard to appreciate at first, but there is much to be said for it. When I sell you a certain amount of goods I sell it to you for exactly what it cost me. Everything

Plans for Showing Septic Tanks at Various City Exhibitions

Alberta Association D. S. and H. E. in Convention—Recommend Closer Association With Plumbing Inspectors—Expect Broader Resumption of Business in West

THIS year's annual convention of the Alberta Association of Domestic Sanitary and Heating Engineers dealt with a large number of matters of importance to the trade and considerable progress was made by the discussions. Vice-president C. R. Frost was in the chair owing to the absence of R. J. Priestly.

The annual report of President Priestly was as follows:

Gentlemen:—I beg leave to submit my fourth annual report. It is with a feeling of deep regret that I find it impossible to be with you at this convention, but knowing that your deliberations will be beneficial to the craft at large, and such legislation will be dealt with that bring all men engaged in the plumbing and heating business together with a better understanding of one another and will, therefore, bring our membership up to the much coveted 100 per cent.

Article 1. As per your instructions, my letters were sent out to the manufacturers, jobbers and Railway Commission re the complaints made at our last convention but unfortunately they saw fit to ignore them.

Article 2. At a previous convention held in Lethbridge a motion was passed to have our financial year end on the last day of February so as to give our secretary an opportunity of closing his books and to prepare a proper balance sheet to be presented to you. With the exception of one or two cases the members have not sent in their fees or moneys for the Price Book until the first sitting of each convention. This is not fair to the secretary as the bank balance is so small from year to year that he hardly has enough money on hand to pay the necessary expenses through the year. I would suggest that the members pay for their change sheets at least once every three months.

Article 3. This association was re-organized in 1919 with a membership of forty. The number of members on the roll to-day are sixty-two. Six have withdrawn for various reasons, three of whom have left the country. Approximately nineteen have not paid their dues for two years, making about twenty-two members who are apparently dissatisfied. Just let us ask ourselves what is wrong. Is it the fault of our executive officers in not showing enough interest in our association, or is it that the district committee is not the proper scheme? Personally I think it is the latter. Therefore I would suggest that the district committees be dispensed with, and we

NEWLY - ELECTED OFFICERS OF ALBERTA ASSOCIATION D. S. & H. E.

President, C. R. Frost.
Vice-president, G. W. Henderson.
Sec.-treasurer, W. H. Kelcher.
Executive officers, H. Ferris, Edmonton; J. H. Hillier, Calgary.

Chairmen of Committees
Sanitary, D. Campbell.
Heating, R. J. Priestly.
Legislative, W. H. Kelcher.
Apprenticeship, J. Carver, J. H. Hay.
Essay, H. Ferris.

appoint an organizing secretary, whose duty it will be to keep in touch by post with every man in the province doing business in our line, at least once a month, in whatever form he thinks best, and would suggest that the question box be adopted as one of his organization schemes. I trust that you will give this

R. J. PRIESTLY

Retiring President Alberta Association, D., S. & H. E., who was elected Chairman of the Heating Committee for 1923-24.

your serious consideration as it is essential that we keep moving forward.

Article 4. You will notice that a proposition will be made to have an exhibit at the exhibitions held at the four cities of the province, consisting of a septic tank in miniature form, water pressure systems in operation, plumbing fixtures connected showing the concealed work as well as the finished, and a display of heating goods, with a banner hung in a conspicuous place with the name and address of every member of the association. This display could be shipped from point to point, and such an exhibit I am sure would draw a great deal of attention, be an education to the public and an excellent advertising medium for ourselves. I sincerely hope that every one present will see the advantage of such a scheme and will get behind it and make it go over with great success.

R. J. Priestly.

Report of Vice-president C. R. Frost was as follows:

"The conditions of trade do not seem to have improved much since our last convention at Calgary. We have had a fairly busy year but conditions are not what they should be. We have not had the support from the wholesalers that we might have had. Our Edmonton association is in a good financial condition, with about the same membership as last year.

"I am sorry to say that we have not accomplished what we would have wished with our Provincial Health Act; the chairman of your Legislative Committee will give you what information we have.

"There are a few points I wish to bring before the members of this association:

- (1) We should try to co-operate more closely with our plumbing inspectors, and to live more closely to our present by-law. In regard to material some of our members are not insisting on the proper grade of material, especially in repair work. The jobbers are equally at fault in this respect as they will continue to stock material that is prohibited. If the jobbers would carry nothing but material of the standard gauge and weight it would help out the work of the plumbing inspectors.
- (2) There is one other item that I would like to see prohibited from use in Alberta. I refer to the wood strip closet seat. We use a porcelain closet bowl; this is sani-

tary; but we put on this an article that makes the fixture far from sanitary, and especially is this true in regard to public lavatories.

"We have been holding our association

together in the hope that conditions will improve. Western Canada seems to be the last place on the continent to come back to normal, but 'the blackest cloud has a silver lining'; we may not be able to see it, but it is there."

C. R. Frost.

Making Little Progress Along Lines of Apprenticeship

R EPORT of Apprenticeship Committees, Alberta Assn., D., S., & H. E.:

As a member of the apprentice committee in the Edmonton district I have to report that there have been no classes held this season as there were only three enrolled and that was not sufficient for the opening of a class for theory and practical instruction in plumbing.

Although there seems to be more need than ever for such classes, as the men that were wished on me last spring were a "joke," no, I would say a tragedy.

However, we have ourselves to blame as we will not take in apprentices to serve an apprenticeship, but simply use them as helpers and then turn them off when we get a little quiet.

Gentlemen, the question of good tradesmen is getting to be serious and the only remedy I can see is to raise them. Hoping this problem will get your earnest consideration.

JAS. CARVER, Edmonton District.

Calgary Report

As a member of the Calgary District of the Apprentice Committee, I beg to report as follows:

Says Some Jobbers Still Try to Sell Plumbers Material Not in Accordance With Regulations

R EPORT of Legislative Committee, Alberta Assn. D. S. & H. E., was as follows:

(1) We have had several conferences with Mr. R. B. Owens, sanitary engineer, during the year in connection with some of the clauses in the revised regulations and the progress being made in regard to same. We were hopeful that the whole matter would have been cleared up in time to give a definite report regarding same at this convention, but in this we have been disappointed, for, although practically all the clauses as amended have been passed by the Cabinet, those clauses dealing with the licensing of master plumbers and the appointing of an Examining and Licensing Board are still to be definitely dealt with. Further consideration of these matters will not be given by the Cabinet until after the close of the Legislature which is now in session and what the final outcome of this consideration will be we cannot forecast. Certain legislation may be passed which may make it possible for us to attain our goal in this connection but only at the close of this sitting of the

The number of apprentices being raised in Calgary at the present moment is very small, in fact five or six is all the city can boast of. A class was started in the technical school last year but was taken more advantage of by the man than by the apprentice. The subjects were mainly shop mathematics and drawing as applied to plumbing, and there were about ten men and three apprentices attended.

The class was not taken up this year. Outside of this very little interest is being taken with regard to where we are going to get our future tradesmen. Of course conditions have not been favorable, and expenses have been cut to the minimum, but nevertheless unless firms are willing to try and interest boys in the trade, we are making all kinds of trouble for ourselves in the future. Of course the youth of to-day is not attracted with small pay and a long term of apprenticeship, when so many easy jobs can be picked up; so that I am afraid unless firms can make it more attractive for the boys "the trade is going to die with us."

J. H. HAY, Calgary District.

House will we know what has been done in this matter. Under any circumstances this convention should keep in close touch with Mr. Owens, and if necessary with the Minister of Health, in order to keep this matter before them.

(2) Your committee wish to bring to the attention of the members of our association the urgent necessity of each and every member doing his utmost to fulfill all the requirements as laid down in the health regulations relating particularly to our trade. If there are changes which any member or group of members think should be made in any of the clauses of the regulations they should be discussed at this convention and referred to the Legislative Committee for action.

(3) Some of the jobbing houses and some other firms who sell goods to our members still endeavor to have us buy and install goods which are not in accordance with the regulations. We might refer, for sake of example, to two or three items, namely, 20-gauge basin traps and 6-lb. lead bends instead of 16-gauge traps and 8-lb. lead bends as laid

down in the regulations. These are only two of several things which might be mentioned which are not in accordance with the requirements. If we, as an association, ask the Department of Health to place certain clauses and requirements in the health regulations and expect that department to help our business by enforcing these regulations, it is up to us as members of this association, whether doing business on a large or small scale, to live up to the requirements of such regulations and not buy material which is not up to the standard laid down, nor try in the installation of our work to get away with something which does not comply with the regulations.

(4) At the convention last year your committee was instructed to proceed with the incorporation of our association under the Ordinance respecting Benevolent Societies, which we have carried out and the certificate of incorporation is submitted herewith, also a copy of the incorporation papers as filed with the Registrar of Joint Stock Companies.

W. H. Kelcher,
Chairman, Legislative Committee.

ARE NOW FIRST-RATE PLUMBERS

Port Arthur, Ont.—Examinations upon which successful candidates will receive licenses to act as plumbers in Port Arthur have been completed at the Collegiate Institute and the following were successful in obtaining licenses: T. Bennett, Nick Pacuzzo and Hugh McRae, Jr. Candidates were examined for practical work, theory and chart tests and all three obtained over eighty per cent., the required for pass being seventy-five per cent. The practical examination required two and a half hours and all three candidates finished in two hours. The Board of Examiners who held the examinations included J. W. Barnes, chairman; R. A. Shaw, representing the journeymen plumbers, and A. J. Peckett, inspector and secretary.

The plumbing classes held in the Collegiate this year ended March 31. Much work was undertaken and the apprentices were congratulated by their instructor, A. J. Peckett. Attending the classes were: Hugh McRae, Alex. McRae, Nick Pacuzzo, Matt Slater, A. Peckett, Jr., Peter Giraitt, Fred Shirley, T. Bennett, Louis Anderson, Norman McGregor, John Sime, Jr., Frank Peltier.

Nick Pacuzzo, Alex. McRae, Matt Slater and Peter Giraitt were presented with certificates by Principal Howell for faithful attendance at classes, which were held two nights each week from October 1 to March 31.

NOT EXCLUSIVE RIGHTS

The statement inadvertently was made in a recent issue that the "exclusive" rights in Canada had been secured for the reproduction of the dealer helps of the National Trade Extension Bureau. Sanitary Engineer has secured the rights for the reproduction of these helps but this is not "exclusive."

Delegates to Annual Convention, Alberta Society, Domestic Sanitary and Heating Engineers, at Medicine Hat.

Would Abolish District Committees and Appoint Organizer

R EPORT of Executive Committee, Alberta Association D. S. & H. E. "We have endeavored to the best of our ability to carry out all the instructions and recommendations allotted to us at the session of 1922, held in Calgary, namely,

- (1) To send letters to the Alberta wholesalers, and the manufacturers of plumbing and heating goods, protesting against the loss of labor due to defect ve material;
- (2) To the manufacturers of enameled ware in reference to the high cost of their product;
- (3) Letters to the railway commission protesting against the high freight rates.

"We are of the opinion that it is the intention of the officers to bring to your attention propositions which we feel will be of benefit to our organization, such as an exhibit at the principal cities during the Fair week, of the proper installation of plumbing and the disposal of sewage in rural districts; also a proposition to dispense with the district committees and appoint an organizer for this purpose. These are very important matters and no doubt will receive due consideration.

"One of the duties of your executive committee is to have charge of the funds of the association and pay all bills contracted. In order for us to fulfil these duties we must have your co-operation in the punctual remittance of dues and moneys due by you to the association. In the past the secretary has gone to our annual meeting with funds practically depleted, with the hope on arrival that will be replenished. This is a bad state of affairs, and a poor manner of conducting business, and the blame truly lies with the membership at large, and furthermore does not give the secretary an opportunity to close his books and have

a proper financial statement to submit to the association for consideration. You elect the officers of the association believing that they will carry out their duties. A prompt observance of this

matter on your part will enable them to do so. Send all moneys due to the secretary each and every month so that it will be possible for him to close his books on December 31st, and thus show a desire on your part to assist us."

Respectfully submitted,

Executive Committee—R. J. Priestly, C. R. Frost, H. C. Pheiphs, D. Campbell, G. W. Henderson.

Canadian Society Convention is Unlikely

Apathy on Part of Various Provincial Bodies Responsible for Announcement — Convention Would Not be Representative of the Country

MONTREAL.—There is every likelihood at the present moment that for the second consecutive year the Canadian Society of Domestic Heating and Sanitary Engineers will not meet in general convention, despite the fact that it has been the announced intention of the executive to hold the convention in Montreal early in June.

Announcement to this effect was made this week by President A. Latourelle, apathy on the part of the different provincial organizations being given as the reason for this change of plans. Early in March a meeting of the sub-committee of the society's executive met in this city, making preliminary plans for the convention which, according to the constitution, is to be held in June of each year. The second week in June was selected as the most suitable but before setting any definite dates for the convention, Secretary D. K. Trotter was instructed to communicate with the whole executive, comprising the presidents of the various provincial associations.

"This was done," stated Mr. Latourelle, in speaking to a representative of Sanitary Engineer on the subject, "but Mr. Trotter informs me that to date he has had but two or three replies and even these do not show evidences of sufficient interest in the proposed convention to warrant our going ahead with

the expense of making the necessary preparations."

President Latourelle has called a meeting of the sub-committee for Thursday, May 17, when the matter will be taken up, discussed at length and finally disposed of, but from present indications it is already settled by the weak response made by the organizations affiliated with the Canadian society.

Asked for any possible reason or explanation of the attitude being taken by the other provinces, Mr. Latourelle stated that he was at a loss to account for it.

"We have a local organization here in Montreal and get good results from it, but I don't know what is the matter with the others," he declared. "Most of them have not even replied to Mr. Trotter."

Mr. Latourelle added that while if the convention were held, even though there were a good number of outside plumbers present, from present indications they would only be from this province and that this was not what was wanted but a convention which would be representative of the national scope of the Canadian Society of Domestic Heating and Sanitary Engineers.

Locally, the executive have been given co-operation by the Montreal Master Plumbers' Association, it being at their invitation that it was decided to hold the convention in this city.

"We're a Funny Trade—All of Us Bein' Suspishus of the Other Feller and Thinkin' Our Own Skirts is Clean All the Time"—Jerry

Jerry Takes a Trip to the Big City and Wonders Why the City Plumbers Don't Get Together More

With apologies to Ring Lardner. Written for Sanitary Engineer by MAJOR L. L. ANTHERS, Managing Director, Anthes Foundry Co., Ltd., Toronto.

Dear Al:

O Boy these bammy breases from the South maikes you feel like a 2-yr.-old & you fergit all abt the grouches & pesticism of the long cold days & the long cold nites witch set in abt. Oct. & was still goin strong last wk. Life has a diff. outlook if you no wat I meen.

Spring is a wonderful thing. Yer sole gets fulla poultry & you feal like a bird that aint got no caires in the world. You fergit all abt. frosen pipes & radyaters & etc. & begins to think of fishin & baseball & crokay & marbils & spinning tops & other lite deversions. After the winter is all over you fergit you ever had enny trubbles & you begin to taik hart onct moar.

I was down to Tronto last weak witch as you no Al is the big Meteropolos of thees partz. Thats were all the wize guys lives or thinks they doz. & were theres moar chickens on the sts. than their is on all the farms in our countie. The fellers down their aint such a bad lot wen you git 2 no them but I aint met ennyboddy wot noes em yet. You sorta xpect. 2 meet with a lot of seperior intelligence in the city were fellers nose all abt. the cost of doin bizness & how to figger & all that but befor I got their I come 2 the concln. that theirs as menny guessers in the city as wat their is in the countrie only moar numerikly seein as their is more 2 the sq. ft. in the city than they is in the countrie. However it is not my desire nor intentn. 2 mock the city fellers but only simpithise with them only I dont see why they dont get tergether moar & organize fer the good of the traide wen they have such a good chanct on acct. of their being so menny. Weere a funny traide all of us bein suspishus of the other feller & thinkin our own skirts is clean all the time.

Well wile I was in the big burg some of the fellers ast me to a meetin & I bean a gest was ast 2 say a few werds. Seein as only abt. ½ the gang what was invited had terned up I immed. tocked on organyzation & how nessery it was fer everyboddy 2 B present wen a

meetin is called. Then I begin 2 tock abt. baseball & as how it was Kwoperation & teem play wat maid us win the pennant. I tocked of the way we werked 2 win in 1916 & as how we eat up the hole big league & then cleened up the post serious fer dissert. I ast them if theyd remembered wat we done that yeer & wen no 1 seamed 2 hev herd wat we done I pointed out how nessery it is 2 reed the Daley paipers 2 keep up with the timse. 1 of the fellers settin neer sed that abt. that time all they was readin was daily orders in France upon witch I changed the subjek.

After I finnishd I ast them if they wanted 2 ast enny questns. 1 feller ast me how menny plumbrs they was in Tarraboone & I told him 1 bein us & annother feller naimed Spuds wat werked into a woodshed.

He then ast if us & Spuds Kwoperated & I sez no becaws Spuds was a low down cuss.

Jerry throws off all the work-a-day duds and takes a trip to the big city. Read what he thinks of the city plumbers.

He then ast if we ever tride to Kwoperate & I retortuned no becaws we dident reconige him as a ligitimit plumber & he then ast why & I finely quit.

I herd sumboddy say somthin abt. charitie beginnin at home & I dident feal as comfertible as I had bean.

Then annother guy got up & begin to speal on Kwoperation. He sed that the hole trubble with the traide was that everyboddy waited fer the other feller 2 maike the 1st move. That was why everyboddy was stallin & the traide werent gettin nowhears. He sed that in the plumbing bizness their shd. bee a lot of give & taikie but not as sum fellers seam 2 think such as give a feller a push & then taikie wat hees got from him.

Thinkin ide taikie a rize outta him I ast him if he dident reemember the text wat sez 2 hymn what has shall b gave & 2 hymn what aint shall b took wat he aint got. You know Al I allus was strong on that skripshul stuff.

He had a quick cumback & sez the feller musta bean a plumber becaws a plumber aint never got nothin. However he says that aint the point he wants 2 maike wen he sez the traide shld. give & taikie. He pertested that they shld shaire 1 anothers trubbles as if a plumber dident have anuff trubbles of his own without sharin the trubbles of annother plumber.

But the guy stuck 2 his argament & finely he had me thinkin & I begin 2 feel like the crook who taikes chainge offa the collection plaite in charch. Its strainge how sum fellers can maike you feal that you have gave yr. nayber a dirty deel & I maide up my mind that wen I got hoame Ide go over to Bill Spuds & berry his hatchit.

Annother guy what they called a mannafer give a tock on skeptie tanx together with a lot of other stuff pretaining 2 the traide. He also begin 2 opolegise fer split hubs & sandholes & etc. tellin how they happened & as how wen a plumber bot sum difective goods if he wld. only send a defective peace with the naime & the number onto it the

mfr. eld. wrecktify the trubble. No mfr. what has enny respex fer his goods wants 2 get a bum naime & is only 2 glad 2 be able 2 traice trubble so that it went aeur agen.

He sed as how hard it was 2 controle the humin yelloment watever that is & that bum stuff gets past sumtimes no matter how cairful the mfr. wants 2 B. I come to the concln. that even mfrs. has trubbles as well as plumbers.

After the guy had tolde his story he ast those what wanted 2 ast questns. 2 ast them & he was kept bizzy abt. 10 mins anserin questns.

The fellers sune found out sum things what has bean puzzlin them fer a long time & I thot as how it was a pity their werent moar meetins of the kind wear more mfrs. sez as how no mfr was 2 big 2 adress a mating of the trade & if the traide was well orginized as how no mfr. eld. reefuze 2 speek no matter how big he thot he was.

From the factory 2 the compleat installn. of a job was a serious of lynx like a chaine he claimed & if 1 link was week the chaine would bust. He sez as how everyboddy connected with the manafacher & destrebutiön & installn. of plumbing supplize was lynx & as how they shld. mutuelly strenthen 1 an-nuther. It was good dope & I hopes as how the traide will orgenize & give the the mfrs. a chanet to maike there confessns. regardin there goods.

After the meatin grub was searved & the gang gathered arnd. the taibles in groops & swapped xperyenees. The Pres. explnd. 2 me as how thees gather-ins permoted soshability & if enny boddy had a grouch on enny boddy else thade lay there cards on the taible & as a rool noboddy had moar than 4 aces & those wat was onct ennemies wld. shaike hands & bee frends until the next time.

Booze is awful hard 2 get in Tronto now & the stuff I got dident do me no good. Ime off it fer life. Aside from this a plesent time was had.

Yrs. as ever,

JERRY.

MONTREAL PLUMBERS AGREE ON INCREASED WAGE SCALE

After negotiations covering a period of two months, an agreement has finally been signed between the Master Plumbers' Association of Montreal and the Catholic and National Syndicate Plumbers' and Steamfitters' Union, calling for an all-round increase of five cents per hour, effective May 1, and to last for two years. This fixes the new rates at

"There's more chickens on the streets in Toronto than there is on all the farms in our countie."

75 cents an hour for A men, 70 cents an hour for B men, and 65 cents an hour for

C men, the latter scale generally being for first-year men who have served their apprenticeships.

SANITARY ENGINEER HANDLES QUESTIONS AND ANSWERS CLEARLY

"I have always been deeply interested in your Questions and Answers column, and I certainly like the way you handle your subjects as you always make them so clear."

"Your subjects such as septic tanks, bigger and better business, rural plumbing work and the markets have all been exceptionally good, as have many other subjects treated by you."

"I think your paper has been better this year than for the last five years."

(Signed) George Duesberry,
71 Pinnacle St., Belleville, Ont.

As in the past, the "open shop" clause remains in the agreement. For six months hours are to be 49 per week, with 44 hours for the balance. Time and a half is to be paid on Saturday afternoons and after the regular hours until midnight. From midnight to 7 a.m. on Sundays and on legal holidays double time must be paid.

The Catholic and National Syndicate supplies the major portion of plumbing help to the Montreal trade, many non-Catholics being found in the organization. While the employers are not bound to pay non-union plumbers at these rates, the same scale has been used by most employers in the past.

Details Process of Manufacture of Wrought Iron Pipe

H. E. Rooke, Sales Manager Page, Hersey Co., Ltd., Chief Speaker at Final Meeting for Season of Hamilton Plumbers—
Meetings to be Resumed on Broader Scale Next Fall

ON WEDNESDAY evening, May 2, was held the closing dinner of the most interesting series of such meetings held during the past winter by the Hamilton plumbers, and which was referred to at some length in the last issue of Sanitary Engineer.

This final dinner for the season was in every way the most successful of the series, and speaks well for the success of these splendid gatherings when they are resumed next fall.

C. F. ROGERS

Manager in Hamilton of Standard Sanitary Mfg. Co., who has been one of the prime movers in connection with the series of helpful meetings held this winter among the plumbers of Hamilton.

Promptly at 6.15 upwards of one hundred sanitary engineers of Hamilton, together with visitors from Toronto, London and Galt, sat down to an excellent dinner, served in the Arcade Restaurant. A sparkling musical program consisted of duets by Messrs. Pollard and Jenkins and Scottish songs and patter by Sir Harry Lauder, who was very cleverly impersonated on this occasion by Wee Sandy MacDonald, son of one of the members, in costume. Much of the success of these meetings is due to the snappy way in which Sergeant-at-Arms L. Rogers and his alarm clock keeps everyone on his toes, and on time to the minute.

Mr. Gordon Stewart announced the winners of the various contests held by the bowling league, and the handsome Standard Sanitary Silver Cup was presented by the chairman, Mr. C. F. Rogers, local manager of Standard Sanitary Mfg. Co., to Journeymen Plumbers' Local Union No. 67 who were high team for the season. Other prizes presented by Empire Brass Mfg. Co., Greenfield Tap and Die Corp., Cunningham & Hill, Ltd., Galt Brass Co. and Canadian Brass Co., all of whom had representatives at the meeting, were also presented to the more skilful (or lucky) bowlers.

Prizes Donated

The highest individual score for the season. Prize of \$10 donated by the League was won by J. P. Robb, of journeymen's team.

The highest team score for any one night. Prize of \$10 was won by the journeymen's team.

The highest individual score for three games. Prize of \$5 was won by John Allan, of Standard Sanitary Mfg. Co.

Bath seat donated by Cunningham & Hill, Toronto, was presented by Bert McLaren to Wm. Newell of M.P. team No. 2.

Two pipe wrenches donated by Greenfield Tap & Die Co., of Galt, were presented by P. A. Moore, president of Hamilton Society of Sanitary and Heating Engineers. 1-14 in. wrench to H. Mellon of journeymen's team; 1-10 in. wrench to J. Kerr of M. P. team No. 1.

The highest score of any individual game, prize of \$2, was won by E. Wilson, of Marks & Co.

The booby prize went to Wm. Bachalake, of M. P. team No. 1.

The two brass candle sticks donated by Empire Mfg. Co., London, were presented by A. Branston to G. O. Rinman.

The League standing for the season was as follows:

	Won	Lost
Journeymen	19	11
Standard Sanitary Co. . .	17	13
Crane, Ltd.	16	14
Master Plumbers No. 1	14	16
" " No. 2	14	16
Marks & Co.	10	20

Plans for Next Fall

Those present discussed the idea of continuing these dinners again next year and forming an organization having a standard name, with membership fees to cover general expenses such as printing, etc. They proposed to call a meeting in September and this also received a unanimous vote.

Norman Swanson, Toronto, spoke for the visiting journeymen. H. S. Wallace, sales manager for Toronto Hardware Mfg. Co., gave a short and spicy address and made some nice references to the old days when he used to ply his trade in Hamilton, and complimented the plumbers in getting together in this social manner.

Mr. Stewart proposed having a soft ball league formed in the near future to consist of four teams.

WM. NEWELL

Master plumber of Hamilton, Ont., who has given considerable assistance in connection with the series of meetings held among the craft in that city during the past winter.

H. E. Rooke Speaks

Promptly on scheduled time the speaker of the evening, Mr. H. E. Rooke, sales manager, Page, Hersey Co., Limited, was introduced by Mr. Charles Marks, of Marks, Limited, who reminded his hearers that Harry Rooke was an old Hamilton boy, having gained his first knowledge of the hardware business with the Wood-Vallance Co. there.

Mr. Rooke, on rising to speak, was greeted with a very warm reception, and he replied by extending a most hearty invitation to the plumbers and sanitary engineers of Hamilton to set an early date for a visit of inspection to the Page,

Hersey plant at Welland. He assured the gathering they would be interested in seeing the various processes of manufacture from the raw material stage through the huge furnaces, rolls, bending and welding machines, to the finished article, the wrought iron pipe which they are using daily in their business. It is altogether likely that this invitation will be accepted and a trip to Welland will be planned for an early date in the month of July.

Traces Process of Manufacture

Mr. Rooke, whose subject was, "The Men We Sell," first gave an interesting description of various kinds of pipe, tracing its development from the old hand-welded or blacksmith-style of iron pipe, then the revolution created by the discovery of the Bessemer process in 1876, and on down to the highly developed, heavy machine product of today.

The speaker then discussed the selling policy of his own company, pointing out

PERCY A. MOORE

President Hamilton Master Plumbers' Association, who has given considerable time and attention to the educational interests of the craft in Hamilton, in connection with the series of meetings held in that city this winter.

that there were undoubted advantages to the ultimate consumer in marketing such a product as heavy iron pipe through jobbers located at strategic shipping points throughout the country as they do. Were they to attempt to sell to the trade direct it would be necessary to establish warehouses of their own in practically every city of any size, and the overhead expense would be prohibitive. Mr. Rooke concluded his very interesting and instructive talk with an outline of the export trade done by the Page, Hersey Co. with Australia, New Zealand, India and South Africa, and pointed out that pipe was put on the market in the same way the world over.

R. Binette, general organizer for the building trades in the Catholic and National Union, returned to Montreal from Hull and Ottawa where he has signed up a contract for the Hull local of the Catholic and National Union of Plumbers for one year at 75 cents an hour.

New Goods of Interest to the Plumbing Trade

Pressure Reducing Valves

H. Mueller Mfg. Co. Ltd., Sarnia, Ont., have placed on the market a new improved type of pressure reducing and regulating valve for use on cold water pipe lines.

The new valve is designed particularly for domestic water service and is said to maintain a constant delivery pressure, regardless of variation in the initial intake pressure. It is also said to be valuable as a protection for plumbing fixtures.

The points of superiority claimed for the new valve include the following; made of bronze and therefore it is non-corrosive, full seat opening means unrestricted flow of water, special sensitive composition diaphragm insuring accuracy and interchangeable wearing parts making replacements rapid and simple.

The sectional view of the new valve

appearing herewith shows the strainer on the intake side which is a feature designed to protect the working parts from sand and pipe scale.

Home Water Plant

The Canadian Fairbanks-Morse Co. Ltd., Montreal, are now placing on the market their new home water plant for deep wells, a plant suited to those installations where the water lift is greater than 22 feet—the limit of the shallow well plant. The entire mechanism is enclosed in a neat appearing cast iron housing but is so built that the entire working mechanism is easily accessible. The drive is direct, the worm that drives the chain being directly connected through a flexible coupling to a vertical motor, the motor being of the full ball-bearing type. One of the features claimed for the plant is the quietness of its operation, the worm and gear meshing quietly in a bath of oil. The pump can be furnished with an automatic float switch for open tank service or it may be provided with a pressure switch and pressure tank for a pneumatic system. When the pneumatic system is ordered the pump is equipped with an air compressor.

New Tank Float

The cut above shows a new copper tank float just being put on the market by W. H. Cunningham and Hill, Limited, 269 West Richmond St., Toronto.

Messrs. Cunningham and Hill state that their new float is positively with-

out seams or points of any kind. It is made from the purest electrolytic copper. The price is said to be higher than the ordinary float but the new solid shell float is guaranteed for 5 years and the manufacturers claim it will prove the most economical in the long run.

MAY APPOINT ORGANIZING SECRETARY

(Continued from page 16)

address, which dealt with the value of organization. He enthused over the future prospects of the association which would follow upon the efforts of the members to build not only the society but the industry as a whole.

P. C. Mansell, chairman of the Legislation Committee, gave an outline of developments during the year, pointing out the present situation regarding the proposed Ontario plumbing by-law.

Ross Belyea, chairman, Educational Committee, had little to report on educational work, pointing out that the machinery of the association was not sufficient at present to put any extensive educational campaign into effect.

Short Course Lectures Well Attended

Value of Sanitation on the Farm—Hundreds of Young Farmer Boys and Girls Attend Three Month Lectures—Pneumatic Water Systems Used for Practical Demonstration Work

Written specially for Sanitary Engineer by EDWIN NEWSOME, Consulting Sanitary and Heating Engineer.

IT WOULD be quite a task for one to even guess at the probable amount of good that has been accomplished by those who launched, conducted, and otherwise took part in the short courses recently concluded in eight provinces in Ontario.

These courses were in the form of series of lectures and practical demonstrations, blackboard sketches, English, mathematics, literature, horticulture, bee-keeping, animal husbandry, farm mechanics, sanitation on the farm, including sanitary plumbing; the value of same on farm homes; sanitary heating, ventilation, water supply and sewage disposal systems, pumping, how to locate wells, and where, the proper installation of such apparatus which go to make up such systems that deal with rural sanitation in its broader sense.

The attendance at these courses of lectures really reflects great credit to the students which included boys and girls, each being conducted in separate lecture rooms. The girls took up subjects relative to domestic science, cooking, washing, millinery, literature, English and mathematics, household management, and special studies were prepared for the girls relative to water supply, bathrooms and kitchen equipment and disposal systems.

The writer found each and every student particularly interested in the subjects he prepared and lectured upon.

Notes were taken down and a set of specially prepared and illustrated sheets were distributed, one to each student. These sheets contained twenty-two (22) practical drawings with quantity of reading matter in connection with and describing each drawing. The sheets numbered 13 and dealt with the following subjects:

Various kinds and styles of hand pumps.

Various kinds of wells, designs, etc.

Details of pump cylinders and valves. Sources of water, (four), springs, deep and surface.

Poor and good location of wells and pumps.

Well and gasoline driven pneumatic water system, located near house.

Instruction sheet showing proper location of septic tank fittings and other details in connection with construction of septic tanks. Position and height of fittings and syphon.

How to install hydraulic rams and details of ram construction and working.

Hand operated pneumatic water supply systems.

Plan and elevation of septic tank where layout of disposal system where ground is fairly level.

Plan and elevation of septic tank where situated near lake, river or stream, showing details of filtering effluent.

The writer took up most of each day for eight days in eight counties, and the

attendance ran (boys) from 15 to 60 at the different centres. The lectures were planned in such a manner as took up about 3 days in subjects under heading of farm mechanics. Care and use of all manner of tools, repair work of all kinds that would not require power machinery. Care and repair of pumps, the diagnosing of pump troubles, the principles of various designs of pumps and proper choice of same. Rope splicing and belt repairing.

Five days, or most of that time, was devoted to lectures showing the vast importance of sanitary plumbing and water supply on the farm. Reasons why attic tanks are unsanitary. Reasons why the cesspool is a menace to health. Value in dollar and cents of a properly designed septic tank and sewage disposal system complete. Working equipment, motors, pumps, some loosened up to show the working parts, were loaned by manufacturers. A model septic tank, all to prove the value as an investment of all such apparatus as would fit every farm and rural home with city conveniences. It was surprising how easy it was to convince those in attendance at these courses that real value was there.

Discussions were indulged in. Questions were asked and answered, and when the utility of modern city conveniences was explained, every student realized that good value was there. Approximate costs in dollars and cents were given.

Edwin Newsome, contributing editor Sanitary Engineer, shown demonstrating to part of his class at Clinton, Ont., the use of a pneumatic pump.

The large class at Binbrook, Ont., which attended the three months short-course lectures by Edwin Newsome, lecturing on behalf of the Ontario Government throughout the rural sections of Ontario. These bright young men and women have become boosters for modern sanitary equipment and they have a working knowledge of how such equipment should be installed and operated.

and upon such cost value in service found to be all to be desired, and compared very favorably, in fact more so, than any other capital investment.

Apart, and in addition to the lectures conducted during the day, a special lecture, illustrated by lantern slides, was delivered by the writer. These lectures were advertised, using posters, postcards and handbills as mediums, as well as local newspaper advertisements and editors' notes and news columns. And to see how well these lectures were attended proved conclusively that the population of rural Canada is interested in, and do appreciate, the service that can be rendered by each home being fitted up with city conveniences.

The local town papers gave these lectures a lot of publicity and, typical of the reports and space devoted to these lectures, can be judged by one which appeared in the Wellington News, where 175 persons were present. Despite the fact that a blizzard was blowing, accompanied with a violent snow storm, people drove as far as 12 miles through it all to hear the lecture. The report, which appeared in the Wellington News, Prince Edward County, is well worth reading and hence we have decided to reprint same.

LECTURER DISCUSSES FARM HOME PROBLEMS

Mr. Edwin Newsome, Consulting Engineer Talks On Rural Sanitation, Water Supply and Sewage Disposal Systems—Nearly Seventy Slides Shown.

"A very interesting and valuable lecture illustrated by lantern slides was delivered by Mr. Edwin Newsome, Consulting Sanitary and Heating Engineer, Weston, at the Consolidated school, Wellington, on Tuesday, January 16th.

"Mr. Newsome has been to Wellington for the past two weeks, lecturing to the students at the Short Courses being conducted by the Ontario government under the direction of Mr. A. P. MacVannel, Agricultural representative for this county.

"The subject of the lecture was that of rural and farm sanitation, water supply and sewage disposal systems and the lecturer showed his audience in word and picture, conditions as they are, true to life on the farm. With all the inconveniences that have to be put up with, the old wood pump, a snow storm raging and the farmer thawing out the frozen pump, friend wife emptying waste water out at the back door, also the filthy outdoor privy. The lecturer then described how it is possible to have city conveniences on the farm and in every rural home. As a matter of fact the cost of these conveniences, modern bathroom, modern sink, septic tank to sanitary disposal of sewage and pneumatic water supply systems, can be procured at less cost than the city dweller has to pay for the same conveniences.

"The annual taxes in the city of Toronto, directly and indirectly amount to \$43.34 cents per person and this amount simply covers the cost of streets, sewers and schools. And to raise this money every home or other building has to be mortgaged by the city corporation to the extent at present of over 60 per cent. Whereas a farmer buying his own equipment could get all these conveniences including a good furnace for about \$1,000 at 6 per cent., only costing \$60 per year. Who, said the speaker, would not pay \$5 a month to have hot and cold water at the sink, be able to have a bath, hot or cold, as often as one wished, or give the wife a chance to be happy day in and day out by making hard work easy for her.

"The farmer's wife is a drudge in comparison to the wife of a city man. No city man would ever dream of asking his wife and family to get along without modern conveniences. As a matter of fact the health authorities of a city or incorporated town will not let anyone build a house unless a bathroom and all other modern sanitary plumbing fixtures are installed in every home.

"If you were to walk down some of the streets in the older sections of Toronto you would find a sign nailed on

the door 'Insanitary, unfit for human habitation.' And ladies and gentlemen, I venture to say and to prove that less than 5 per cent. of the farm and rural homes have the proper conveniences to enable their occupants to live as they ought to have the privilege of doing."

It might be stated (but cannot be proved) that the average farmer cannot afford to put a modern bathroom and kitchen sink, etc., in his home. Bosh! Rubbish! In the year 1921 the government of Ontario issued 181,978 auto licenses, and out of that number 64,045 were taken out by farmers. Farmers took out 1,859 auto truck licenses and 428 motorcycle licenses in the same year. "Now," said the lecturer, "do not think I wish to infer that farmers should not own autos. I believe they should but I most emphatically assert that no auto is so essential to human comfort and human necessity as is a modern bathroom, hot and cold water at the sink, good water supply and sewage disposal system and furnace. And all these can be procured for the price of a fairly decent car.

"The reason why we are confronted with the depopulation of our farming communities is largely because of the lack of city conveniences. Can we expect anything else? This depopulation is brought about by the fact that our old folks get tired of farm drudgery and our young folk have the distastefulness born in their very souls.

"Every man, whether farmer or city man, should help to make life easier for the mother of the farmer to be by doing all in our power to assist that mother farmer.

"If the mother on a farm home is assisted, if her work is made a pleasure, then her babies are more likely to live and love their labors when they grow up, because she, their mother (even when her babies were yet unborn) was contented, happy and interested in her work.

"If health authorities refuse to allow city homes to be used as habitations where no sanitary plumbing is installed.

(Continued on page 46)

How Plumbers Should Figure Profits

Percentage of Profit Should be Based on Selling Price Rather Than Cost—A Profit Schedule to Help the Plumber—A Case in Point

IT HAS become a custom of merchants, in referring to the cost of doing business, to speak of a given percentage on sales, as for example: If the net sales for a given year were \$60,000, and the cost of operation was \$20,000, we would refer to our cost of business as 33 1-3 per cent.—that is, 33 1-3 per cent. of net sales.

In determining what margin of profit to place upon our goods we have become accustomed to speak likewise in percentages, but in this instance, unfortunately, we have almost invariably spoken in percentages upon the cost of the goods to be sold, rather than in percentages of the retail or selling price.

For example: If we have bought a bill of goods for \$1,000, we say that we will add a profit of 50 per cent. and obtain \$1,500 for this particular merchandise.

This custom has caused endless confusion and frequently great loss on the part of those who are not familiar with accounting methods and the principles of good merchandising. It has been frequently assumed in fact, that if the volume of sales was \$75,000 and the cost of doing business was \$25,000—33 1-3 per cent.—a mark-up of 50 per cent. on cost would insure a very comfortable margin of net profit; and many a merchant has operated on this assumption to his lasting sorrow.

Among the advantages to be derived from figuring percentages on selling price, rather than on cost, we would include the following: (1) dealing with smaller percentages of profit; (2) elimination of much guesswork in establishing retail prices, through a better acquaintance with the cost of doing business which this revised method would encourage, and (3) a quicker realization of the net profit involved.

Briefly discussing these three advantages, we would say, in the first place, that dealing with smaller percentages of profit will often serve to disabuse the mind of the retailer who doubts whether he is justified in adding to his laid-down invoice cost a percentage that really is essential to his progress. It will similarly correct a mistaken notion in the minds of uninitiated employees and of the general public, who may regard the percentage added to the cost of goods sold as unreasonably large, while they ignore the fact that the invoice cost of merchandise is only one factor in its cost and that to this factor must be added all the costs of doing business.

In the second phase, we believe that dealing with a smaller percentage—the percentage on selling price rather than the percentages on cost—will greatly encourage the merchant in his determination to know at all times the actual cost of doing business in order that his mark-up may provide for all the factors of this cost and for a reasonable percentage of net profit.

The third advantage is explained by the fact that the cost of doing business is commonly expressed in a percentage on sales; hence we know that if we base our mark-up likewise on sales our profit must be the difference between these two percentages. If my cost of doing business is 35 per cent. on my sales, and if I mark up a piece of merchandise 45 per cent. on the selling price, I know that my net profit will be 10 per cent. of the selling price.

Probably no other factor is so much to blame for the surprises and disappointments occasioned by the end-of-the-year showing as the incorrect pricing of merchandise, and this incorrect pricing may be attributed chiefly to errors in computing profit percentages.

Many a retailer has been misled by the statement, in itself entirely correct, that goods bought at \$10 a dozen and sold at \$15 a dozen will yield a profit of 50 per cent., and has assumed that because his cost of doing business is around 33 1-3 per cent., he obtains a substantial margin of net profit.

What the retailer overlooks is the fact that the 50 per cent. is a percentage on cost and the 33 1-3 per cent. is a percentage on sales. The truth is that 50 per cent. on cost would yield \$5 a dozen, and 33 1-3 per cent. of \$15 is also \$5, so even though the retailer knows his cost of doing business to be 33 1-3 per cent. and has overlooked no items of expense, such as depreciation, rent of store that is owned, and his own salary, nevertheless he has sold his merchandise without making a profit.

Let us assume that the cost of an article is \$6.60 and that the cost of doing business is 30 per cent., which, with 5 per cent. excise tax, involves a total cost of 35 per cent., and that we desire a 10 per cent. net profit on sales; then it will be necessary to provide for a total mark-up of approximately 45 per cent. of the selling price.

Use Profit Schedule

If the merchant has at hand a profit schedule he can see at a glance that an article that cost \$6.60 and is to be marked up 45 per cent. on the selling price should be priced at \$12. This selling price will take care of the cost of doing business and give him the net profit he is seeking. Were it based on the cost, the percentage that produces this selling price might seem large, but when it is based on selling price it will appear more conservative; what is infinitely more important, it will readily be seen to be essential if the cost of doing business

Have We Heard From You Yet?

Many requests have been received by SANITARY ENGINEER for catalogs of electros and other material available showing prices in this new service. These illustrations will be sold to you at cost, ranging from 30 cents to \$1.00, and they will help greatly to make your advertisements pull business.

Send NOW for complete catalog of illustrations and prices to

SANITARY ENGINEER,
143 University Ave.,
Toronto, Ont.

is to be covered and a reasonable percentage of net profit is to remain.

If we are marking silverware at 60 per cent. on cost, this will be found to be equivalent to 37½ per cent. of selling price and those of us whose cost of doing business is 30 per cent., and over, exclusive of a 5 per cent. tax, and who realize the expenses entailed in such

items as engraving and delivery will recognize the need of greater profits to compensate for handling silverware. If we are marking silverware at 70 per cent. on cost, this is equal to 41 per cent. on selling price, which surely is not unreasonable if the cost of doing business is more than 30 per cent.

An acquaintance of mine in the hard-

ware business took in a new partner, an accountant. The store handled a certain stove that was handled also by a competitor. The wholesale price was \$9.25 and the freight and cartage amounted to 75 cents, making the stove cost \$10, set down in the store. Competition on this

Putting on a "Bath a Day" Campaign

Window display No. 56 by National Trade Extension Bureau

HERE we have a very effective and good-looking window display arrangement that has the distinct advantage for many P. and H. contractors of going comfortably and effectively into a shallow window.

The material and fixtures displayed are any good recessed built-in tub, a built-in overhead shower with mixing valve, shower curtain and rod, and bath stool. The display should be trimmed up with modern fixtures in the way of towel bars, soap dishes, etc., as indicated in the photograph.

The walls surrounding the built-in tub are easily made of beaverboard or some similar wallboard. The tile effect shown in the photograph may be secured easily in either of two ways. It is probable that your lumber yard or planing mill will be able to supply you with the wallboard already marked in a tiled pattern. If such tiled finish wallboard is not procurable, the same effect can be very closely reproduced by lining your tile-board with heavy pencil markings, using a straight-edge. The baseboard shown at the bottom of the walls in front of the tub can be easily enough made out of light lumber, painted to represent tiled effect. The upper walls of your bath room will be of plain beaverboard or other wallboard properly tinted.

It will be easily seen that this effective display can be placed in a window as shallow as four feet in depth, and as narrow as six feet wide.

After you have your outfit built and set up, it will only be necessary to add sign cards as shown in the photograph.

The small display card standing on the bath stool should show the price of the combination you display in the window. The one in the photograph carries the legend, "Tub—Shower—Curtain and Stool \$\$\$\$—Others to suit just as reasonable."

For this display, the floor of your window can be covered with a nice bright colored linoleum in a plain tiled pattern. The effect of this kind of floor covering in connection with this display, will be very good. As in the case with all window displays, all of the fixtures should be shown as if permanently in place. They should be so installed, however—in

every window display—as to be easily removable, to permit frequent changes of your window offerings.

Action of any kind in a window display is always desirable. In this particular display, a very effective result in the way of action could be produced by connecting the shower up to keep the

spray flowing from it, and, of course, connecting the waste of the tub up in some manner to dispose of the flow of water. Putting this display under water in this manner, and keeping the shower flowing, would well repay your effort by the additional attention the display would excite.

Suggested window display to help drive home the principles of a "Bath a Day."

Questions and Answers Regarding Plumbing and Heating Practice

How Should Steam Traps be Placed

Editor, Sanitary Engineer:

I would be pleased if you would tell me whether it makes any difference which way the radiator or drip traps are placed on a vapor system, that is, should the diaphragm be on the flat or on the edge?

Of course in the case of a trap operated with a float, it would have to be placed so that the float would be upright and not on the side, but in case of the Dunham, Trane or McAlear traps, is there any difference, and what effect would it have on a system?

F. A Johnston,
Moncton, N. B.

The various forms of traps referred to by our correspondent should all be installed in accordance with manufacturers instructions. First, for the simple reason that if wrongly installed no manufacturer would assume the responsibility of any inefficiency of working. Secondly, there are quite a number of claims made for traps that could not be credited to a heating system if instructions were not followed out.

Regarding the effort of installing, say, a Dunham trap on its side. In the first place the return pipe from the radiator being connected to the radiator would cause a pocket and water would collect in the radiator owing to the fact that there is only a small opening in the trap and the thickness of the nipple would also help to retard the flow of steam or water.

The principle of the Dunham trap is based upon a theory, and one that has proved to be eminently practical, that no matter what the temperature of the steam is, water of condensation must be lower, though very slight and, such being the case, when steam comes in contact with the fixed thermostatic member, it expands and closes the valve. But as soon, (instantly), as the condensate, being cooler, comes in contact with diaphragm, it contracts very slightly and permits the water to return to the boiler, or into the return line of the heating system.

Furthermore this type of trap, being so accurately adjusted before leaving the plant, is not affected by a vacuum, which could take place with a loose disc or diaphragm type of trap.

Most traps, and the McAlear trap is one, which have a loose thermostatic member, would be affected very badly if installed with the diaphragm on the

seat of the valve and prevent working.

There is also a trap with a fixed thermo disc and loose ball. If this trap was placed on the flat the bronze ball would absolutely close the return pipe.

The Trane return trap is one made up of springs which, when subjected to excessive heat, expand and is said to close with steam. It is not a disc or diaphragm trap. The aperture is very small, not too small, of course, but if improperly installed, could not give the service claimed for it. So that, in conclusion, we would strongly advise that all radiator traps be installed as per manufacturers instructions, and when choosing a steam radiator trap the most simple in construction can, as a rule, be counted on as the best. Rivets, springs, pins, trunnions, slots and steam guides, and loose pieces are not likely to form parts of a good radiator trap.—Technical Editor.

HOW PLUMBER SHOULD FIGURE (Continued from previous page)

stove was keen and the partners decided to cut the profit to 10 per cent. net.

The senior partner figured that the cost of doing business was 18 per cent., that a 10 per cent. profit would bring the mark-up to 28 per cent., and that on this basis they could sell the stove at \$12.80. He thought they would make a net profit of \$1.

Let us see what the new partner showed him. As the stove cost \$10 and they wanted to make 28 per cent. gross profit, he considered the selling price as 100 per cent. and the cost price as 72 per cent. or all of the 100 per cent. except the gross profit. Now if \$10 is 72 per cent. of the selling price, it is necessary only to divide \$10 by .72 to find that the selling price must be \$13.89. By the senior partner's method of figuring \$2.30 of the \$2.80 gross profit went to cover the 18 per cent. of doing business, leaving a net profit of 50 cents.

Don't Mix Percentages

Don't get your percentages mixed!

That is the gist of the whole matter of figuring profits. The percentage of profit and the percentage of cost of doing business should be figured on the same basis—on sales.

It is easy to show how the practice of figuring percentages on different bases can result in loss. Suppose our merchant, figuring his cost of doing business at 18 per cent. on sales, had marked up his stove 28 per cent. on cost, to allow for 10 per cent. net profit, and priced it at \$12.80. Now suppose that he fails to sell the stove at that price and decides to mark it down 28 per cent. and sells it, as he supposes, at cost. What happens? He marks it down 28 per cent. of the selling price of \$3.58, sells it for \$9.22 and sustains an actual loss of 78c.

In this connection the following table may be found useful:

5	%	on cost is	4 3/4	%	on selling price.
7 1/2	%	on cost is	7	%	on selling price.
10	%	on cost is	9	%	on selling price.
12 1/2	%	on cost is	11 1/4	%	on selling price.
15	%	on cost is	13	%	on selling price.
16 2-3	%	on cost is	14 1-4	%	on selling price.
20	%	on cost is	16 2-3	%	on selling price.
25	%	on cost is	20	%	on selling price.
30	%	on cost is	23	%	on selling price.
33 1-3	%	on cost is	25	%	on selling price.
40	%	on cost is	28 1-2	%	on selling price.
45	%	on cost is	31	%	on selling price.
50	%	on cost is	33 1-3	%	on selling price.
55	%	on cost is	35 1-2	%	on selling price.
60	%	on cost is	37 1-2	%	on selling price.
65	%	on cost is	39 1-2	%	on selling price.
66 2-3	%	on cost is	40	%	on selling price.
70	%	on cost is	41	%	on selling price.
75	%	on cost is	42 3-4	%	on selling price.
80	%	on cost is	44 1-2	%	on selling price.
90	%	on cost is	47 1-2	%	on selling price.
100	%	on cost is	50	%	on selling price.

To those who are interested in the relation between percentages of selling price and percentages on cost, the following schedule may also be found helpful, as the equivalents are easy to grasp.

1-3	of selling price is equal to	1-2 of cost.
1-4	of selling price is equal to	1-3 of cost.
1-5	of selling price is equal to	1-4 of cost.
1-6	of selling price is equal to	1-5 of cost.
1-7	of selling price is equal to	1-6 of cost.
1-8	of selling price is equal to	1-7 of cost.
1-9	of selling price is equal to	1-8 of cost.
1-10	of selling price is equal to	1-9 of cost.
2-5	of selling price is equal to	2-3 of cost.
2-7	of selling price is equal to	2-5 of cost.
2-9	of selling price is equal to	2-7 of cost.
3-8	of selling price is equal to	3-5 of cost.
4-9	of selling price is equal to	4-5 of cost.

Pattern for Double Pitched Roof Flange Cape Surrounding Stack as Ventilator on Steep Roof

Makes Working Drawing of Device to Prevent Weather From Getting Into Boiler Room

Written especially for Sanitary Engineer by O. W. KOTHE, Principal, St. Louis Technical Institute, St. Louis, Missouri

WHERE stacks pass through steep roofs, a cape often surrounds the stack as a ventilator and to prevent the weather from getting into the boiler room. It is possible that the cape is cut on a gable as 2-8, but it is not often that the top is cut parallel with it as 1-7, that is unless the stack is quite large and a steep pitch would be met with. But this treatment is interesting, as it shows getting true lengths from various outlines, also developing girth bands along inclined spaces, that are curved in plan.

So first draw the elevation of stack and describe the plan making the distance 1-2 to suit and with this the outlines of elevation can be drawn in. The large semi-circle of plan is divided in any number of equal parts and lines are drawn to the centre, thereby dividing the smaller circle at the same time. Draw lines from one point to the other as 1-2; 2-3; 3-4, etc. From these points

erect lines into elevation and that gives you those lines on the bands bottom and top as 2-4-6-8 and 1-3-5-7. To find the true lengths we draw the line H-T and pick the plan lines 1-2 and 2-3 and set

them off as T-2 and T-3. As all these plan lines are of the same length, we square up lines which gives points 2-4-6-8 and 3-5-7. By drawing these lines to the proper altitudinal height line around point H we have the true lengths.

Now to determine the true girth along the edges and top and bottom of cape, we must first develop the bands and the rim. So pick the girth from plan for the upper band as 1-7 and set it off as 7-7 and then develop the pattern by projecting lines over as shown. In a similar way we developed the rim by picking spaces 2-4-6-8 from plan and setting them as 8-8 ft. and then developing the pattern as shown. Observe spaces 2 in.-4 in.-6 in.-8 in. are for the girth the lower edge of cape and that the spaces 1 in.-3 in.-5 in.-7 in. are for the girth on the top edge of cape. After this develop the cape after the manner of all tapering fittings taken up in past issues.

SAYS TRADE BENEFITS BY "SANITARY ENGINEER"

"I believe anyone connected with the plumbing trade will derive a great deal of benefit from Sanitary Engineer.

"I am a comparatively new subscriber but I have found some very interesting items in the various numbers, particularly in the departments devoted to practical work. The market reports are very helpful also."

(Signed) Chas. W. Mullett,
Bancroft, Ont.

Merits of Central Heating

IT IS interesting to note that the merits of central heating, particularly in view of the shortage and high cost of fuel, have been sufficiently appreciated by the Federal Government authorities to have a recommendation along that line included in the report of the Federal Advisory Fuel Committee to the House of Commons. The recommendation is as follows:

"Advocate the installation of central heating plants, especially in the smaller towns where the municipalities own and operate steam-driven plants for electric lighting and now waste the exhaust steam from the engines.

"The cheapest grades of bituminous coal could be used in plants of this kind."

Standardizing Plumbing

STANDARDIZATION is a question which is receiving a great deal of attention at the present time. The Department of Commerce in the United States has been actively engaged in studying production and distribution and making recommendations for the simplification of patterns and designs of various articles and much success has attended these efforts. In some cases reductions to the extent of 40 per cent. in certain lines of tools have been made. This activity is extending to Canada. Sanitary Engineer has discovered that a new list is now being prepared by file manufacturers in this country which will eliminate about 150 of the lines of files which are least required.

A Canadian manufacturer of plumbing goods who is working his plant to only about 60 per cent. of capacity has been giving some thought to the subject. He has expressed the opinion to Sanitary Engineer that Canadian manufacturers should get together and eliminate some of their lines and come to an agreement regarding the manufacture of standard lines with a view to developing quantity production. Instead of two firms making one hundred products each, two might better concentrate on fifty lines. The point was made on the basis that many manufacturers have little opportunity to reduce their costs in other directions such as labor, freight, etc., and can, therefore, only increase earnings by the exercise of more rigid economies in production.

Recent developments in industry have been towards simplification and standardization with a view to cutting costs to a minimum. If developed sufficiently it will be of material assistance to the plumbing and heating industry in reducing the labors of stocktaking and facilitate the keeping and locating of stock in the shop.

In Ignorance

IT IS NOT difficult for the man or woman who reads of this wholesale abandonment of homes while seated in the street car or in his cosy home to criticize or to belittle the farmer. He has not the courage or the determination of the older generation, say these superior critics; he expects to make a fortune too quickly, he relies on a single crop and does not work half hard enough they say. There is plenty of this kind of talk in the cities. It would not be so general if the city man would change places with his country brother for a week. Clerks in offices who suffer from brain fag when they total up many rows of figures in a warm office, lawyers who plead exhaustion after the delivery of an oratorical tour de force, and men and women at the dress goods counter in a heated and well ventilated store, would find life many shades more difficult if they had to break the ice at the well at five o'clock on a winter's morning in order to water the beasts, or had to milk the cows, with the thermometer standing forty "below." These are the conditions rural plumbers are trying to improve.

What Kind of Building?

THE great activity in the building industry in Canada would seem to indicate an increasingly large outlet for plumbing and heating equipment. Indications are that this year will be the greatest of building years since the boom days of 1912 and 1913. The total of building in Canada for the first four months of 1922 represents an increase of 60 per cent. over the previous year.

The question arises as to how much of this planned building will actually be done. Authorities on the subject point to the increasing costs on building materials and give it as an indication that builders will now go ahead with construction, confident that no lower costs will prevail for a while at least. The average cost of labor is expected to continue approximately on the same basis as labor costs in 1922, but materials have increased.

Analyzing the records for the month of April, residential building accounted for 38 per cent. of the total, business building was 30 per cent., industrial building 4 per cent., public works and utilities 28 per cent. A further analysis of the building done in four months which would be of particular interest to sanitary and heating engineers indicates the following: Ontario; 18 apartments, 18 churches, 3 hospitals, 54 factories, 22 public garages, 15 hotels and clubs, 27 office buildings, 21 public buildings, 2,988 residences, 33 schools, 125 stores, 22 warehouses.

Quebec; 9 apartments, 14 churches, 24 factories, 10 garages, 9 hotels and clubs, 7 office buildings, 5 public buildings, 786 residences, 15 schools, 40 stores, 12 warehouses.

West; 2 apartments, 3 churches, 18 factories, 14 garages, 2 hospitals, 7 hotels and clubs, 14 hospitals, 11 public buildings, 454 residences, 18 schools, 66 stores, 2 theatres, 21 warehouses.

These figures are fairly representative of the whole Dominion and give the craft some idea of what type of building is being done.

Briefs

ORILLIA will experiment with central heating. The experience of this winter will prompt many municipalities to examine the possibilities of the system.

Buying Series

Don't Compete with the Fellow in the Looking Glass

THE merchant who now carries a good brand of merchandise, and who stocks a new brand to keep his competitor from getting it, immediately starts competition with himself—on the inside instead of on the outside where it properly belongs.

He plays a game of "Heads you win—Tails I lose."

He's beaten before he starts!

By purchasing this new brand he multiplies his stocks, confuses his selling and destroys his profits.

On the other hand, should he need the brand to round out a salable assortment, let him take it on. It will be a wise move. But—

When two brands compete with each other, discard one of them. Give the best a chance to win. Let your competitor have the other—HE MAY NEED IT.

Make competition when you can, meet competition when you must, but do not try to avoid it by housing it within your own store.

THINK IT OVER—APPLY IT IN YOUR BUSINESS

News Notes From Coast to Coast

Doings in the Plumbing and Heating Industry

BUSINESS CHANGES

Rigaud, Que.—Sequin, frere, plumbers, have dissolved.

Ottawa, Ont.—W. G. Edge, Ltd., hardware and plumbing, have discontinued the hardware branch of their business.

St. Thomas, Ont.—The partnership heretofore existing between the late Albert Edward Hamilton, who died September 20th, 1922, and James E. Stott, carrying on business of plumbing, tin-smithing, steam and gasfitting, at 428 Talbot St., St. Thomas, has been dissolved, and the firm is going to be carried on by James E. Stott, under the firm name of Hamilton and Stott.

MASTER OF ARTS HAS A JOB AS PLUMBER'S ASSISTANT

Ottawa.—Departmental patronage in filling positions exempted from the operation of the Civil Service Act was described by C. Grant MacNeil, acting for the Great War Veterans' Association and Dominion Veterans' Alliance, before the House Committee on the Civil Service Act.

Mr. MacNeil recommended that departments obtain their men for exempted positions through the government employment service, which would give the preference to ex-service men.

"In Toronto the labor market is good," remarked James Malcolm, who was in the chair. "No man need go without a job in Canada to-day."

Mr. Chevrier said he knew of a master of arts from Toronto University who took a job as plumber's apprentice a few days ago.

PLUMBERS, NOT BURGLARS

A couple of plumbers caused quite a stir at the Canada Wire plant, Leaside, Ont. While working on a basin which is dangerously near the vault, one of them touched those highly charged wires which send in the burglar alarm. They didn't hear any sound, but not so, however, with the protection company at the other end. A police van, with numerous detectives was on the premises in short order.

PLUMBER HAS RADIO SET IN WATCH CASE

A wireless set with a receiving radius of five miles built into a watch case is the novel possession of Mr. Henry Gallie, a plumber of Vancouver, B. C., who has been an enthusiastic radio fan for many months. The first set which he built was large enough to cover the kitchen table, and the last so small that it can conveniently be carried in his vest

pocket. In between these two efforts this indefatigable radion has built four sets, each smaller than the one preceding it.

Having perfected this miniature set, Mr. Gallie's ambition is now to devise a portable aerial which will allow "listening in" while the set is being carried in the vest pocket.

COBALT TO HAVE SANITARY INSPECTOR AND TAX COLLECTOR

Cobalt, Ont.—Urged into activity by some pointed criticism of the condition of the town by Dr. E. W. Mitchell, local M. H. O., the town council will appoint a sanitary inspector and tax collector, the duties of the officers to be combined. Dr. Mitchell, at the first meeting the Board of Health has held since December, 1921, declared that some parts of Cobalt were in a "scandalous" condition, and that he supposed the town never was as dirty as it was to-day.

The chief of police nominally has been sanitary inspector, but the medical officer had no faith in this combination of work, believing the chief had enough police duties to occupy his time. The doctor also recommended the installation of a chlorination plant at a cost of \$1,800, which the council passed on to the Public Utilities Commission.

DISCUSS DRAIN CONNECTIONS AND APPOINT PLUMBING INSPECTOR

Dundas, Ont.—The installation of private drain connections into homes whose owners have signified a willingness to pay the entire amount of the cost, including labor, material, inspection and 5 per cent. of the cost of engineering on completion of the work, will be proceeded with at once. Any other citizens desirous of having the work done under the same terms are requested to submit their applications without delay to the office of the town clerk.

At first it was the idea to get the work done and arrange payments so that they could be made along with the main work. Urging of citizens to adopt the plan failed to bring the desired results so that to follow it now will mean the adding of considerable expense.

At the meeting of the sewer committee when this matter was discussed, James Wright, waterworks commissioner, was appointed inspector of the construction of sewers, private drain connections and plumbing.

Makes Plea for More Public Lavatories

The following editorial appeared in Montreal Gazette:

"A matter in which Montreal lags far behind most other large centres of population is in the provision and maintenance of public lavatories at conveniently located points throughout the city. The necessity of such facilities is so obvious as to require no argument, yet the city in the past has allowed this important public service to devolve upon such incidental provision as is made by hotels, stores, depots, office buildings and other public or semi-private enterprises. The subject is not one which lends itself to discussion in detail, but where the comfort and health of men, women and children are concerned, reticence may be carried too far and a crying need neglected on the plea that there is no urgent demand being made for its amelioration. There is no occasion for dealing with this question of elementary human conveniences with the frankness with which it is treated in European cities, but on the other hand there is no excuse for ignoring the palpable facts. An adequate number of public lavatories could be constructed without making any inordinate demands upon the city treasury, and the expenditure would be fully as justifiable as many of the services or improvements which are undertaken in the ordinary course of the year's work. The requirements to be kept in view are simple—inconspicuous location, easy access, economical construction and equipment, and, after their completion, scrupulous cleanliness in operation. A start should be made this year in the provision of one or two, with others added at suitable centres as finances warrant and the need becomes apparent."

PLUMBER BURNED

Montreal.—Attempting to extinguish a fire which broke out in a pile of oakum in his plumber's shop, J. A. Laroche, 44 years of age, 99 Garnier Street, was slightly burned about both hands. In some way the material caught fire and it was while Laroche was endeavoring to pull the burning oakum apart that he was burned.

MOVES TO NEW PREMISES

Peterboro, Ont.—Geo. A. Brenton, plumber, has moved from 99 Hunter St. to his own building at 440 Water St., after fifteen years at the old address.

Western Ontario News

A. E. Pollock, Essex, Ont., was awarded contract by council for all water services to be installed during the year.

James R. Linton, Essex, Ont., wants prices on heating, plumbing and electrical work for new \$4,000 bungalow.

Noble & Rich, London, Ont., have been awarded contract for heating and plumbing for new \$9,000 residence for Bert Weir.

Charles Kingston, Port Colborne, Ont., wants prices on heating, plumbing and electrical equipment for new bungalow for which plans are being prepared.

Wm. Mc Clure, Base Line, Streetsville, Ont., is preparing plans for new \$5,000 residence and wants prices on heating and plumbing.

Alex. Milne, London, Ont., has been awarded contract for heating and plumbing for new \$50,000 addition to Knox Presbyterian Church.

Wesley Ham, Fergus, Ont., is preparing plans for two new residences to cost \$7,000.

John Lawton, Aylmer, Ont., is preparing plans for new \$4,000 dwelling and wants prices on heating, plumbing and electrical equipment.

Wm. Culver, Russell St., Leamington, Ont., wants prices on heating, plumbing and electrical work for new \$6,000 dwelling.

Hyatt Bros., 288 Egerton St., London, Ont., want prices on hot air heating, plumbing and electrical work for three new dwellings costing \$20,000.

Watt and Blackwell, Bank of Toronto, London, Ont., will call for tenders about June 1 for new \$450,000 hospital for Sisters of St. Joseph, at Kitchener, Ont. Prices wanted on plumbing, heating and electrical equipment.

Plans for a new six-roomed school at Hanover, Ont., are being prepared by Architect W. G. Murray, Dominion Savings Building, London, Ont., and prices will be wanted shortly on all heating and plumbing equipment.

Plans are being prepared for new nurses' home at London, Ont., to cost \$150,000. Watt & Blackwell, Bank of Toronto, will call for tenders about May 21. Steam heating, plumbing and electrical equipment will be purchased.

Plans are being prepared by Watt & Blackwell, Bank of Toronto, London, Ont., for new Parish Hall for the Cronyn Memorial Church. Tenders will be called about June 1 and prices are wanted on heating, plumbing and electrical equipment.

TAX AND TARIFF CHANGES OF INTEREST TO PLUMBERS

THE Budget brought down by the Minister of Finance contains a number of interesting changes affecting the plumbing and heating industry, but as the official details were lacking at time of going to press Sanitary Engineer will postpone a thorough dealing with the subject until the next issue.

One of the most important provisions has been the decision to collect a sales tax of 6% at source of manufacture or import rather than having the sales tax collected in two separate stages as in the past. This form of taxation represents an increase of 1½%. The fact that this altered tax is not effective until August 1 will eliminate the danger of misunderstandings which would undoubtedly have followed its immediate application.

Of interest to the trade will be the provisions to exempt small manufacturers, which will probably make it unnecessary for tinsmiths to take out licenses as manufacturers as has been the case in the past. The decision to encourage the production of copper in this country may also have some interesting results. Watch for complete details in next issue.

WOULD BE LOST WITHOUT "SANITARY ENGINEER"

"I appreciate Sanitary Engineer very much and would be lost without it. After receiving each issue we read:

"First, the market conditions; second, news notes from coast to coast; third, Minute Message by Frank Stockdale; fourth, Patterns in Sheet Metal Work; fifth, editorials.

"We read most of the articles and note most of the advertisements."

*(Signed) C. E. Meiklejohn,
Warkworth, Ont.*

PLUMBING BY-LAW BEING OPPOSED

St. Boniface, Man.—If the new St. Boniface plumbing by-law prepared by master plumbers of St. Boniface and Winnipeg does not pass through council at its next regular meeting, St. Boniface will be the only district in Greater Winnipeg that will not have the standardized plumbing system. The by-law, which has received a partial second reading, will be most likely completed at the next session of the council.

All other districts surrounding Winnipeg and including Winnipeg have the one system of plumbing which came into effect when the Greater Winnipeg water district was formed. This means that plumbers all can carry the one stock. Opposition to this method has been voiced by some St. Boniface plumbers who wish to retain their present method of plumbing which part of the council declare to be obsolete.

PLUMBERS GIVEN INCREASE

Montreal.—Plumbers in the National and Catholic Union get an increase of five cents an hour following negotiations just concluded between the Master Plumbers' Association of Montreal and vicinity and the National and Catholic Union of Plumbers. The contract is being signed and the agreement is made for two years, to May 1, 1925. Four hundred men are involved, but it is understood that the rate agreed upon with the union will be that paid by the Master Plumbers' Association to all plumbers employed by them in Montreal and district.

Rates under the new agreement are 75 cents an hour for plumbers in Grade A, 70 cents for Grade B and 65 cents for Grade C. A special clause providing for abnormal times is included in the contract. This specifies that in case of outbreak of war or a prolonged economic trouble one or both of the parties signatory to the contract may give 30 days' notice of the cancellation of the agreement.

Hours of labor under the contract are: May 1 to November 1, a week of 49 hours to 50 hours; November 1 to May 1, a week of 44 hours to 45 hours. Overtime will be paid for at the rate of time and a half, with double time after midnight and for Sunday labor. The usual holidays, including Labor Day, Christmas Day, New Year's Day, and religious holidays including Conception Day and Ascension Day will be observed.

The committee representing the Master Plumbers' Association in the negotiations included George Delaney, M. Walsh, M. Latourelle, M. Charette, while those representing the union were R. Binette, L. Vachon, R. Lajoie, A. Dubois and A. Durand.

Selling the Farmer City Conveniences

One of the Many Reasons Why Farming Districts Are Being Depopulated is That City Conveniences Are Not Installed in Farm Houses—Sanitary Engineers Can Cultivate This Almost Unlimited Field for New Business

By EDWIN NEWSOME, Contributing Editor Sanitary Engineer and Lecturer on Rural Sanitation for Department of Agriculture, Ontario

HOW many farmers are there, do you think, who own an auto, have a couple of thousand dollars in the bank and wash in a tin dish?

What would you say, reader, if I told you that in Ontario alone, out of 175,000 farmers, nearly 65,000 own automobiles and have no plumbing and heating systems in their homes?

Of course we all know that it is about as hard to get a farmer to admit that he has any money as it would be to convince me that all I write is not as true as gospel. But anyway the fact that less than 5 per cent. of those owning cars can boast of a modern bathroom and furnace in their homes proves that there is plenty of scope for more farm bathrooms.

Once Detested Auto

If an old gas bus of the vintage of 1907 or so was to whizz by you, the chances are you would turn around and exclaim, "Whow, whow—what a sight!" and you would wonder if the clock had gone back a century. Or else you would nudge someone and exclaim, "Some boat, by Jove."

Yet the old cars that ambled around in the days of 1903 had a place in the world of automobiles that the highest priced Rolls-Royce or Super Six can't crowd into now. The gas wagon that came into existence when there were only two or three to a town, were a centre of admiration. The man who owned it was a greater man than the chap after whose grandfather the main street was named, and almost on a par with the deacon who tapped the corner stone of the new church with a silver trowel.

First Licensed in Ontario

Automobiles were first licensed in Ontario back in the year 1903. In that year

the roll of "horse scarers" contained the names of 220 guilty parties. The horse, in 1903, that didn't put its hind legs over the dashboard in utter disgust at the approach of one of those "usurpers of the highway" wasn't worth wasting oats or pasture on. The average farmer cursed and cursed like Sam Hill at those "ding busted tin wagons."

But what a change has taken place since those days! We now find that as automobile owners farmers head the list; in fact, nearly one out of every three in Ontario is owned by a farmer. In 1915, there were 78,861 car licenses issued by the Ontario Government, and 23,409 were granted to farmers, not including 4,929 trucks, that was equal to one out of every three.

In 1918, out of a total 101,845 licenses issued, 37,758 were issued to farmers and drovers.

In 1919, 127,860 autos were licensed, and in 1920, 155,500 passenger cars and 16,200 trucks with approximately the same ratio as afore mentioned, issued to farmers.

But in 1921, the figures take a big jump. Out of 181,978 passenger cars, 64,045 were licensed by farmers; also trucks, 1859; motorcycles, 428.

Don't these figures suggest a change of heart on the part of a farmer? They certainly do. They also suggest that if farmers have money to buy autos, they can afford to pay for the installing of modern bathroom fixtures and up-to-date kitchen sinks, with hot and cold water on tap 24 hours a day.

Small Per Cent. Own Bathrooms

In the year 1915, the Commission of Conservation conducted a survey of 400 farms, and some very interesting data

was secured respecting conditions in many rural homes.

Keeping the young people at home on the farms is one of Canada's most important problems, and one of the chief suggestions made to make farm home life more attractive is that city conveniences be provided.

Of the 400 farmers visited, 53 per cent. had young folk in their families. With this large percentage of young, it was found to be a regrettable fact that only two farmers out of every hundred have bathrooms in their homes. Only 6.2 per cent. have water closets, only 2.5 per cent. had a complete plumbing system, and only 2.2 had electric light.

In those 400 farms only 16.5 per cent. had the water piped to the house, and but 7.5 per cent. had furnaces in the homes.

These conditions are entirely within the control of the farmers themselves, 7.5 per cent. had furnaces in the homes farms averaging 126.5 acres each.

Figures Worth Considering

Just imagine, reader, the great and golden opportunities there are in rural districts for the sanitary and heating industry. Out of 400 average sized farms, only 10 contains plumbing, and 20 of these 400 owned autos. And, further, we are told that 31.5 per cent. of these four hundred farmers had either auto or horse and buggy for the young people.

Much has been said and written of late to interest farmers in the automobile. Manufacturers see that the most glowing pictures are painted in the mind's eye of the pleasures, yea, and profits to be gained by owning a car. But what have manufacturers of plumbing and heating goods done? I do not wish to cast any

(Continued on page 46)

Can You Use Some Booklets on This Subject?

SANITARY ENGINEER has a limited supply of booklets in convenient size setting forth the matter contained in this article. It will explain to your prospects the need for sanitation in rural districts and the plan of the Ontario Government for assisting farmers to pay the expense of such installations.

You will have to hurry to get your order in for some of these booklets as the supply is limited. Write the Editor, Sanitary Engineer, 143 University Ave., Toronto.

Market Conditions and Tendencies

Price Trend on Sanitary and Heating Supplies

Markets at a Glance

CHANGES in price have been of a moderate nature in the lines connected with the sanitary engineering and heating field for the week. Changes have occurred in a few lines, however, which, though not of large proportions, are nevertheless important. These changes are not confined to advances in price, but cover adjustments in both directions. Closet combinations are slightly affected by higher quotations on vitreous china combinations, which are now \$30.75 instead of \$29.00 as formerly, and those with cast iron enameled tanks are now \$29.00 instead of \$28.75, which was the old price. Tanks, however, have taken the opposite price direction, oak wood tanks are now \$11.20 instead of \$13.20 and oak

vitro or pussyfoot tanks are also quoted at \$11.20 instead of \$13.45.

Higher prices are now being quoted on malleable fittings, the discount being 62½ per cent., whereas it was 65 per cent. formerly. Plugs and unions have also undergone a revision and are quoted at 2½ per cent. higher than formerly. Following the advance in sheet tin at primary sources, quotations on boiler tin and tinned sheets for milk cans have been advanced in price about 10 per cent.

Reductions have again occurred in gasoline and coal oil, 2c per gallon being clipped from the price of both lines, copper wire is now being quoted at \$1.00 per cwt. lower than former levels.

Montreal Markets

MONTREAL, May 13.—Few new prices are noted this week in the local markets, quotations on lines of interest to the sanitary engineering industry remaining fairly well at previously-established levels. As has been the case for the past two or three weeks the ingot metal market and the sheet market show an unsettled condition, following the rapid advance of the previous month. There has been an advance on the local sheet market of approximately fifty cents, this advance being purely local. It will be recalled that some time ago when distributors in other sections of the country advanced their prices, Montreal firms remained at the old levels but have since been forced upwards by the continuance of high levels in primary markets.

The late spring has had a depressing effect upon trading, delaying the season for the building trade by at least a month, which effect has been reflected in plumbing and allied markets.

An advance of five per cent. in the price of stoves has been announced and a reduction of five per cent. in the discounts on range boilers. Single reeled machinery steel has advanced slightly and there are indications of higher prices on heavy sheet products. Following recently established higher prices on asbestos, asbestos sheathing is now up fifty cents per cwt.

The only weakness noted is in the scrap market where there is a general tendency downward, although as yet few prices have been altered. Rubber shoes and automobile tires are down a little as is light brass, but others are expected to follow shortly.

STOVE PRICES ARE ADVANCED FIVE PER CENT.

Montreal.

Announcement is made this week by some manufacturers of an advance of five per cent. on the quotations on wood and coal burning ranges and heaters. The advance does not touch gas heaters.

GALVANIZED SHEETS ADVANCED FIFTY CENTS

Montreal.

The past two weeks have seen the establishment of slightly higher prices in the local sheet metal market. This step had been taken some weeks ago in some parts of the country but local distribu-

tors held off, hoping to get through without touching higher levels. This did not prove possible and an advance which averaged around fifty cents has been made. There is a considerable range in the quotations of the different distributors as the following table will show:

BLACK SHEETS—			
10 gauge, base	4 75	5 00	
12 gauge	4 85	5 00	
14 gauge	4 85	5 10	
16 gauge	5 05	5 15	
18—20 gauge	5 20	5 25	
22—24 gauge	5 20	5 35	
26 gauge	5 25	5 40	
28 gauge	5 35	5 60	

GALVANIZED SHEETS—			
	Queen's Head	Fleur de Lis	
18-20 gauge	6 90 7 40	6 65 7 15	
22 gauge	7 15 7 65	6 90 7 40	
24 gauge	7 25 7 75	7 00 7 50	
26 gauge	7 50 8 00	7 25 7 75	
28 gauge	7 75 8 25	7 50 8 00	

Other Brands—			
10¾ oz.	7 50	7 75	
28 U. S. gauge	7 20	7 50	
26 U. S. gauge	6 55	7 10	
24-22 gauge	6 60	6 85	
20-18 gauge	6 40	6 50	
16 gauge	6 25	6 35	

Above prices are for ½ ton lots in English iron and 1000 lb. lots in American iron with an extra charge of 25c. for less quantities. Extra for sheets 3 ft. wide, 28 gauge and 10¾ oz., 25c. per 100 lbs.

Further extra for sheets 4 ft. wide according to gauge.

TIN PLATE—		
20 x 28 x 100 lbs. basis.....		15 50
20 x 28 IC, 112s		16 00

Welsh, polished, 52s		7 10
Galvanized, 52s		8 00
Galvanized 60s		8 50

WEAKER TENDENCY IS NOTED IN SCRAP METAL MARKET

Montreal.

There is a weaker tone all through the scrap market this week, although few changes in price have been made as yet. Rubber scraps have been reduced slightly as has light brass and other changes are likely to follow. The feeling that these lower prices are coming has caused buyers to hold off to a certain extent, local trading feeling the effects of this tendency. Average local quotations are as follows:

SCRAP—

Automobile Tires	0 50
Rubber Shoes	0 02½
Yellow brass	0 07½
Red brass	0 10½
Light brass	0 05
Scrap zinc	0 05¼
Lead, heavy	0 05½
Lead, tea	0 04½
Light copper	0 10½
Heavy copper	0 13¼
Wrought iron, R. Rd. No. 1 per gr. ton	12 00
Malleable scrap (ton).....	18 00
Pipe scrap (ton).....	10 50
Heavy melting steel.....	13 00
No. 2 busheling	7 00
Boiler plate	12 00
No. 1 machinery cast.....	24 00

CEMENT TRADING CONTINUES TO SHOW IMPROVEMENT

Montreal.

As in the case of all other building lines, the cement market continues to strengthen with the progress of the spring season, the warm weather having had a decided effect upon trading locally. There is no change in the prices quoted here, the following remaining in effect:

CEMENT—

Car load lots, per bag, F.o.b. steam cars	0 86
Per Bag, delivered	0 94
Less car lots, per bag, F.o.b. yard.....	0 94
Per bag, delivered	1 04
Rebate of 20 cents for empty bags.	

EAVES AND CONDUCTORS ARE IN FIRM MARKET

Montreal.

Seasonable activity in eavestrough and conductors is reported to be gaining in strength as the warm weather sets in. The market is firm with no tendency to move from the levels established some time ago, as follows:

EAVESTROUGH—

O. G. round and half round, per 100 ft. 3 in., \$16.90; 10 in., \$18.70; 12 in., \$22.20; 15 in., \$35.50; 18 in., \$45.00.

O. G. Square bead, per 100 ft.; 8 in., \$15.90; 10 in., \$17.70; 12 in., \$21.20; 15 in., \$34.50; 18 in., \$44.00.

Discount 65 and 5 per cent.

CONDUCTOR PIPE—Round, Plain and Corrugated, per 100 ft.; 2 in., \$18.40; 3 in., \$22.30; 4 in., \$29.60; 5 in., \$48.00; 6 in., \$58.80.

Discount 65 and 5 per cent.

CONDUCTOR ELBOWS—

Plain or corrugated, price per doz. 2 in., \$5.25; 3 in., \$6.00; 4 in., \$10.50; 5 in., \$24.00; 6 in., \$29.00.

Discount 65 and 5 per cent.

RANGE BOILER DISCOUNTS ARE REDUCED FIVE PER CENT.

Montreal.

A reduction of five per cent. in the discounts on range boilers has been announced this week, the standard now being list less 35 per cent. and the extra heavy at list less 25 per cent. Trading is reported slightly better, though quiet

even yet. Prices being quoted locally are as follows:

RANGE BOILERS:—

5 Gallon	\$13.50
12 "	14.00
18 "	15.00
25 "	16.50
30 "	17.50
35 "	20.50
40 "	22.75
52 "	38.00
66 "	60.75
82 "	74.00
100 "	103.00
120 "	117.00
144 "	164.00
168 "	187.00
192 "	210.00

St., less 35 per cent.; Ex. Heavy, 25 per cent.

FIRM MARKET IS ESTABLISHED FOR SOIL PIPE

Montreal.

Trading in soil pipe is reported to be improving this week, following a slight tendency towards weakness evinced of late. Prices set in March are still in force, local quotations being:

SOIL PIPE—

2 and 3 inch	33 1-3%
4 inch	33 1-3%
5 and 6 inch	33 1-3%
8 inch	net

FITTINGS—

2 to 6 inch	45%
8 inch	net

NO CHANGE IN QUOTATIONS ON COMPRESSION GOODS

Montreal.

Compression goods remain at levels quoted in the last issue, there being little indication of any early changes, following the recent revisions in these lines. Trading is reported fairly good in the local market and will naturally be on the up-grade from now on throughout the remainder of the season. Local quotations are as follows:

VALVES AND BIBBS—

Compression work, standard	45%
Fuller work, standard	30%
Quick opening, compression bibbs.....	43%
Bath cocks, quick opening	38%
Bath cocks, compression	40%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, standard	54%
Roundway stop and waste cocks, std....	42%
Brass steam cocks, standard, ¼ in.....	50%
Radiator valves, standard	55/25%
Do., removable discs	55/25%
Globe, angle and check valves, std....	25%
Gate or straightway	25%
Emco globe valves	33%
Emco check valves	33%
Jenkins globe, angle, check and swine check	plus 15%
Jenkins gate or straightway.....	plus 11%
Jenkins iron body, globe and angle.....	plus 10%
Jenkins iron body, gate.....	12%
N. P. "O" and "S" traps	34%

BOILER TUBE MARKET RETAINS VERY FIRM TONE

Montreal.

There is a firm market for boiler tubes locally and although prices remain at the levels which have been in force for some time, it would not be surprising to see a revision in the very near future. Quotations now in force are as follows:

BOILER TUBES—

	Seamless	Lapweld
1 inch	20 00
1¼ inch	22 00
1½ inch	21 00
1¾ inch	24 50	24 00
2 inch	21 50	20 00
2¼ inch	24 50	23 00
2½ inch	29 00	24 50
3 inch	34 00	31 00
3½ inch	39 50	35 50
4 inch	50 00	45 00
Prices, per 100 ft., f.o.b. Montreal.		

ENAMELED WARE TRADING IS SLIGHTLY IMPROVED

Montreal.

Slight improvement is noted in the enameled ware market this week, although even yet it is much lighter than is usually the case at this season of the year. There has been no further change in local quotations which remain as follows:

ENAMELED WARE—

Sinks, flat rim—	1 only	2 only	3 only
16 x 24	\$ 7 50	\$ 7 40	\$ 7 30
18 x 30	8 70	8 60	8 50
20 x 30	9 90	9 80	9 70
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide			51 40
Bath tubs, 5½ feet,			57 10

Lavatories—

17x19 in. Apron F139 or P4045.....	15 30
18x24 in. Apron F154 or P3845 or P3847	23 60
18x21 in. Apron F169 or P4205.....	17 60
17x19 in. Roll rim. F241 or P4345.....	12 60
Less 30 per cent.	

SEASON IS REPORTED SLOW FOR CLOSET GOODS

Montreal.

Since the minor price adjustments noted in the last issue there have been no further price changes on closet goods in the local market. Trading still remains somewhat behind the mark of former years but is opening up gradually at the following levels:

CLOSET COMBINATIONS—

Low Down Outfits,	each
Closet, standard outfit, oak.....	24 00
Do., post hinge seat	25 00
Do., oak vitro or Pussyfoot.....	24 50
Do., post hinge seat	25 50
Do., mahogany vitro or Pussyfoot, post hinge seat and cover	28 00
Do., vitreous china, oak post hinge seat and cover	29 00
Do., vitreous china, mahogany post hinge seat and cover	30 00

Add for ¾" valve on supply pipe.....	1 25
Add for spud	0 60
Add for reverse trap bowl	1 50
Add for syphon jet bowl.....	7 00
Deduct for supply pipe	0 80
Deduct for floor hinge	0 60

CLOSET BOWLS—

Richefeu bowl	\$ 00
Washdown bowl with spud	9 50
Reverse trap bowl with spud.....	9 50
Syphon jet bowl with spud.....	15 00

CLOSET SEATS—

Oak post hinge seat and cover.....	3 85
Oak wood strip seat and cover.....	3 50
Mahogany finish post hinge seat and cover	4 05

CLOSET TANKS—

Low down, oak vitro or Pussyfoot with fittings less seat	12 00
White vitro or Pussyfoot with fittings, flush elbow and supply	16 50
Vitreous china tank with fittings, flush elbow and supply	16 00
Enamelled iron with fittings, flush elbow and supply	16 00

TRADING IS REPORTED GOOD IN METAL LATH MARKET

Montreal.

Metal lath trading is reported firm during the past week, orders placed earlier in the season for May delivery being shipped by local distributors in large quantities. Prices remain at the following levels, established some weeks ago:

METAL LATH—

	per sq. yd.
Painted—	
26 gauge	23c.
24 gauge	28c.
32 gauge	32c.
Galvanized, 10c. per sq. yd. extra.	

PIPE FITTINGS REMAIN FIRM AT RECENT REVISION

Montreal.

Discounts as revised two weeks ago remain in force on the local market for pipe fittings. Trading is reported good at these levels which are as follows:

PIPE FITTINGS—

Cast iron fittings	15%
Plugs, cast iron	15%
Do., solid	15%
Do., countersunk	15%
Bushings, cast	17½%
Do., malleable	17½%
Unions	33 1-3%
Flanged unions	15%
Flanged fittings	27½%
Dart unions, black, ½ to 2 in.	331-3%
Do., ½ in., 2½ in., and larger	23%
Do., galv. add to black	30%
Nipples, ½ to 4", close and short	50%
Do., long	55%
Do., 4½ to 8", close and short	40%
Do., long	45%
Couplings, 4" and under	25%
Do., 4½" and larger	5%

Malleable Fittings—

Piece list effective June 1st, 1922. Discount 65 per cent.

QUIET MARKET FOR RADIATION GOODS AT PRESENT

Montreal.

Prices on radiation goods remain without change for some time past, this market being a little quiet at present. Current quotations on radiation goods are as follows:

RADIATORS AND BOILERS—

Radiator list prices are for 1, 2, 3, 4 and 5 column radiators, per sq. ft.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount 44 per cent for hot water, and 45 per cent. for steam.

Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05; Discount 41 per cent.

Boilers—Round t water boilers, sizes from 0 to 10, 52 per cent. off list. Square or sectional hot water or steam boilers, 15 in., 3 per cent. with Ontario Government trimmings, list. Square or sectional water boilers, 19 in. to 36 in., 2 per cent. Square or sectional steam boilers, 19 in. to 26 in., 5 per cent. Ontario Government trimmings, list plus 7 per cent. Square or sectional water or steam boilers, 48 in., list plus 10 per cent. With Ontario Government trimmings, list plus 13 per cent.

Round steam boilers, standard trimmings, 16 per cent. Ontario Government trimmings, 13 per cent.

F.o.b. Montreal, Toronto, Guelph.

FIRM MARKET MAINTAINED IN ASBESTOS GOODS

Montreal.

Asbestos products are in a decidedly firm market locally. The recent advance in sheathings has taken asbestos sheathing up along with the rest, the new price being fifty cents per cwt. over that previously in force. Higher prices on other asbestos goods are still anticipated. Local quotations are as follows:

ASBESTOS PRODUCTS—

	Off list prices
2 ply pipe covering	57½%
3 ply pipe covering	55%
4 ply pipe covering	50%
85 per cent. magnesite	35%
	Per b--
Boiler covering	\$1 50
	Per 100 lbs.
Asbestos sheathing	8 25 9 00

TRADING IS GOOD LOCALLY IN CORRUGATED SHEETS

Montreal.

Trading in the corrugated sheet market continues to improve steadily, spring shipments going out from local distributing points in large quantities these days. While the market is firm there has

for some time, those in force remaining as follows:

CORRUGATED SHEETS—

	Per 100 sq. ft.
No. 28 gauge	7 00
No. 26 gauge	7 50
No. 24 gauge	10 00
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	19 00
Less 10 per cent.	
Lighter than 24 gauge and wider than 27 ins.,	
75 cents per square extra.	

MACHINERY STEEL FIGURES IN SLIGHT ADVANCE

Montreal.

The past week has seen little out of the ordinary in the bar products lines, the only price change being the advance noted in single-reeled machinery steel which is now twenty-five cents higher than previously quoted. There is a firm market with trading fairly good at the following levels:

IRON AND STEEL—

Common bar iron, 100 lbs.	3 95
Refined iron	5 45
Irish finish machinery steel	4 00
Mild steel	3 95
Single reeled machinery steel	5 50
Band steel	3 95
Sleighshoe steel	3 95
Spring steel	5 00
Tire steel	4 15
Harrow tooth steel	3 80
Toe caulk steel	4 85
Mining tool steel, per lb.	0 19
Black Diamond tool and cast steel,	
per lb.	0 19

NOTE.—Refined iron is approximately \$1.50 per cwt. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

Iron and steel 3-16 in. and thinner, 50c per 100 lbs. extra.

STEADY IMPROVEMENT IS NOTED IN COTTON WASTE MARKET

Montreal.

Brisk business is reported this week in the cotton waste markets. Opening of navigation is largely responsible for the increase, although there has been a steady increase in trading noticeable for some weeks past. The quotations of the past two months remain in effect as follows:

COTTON WASTES—

	Per lb.
Cream polishing	0 24

HEAVY SHEET PRODUCTS LIKELY TO UNDERGO ADVANCE

Montreal.

Manufacturers of heavy sheet products such as scrapers and wheelbarrows are said to be having difficulty at the present time in keeping up with the orders on hand; in fact, one manufacturer is said to have stated that were he to receive no further orders during the next two months his plant would be in no way affected by this condition. Several reasons are given for this congested state, one being the difficulty of secur-

ing supplies from the American markets and another being the late opening of navigation and the transportation hold-up caused by the floods in the Maritimes which have held up English materials shipped to winter ports on the coast. In the opinion of local distributors, their difficulty in having orders filled at the factory is likely to result in an advance in price of these goods shortly.

INGOT METAL MARKET RETAINS UNSETTLED TONE

Montreal.

The metal market still remains more or less unsettled and there is no particular sign of any marked improvement as yet. The European situation is still a drawback to conditions improving in England and at the moment the outlook is somewhat uncertain. There has, however, been a substantial reaction from the high prices reached a month or two ago and the general level of prices is now more reasonable.

TIN.—This metal continues to fluctuate within narrow limits but there is no sign yet of any particular interest on the part of American buyers. This is the key to the situation and until they come into the market again it is not likely that there will be much advance. The local market is slightly lower at 51 cents per lb.

COPPER.—The New York market is easier in sympathy with London where the most is being made of any bearish factors. Copper has now declined 1½ cents per lb. from the top price and 16 cents is not an unreasonable figure. American mills must soon come into the market again which should have a steadying effect upon prices. The local market is quiet at 20½ cents for casting.

LEAD.—East St. Louis continues to decline and evidently the possibility of foreign lead being imported into the U. S. A. has its effect upon prices. Stocks are still low in the U. S. A. and were it not for the foreign situation the market would, no doubt, have rallied before this. London is slightly lower, chiefly owing to more plentiful offerings. The local market is easier at 8 cents.

SPELTER.—After going as low as 6.75 last week East St. Louis advanced sharply to 7.15 but it is again easier owing to the decline in London. There is evidently considerable buying still to be done for May and June and as stocks are somewhat light a further advance would not be surprising. American spelter has temporarily ceased to be a factor in London where the market is rather easy. The local market is weaker at 9½ cents per lb.

ANTIMONY.—The New York market is slightly easier but locally the situation remains firm owing to scarcity of supplies. There is no change in local quotations of 8 cents for Chinese but the English market is firmer at 9 to 9½ cents per lb.

ALUMINUM.—A quiet tone continues in this market locally with prices remaining at 25 cents per lb.

Toronto Markets

TORONTO, May 13.—The outstanding feature of the market report in sanitary engineering products is the fact that prices have maintained the levels recently noted, with but few exceptions.

Some slight changes have developed, however, which have been more in the nature of an adjustment of some slight irregularities which have occurred in quotations, and other changes have brought the price of the lines affected, to lower levels. The adjustments have been in closet combinations and bowls, the vitreous china and enameled iron tank combinations both being quoted at slightly higher prices. Oak wood and oak vitro tanks have been slightly reduced, being now quoted at \$11.20 each, with bend and supply.

Oil and gasoline have again been reduced in price locally. Royalite grade oil is now quoted at 18c per gallon and motor gasoline at 25c per gallon. A similar situation has developed in quotations on copper wire which have been reduced \$1.00 per cwt. from former levels.

Recent advances have occurred in quotations on most lines of sheet metal in primary sources, the principal change locally, however, has been in some of the grades of tin plate, on which slightly higher prices have been quoted during the week.

A gradual improvement in trade in plumbing and heating is reported from most sources. Some good contracts have been let in various parts of the province since the opening of spring, but there is no doubt the recent inclement weather has had a depressing effect on the building trade.

COTTON WASTE ENJOYING BRISK TRADE

Toronto.

The spring season has opened up satisfactorily in the cotton waste market. There is no further change in the price, recently noted levels being well maintained.

Asbestos Sheathing	\$8.25 \$9.00

Magnesia pipe covering

Magnesia pipe covering, small lots, less 35 per cent.

NO CHANGE IN BOILERS AND RADIATORS

Toronto.

Boilers and radiators continue at the revision of March 31st. Building programmes for this season seem to be of such dimensions to warrant the feeling that good sales will be made in these lines during the next few monthss. Quotations on the local market are as follows:

RADIATORS AND BOILERS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 28 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.

Discount on 2, 3, 4 and 5 column standard sizes, 44 per cent. for water and 45 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 36 per cent. for water and 37 per cent. for steam.

Wall radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 41 per cent.

BOILERS—

Water:

Round 52 per cent. off list. Square 8 per cent. off list.

Steam:

Round, 13 per cent. off list; Square, list plus 7 per cent.

SMOOTH-ON IRON CEMENT ENJOYS BRISK SALE

Toronto.

Smooth-On iron cement has shown considerable activity within the last week on the local market. Average quotations on the popular selling packages are as follows:

English polished, 52 sheets	7 30
English polished, 60 sheets	7 75

SMOOTH-ON IRON CEMENT—

Household size 6 oz. can per doz., \$4.44. 1 lb. cans, each 48½c. 5 lb. cans \$2.25 each.

NO FURTHER PRICE ANNOUNCEMENT ON IRON PIPE

Toronto.

The new prices on iron pipe announced in the May 1st issue of Sanitary Engineer, are now being well maintained on the local market. The abrupt nature of the recent advance caused some variation in quotations but there is no evidence of this condition remaining.

CORRUGATED SHEETS RETAIN THE FIRM TONE

Toronto.

While the sale of corrugated sheets cannot be described as particularly

heavy, there is a satisfactory movement of the line reported in most cases. The higher prices of galvanized iron in U. S. markets has not had any effect on this product locally and dealers are not looking for any immediate change.

CORRUGATED SHEETS—	Per 100 sq. ft.

WROUGHT NIPPLES SHOW NO PRICE CHANGES

Toronto.

Quotations on wrought iron nipples have remained unchanged in the last two weeks. The line changed in price simultaneously with the change in price of

iron pipe, and have since been well maintained on a quiet market.

WROUGHT NIPPLES—

Close and short 4 in. and under 45 per cent; 4½ in. and larger, 35 per cent; Long 4 in. and under, 50 per cent; 4½ in. and larger, 40 per cent; running thread, 4 in. and under, 25 per cent; Running thread long nipples, 20 per cent

GALVANIZED SHEETS HOLDING FIRM AND UNCHANGED

Toronto.

Prices on galvanized sheets, while decidedly firm in tone, have remained at the levels shown below. There has been a substantial advance in U. S. markets on this line but there is no movement of a similar nature reported in Canadian trade circles. Sales are good for this season at the following quotations:

GALVANIZED SHEETS—

	Premier and	Apollo
10¾ oz.	6 90	7 40

CONTINUED WEAKNESS EVIDENT IN SCRAP MATERIALS

Toronto.

In sympathy with a similar situation in U. S. markets, there is a decided

weakness noted in the scrap material market. Metals have shown no further declines from those recently noted but demand is light with buyers holding off waiting for still lower prices. Rubber products, however, continue to show further weakness and new lower prices are in effect locally. The following quotations are for car-lot quantities, f. o. b., Toronto.

SCRAP MATERIALS— f.o.b. Toronto

Scrap Iron		
Heavy melting steel	16 00	— 17 00

COAL OIL AND GASOLINE AGAIN GO DOWN

Toronto.

A satisfactory development has occurred in the coal oil and gasoline market locally. Oil is now quoted at 18c. per gallon and "gas" at 25c.

Winnipeg Markets

WINNIPEG, May 13.—Practically all changes recorded in plumbers' and steamfitters' supplies are in an upward direction. This week every market change reported has shown an advance, and among the lines included are wrought iron pipe, cast iron fittings, Jenkins and standard valves, and pop safety valves. There is a revision in discounts on elbows and tees as well as nipples.

HIGHER PRICES IN EFFECT ON JENKINS VALVES

Winnipeg.

Higher prices have been registered on Jenkins iron body valves and revised discount is 15 per cent. advance. Standard valves are quoted at 15 per cent. while check valves with drip cocks are quoted for one half inch \$1.50, three quarter inch \$1.60 and one inch \$1.85.

HIGHER PRICES IN EFFECT ON POP SAFETY VALVES

Winnipeg.

There has been an advance in quotations on pop safety valves and three-quarter inch is quoted at \$6.50, one inch at \$7.30, one and one quarter inch \$8.75, one and one-half inch \$10.50 and two inch \$16.75.

A-5260
MUELLER
Bronze Body
Reducing and Regulating Valve

TO GIVE your work that "Master Touch"—to establish that difference between a common job and a satisfactory installation—install a Pressure Reducing and Regulating Valve on the supply line to every house, and relieve the fixtures of the strain of high pressures.

The MUELLER Valve A-5260, illustrated, is specially designed for domestic service and is unequalled for this purpose. Regardless of variations in the initial pressure, a pre-determined constant delivery pressure is maintained.

Made of Bronze-special composition diaphragm--wearing parts easily renewed—full seat opening—make this valve (sizes $\frac{1}{2}$ " to 2") stand out above the rest.

HIGHER QUOTATIONS IN EFFECT ON IRON PIPE

Winnipeg.

Following the strong tone of primary markets quotations on wrought iron pipe have been moved to higher levels. New prices are shown below.

WROUGHT IRON PIPE—

Size 1/8 per 100 feet	7 20
Size 1/4 per 100 feet	5 10
Size 3/8 per 100 feet	5 25
Size 1/2	6 80
Size 3/4	8 30
Size 1	11 90
Size 1 1/4	16 10
Size 1 1/2	19 25
Size 2	25 90
Size 2 1/2	40 90
Size 3	53 50
Size 3 1/2	68 80
Size 4	81 50
Size 4 1/2	96 50
Size 5	112 50
Size 6	146 00
Size 7	210 00
Size 8	225 00
Size 9	314 00
Size 10	291 00

GALVANIZED—Per 100 feet—

Size 1/4 \$9.75; 1/4 \$7.50; 3/8 \$7.65; 1/2 \$8.50;	
3/4 \$10.25; 1 \$14.75; 1 1/4 \$19.95; 1 1/2 \$23.85; 2	
\$32.10; 2 1/2 \$50.75; 3 \$66.40; 3 1/2 \$84.30; 4	
\$99.85; 4 1/2 \$117.80; 5 \$137.35; 6 \$178.00.	

GENUINE WROUGHT IRON GALVANIZED—

Per 100 feet—Size 1 1/4 \$29.95; 1 1/2 \$35.80;	
2 \$48.15.	

CAST IRON FITTINGS AT HIGHER LEVELS

Winnipeg.

Higher prices are in effect on cast iron fittings. With the cold weather business has not opened up to any degree as yet but it is expected it will improve as the season progresses. Discounts are quoted as follows:

CAST IRON FITTINGS—

Reducers	10%
Bushings	15%
Plugs	10%
Flange Unions, Standard	5%
Companion flanges	15%
Floor flanges	20%
Branch tees	5%
Elbows, tees, etc.	5%
Drainage fittings	25%

NIPPLE QUOTATIONS CHANGED TO HIGHER LEVELS

Winnipeg.

Another reflection of a firm trend noted in the iron pipe market is shown in new quotations on nipples. New quotations are five per cent. higher than formerly in effect, the discounts are as per list below.

NIPPLES—Wrought—

Close and short, 4 inch and under, less 40%.	
Close and short, 4 1/2 inch and larger, 30%.	
Long 4 inch and under 45%.	
4 1/2 inch and larger, 35 per cent.	

REVISED DISCOUNTS ON ELBOWS AND TEES

Winnipeg.

Union elbows and tees are quoted at higher levels and the new discount is less 50 per cent. Boiler elbows and couplings are also quoted at the same discount. Dart unions from one-quarter to two inch are quoted at list price less 27 1/2 per cent, with one-eighth and two and a half inch to four inch at less 10 and 10 per cent. Jefferson unions are quoted at 15 per cent., while malleable railing fittings are quoted at 35 per cent.

SELLING THE FARMER

(Continued from page 38)

reflection upon our travellers and salesmen, but I never yet met one who had the enthusiasm in them which they should for the goods they sell; at least, not within miles, as it were, to the amount of enthusiasm to be found and displayed by the average automobile salesman. Yet, as a matter of fact, the automobile business is as a mere flea bite, taken from every angle, as compared with the all-round usefulness of a complete sanitary and heating equipment in a home, whether it be a farm, rural or city home.

Very little is heard by the farmer and his wife about the value of such household conveniences as bath-tubs, laundry tubs, kitchen sinks, water closets, and hot and cold water at the taps day and night. Automobiles may carry the farm folk away from the daily solitary grind of farm life for a few hours a week, and no doubt such a change is not altogether an unmixed blessing. But, oh, what a mirage in comparison to a home like unto the one found in the average town or city? Here are a couple of stories, which should burn into the mind of every manufacturer and jobber of sanitary and heating goods, as well as every sanitary and heating contractor.

(Continued in next issue)

SPEAKER HOPED DAY WOULD SOON COME

(Continued from page 20)

I charge above the price for the material is my charge for service. I am rendering the customer a splendid service and it is up to me to see that he pays for it. We are taken on our own estimate. In the difference between what I ask the customer to pay and what I paid for it lies the representation of my own value on myself. It is not profit. We are selling our service to humanity. If our estimation of ourselves is so mean that we don't get enough for this service, that is our fault.

"There is not much salesmanship shown in this business. We should develop our imaginations more. Visualize it and see what it will be in the future. This business is just starting to grow and we must keep up to date. We cannot do that by closing our minds with prejudices or set ideas.

"In the question of apprenticeship I note that we are not making many new mechanics and this is going to be felt intensely. Do you think you can interest young men in this country to learn your business and to spend four or five years on a small wage when you set before them an example of yourself in an unclean, untidy condition? Do you think there is any inspiration there for the youth to follow? When you become an employing plumber you should take your overalls and burn them. Put on a shirt and collar, get your shoes shined and

go out and talk business. No man can have the right mental condition or develop a proper character in filth, and the very foundation of your business is opposed to that very condition. Sincerity, sacrifice and truth will solve many of your problems. The day of education is here."

SHORT COURSE LECTURES

(Continued from page 29)

why should farm homes be used in the state they are?"

In concluding his address the speaker made a very astounding assertion. Said he, "And now a word to those farmers who really cannot raise the necessary cash to install these city conveniences I have referred to.

"You have I suppose heard about the Ontario Government establishing savings banks all over the province. What do you think the Government does with this money? They turn some of it, if not all, over to the Ontario Agricultural Development Board. This Board loans money to farmers at 6 per cent, for the purpose of improving their farms and I personally took this question up with the Deputy Minister of Agriculture and the chairman of this development board, and found that provided the rules and regulations of the Agricultural Development Act are complied with money can be borrowed by farmers to fully equip their homes with modern plumbing and all the city conveniences referred to in this lecture shown on the screen. So, ladies and gentlemen, this is the happy climax. And a word to the ladies. Don't let the snow melt before you have got John or whatever name you call your husband by, to promise you city conveniences on the farm and you girls, don't say 'yes' to Tom unless he can assure you of hot and cold water and a modern bathroom in your future home. The job's dead easy for the ladies. It can be done."

Trade Should Follow Up Such Good Work Done

It would be safe to state that this work recently concluded by the agricultural department of Ontario is bound to do good. It ought to be followed up by the whole industry. No other industry has ever had such good work done for it as this, and to neglect or not to follow up such work would be little short of pathetic. Sanitary and heating engineers are not mere business men. By virtue of their very occupation they are custodians of the health of the people. Much more so than medical men and viewing the responsibility of the craft from that angle, such good work done, and done gratis, should be followed up. No other industry would let such splendid work go by without thoroughly following it up and in that way not only increasing the volume of business but performing a duty by seeing to it that every farm home is fitted up with city convenience. A very humanitarian duty.

Banner Pipeless Furnace

Costs One Quarter The Price of a Steam or Hot Water Job

There is a true economy in the installation of a Banner Pipe or Pipeless Furnace.

In farm districts, particularly, this economy is regarded as a very desirable thing.

Farmers everywhere who will not even consider a steam or hot water installation are getting rid of stoves and putting in Banner Pipe or Pipeless Furnaces.

Every stove heated house in your territory is a real, live prospect for these better built furnaces that require no "service" or repairs.

Write to-day for attractive agency proposition.

Few people realize the tremendous selling power of classified advertising or the exceptional opportunity which it offers.

Hundreds of Sanitary Engineers to-day are carrying equipment for which they have no further need, yet many others could use this same equipment to good advantage and would be glad to buy at a fair price, if they but knew of it.

How to get buyer and seller together—that's the question. The answer is—SANITARY ENGINEER classified advertising service. Thousands of Sanitary Engineers throughout the country read the classified advertisements every issue. That's why they produce results surely and quickly.

If you want to buy, sell or exchange equipment.

If you want to sell or exchange your store.

If you want to buy a store.

If you are looking for a location.

If you need a competent journeyman.

If you are seeking a position.

In fact if you wish to buy, sell or exchange anything used in a plumbing and steamfitting shop or for any reason desire to quickly get in touch with other Sanitary Engineers, use SANITARY ENGINEER'S classified advertising service. The charge is ridiculously low—\$1.50 for twenty-five words, 5 cents for each additional word.

How to Reach Your Prospective Customer as an Invited Guest

11

Suppose you are anxious to secure an order from an important business man; which of the following would you prefer:

(1) To call upon him at his office, while he is busy with Rush Correspondence or engaged on business with other people with whom he has made appointments, and perhaps find after all he is unable to see you, or

(II) To receive a note from him saying he will be glad to see you if you will call on such and such a day?

Naturally you would prefer to receive his note. You would then be sure of receiving his attention; you would be the "invited guest." In the first case you would be more or less an interloper, possibly unwelcome, as you would be taking up time he had intended to use otherwise.

Now the relative difference between the interloper and the invited guest represents exactly the difference between the free publication or circular and the business paper. The former comes unasked, it may by chance be read, more probably it is not. That depends on circumstances. Its most likely destination is the waste paper basket. The trade paper, on the other hand is the invited guest. It is even more, for it has not only been invited, it has been paid to come. Its arrival is looked forward to periodically and the messages it brings are therefore sure to receive attention.

It is partly in order that he may receive these sales messages that the business man pays for the paper. In most cases the advertisements are considered equally as important as the reading matter. It is advisable then for you to see that your messages reach him in this best of all possible ways—as an invited guest.

Now how can you assure yourself that the medium you choose for your advertisement will comply with these conditions—that it is not among the interloper class?

The answer to this query will appear in our third talk which you will find in our next issue.

 SANITARY ENGINEER**

Ever see two boilers in one ?

That's what Burnham Boilers are. Great big man's size heat givers for cold, bleak days. Or on uncertain spring days, they run at half time just as economically as when at full blast. The grates shake half at a time, so you could run half the boiler at a time.

Write us for complete information.

PNEUMATIC WATER SUPPLY SYSTEM

Gives country residents all the advantages of a city water system without the excessive cost

The wide-awake dealer will make big profits out of this system among customers who now have difficulty with their water supply. It is so simple to operate and costs practically nothing for upkeep.

The outfit consists of an air-tight steel tank which can be placed in the basement, and a "Myers" famous guaranteed pump (hand or power), suitable for pumping air or water, together with pipes and fittings. Any plumber or gas fitter can easily install it. Every outfit guaranteed to do the work for which it is designed. For small or large dwellings.

Write us for Water System Catalogue and prices. Now is the time to interest your customers.

CHRISTIE UNIT SYSTEM SEPTIC TANKS

Convenience for ALL. Thousands of homes can be modernized. Any place where there is NOT a Public Sewer CHRISTIE'S UNIT SYSTEM SEPTIC TANK is the only correct method of disposal.

HEALTHY, CONVENIENT, ECONOMICAL

Made of Reinforced Concrete. Can be shipped anywhere. Easy to install. Low in price. Both syphon and overflow type. No job too small. None too large. We have a type for both heavy and light soils.

HOMES, SCHOOLS and SUMMER HOUSES.

Write for catalogue and dealers' price list.

Manufactured By

Christie Concrete Products Co.

Lindsay, Ontario

PATENTED

A Suggestion

"Medium Weight soil pipe has a round bead pattern at the hub to distinguish it readily from the Extra Heavy weight pipe which has a flat bead pattern."

This is only a matter of design, one being as strong as the other.

We respectfully suggest the advisability of continuing the excellent practice of invariably specifying medium weight pipe in the round bead pattern."

Sanitary Engineer

is the logical medium to use if you have a message for the Plumbing and Heating trade of Canada

The Difference in Advertising Is the Difference in Men

Of itself, advertising is little. And the differences in it are the differences which exist in men.

Just as some men are strong and virile and interesting, so is some advertising. And just as some men are ineffectual and weak and boring, so is some other advertising.

"Does it pay to advertise?" It pays those men who are keen enough students of the public to make it pay them. It pays those men who are truthful, sincere, interesting and believable.

It pays the men whose product deserves the payment, whose brains are keen enough to organize for success and judge enough of the human mind to know how to tell their story with sincerity and interest.

So when you judge advertising, judge it by how it is used and by whom—not of itself and of itself alone.

Remember, an ugly man looks just as ugly in a mirror.

"WARDEN KING"

Soil Pipe That Endures

Give that piping job a guarantee of permanence by specifying W. K. Soil Pipe and Fittings. Your recommendation is backed by a record of splendid service under every condition all over Canada.

There is high, consistent quality and solid strength in every length of W. K. Soil Pipe, yet prices are no higher than those asked for ordinary pipe.

Now is the time to get much profitable business in soil pipe installations. Insure the permanency of these installations by specifying and installing W. K. Soil Pipe.

WARDEN KING, Limited, Montreal

Branch Office :

136 Simcoe St., Toronto

Additional Installations

After closet tanks have been installed for a number of years does the owner of the building give you an order for additional installations? The satisfaction and sanitary value of the first tanks govern this.

An initial installation of New Design Vitro Tanks is the beginning of a life-time business connection. The white, gleaming beauty will never craze, crack nor become yellow. Stern tests at the factory determine that each tank, fittings and all, is staunchly made and mechanically sound before it is sent out.

Each tank installed makes new friends, creates new business, brings repeat orders. This is the real reason why more Vitros are being sold today than any other tank on the market.

Good Reasons to Buy and Sell Viking Radiators

Viking Radiators make the installation perfect

Tell your prospective customers to satisfy themselves thoroughly on the following points before finally buying a new furnace—

The construction of the boiler as to durability. Insist on a thorough demonstration proving that the maximum fuel value is derived from the gases generated in the fire pot: don't waste these gases via the chimney route.

Be sure the heating capacity of the boiler is sufficient to do the work; consider the facilities for operating and cleaning. Find out what present users think of the furnace.

You can sell Daisy boilers on any one of the above points—

Then, to make the installation perfect, use Viking Radiators.
